Now finally, there is promotion—sheer, straight building of the market and share of the market. Our industry is different from others in degree but not in kind. Attention must be attracted to the products available, especially new products. This history of marketing proves that people do not beat a path to your door to buy that better mousetrap. The market must be made. We must take greater care, but we must still build the market. This is a typical free enterprise type of operation which is expensive and necessary and without it the other services would not be possible.

So there they are, these six commitments of the pharmaceutical industry.

The most significant thing about this briefly told story is that it brings home that the pharmaceutical industry is not just a manufacturing industry, but a service industry as well. We are a service and a product industry with six commitments of profound social value. This is basic to an understanding of what we are.

At the beginning of this talk, I touched so lightly as hardly to have done it on some of the accomplishments of this industry. But, in the future, even more should be expected of this industry because knowledge builds on knowledge in geometric progression. And the evidence is all there, that there will be a speaker like me 30 or 35 years from now, making the kind of comparison I did at the outset of my remarks and probably likening us, too, to some equivalent of the kindly old general practitioner who had hardly anything in his black bag.

But some members of this industry do not assume all of these commitments. Some, hardly any of them. And I think this contrast helps bring the significance of these commitments into clear perspective.

I remember many years ago encountering one of these people in this category of little or no commitments, and out of sheer curiosity, I said to him, "How do you operate? I know you don't do any research. I doubt if you do any development. I've never seen any advertising, and you don't have any detail men do you?" And he got a big laugh out of this. And he said, "It's simple enough. First of all, I'm not a full-line house, I pick and choose the fast-moving items that are already developed, like the best-selling products in the Pfizer penicillin line." This was many years ago, as I said. But he said, "I can make these products and, in fact, I can make them cheaper than you can—you're too fancy. And I can send a postcard to the druggist. Not all across the nation, not even throughout all of my state. But I can send a postcard to the druggist and say I've got penicillin available at the lowest price on the market. They won't all come to me, but I'll get my share." He said, "I'm going down to Palm Beach this winter. What are you doing?"

I don't deny that man his right to operate

[1] Text in *New York Times*, July 11, 1969.
[2] September 4, 1969, p. 526 ff.

in that fashion as long as his products meet proper quality standards. I don't even criticize. But I ask this question: What is the relative social value of this entrepreneur. I don't mean the value of his enterprise to himself. I mean the value to society. This is what is in issue these days. This is what the debate is really all about, or should be about. To some, the lower prices of the drugs he supplies will seem an important social contribution. But just what is the net value to society of that price differential, when it is achieved by largely or completely avoiding those vital service commitments to research, development, quality control, distribution, education, and marketing that has earned world leadership for the American pharmaceutical industry, and on which the progress of therapeutics very substantially depends? What is the real price of that low price drug? And who pays it?

So this is the point of beginning for our industry—to know ourselves through serious study, to welcome the beginning of the possible new atmosphere as the shrill cries seem to moderate, or at least as some moderate voices begin to be heard. Before us now is the difficult problem of the future of health care in this country. Our hope and our responsibility is to participate with our new partners—government, the medical profession, and academia, in building for the future. The old way of hostile hearings and regulatory battles has little to do with this future—indeed can only hinder and impede it. In a word, if we are to build the future it will be by cooperation. In that necessary cooperative effort, the pharmaceutical industry is ready to do its part.

AMENDING TITLE 28, UNITED STATES CODE, TO EXTEND THE TIME FOR FILING TORT ACTIONS BY CERTAIN PERSONS

HON. JACOB H. GILBERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, December 15, 1969

Mr. GILBERT. Mr. Speaker, I support H.R. 10124, offered by the gentleman from Massachusetts (Mr. DONOHUE), to extend the time for filing tort actions by persons under the age of 21, or insane or mentally ill, or imprisoned on a criminal charge.

I have sponsored a similar bill in past Congresses and in this Congress—H.R. 4155, 91st Congress. The bill will modify existing law by providing that the 2-year statute of limitations applicable to tort actions against the Government will not run against persons under legal disability at the time the action accrues, and that, such individuals may present the claim within 2 years after the disability ceases. We should recognize the fact that persons suffering from legal disabilities and particularly those who are under age are actually being deprived of their rights because of the presently overstrict limitation provision in subsection (b) of section 2401, title 28 of the United States Code.

There is a demonstrated need for this legislation. I support H.R. 10124 and I commend my distinguished colleague (Mr. DONOHUE) for the action of his subcommittee in bringing this bill to the House floor.

PLAYING WITH FIRE IN THE MIDDLE EAST

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1969

Mr. OTTINGER. Mr. Speaker, I am deeply disturbed about the apparent erosion by the Nixon administration of our position of support for a fair and permanent resolution of the conflict between Israel and her Arab neighbors in the Middle East.

The basis of our policy has been to promote a settlement by direct negotiations between the parties of their disputes over borders, recognition, refugees, and access to international waterways and, until such a settlement can be reached, to assure Israel's invulnerability to Arab attack.

The first disturbing indication that the Nixon administration was backing away from this policy occurred at its inception when Gov. William Scranton announced, after a Presidential fact-finding tour of the area, that the new administration was going to pursue a more "even-handed" policy. Next came a period of equivocation over delivery of Phantom jets to Israel in pursuance with prior commitments. While the jets have now been promised, they still have not been delivered.

These events led to sincere fears that "even-handedness" meant abandoning Israel in favor of Republican oil interests in the Arab States.

These fears were heightened when the United States supported the United Nations resolution condemning Israel for her attacks on Lebanon in response to actions of Arab terrorists in blowing up an El Al airliner at Beirut airport without any condemnation for the Arab attacks which provoked the incident. This hardly seemed even-handed. Nor did our abstention from subsequent one-sided U.N. Middle East resolutions or our silence in the U.N. during the public hangings by Iraq of Jews.

These fears were again aroused when the U.S.-proposed four-power talks to promote a Middle East settlement with France and Russia committed to side with the Arabs. They were barely assuaged by our assurances that the four powers would concern themselves solely with broad guidelines for peace and not the specifics of a settlement which we stated would be left to direct negotiations.

The State Department's latest pronouncement inviting resumption of official recognition of the Arab States that have sworn to annihilate Israel and are daily sending terrorists across her borders to kill her citizens can but confirm these fears.

Worse yet, Secretary Rogers' recent speech putting forward specific border settlement proposals, undermines Israel's chief bargaining position requiring direct negotiations of the details of a settlement. Indeed, since only direct negotiations can produce a permanent and lasting settlement, the State Department's position seriously jeopardizes the prospects for peace in that troubled area.

It seems clear that President Nasser and his radical Arab associates will interpret Secretary Rogers' latest overtures as a signal that they are free to pursue, with Soviet assistance, their policy of military adventurism against Israel and her people. This encouragement could well prove to be explosive.

Indeed, it is significant that no sooner had Secretary Rogers spoken than the Soviet Union's prime minister promised increased military aid for Egypt and reaffirmed his nation's support for the terrorist Arab guerrilla movement.

I think it is clear that the Soviet-Arab strategy is to create an atmosphere of such intense crisis that the United States would force major concessions upon Israel as the price for a temporary respite. And temporary it clearly would be, for no arrangement worked out in the absence of direct negotiations between Israel and the Arabs can hope to have any permanence.

We cannot, we must not let ourselves be coerced into such a position, for to do so would jeopardize the political independence and territorial integrity of Israel without achieving a meaningful peace in the Middle East. To undermine Israel at this time would merely whet the radical Arab appetite for full-scale assault on Israel and increase the risk of a wider war.

It is appropriate to remind ourselves of the statements made by John Foster Dulles when he was Secretary of State under President Eisenhower:

> The preservation of the State of Israel is one of the essential goals of United States foreign policy.

Israel is the one bastion of freedom in the Middle East. By encouraging the Arabs, we are playing with fire in an explosive situation. If the Arabs mount a major attack on Israel, we can hardly avoid becoming involved. It is eminently in our interests to prevent such a conflict from breaking out and to return to the sound principles for a sound settlement that this country has pursued until the present.

BIG TRUCK BILL

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1969

Mr. SCHWENGEL. Mr. Speaker, my editorial for today is from the Arizona Republic. The editorial follows:

CONGRESS LEFT TO DECIDE SAFETY QUESTION OF HEAVIER TRUCKS

WASHINGTON.—The Nixon administration left it up to Congress yesterday to decide whether heavier and bigger trailer trucks and buses are safe enough to be permitted to travel on interstate highways.

Federal Highway Administrator F. C. Turner told a House public works subcommittee his agency did not have "sufficient reliable evidence" to determine whether the increased sizes of trucks and buses proposed in controversial legislation would mean additional safety hazards to motorists.

If Congress decides motorists safety is not affected "measurably," Turner said, the ad-

ministration would urge that implementation be delayed until July 1, 1972, rather than on the date of passage. The government needs the three years to set performance standards for the bigger trucks, he said.

Turner's long-awaited disclosure of the administration position on the bill, while not an endorsement, brought smiles to the faces of subcommittee members who support the legislation.

As opponent, Rep. Fred Schwengel, R-Iowa, said it was "incredible" that the Transportation Department did not recommend delay in action on the bill until it could collect adequate safety data.

The bill, supported by the trucking industry and opposed by the American Automobile Association, would increase from 8 feet to 8½ feet the maximum allowable width of trucks and buses using the interstate highway system.

The limit on weight would be raised from 73,280 pounds to 108,500 pounds. The length, which is not limited now, would be set at 70 feet. Turner recommended a maximum length of 65 feet.

CHRISTIAN HIGHER EDUCATION AND THE SEVENTIES

HON. BILL NICHOLS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1969

Mr. NICHOLS. Mr. Speaker, on November 18, 1969, Dr. Harry Philpott, president of Auburn University, addressed the Alabama Baptist State Convention in Birmingham. Dr. Philpott is an ordained Baptist minister although he has never held a pastorate, his entire career has been in the field of education. In his address, Dr. Philpott outlined the continuing need for Christian higher education in the years ahead. I would like to share his thoughts on this important subject with my colleagues by inserting his remarks in the RECORD at this point:

CHRISTIAN HIGHER EDUCATION AND THE SEVENTIES

Our emphasis on Christian higher education continues a glorious phase of Baptist history. It is well to remind ourselves of the fundamental importance of education in the development of Baptist churches. Our present-day heritage has many roots but none is more important than the leadership of Luther Rice in the 19th Century. One commentator has described his return from Burma to solicit support for Judson's pioneering missionary enterprise as the single most important event in Baptist history during the 19th Century. He arrived with a great zeal for missions but discovered the support necessary for these could not be obtained because of the fragmented character and separatism of the Baptist churches and because of the appalling lack of education within the ministry and the leadership of the churches. If the missionary endeavor was to move forward, it was necessary to bring the churches together in associations and conventions and to overcome the lack of education and understanding.

With unequaled devotion, Rice traveled throughout the eastern and southern United States drawing Baptists together, presenting the missionary challenge and sparking the organization of Baptist colleges and schools. The difficulty of his task can be seen in the fact that an early division in the ranks of the Baptists separated those who believed in education and missions from those who opposed such endeavors by the churches. Our forebearers proudly proclaimed themselves Missionary Baptists and equally emphasized their great concern for education. Church-related educational programs, academies, colleges, universities and seminaries characterized the educational enterprises of our churches and continue to be a basic emphasis of our Christian mission today. Despite the problems which face us educationally and the changes in American education which have had their effect on our programs, we would be disloyal to our Baptist heritage and, more importantly, unworthy of the future if we did not continue to give major importance to these endeavors.

I stand before you today as a concerned individual with a troubled soul. I have always held, and still do, a firm belief in the dual system of higher education as we have known it in the United States. Problems which face both the private sector and the public sector of higher education are as difficult, if not more difficult, than at any time in our history. During this century we have witnessed undreamed of expansion in public education, while the private and church-related institutions have been forced by a variety of circumstances to simply hold their own, as a rule. In Alabama for example, in the last ten years we have seen a 115 per cent enrollment increase in our institutions of higher learning, with only a small proportion of this coming in the private and church-related sector. Our best estimates indicate that a 70 per cent increase in higher education enrollment will take place in the next decade, again with the overwhelming percentage being in the public institutions.

Changing circumstances have dictated new patterns for our Baptist programs in higher education. While continuing, as we absolutely must, support for our own institutions, we have been challenged to develop Baptist Student Programs in our public institutions. The developing Junior College system in Alabama has opened a new opportunity for student work in many of our churches and for the State Convention. Christian higher education today requires that we meet student needs whatever type of institution they attend.

It should not be supposed that the public institutions are immune from the same problems private institutions face in attempting to fulfill their responsibilities. We are witnessing at the present time, and I can only predict that this trend will accelerate in the next ten years, an obliteration of the line which distinguished private and public institutions of higher learning in the past. Tax dollars now provide as much as 45 per cent of the annual operating budgets for some private and denominational institutions while public institutions must avidly seek private gift support to supplement governmental appropriations.

We have only to remind ourselves that in every State Convention of Southern Baptists this year the issue of tax support for our institutions, or government aid in a variety of forms, will be a major consideration. I have no simple answer to resolve this issue but from a survey of recent history can only offer the prediction that in the decade ahead some form of support from the governments will be required for the continued existence of our institutions. Our task will be to devise programs which will safeguard, so far as possible, the administration of our schools in private hands and which will draw a clear line of distinction between activities which are religious in character and those which are common to the educational experience of all students.

In this connection, I am pleased with the growing understanding being shown by my fellow Baptists in placing the day by day decisions in such matters in the hands of trustees and the administrators of our institutions. Large conventions can express overall policies and desires but simply do not have the time and background information to make a judgment on individual programs and opportunities. I am a firm believer that authority in such matters must be delegated to competent persons who will then be held accountable for the decisions reached.

Our program of Christian higher education is further threatened by the overall crisis which faces our collegiate institutions in the nation today. Traditionally in America we have had great faith in education as the ultimate solution to our major problems. Suddenly, we find ourselves in a situation in which a superficial observer might conclude that higher education is the source of great problems in our nation today. So much has been written about the crisis on the campus that it is not necessary to provide additional documentation for a group such as this. Suffice it only to say that the situation is extremely complicated and no simple description of campus unrest is possible. We must be honest in recognizing that since higher education occupies such a central role in the preservation of American democracy, those who would undermine our ideals and our liberties have chosen these institutions as the prime target for destruction. Small in number but extremely vocal, attracting an undue amount of attention from the news media and the public, they nevertheless do represent a grave threat to all of higher education.

Recently one of my friends in journalism told me that the events which are most important to the news media are those which describe substantial changes in life as we have known it and those which are totally unexpected. Riots and disorder on the campus, so foreign to the previous tranquility of the academic environment, fall into the latter category and make the news. Two hundred thousand American collegians last year, out of a total enrollment of 6,500,000, are estimated to have had any involvement whatsoever, even as onlookers, in campus disorders. The 6,300,000 students who went about their educational endeavors with devotion and calmness have escaped notice. It is this latter group, in my opinion, which will ultimately shape the future of our nation.

However, we cannot escape the fact that within this group there are serious questions being raised and serious problems encountered which must be faced realistically by all of us in education in the next decade. Their quest for relevance in the curriculum, their impatience with the ethical hypocrisy of their elders and their desire for knowledge of the meaning and significance of life constitute the great challenge to the Christian educator today and in the future. More than the problems, more than the crisis, it is our response to these needs that should be of primary concern to Baptists today.

We have a great educational heritage and I wish to testify to a personal undiminished faith in our capacity to make even greater contributions in the future. I am reminded of the words of Robert A. Millikan, a great physicist in my collegiate days: "We have come from somewhere and we are going somewhere. The great Architect of the Universe never built a stairway that leads to nowhere." Our Baptist institutions and our public institutions have not been built through years of dedicated labor and service in order that they may be destroyed. The problems and the crisis of the moment do not symbolize the beginning of the end but rather a larger opportunity for greater service. This will be true if we are undergirded by the basic faith of our Christian gospel. In the words of St. Paul: "Beloved, now are we the Sons of God and it doth not yet appear what we shall be."

In speaking of Baptist higher education in

the next decade I would like to choose as a text some words of Paul in his Second Epistle to Timothy. Writing in discouraging times, his spirit remained buoyant and his faith firm. He points out to the young Disciple, "For God hath not given us the spirit of fear; but of power, and of love, and of a sound mind." Those who simply fear for the future of our Baptist programs of education are lacking in the faith that, to those who love God, things will work together for the good.

As we face the decade ahead, we are animated not by fear and doubt but by a sense of power. It is rather ironic that a struggle for power has characterized so much of the disorder on the campus today. An educational institution—and the same thing is true in a church—that is characterized by a struggle for power, for authority and control, is suffering great harm. It is foreign to the intellectual enterprise when raw power is utilized by any segment of the institution's constituency. A college as well as a church moves forward when there is cooperative interaction, mutual understanding, and a dedication to the larger mission.

The power which Paul speaks of to Timothy comes from a deep commitment to the Christian interpretation of life. The power of Christian higher education is to be found in its opportunity to transmit to succeeding generations this comprehensive understanding of the meaning of existence. The late Walter Lippmann once observed: "We have established a system of education in which we insist that while everyone should be educated there is nothing in particular that an educated man must know." The growth of factual knowledge through research and experimentation gives to our young people more and more to learn. It has also fragmented our programs and resulted too often in an educational program for narrow specialists. The cry for relevance from our young people today is often the cry for unified meaning and understanding in the midst of confused diversity. Our young people need a religious faith which can provide a dynamic unity of understanding. This was the role of Christianity in the lives of our forefathers and it is the reassertion in our educational programs of this metaphysic which provides us with power for the future.

Again Paul reminds us that we were not given a spirit of fear but of love. Our young people are troubled by the impersonality of our lives and so many of our institutions. Too many of them are lonely, yearning for a warm community but unable to find it. When we deal with the masses as we are forced to do in education today, we have the temptation to think of students only as numbers and not as individual human personalities, sacred in the sight of the God who made them.

Again, it is interesting that some of our revolters have latched on to the basic necessity for love and appropriated it for their own. Unfortunately, their definitions and descriptions of love are a parody on the concept set forth by Jesus Christ. The fact, however, that they seek to capitalize on love should re-enforce our own commitment to its importance in education and all aspects of life.

One of the memorable addresses that I have heard in my lifetime was delivered by the late Douglas Southall Freeman at the dedication of the Library at the University of Florida. Dr. Freeman was for many years the editor of the Richmond News-Leader and author of the Pulitzer Prize-winning biography of Robert E. Lee. At the conclusion of his address he made the rather startling observation that the most important thing about the library was not to be found in the size of the building or the books that it contained. Its future usefulness would be determined by whether or not there was love for human beings on the part of those who served in it. Justifying this observation from personal experience, he told how as a boy of nine he had accidently walked into a private library in Richmond. A kindly librarian, who loved little boys, ignored the fact that he was not entitled to be there, and led him to a shelf containing biographies of American heroes and invited him to read. This was the beginning of a life-long interest for him. In later years he told of encountering many librarians whose attitude seemed to be one of daring him to try to get any help or service from them. Whenever such events took place, he stated that he uttered a silent prayer of thanks to God for the fact that his first encounter with a librarian was with one who loved little children.

Love for human beings is still basic to all of education. A teacher may achieve competence in a subject matter field but without love and a desire to help others can never be a competent communicator of the material. A university or a college which is not undergirded by an interest in individuals and a concern for their development will never fulfill its educational mission. "Let love be genuine" should be an imperative for all of us in education.

Paul reminds us also that we do not possess the spirit of fear but of a sound mind. While true education must concern itself with more than intellectual attainments, this remains our central concern. As John Maysfield has written: "A true university is a place where those who hate ignorance may strive to know, where those who perceive the truth may strive to make others see." Christian higher education rests on the words of Jesus that "you shall know the truth and the truth shall make you free."

This matter is of particular importance to those of us who are Baptist because of our historic emphasis on the freedom and sufficiency of the individual to formulate his faith, based on his understanding of the revelation of the scriptures. An open mind with freedom to explore and propound is essential to our institutions as well as our churches. Occasionally our enthusiasm for a particular point of view leads us to forget this basic tenet of our faith. I have heard a Baptist stand on a Convention floor and say that our Baptist colleges should teach nothing but the things that all Baptists believe. I fear that having determined beliefs on which there was complete unanimity, there would be very little left for the curriculum to cover. We must guard against attempts to creedalize our faith and to tyrannize a sincere seeker for truth.

In a recent speech John Gardner, former Secretary of Health, Education and Welfare, spoke of two groups of people who were a danger to our institutions of higher learning. He referred to them as unloving critics and uncritical lovers. Throughout history our institutions have been under attack by some who were anti-intellectual and anti-educational. Unloving critics, may have sought for a variety of reasons to undermine our programs and our witness. On the other side, there have been those who have been so devoted to the institutions as they knew them that they have smothered them in complacency and tradition. Both groups are equally harmful. Our institutions need the critical assistance and the incisive suggestions of those who love them and wish to see them advance. It has been said that "he has a right to criticize who has a heart to help." It is Baptists in this category who will assist our institutions in the development of sound minds.

The minds which we seek to develop are not limited to factual information and empirical observations. Rather, they possess the capacity to reason and to understand within the context of a great faith. Education itself is an enterprise of faith. Someone has said that any fool can count the number of apples on a tree but that it takes a wise man to count the number of trees in an apple. It is a faith in our young people, a faith in the future and a faith in the realization of God's purpose for our lives that motivates us.

In retrospect, the problems and difficulties we face are small compared with the circumstances confronting Luther Rice on his return to America. There is an old Greek proverb which says: "Things worthy of admiration are never easily won." The world we dream of, the institutions devoted to the work of the Kingdom of God and the cause we seek to advance demand not a spirit of fear but of great faith. The willingness of each of us to assume our responsibility in our time will determine our stewardship of a great heritage we have received from those who have gone before.

Two men were climbing in the Pyrenees Mountains—one a novice and the other a veteran. Having been overtaken by nightfall, they spent the night sleeping on a ledge. Early in the morning a storm which the Latins call Euroclydon blew across the peaks. The frightened neophyte cried out, "I think this is the end of the world!" The veteran climber responded, "No, this is how the dawn comes in the Pyrenees."

In prayerful confidence and devoted service, let each of us resolve that the Seventies will witness a new dawn of advance for Christian higher education in our nation.

UNSOLICITED CREDIT CARDS MENACE CONSUMER

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1969

Mr. ROSENTHAL. Mr. Speaker, unsolicited credit cards have become one of the major scourges of the Nation's consumers. The cards have been an open invitation to mail fraud and can expose unsuspecting individuals to possible liability.

The Nixon administration initially supported the idea of a ban on unsolicited credit cards, but more recently modified its stand. Such action is contrary to the best public interest and must be revoked to eliminate the irresponsible mailings once and for all.

The following two editorials in the Washington Post and the Washington Star provide an excellent analysis of the unsolicited credit card problem:

[From the Washington (D.C.) Post, Dec. 11, 1969]

THE PRESIDENT'S COMMITTEE ON WHOSE INTERESTS?

Back in September, we had some harsh words to say about the people who send out unsolicited credit cards and we thought that the President's Committee on Consumer Interests was with us. It had urged the Federal Trade Commission, as we did, to adopt a proposed regulation barring companies under its jurisdiction from sending these cards to you without finding out first if you want them. It had also asked Congress, as we had done, to bar these unsolicited mailings by companies not within the FTC's jurisdiction, notably banks and transportation companies.

Now we find out that for some reason not exactly clear these White House guardians of consumer interests have had a change of heart. The problem had better

be studied some more, the committee's legislative director testified the other day. An outright ban on such mailings, he said, might give the banks and companies and stores that have already sent them out an unfair advantage over those who haven't done it yet.

That argument may have some appeal to those who look at credit cards only from the corporate viewpoint. It is exactly the argument made to Congress in recent weeks by the business interests. But one hopes for better from the President's Committee which is, after all, supposed to be concerned with *consumer interests*. Consumers who have already had to bend, fold, spindle, mutilate and destroy far too many unwanted credit cards are likely, we think, to regard it as a pretty sleazy argument. It is a little like a farmer refusing to lock his chicken coop after the first raid by the foxes for fear of being unfair to the rest of the foxes.

The case against the mailing of unsolicited credit cards is simple. The price on a stolen credit card is $100 in the underworld and postal officials say these mass mailings have caused a seven-fold increase in mail fraud cases in recent years. That, alone, is sufficient cause for Congress to act. When you add the inconvenience these mailings cause consumers, the possible liability to which they are exposed, and the invasion of their privacy, the case for congressional action becomes overwhelming. The advice of the White House guardians of consumer interests is of no help on this issue, and won't be until the guardians discover that the word consumer means one who uses, not one who sells.

[From the Washington (D.C.) Star, Dec. 9, 1969]

CURBING THE CREDIT CARD BLIZZARD

It is regrettable that White House consumer aide Robert Meade has backed away from his strong stand in favor of an across-the-board ban on unsolicited mailings of credit cards. When he appeared before the House Postal Subcommittee on November 19, Meade was all for such a ban. He cited the $100 million a year loss resulting from thefts of unsolicited credit cards. He also mentioned the nuisance value to the addressee who is obliged to destroy these cards or return them.

But in his recent appearance before the Senate Subcommittee on Financial Institutions, Meade trotted out the stale argument that such an across-the-board curb would be unfair to newcomers to the plastic credit field. In point of fact, the White House aide explicitly rejected this argument in his November 19th testimony for a very good reason. If these newcomers have a credit card that people want, the card will sell itself with the aid of a credit card application and appropriate advertising materials. Unsolicited mailings are not required to make the sale.

In any event, the White House surely owes less solicitude to these newcomers to the plastic credit field and more to the millions of American families a hair-breadth above the poverty line who have been bombarded with unwanted credit cards. Despite considerable congressional prodding, the administration has yet to send forth a bill that addresses this problem. Meanwhile, the appearances of Mr. Meade before interested congressional panels serve to mark time. Eventually, of course, the administration will have to bite the bullet and let the public know whether it favors a complete curb on unsolicited credit card mailings. In our view, it would do well to come out promptly for such a curb before all of us are buried under mounds of these cards.

THE BLACK PANTHERS: THE UNFIT MARTYRS

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, December 16, 1969

Mr. MIKVA. Mr. Speaker, there has been much misinterpretation and much distortion of the Black Panther "shootout" in Chicago last week and the efforts of citizens and public officials to obtain an impartial report on that event. Mayor Daley has called for an impartial report on the matter; the Civil Rights Division of the Department of Justice, has announced that it will investigate the shootout; and a national ad hoc committee of distinguished lawyers has indicated that it plans a citizens' inquiry.

What is ironic about this nationwide interest in the Chicago shootout is that the Black Panthers are the unlikeliest of martyrs. The Black Panthers were and are a gun-toting, violence-preaching group of self-proclaimed political revolutionaries. It it all the more tragic that the Black Panthers' violent philosophy and their inherent lack of appeal to the vast majority of our citizens—black and white—have been obscured by the unanswered questions which surround the early morning raid on the Panther apartment in Chicago. The more quickly these questions can be answered and all citizens' doubts resolved, the more quickly attention will again focus on the real question—whether the Panthers' philosophy of violence and the gun has anything of value to contribute to solving the problems of race relations in America. My own belief is that it does not.

These thoughts were brought out recently in an editorial in the Washington Evening Star. I insert the editorial, "The Unfit Martyrs," at this point in the RECORD:

[From The Washington (D.C.) Evening Star, Monday, Dec. 15, 1969]

THE UNFIT MARTYRS

The Black Panthers—in case anyone needs reminding—is a small, loud, revolutionary organization which preaches race hatred, extols violence, collects arms and excels in gutter invective. Today, this isolated band of extremists is being vested in the cloak of martyrdom by many who, short weeks ago, were counted among the Panthers' most active ideological foes.

This turn of events is something more than regrettable. It is extremely dangerous.

The cause of the unlikely martyrdom is a series of police actions in several cities over the past year: Raids that have resulted in hundreds of arrests and—according to Black Panther figures—the killing of 28 of its members.

The raids—again according to Panther spokesmen—were the result of a national policy of harassment, orchestrated by the Justice Department, and dedicated to the extermination of the Black Panther membership.

These charges of "genocide" and "police murder" were dismissed by most of the community as wild rhetoric. Then, on December 4, Chicago police raided a run-down West Side apartment. The head of the Illinois Black Panthers and a Panther leader from Peoria were killed, four Panther members wounded, three others arrested. One policeman was wounded.

Four days later, in Los Angeles, 300 policemen surrounded a Panther headquarters and, after a four-hour gun battle, arrested 11 members.

The Chicago case became the center of immediate, intensive investigation and controversy. While final judgment must be suspended, it can be said that serious doubt has been cast on the police contention that they were met by heavy fire when they tried to enter the apartment. The Los Angeles raid, following so close behind the Chicago incident, fortified a growing suspicion that something more than isolated local police action was involved.

Nine members of Congress asked the Violence Commission to investigate the Chicago raid. Six Negro House members announced their own unofficial probe of the incident. The Urban League and the American Civil Liberties Union called for a broad investigation of police actions against the Panthers. Roy Wilkins said that the police actions "take on the aspect of a vendetta." Ralph Abernathy called on his followers to support the Panthers, and expressed a fear that his organization might be next on the list.

These charges must be taken seriously. If local police or the Justice Department are in fact undertaking to short-circuit the law in order to rid society of a band of dangerous troublemakers, that activity must be halted at once. Immediate consideration should be given to the formation of a special presidential commission to study the charges. The membership should include the questioning members of Congress and the thoughtful, moderate Negro leaders whose faith has been shaken.

We doubt that evidence of a national police conspiracy will turn up. But we would like to be certain. And aside from the ultimate findings, the formation of such a commission would have the immediate effect of halting the contagion of fear and distrust that has already spread to an alarming proportion of the black community.

NIXON CRITICIZED FOR OUSTER OF MORGENTHAU

HON. EDWARD I. KOCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1969

Mr. KOCH. Mr. Speaker, I was informed this afternoon that President Nixon and the Attorney General are ousting Robert Morgenthau from his position as U.S. attorney in the southern district of New York.

It is not easy for me to make a comment upon this matter for personal reasons; namely, that the successor appointed, Whitney N. Seymour, Jr., was my adversary last November when I ran for Congress. My statement is not intended to in any way reflect upon Mr. Seymour, who is a distinguished member of the New York bar.

However, the implication of the Attorney General's action are such as to require me to speak out. Robert Morgenthau, in the years that he has served, has been held by those familiar with criminal enforcement as the most outstanding U.S. attorney of this and recent decades. He has conducted his office without regard to party affiliation. To him, it meant

nothing that a prospective defendant was high placed and a member of the same party in which Morgenthau was enrolled. The most recent conviction of Carmine DeSapio, former New York County Democratic leader, under the personal direction of Robert Morgenthau established this fact beyond the shadow of a doubt.

I feel reasonably certain that other high figures both in the Democratic and Republican Parties will be very relieved to see him go because of his pending investigations. There have been few in this country willing to undertake a real battle against the Mafia, who are entrenched in so many States and corrupting public officials on every level. In the recent Marcus scandal, it was Robert Morgenthau's office that obtained convictions of a high city official and a Mafia don. If he is given the opportunity to finish out his term, I feel certain that the corruption which exists in the State of New York, as in the State of New Jersey, will be rooted out.

In that same Marcus case, the present Manhattan county leader of the Republican Party, Vincent Albano, was named as a political fixer and so what we have seen only partially uncovered to date is a sordid picture involving one former Democratic county leader and the current Republican county leader. It would be a shame and a scandal to interrupt these investigations.

I urge Robert Morgenthau to remain on under his fixed term which does not expire until 1971 and I call upon the President to rescind the appointment necessitating Morgenthau's resignation.

If the Attorney General means business in his fight against crime and the corruption of public officials, he has no business relieving Mr. Morgenthau who has been engaged in this fight for a far longer time than Mr. Mitchell.

When Robert Morgenthau leaves his position as U.S. attorney it should be to become the successor of J. Edgar Hoover.

PRAYERS FOR USE IN PUBLIC SCHOOLS

HON. RICHARD L. ROUDEBUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1969

Mr. ROUDEBUSH. Mr. Speaker, each week we are offering five children's prayers for insertion in the CONGRESSIONAL RECORD.

These prayers may be repeated by children in the Nation's public schools as a means of overcoming the evil effects of the Supreme Court ban on prayer and Bible reading in the public schools.

The prayers follow:

I

What is before us we know not, but this we know: That all things are ordered and sure. Everything is ordered with unerring wisdom and unbounded love by Thee, our God, who art Love. Grant us in all things to see Thy hand.

II

Thine is the day, O Lord, and Thine is the night; grant that the Sun of Righteousness may abide in our hearts to drive away the darkness of evil thoughts.

III

Our Father, may the world not mould us today, but may we be so strong as to help mould the world.

IV

O Lord, Thou knowest how busy I must be this day; if I forget Thee, do not Thou forget me.

V

Father, may I so live the life of love this day that all those with whom I have anything to do may be as sure of love in the world as they are of the sunlight.

ACCENT ON HAND SKILLS

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1969

Mr. DERWINSKI. Mr. Speaker, since we in the House have passed additional legislation to expand vocational training, I was pleased to note the emphasis which the Illinois General Assembly is also placing on the subject.

A very timely editorial in the Chicago Heights Star, Sunday, December 14, very effectively emphasizes the value to the Nation of expanded vocational training programs. The editorial follows:

ACCENT ON HAND SKILLS

In one of his recent books, philosopher Eric Hoffer makes the persuasive point that, other national assets notwithstanding, countries whose people are skilled in the manual arts have a priceless economic advantage over countries in which hand skills have been allowed to deteriorate.

As proof of this he points to our own country, where mechanical geniuses such as Henry Ford, Thomas Edison and Cyrus McCormick—"Yankee mechanics all"—helped make America the workshop of the world. He also cites the classic cases of West Germany and Japan, whose economic recovery following World War II is among the most remarkable industrial achievements of the postwar era.

As though in confirmation of the concept that artisans are as important as artists in the national make-up, the Illinois General Assembly recently appropriated $34 million to expand vocational training in the public schools. Distribution of funds will be based to some degree on shortages in local work forces and on the need for training new manpower.

A distinctive feature of the new, more liberal state-aid program is that, for the first time in Illinois, elementary schools also are eligible to receive funds for vocationally oriented programs. The schools may use the money for such things as field trips, group guidance classes, guest speakers and other activities that enable pupils to learn about day-to-day operations in business and industry.

Under the expanded program, the state will reimburse participating schools on the basis of students served, rather than on the basis of actual teaching hours. It also permits the state to reimburse schools for up to 50 per cent of the cost of any vocational facilities that they build and up to 60 per cent of the cost of vocational training equipment. Because many schools are hard-pressed financially, this provision could be especially helpful.

As a result of the increase in state aid, Bloom, Rich, Homewood-Floosmoor, Crete-Monee, Thornton and Thornton-Fractional high schools are considering formation of a co-operative in vocational education. As currently envisioned, different vocational subjects would be centered at the various schools. This arrangement would remove another current obstacle—the lack of space at the various schools for use in vocational training.

When the Russians sent Sputnik I aloft in 1957, educators and U.S. government officials immediately began placing great emphasis on highly technical skills needed for our accelerated space program. It was not until just recently that we have come to realize something that we had forgotten—the fact that auto mechanics, carpenters and TV repairmen also are important to a healthy national economy.

The new state-aid vocational training program is a commendable step in the direction of creating a pool of young people whose manual skills will assure them of well-paying employment as they help keep the national economy functioning in good order.

LATIN AMERICAN TEACHING FELLOWSHIPS PROGRAM

HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1969

Mr. MORSE. Mr. Speaker, I have had the pleasure of serving for over 2 years on the national advisory board of the Latin American teaching fellowships program, which is operated by the Fletcher School of Law and Diplomacy at Tufts University. My very able associate from the Committee on Foreign Affairs, DON FRASER, also serves on the board, along with the senior Senator from New York, JACOB JAVITS.

I know of no other program that has shown a greater degree of imagination and innovation in the area of Latin American educational cooperation than the Tufts program. As an example of that innovation, I would like to introduce into the RECORD an article from the October 23, 1969, issue of Business Latin America.

The intern program described in this article benefits all parties concerned: the multinational business, the Latin American university, and the teaching intern.

The multinational business receives a direct benefit because the intern works with them directly in their own operation. He comes to the company with real skills and a high degree of knowledge about the culture and the language of the country. He also serves as a direct link between the company and the university where he teaches.

Second, the Latin American university receives a first-rate teacher for the 2 or 3 years that the man serves as an intern. This is of particularly critical importance because a man is a much more effective teacher the second or third year. Also, because his living stipend is pro-

vided by the company, the university's very limited resources are not further diluted.

Third, the teaching intern, because of this unique experience, gains a much greater understanding of the people in the country where he works. When he returns to teach in our own universities or to work here at home, he brings this awareness and understanding with him.

Finally, I would like to commend the program because of the close ties that LATF has developed in Latin America, particularly in Venezuela and in Mexico. In Venezuela they are working in close collaboration with the North American Association—truly one of the outstanding and unique organizations anywhere in the Americas. The NAA has done much, since its founding in 1942, to increase the bonds of friendship and understanding between Venezuela and the United States. They have very wisely concentrated on education, and it is encouraging to me to see the close ties between the Latin American teaching fellowship program and the North American Association.

In Mexico, LATF is working in productive cooperation with the Comite Norte-Americano Pro-Mexico. This excellent organization has as its aim the development of knowledge and understanding about our closest Latin American neighbor in the United States. I am gratified that the Comite and the LATF have developed such a productive working relationship.

Mr. Speaker, I am pleased to be associated with this effort and I think my colleagues will find the following article from Business Latin America of great interest:

LATIN AMERICAN TEACHING FELLOWSHIPS PROGRAM OFFERS LATIN AMERICAN COMPANIES SKILLED LAWYERS, ECONOMISTS, AND MBAS

If your company prefers to recruit management locally wherever possible, but faces short-term needs for specialized executive personnel that cannot be filled in this way, you should look into a novel graduate fellowship program that has helped other companies bridge this gap. The Latin American Teaching Fellowships Program (LATF), sponsored by the Fletcher School of Law and Diplomacy,[1] places young US-trained lawyers, economists, and MBAs with US subsidiaries and national firms in the region, giving the "interns" an opportunity to learn about international business at first hand while teaching in Latin America.

Working on flexible part-time schedules that allow them time to teach, the interns receive a monthly stipend of $450 to $550, paid by the companies indirectly through LATF to avoid conflict with local labor law stipulations. LATF itself covers transportation costs. The duration of fellowships varies between one and three years, and firms maintain the right to cancel the arrangements at any time.

ACCURATE MATCHING

So successful has the two-year-old LATF internship program been, that every sponsoring company has requested additional interns and the list of waiting firms far outstrips the number of available interns. Participating sponsors credit their uniformly favorably reaction toward the LATF program to the care with which the interns' skills, experience and interests are matched with company needs.

The First National City Bank branch in São Paulo, which is stepping up local recruitment efforts, received an economist whose graduate course work emphasized long-range manpower planning. Such accurate matching is possible because LATF initially approaches the local subsidiary, although it is the parent company which ultimately chooses the intern.

The LATF internships were originally devised simply as an alternative funding technique to outright solicitation of donations for a program that had been strictly academically oriented. The idea was the LATF participants could finance their stints as instructors in universities and business schools by working part-time with US companies. By now, however, the internships have acquired an attractiveness that equals that of the academic portion.

Moreover, sponsoring companies such as Ford, Union Carbide, and IBM have discovered that their highly specialized interns can fill important gaps in local planning, market research, or legal projects, whose short-term duration does not warrant the hiring of full-time personnel. or example, Union Carbide put its economist intern to work coming up with alternate funding strategies for its bulk chemical facilities. The intern's next project: contingency planning for Union Carbide in the event that Venezuela does join the Andean Common Market.

Ford's Venezuelan subsidiary decided it wanted to sponsor an LATF lawyer on a permanent basis after its first intern became in effect the legal middleman between parent-company lawyers and Ford's Venezuelan law firm. The LATF intern centralized company contacts with local lawyers, allowed Ford to verify lawyers' billing and, although he was not a practitioner of Venezuelan law, saved the company time and money by researching basic legal questions on his own. IBM also asked for and got a lawyer, the company's second intern, for its regional headquarters in Montevideo.

Companies have found that their interns' close relationship with local universities and graduate business schools gives them valuable contact with prime sources of potential local management recruits. The First National City Bank's intern in São Paulo, who will be concentrating on manpower planning, will also be teaching at Brazil's leading graduate school, sponsored by the Getulio Vargas Foundation (*BL* '68 p. 158). IBM has utilized its Buenos Aires-based intern, who is an economist with advanced computer training, to determine how local universities can integrate computers into their academic programs. One food processing firm, which is still on the LATF waiting list, wants an intern to work-out an in-company training program that will give its local management trainees the analytical judgment they need to develop investment projects themselves rather than simply carry them out on assignment.

The biggest advantages of LATF interns, according to several companies, are their fluency in Spanish or Portuguese (an LATF requirement) and their receptivity to projects that involve close relations with local groups. Union Carbide's Venezuelan subsidiary feels that its intern's ability to speak the language, and his willingness to consult with local sources on financing projects, alerted the company to potential problems of public opinion.

Still, one highly technical sponsoring company admits that the enormous amount of training that subsidiary management must give an intern who is only going to be with the company a limited time is a definite drawback. Another firm pointed out that because of the strong interest in academic careers among LATF participants, any company that wants to recruit its own LATF intern will have to work hard.

[1] Companies interested in the program may write Mr. William Cloherty, Latin American Teaching Fellowships Program, Fletcher School of Law and Diplomacy, Tufts University, Medford, Mass. 02215.

VOLUNTEERS IN SERVICE TO AMERICA

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1969

Mr. VANIK. Mr. Speaker, those Members of this House who have been supporters of the Office of Economic Opportunity are indeed pleased with the high level of support which the Congress has shown in the past week in extending for 2 years this vital program.

Our former colleague, Don Rumsfeld, deserves a great deal of credit for his splendid efforts and commitment to this vital endeavor. He has already clearly demonstrated his talent and skill for administration. His commitment to the ideals of this program will mean a great deal to millions of Americans who seek assistance for meeting their most basic human needs. Don Rumsfeld has passed this critical test and we applaud him in his work. He has done a fine job thus far and we all wish him continued success.

Too many times in moments of heat and the passion of debate on the floor of the House and the other body years of work could be minimized, and good and worthy programs could be altered detrimentally. This was not the case with the action taken on extension of OEO.

Among the most vital and successful programs within the Office of Economic Opportunity has been the Volunteers in Service to America. The test of the success of any program is the loyalty and devotion which is shown by the VISTA volunteers who have labored so diligently who have easily met this test manifold. The difficult nature of the assignments have clearly proved that those who have stuck by their work, when they could have chosen much easier lives, have committed themselves instead to the very highest service to their fellow citizens and to their country. There has been no nobler demonstration of complete devotion than has been shown by our VISTA volunteers and the very dedicated and creative staff which so skillfully guides the work of this legion of volunteers.

No organization, however committed to the right goals, can function, without strong, effective, and honorable leadership. As is well known, the inspiration required to sustain idealism in on-going programs for a long period of time is no mean feat. Padraic Kennedy, VISTA's National Director, has clearly demonstrated his extraordinary ability to combine idealism with hard-nosed management abilities so that those who participate in the programs which he directs do not lose any of the spirit and excitement, the challenge and practical application of the fundamentals upon which our society is based.

No higher tribute can be paid to any man than is paid to Pat Kennedy when one looks at the record that has been established of the work accomplished by VISTA volunteers toward improving the lot of millions of Americans.

This long list of accomplishments is clearly on the record to be tested and

examined. But ultimately the real test of this kind of sensitively balanced program is the steadfastness and loyalty of the program's volunteers and the acceptance of their work by their fellow Americans who seek assistance and find it so readily among a willing, energetic, and committed corps of volunteers and staff.

If VISTA's future could be shaped with the successes of its past, it will make a continuing and significant contribution to the poor of this Nation. Under the skillful and dynamic guidance of Padraic Kennedy, VISTA has grown from an idea to the effective and popular program it is today. Kennedy, who came to Washington in the earliest days of the administration of President Kennedy to help form the Peace Corps, moved to the Office of Economic Opportunity at Sargent Shriver's bidding and helped to draft the basic design of the VISTA program.

Let me review some of the important developments which have taken place in the VISTA program under Kennedy's leadership. Recruitment and selection standards are tougher. Volunteers entering VISTA are more mature, more experienced, and more highly skilled. Some 73 percent of all VISTA applicants are college graduates, and 44 percent of those entering bring with them a professional skill, such as legal or business training. Projects have been upgraded and are now larger, with greater concentrations of volunteers for greater visibility and impact.

VISTA's improvements did not come about by chance. They were the direct result of Kennedy's insistence upon constructive and sweeping changes. Many innovative programs launched in the past year have involved the resources of universities and professional schools in poverty projects in their own communities. While increased emphasis has been placed upon the recruitment of specially skilled volunteers such as lawyers, business school graduates, urban planners, architects, and health specialists, VISTA has gone one step further and joined forces with schools of business administration to assist in economic development and ghetto entrepreneurship. And in schools of social work, law, education, architecture, and planning, VISTA has put education into action by mounting programs under university sponsorship in which students combine service to the poverty community with study in specially designed curriculums.

In my own city of Cleveland, I have seen this new breed of skilled volunteer at work. VISTA volunteer attorneys under the sponsorship of the Hough Development Council acted as legal advisers to the major project of the Hough Development Council, the Martin Luther King Memorial Shopping Plaza. These hard-working young men set up the legal corporation, drafted lease forms for merchants, drew up the necessary papers for the Hough Development Council to qualify for SBA loans, negotiated the financing of the new shopping plaza's stores and townhouses with local banks, and assisted with the purchase of urban renewal land from the city. And these dedicated volunteers are only a few of those who have turned to VISTA for an opportunity to serve, because today VISTA has more than 1,500 volunteers with special skills.

VISTA has turned for an essential kind of know-how and leadership to the poverty community itself. Now one out of every three volunteers entering the program has been recruited from the ranks of the poor. In Alaska, VISTA has recruited Eskimos; in Arizona the Navajos are at work on the reservation; in Puerto Rico, over 200 volunteers serve in their own communities; and in large cities, poverty-level volunteers are teamed with specially skilled volunteers to produce an impact felt throughout the neighborhoods in which they live and work.

VISTA has become a tough and sophisticated program. But it did not happen overnight. In 1965 and 1966, while Peace Corps was attracting the students, VISTA was virtually unknown. Today, however, a Gallup poll tells us that 56 percent of all university students, more than 3 million, are interested in VISTA service. In another poll, three out of four parents said they would like their sons to serve in VISTA. The demand for volunteers from potential sponsors far exceeds the number VISTA can field on its budget; and applications for service have increased 27 percent in the last year alone. And VISTA is popular with my colleagues in the Congress, from both parties. This year, Congress authorized more funds for the VISTA program than even VISTA requested—a tribute to the program's impact and significance in the effort to end poverty, and to Padraic Kennedy's imaginative and creative guidance.

A significant problem which clearly arises from the experience we have received from the work of VISTA volunteers and the creative national staff is that much more can and should be done by our citizens for our own citizens. VISTA clearly demonstrates we have a very long way to go to meet head on the vast problems confronting our Nation. The wonderful proof of VISTA volunteers' successes shows undeniably that, when, and if, we as a Nation decide to make that dimension of commitment toward solving our problems of human need, our people can and will respond with their skills and their commitment. All that we need is for Government to respond in kind.

It is my sincere hope, shared by many of my colleagues, that men of the caliber of Pat Kennedy and hundreds of his associates, will continue actively to serve our country despite the rebuffs and discouragement of their labors, knowing that the rewards will continue to be as great as have been those resulting from their splendid work at VISTA.

UNIVERSITY OF TEXAS RANKS SEVENTH IN STUDENT POPULATION

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1969

Mr. PICKLE. Mr. Speaker, the University of Texas this fall enrolled the seventh largest number of students among higher education systems in the United States. The main branch of the University of Texas system, its nerve center, is in Austin.

A report released by the University of Cincinnati shows the University of Texas system with a total enrollment of 64,572, including students enrolled in extension courses.

Last year, the University of Texas system also placed seventh nationally.

LEGISLATION TO ENCOURAGE SPREAD OF HOMEOWNERSHIP

HON. DONALD E. LUKENS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1969

Mr. LUKENS. Mr. Speaker, today the house owner represents a vital stabilizing element in the American economy. However, today it is becoming more and more difficult for all Americans to own a home or property. We need to make it easier for desiring Americans to have a stake in the economy.

Thus I am introducing a bill today that hopefully will encourage the spread of homeownership. One of the main impediments of house hunters has been the scarcity of adequate mortgage money to finance the purchase of new homes. This bill would facilitate the movement of funds into the mortgage market.

The bill would allow the taxpayer to exclude from his gross income for Federal tax purposes the first $750 of interest income received by him from his deposits held in a thrift institution. It would encourage the flow of savings to thrift institutions by increasing the effective yield of return to investors. As a result, these institutions would have more funds available for domestic mortgages, thus creating more capital for home construction.

Tight monetary policy instituted to combat inflation has devastated the mortgage market. What money is available for the purchase of a new home is available at extremely high interest rates. Fiscal policies, such as tax incentives, could provide the necessary incentive to encourage the flow of savings back into the mortgage market and stabilize what is now a cyclical housing and mortgage market due to tight monetary policies and inflation.

We are in danger of losing our American tradition of becoming a nation of homeowners. The housing shortage that faces the country today is reaching emergency proportions. The way that we meet the challenge of more housing will shape the living environment to come.

Two major studies have concluded that over 26 million new homes will be needed in the decade of 1968–78. We must average 2.6 million new homes per year for the next decade to meet our housing requirements. This is double the rate of homes built in the past 20 years. It is unlikely that this year even 1.4 million homes will be started. By 1970, it is estimated that there will be a housing shortage of 1.8 million units.

Growing population coupled with inflation have created this shortage of homes. Nationwide, less than 1 percent of the homes today are vacant, the lowest figure in decades. This kind of trend is restricting the traditional mobility of our population as people are reluctant to move if adequate housing is not available.

The housing shortage is affecting the lives of all income brackets. House hunters are finding that houses are more expensive and the downpayment and monthly payments are becoming exorbitant. Downpayments have gone up as much as $2,000 on a medium price home in the past year and more where market conditions are tight. Mortgage interest has risen from an average of about 6.5 percent in 1967 to over 8.5 percent in recent months. For instance, on a $25,000 mortgage, the 1.5 percent rise in interest over last year's average, means the homeowner forks out an additional $20 to the monthly carrying cost.

In cities such as Cleveland, it is estimated that prices of homes have risen 10 percent over last year. Low- to middle-income families are being left high and dry because in most parts of the country houses in the $15,000 range are no longer being built due to the rising cost of homes.

Inflation has devastated the mortgage market. Tight monetary policy has almost dried up money available for financing the purchase of new homes, and that money which is available is at extremely high interest rates. Without money, buyers cannot purchase homes, and builders will therefore not build new homes.

Over 40 percent of the Nation's mortgage money is supplied by thrift institutions such as savings and loans and mutual banks. In the first 10 months of this year there has been a 44-percent reduction in the deposits of thrift institutions as compared with last year. These institutions are restricted by the Government to a maximum of 5-percent interest paid to the depositors. The present tight monetary policy has resulted in available cash being invested where interest rates are higher, resulting in a decrease of funds available for mortgages. Therefore most home buyers have difficulty in finding a lender with sufficient money to invest and the expertise to evaluate a mortgage.

I feel that the overall advantages of this bill would offset any potential disadvantages that might result from the loss of revenue to the U.S. Treasury. This bill counters inflation and offers incentives to meet the housing requirements of today and the future. Its counterinflationary factors are:

It reduces the costs of obtaining loans by reducing pressure for higher interest rates since money supply is being increased.

It reduces pressures inflating the costs of housing by bringing about a greater supply of houses on the market. Money going into housing is for permanent rather than consumable items, a noninflationary direction.

It encourages savings by individuals.

The bill hopefully will promote the free enterprise concept by encouraging private funds and initiative to meet the country's housing problems. This is preferable to costly Federal subsidy and control over housing.

REDS AID RALLY

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1969

Mr. BROYHILL of Virginia. Mr. Speaker, a friend of mine, Mr. J. A. Cheeseman, 2800 Quebec Street NW., Washington, D.C., has been visiting in California, and wrote me this week expressing his interest in how far more carefully documented is the reporting of the recent so-called moratorium on the west coast than in the Washington metropolitan area.

Mr. Cheeseman felt, and I agree, that not only the residents of the Washington area, but all who read this RECORD, would benefit from reading a series of articles by Francis J. McNamara, which appeared in the San Diego Union December 7 through 12 of this year. The articles follow:

HELPED ORGANIZE MORATORIUM—REDS' ROLE IN RALLY REVEALED

(By Francis J. McNamara)

(EDITOR'S NOTE.—On two occasions this fall, the Vietnam Moratorium signaled mass protests against U.S. involvement in Vietnam. In most instances, the moratorium movement sought what they termed "immediate withdrawal" of U.S. forces. Most participants sincerely objected to the war and were non-Communists. But Francis J. McNamara, former staff director of the House Committee on Internal Security, has written six articles which disclose the extent to which New Left and Communist organizations were closely involved in coordinating planning for the demonstrations.)

WASHINGTON.—The nation's capital is quiet and orderly again.

The rioting and violence have ended. The Nov. 13–15 anti-Vietnam demonstrations are history.

The American taxpayer will foot the bill for the damage to public property and the cost of the extra police, the National Guard and thousands of federal troops moved into Washington to preserve the peace.

TAXPAYER LUCKY

The taxpayer is comparatively lucky. Some Washington businessmen will pay twice—both taxes and immediate cash outlays to repair damage to their property.

Yet everything is as normal in Washington as it ever can appear to be in the capital.

However, things have changed and in ways that cannot be seen on the surface.

In mid-October, people all over the world heard that 500,000 Americans joined in a "moratorium" to oppose the U.S. military involvement in South Vietnam.

A month later, they heard reports that the largest "antiwar" demonstration in the history of the United States, staged for the same purpose, took place in Washington itself; that the American flag at the Department of Justice was pulled down and—if only briefly—replaced by the flag of the Viet Cong.

On the same day, Nov. 15, anti-U.S.-in-Vietnam demonstrations took place in many nations.

This was no coincidence. It was all carefully coordinated and aided by the international Communist propaganda machine. The desire was to project to the world the image of "people" everywhere assembling to protest often with violence, U.S. intrusion and war-making in Vietnam.

The United States has suffered a defeat as a result of this campaign. It is not only that Washington was damaged as a city, but that America was damaged as a nation, with all that implies in today's world.

Who was responsible? As one might expect many are blaming it all on the SDS Weathermen, the Yippies and a handful of other small revolutionary groups.

UNFAIR BLAME

That is oversimplifying. They could not have done it by themselves. And even if their members alone were responsible for every act of violence and destruction in Washington, it would be unfair to place all the blame on them. They merely did "their thing" when handed the opportunity.

The Washington "peace" rally and the violence that followed it comprised the most successful Communist united front operation to take place in the United States in many years. It was the result of months of careful planning and cooperative effort on the part of four organizations engaged in which they termed the "Fall Offensive Against the War in Vietnam."

The four groups are the New Vietnam (New MOBE) and its co-working Student Mobilization Committee (Student MOBE), Vietnam Moratorium Committee (VMC) and Students for a Democratic Society (SDS).

The New Mobilization Committee, technically the sponsor of the Nov. 15 Washington demonstrations, made many statements that it decried violence and wanted only a peaceful, orderly demonstration. The Student Mobilization did the same thing. The Moratorium Committee has always taken that position. SDS also promised it would not "instigate" violence.

REDS IN POWER

However, all the while they were making these statements, these groups were collaborating in an operation that would almost surely end in violence, largely because certain of their leaders wanted it.

David Dellinger, long the top official of new "MOBE," is a Hanoi-Havana visitor and served as the national coordinator of MOBE's Nov. 15 Washington-San Francisco Demonstrations. He made an inflammatory speech to more than 200,000 people at the Washington rally and then urged them to join him in marching on the Department of Justice, where, as had been announced, an "attack" was to take place.

The power spots in New MOBE are saturated with Communists and Hanoi sympathizers. If either of these Communist capitals had said, "No violence," there would have been none—at least not without a feud in MOBE that would have generated such heat the issue would have come to public attention. As it is, the contending (and cooperating) Moscow and Trotskyist Communists in the group had squabbled over lesser issues, such as program speakers.

QUIET FADING

By keeping the Oct. 15 moratorium peaceful to create the impression of belief in law and order, additional innocents were enticed into the climactic Nov. 15 action. Rioting and destruction in Washington itself following the huge rally would have far more worldwide propaganda value than the quiet fading away of 250,000 people.

The Nov. 15 demonstrations, climax of a three-day series of antiwar activities, were a Communist-engineered operation designed to serve the most important of today's Communist objectives—an immediate, uncondi-

tional pullout of U.S. forces from Vietnam so that Communists can take over the country.

U.S. WEAKNESS REVEALED

In retrospect, the most important fact about the demonstrations was the revelation of a weakness in U.S. ability to deal effectively with internal Communist subversion.

The plans for the Nov. 15 and earlier related demonstrations have been a matter of public record for almost five months. There has been no secret about the organizations involved, their nature, objectives, leadership and past records. Yet there was no revelation of Communist involvement until the time of the Oct. 15 moratorium when a few senators and representatives presented facts which indicated that Communists were entrenched in the fall offensive.

Even then these facts went largely unreported.

However, the October and November demonstrations became two of the most widely reported events of the year. Yet in few accounts did the word "Communist" appear.

PROBE KEPT SECRET

Antiwar and anti-draft demonstrations, on a smaller scale, took place four years ago. Then President Lyndon Johnson publicly expressed concern that well-meaning Americans might have been the victims of Communist exploitation.

He gave full support to a Department of Justice investigation to determine the role of Communists in the demonstrations.

The results of the investigation were never made public.

After MOBE's October, 1967, assault on the Pentagon, House Democratic floor leader Carl Albert said the marchers included "every Communist and Communist sympathizer who was able to make the trip." He also charged that the demonstration had been "basically organized by international communism."

Republican floor leader Gerald Ford then revealed that at a White House meeting President Johnson had read to him and other Republican leaders a secret report revealing that the demonstration was organized by international communism. He asked that the report be made public.

Attorney General Ramsey Clark visited Ford and said the report could not be revealed without compromising sources of information and creating a new wave of "McCarthyism." This claim was also made by Secretary of State Dean Rusk.

Ford argued that the American people were mature enough to receive such information without reacting hysterically.

He got nowhere. The report was not released.

The results of suppressing the truth about the 1967 demonstration were seen in November. Thousands upon thousands of idealistic, well-meaning young Americans turned out to support another operation by the same outfit—an operation designed to injure the United States and help its enemies, who are also enemies of all that the overwhelming majority of the demonstrating youngsters believed in. Thousands of adults were similarly misled.

RALLY INDORSED

The files of the FBI Central Intelligence Agency, congressional committees and police departments bulge with information about Communist involvement in the Nov. 15 and related demonstrations.

Compromising sources of information is a minor problem in this case—there is much that can be revealed without injury to any intelligence operation.

It would have been different if Sen. Eugene McCarthy, D-Minn., Sen. George McGovern, D-S.D.; and Sen. Charles Goodell, R-N.Y. had organized a rally of true dissenters, making it clear that they vehemently opposed, and would condemn, the Communist Viet Cong revolution in South Vietnam and North Vietnam's aggression against the south.

However, instead of this, the senators gave their indorsement and support to a demonstration which was corrupted with communism.

Just how deeply the radical left and Communists were involved, however divided they may be on various issues, can be documented.

IMMEDIATE PULLOUT SOUGHT—MORATORIUM LOST BACKING WHEN TRUE GOAL REVEALED

(By Francis J. McNamara)

WASHINGTON.—Millions of words have been spoken and written about the Vietnam Moratorium.

It has been the subject of television network specials, numerous editorials and columns and extended straight news coverage.

The first phase came on Oct. 15. Many people again stopped "business as usual" Nov. 13–15 to demonstrate against the war. David Hawk, one of the four initiators of the sponsoring Vietnam Moratorium Committee (VMC) also said it is a "safe assumption" there will be still another moratorium in December.

The Vietnam Moratorium Committee's original announced plans was to hold a moratorium every month that the war continues, extending it by one day each month. Then, if the war does not end by May, 1972, it would call for a complete shutdown of America. No one would do anything but protest the war, day in and day out, until every last American was pulled out of Vietnam.

This, of course, will never happen—and the VMC knows it.

ARGUMENT CONTINUES FOR WEEKS

Meanwhile, argument continued for weeks about the statements of the President and vice president on the original Oct. 15 moratorium. There was hot debate about whether it was good or bad, right or wrong, supportable or insupportable. Despite all the words, most people did not have the facts they need to make an informed judgment on the issue.

The purpose of this series is to give some background information about the VMC, its aims, similar groups, and key personalities.

What was Moratorium Day for?

A basic issue is the purpose and aim of the VMC and its moratoriums. There has been a lot of confusion about this. To help clarify it, Rep. John Anderson, R-Ill., called David Mixner, another of the initiators and directors of the Moratorium Committee, to get a clear statement of its objective.

Anderson wanted this statement because congressional supporters of the Oct. 15 moratorium had announced their intention of keeping the House of Representatives in session through the night of Oct. 14 in honor of the observance. The great majority of members opposed the move and eventually defeated it.

Anderson taped Mixner's answer to his question so that he could quote it with complete accuracy on the floor of the House. This is what Mixner told him: "We want out now, and this is not contingent on anything that Hanoi or the Viet Cong might do."

Has VMC told the public this is its aim? Let's look at the record.

TAKEN TO LARGER COMMUNITY

One of its first organizing efforts was a letter addressed to interns working for the government in Washington last summer. The letter said Moratorium Day in October would be held so people could spend the day working "to end the war."

Later, a "student call for a Vietnam moratorium" was sent to campuses throughout the nation.

The moratorium, it said, was for "taking the issue of peace in Vietnam to the larger community." (In an early mailing of this call, VMC said about 200 student leaders had signed it; in later mailings "about 500.")

A "faculty call," mailed later, said the moratorium was to "further build sentiments for peace" and to express "opposition to the prolongation of the war." More than 60 professors—called a partial list—were listed as signing this call.

A moratorium organizing memo, mailed in September, said participation in the moratorium is "a commitment to intense work and to peace." Another release, "The Vietnam Moratorium," said the moratorium "is an effort to maximize public pressure to end the war."

Then there were three full-page newspaper ads. The first ad said:

"What we are working toward, ultimately, is the largest and broadest antiwar movement ever seen in the United States."

The same statement of purpose was contained in the third ad. The only difference was that the word "ultimately" was left out.

NAMES OF 4 SENATORS LISTED

The second ad proclaimed that on Oct. 15 students and faculty would leave classes to talk about "the madness of Vietnam." The big eyecatcher, however, was this large, boldtype legend, "We Support October 15." Under it were listed the names of four senators—Charles Goodell, Mark Hatfield, Eugene McCarthy and George McGovern—followed by the names of 11 other persons of varied prominence. A brief statement by each one appeared under the name. At the bottom of the ad in small print readers were asked to work on Oct. 15 "for an early withdrawal of all our troops from Vietnam."

These ads were reproduced as VMC posters and distributed throughout the country.

A lettersize fold-over brochure prepared for Oct. 15 was the cheapest and therefore probably the most widely distributed VMC promotional item for M-Day.

It included the statement of purpose quoted above from the first ad. It also said:

"The Vietnam Moratorium Committee is an ad hoc group formed solely for the purpose of stimulating and supporting broad-based public action against the war in Vietnam." Note that word, "solely."

Sam Brown, VMC's chief spokesman, was interviewed on "Face the Nation" on Oct. 12, just three days before the first Moratorium Day. Facing a nationwide audience, he made conflicting statements about its purpose.

CHANGES POSITIONS ON WITHDRAWAL

First, he said it was "immediate withdrawal," and claimed several times that VMC had "consistently" said this. Later in the program he changed it to withdrawal "as rapidly as it is possible to do so." In answering a subsequent charge that VMC's aim was "vaguely stated," Brown again changed position and said withdrawal "no later than Dec. 1 of next year, and that is not immediate."

Yet the very next day Mixner told Anderson that the aim was immediate and unconditional pullout. VMC has been claiming ever since then that that is and has been its purpose. It is no wonder that even after Anderson quoted Mixner on VMC's aim, other congressmen who supported the moratorium rose to speak for it and made incorrect statements about its purpose.

There was much deceit in the way VMC promoted its October Moratorium.

Hundreds of thousands turned out on the Oct. 15 Moratorium Day in response to the VMC's broad and generalized appeals for "peace in Vietnam," ending the war" and an "early withdrawal" of U.S. forces.

How many would have responded if the VMC had honestly stated that Moratorium Day's purpose was to have this country's forces pulled out of Vietnam instantly and unconditionally?

SENATORS OPPOSE IMMEDIATE PULLOUT

I called the offices of the four Senators whose names appeared in the Oct. 8 ad as

Moratorium Day supporters. The same question was asked of each one: Does the senator support, or has he ever supported, an immediate, complete and unconditional pullout from Vietnam? In each case the answer was the same: "No."

Was the October Moratorium Day a success? It was and it wasn't.

VMC claimed that "millions" would observe the Oct. 15 Moratorium. Nothing like that happened. Most turnout estimates run to about 500,000, though VMC representatives have been reported as claiming over a million.

Regardless of the numbers, however, M-Day was a failure because the great majority who turned out did not support VMC's position and were not converted to it by the day's events.

Ironically, it was the VMC-enlisted big name speakers who guaranteed the failure. They spoke, one after the other, against VMC's objective.

Former Supreme Court Justice Arthur Goldberg called only for a "prompt and systematic withdrawal" of U.S. troops. Sen. Edward Kennedy, D-Mass., urged that all combat troops be withdrawn in a year and others by the end of 1972—a far cry from the VMC's demand.

FEW SUPPORT VMC POSITION

The Rev. Ralph Abernathy said that the only things to be discussed in Paris were "the safe exit of the Americans and political asylum for South Vietnamese who want it."

The VMC speaker list for M-Day contained the names of more than 175 persons who were scheduled to address observances. It cautioned that "not all" had endorsed the moratorium. Thirteen senators, 35 congressmen and about a dozen persons formerly prominent in government appeared on the list. Few support the VMC position. Most are on record as opposing it—and these were the speakers who attracted the largest audiences.

The nature of many M-Day activities also refutes the claim of its organizers that the day was a roaring success. Numerous observances were completely religious in nature, with no policy content at all. In quite a few cases, the "observances" were gatherings of schoolchildren.

Undoubtedly a number of speakers urged immediate withdrawal. Herbert Marcuse, philosopher of today's advocates of violence, was a scheduled speaker; so were far-leftist writer I. F. Stone, five of the persons now being tried in Chicago for conspiring to incite riots during last year's Democratic Convention, and others with lengthy records of activity in behalf of Communist front organizations.

No doubt, too, 95 per cent of those who favor a complete and unconditional withdrawal turned out on Oct. 15. The 5 per cent who didn't just couldn't make it for some reason or other. But there's every reason to believe that many speakers and the great majority of those demonstrating on M-Day did not favor VMC's position.

RED GROUPS AID MORATORIUM—MAJOR "FALL OFFENSIVE" A COMBINED OPERATION

(By Francis J. McNamara)

WASHINGTON.—The Vietnam Moratorium Committee (VMC) cannot claim sole responsibility for turning out hundreds of thousands of people on Moratorium Day, Oct. 15.

Nor could it make a similar claim when moratorium phase II rolled around in November, and thousands again turned out to protest the U.S. role in the war in Vietnam.

VMC had a lot of help in its operations and, without this help, nothing like what was seen on Oct. 15—and on Nov. 13–15—would have taken place. Many organizations have not received the recognition due them for such success as has been attributed to VMC's operations.

GROUPS LISTED

What groups are these? They are the teams playing in the "Fall Offensive" league with VMC. These other teams are the New Mobilization Committee to End the War in Vietnam, the Student Mobilization Committee to End the War in Vietnam and the Students for a Democratic Society (SDS).

Just what is the Fall Offensive?

It is a series of escalating "actions," as their originators call them, against U.S. involvement in the Vietnam war. Its full name is "Fall Offensive Against the War in Vietnam." The objective of the offensive was to exert such massive and intense pressure on the Nixon administration that it would abandon all effort to assist South Vietnam; it would pull out completely and immediately.

Many persons taking part in the Fall Offensive, unfortunately, did not realize its ultimate aim.

The program, worked out by the four groups last summer, was as follows (including minor changes since agreed upon):

Sept. 24—New Mobilization Committee—Chicago actions in support of the "Conspiracy 8," tried for conspiring to incite the riots during the 1968 Democratic Convention.

Oct. 8–11—SDS "Bring the War Home" actions in Chicago.

PROGRAM DESCRIBED

Oct. 15—Vietnam Moratorium Committee—Moratorium Day.

Oct. 25—New Mobilization Committee—Chicago actions in support of the "Conspiracy 8."

Nov. 8–15—SDS, Joe Hill Caucus—Week of local activity to promote Nov. 15 actions.

Nov. 13–14—Vietnam Moratorium Committee—Moratorium Days.

Nov. 13–14—New Mobilization Committee—March Against Death at Washington, D.C.

Nov. 14—Student Mobilization Committee—National student strike.

Nov. 15—New Mobilization Committee—Mass marches and rallies, Washington and San Francisco.

OVERSEAS, TOO

The Fall Offensive "actions" are not limited to the U.S. Moratorium Day, Oct 15, was observed in several places overseas, almost exclusively by U.S. citizens. For that reason, the demonstrations were few and small.

However, Nov. 15, the climax of the offensive, was different. Communist and radical groups in foreign countries were utilized and demonstrations were held in Paris and the French provinces, Italy, West Germany, Holland, Belgium, Norway, Sweden, Denmark, England, Australia, New Zealand and Chile.

The U.S. organizers of the Fall Offensive did not plan and coordinate all these foreign operations. They do not have the personnel, finances or resources. Outside help was given.

Some of the U.S. leaders of the Fall Offensive could tell you how, who, where and why.

If you asked, they would profess ignorance or come up with an amazingly simple explanation, such as: "Oh, people all over the world are so incensed about what the United States is doing to the Vetnamese people that, when they heard about our offensive, they decided that they had to do something to help."

WORK WITH REDS

Many Communists, America haters and Moscow, Peking, Castro, Hanoi and Viet Cong sympathizers took part in the Fall Offensive. The first thing that should be said, however, is that it is not claimed or implied that VMC, the sponsor of Moratorium Day, is Communist.

It is true that the VMC is working with Communists.

Many of the groups working with VMC in the Fall Offensive call themselves "peace" or "antiwar" organizations. They are neither. They are not pacifist. They are not antiwar as such. They have never condemned a Communist "war of national liberation."

Before discussing these groups, let's touch briefly on a bit of recent history. It will help us appreciate the full significance of the Fall Offensive and provide a framework for objective judgment of the VMC.

On Jan. 23, 1967, then-Rep. Edwin E. Willis, who was chairman of the House Committee on Un-American Activities, warned that "an assortment of Communists of both the Peking and Moscow varieties, fellow travelers, Marxists, radicals, pacifists and professional 'peace' agitators" had begun a "crash program" to undermine and sabotage U.S. resistance to Communist military aggression in Vietnam.

Their stepped-up agitation and propaganda campaign against American Vietnam policy, he said, would culminate in what they had designated "Vietnam Week," the week of April 8–15, 1967. Later, but before the event, the Willis committee published a report, "Communist Manipulation and Control of Vietnam Week," which revealed how Communists had initiated and controlled this operation.

With the exception of the newly formed Vietnam Moratorium Committee, the groups which organized Vietnam Week of 1967 are the same groups which organized the Fall Offensive.

MOBE CALLED MAJOR ANTIWAR GROUP—IT'S ON HAND WHENEVER THERE'S AGITATION, DEMONSTRATIONS

(By Francis J. McNamara)

The New Mobilization Committee to End the War in Vietnam, under a variety of names, has been in existence for a little more than three years.

First called the Nov. 8 Mobilization Committee, it was formed in Cleveland in September 1966 to make opposition to the Vietnam war an issue in that year's election.

It changed its name to "Spring" Mobilization Committee to End the War in Vietnam, while organizing Vietnam Week 1967. Several months after Vietnam Week it again changed its name and became the "National" Mobilization Committee to End the War in Vietnam, or "National MOBE."

MOBE, under its varied names, has been the country's major antiwar organization. It is an umbrella-type group, serving as the planner, director and coordinator of operations for the groups affiliated with it whose members provide muscle for its operations. Most of these are in the Communist front, Communist-infiltrated and radical-left category; a few are pacifist.

COMMUNISTS DOMINATE

A study shows that at no time since it was formed in 1966 has MOBE published propaganda or agitated on any issue that conflicted with Communist policies. The 1967 Willis Committee report found Communists "dominant" in MOBE when it was known as the Spring Mobilization Committee.

This is also true of New MOBE today.

New MOBE held a mass rally in Chicago Sept. 24, the opening day of the trial of the "Conspiracy 8," as those charged with conspiring to foment a riot during the 1968 Democratic Convention have dubbed themselves.

MOBE's special interest in the Chicago trial is based on the fact that six of the eight defendants are key MOBE activists. Dave Dellinger, New and old MOBE chairman, is also coordinator of the Washington and Chicago actions in the fall offensive; Tom Hayden, a founder of Students for a Democratic Society and of the new, secret Revolutionary Union, was a co-director of MOBE's 1968 Chicago Convention operation.

BACKGROUNDS GIVEN

Rennie Davis, also an SDS founder, worked with Hayden in 1968 as the other co-director for Chicago, was coordinator of the Counter-Inaugural and co-director for New MOBE's recent Chicago demonstration. Jerry Rubin, Yippie founder, served as coordinator of MOBE's 1967 Pentagon confrontation. John Froines, assistant professor of chemistry at the University of Oregon, was on the MOBE staff during the '68 convention, as was Lee Weiner, a Northwestern University graduate student working toward a doctor's degree in sociology.

The other two original defendants were Bobby Seale, California chairman of the Black Panthers, since convicted of contempt of court, and Abbie Hoffman, another Yippie leader. Both have been MOBE collaborators, though not officials.

New MOBE was the sponsor of the two big events in the fall offensive, the March Against Death at Washington, D.C., and mass marches and rallies in Washington, D.C., and San Francisco.

New MOBE conceived and launched the fall offensive Against the War in Vietnam under its former name, National MOBE.

This was accomplished by having a number of its key leaders enlist the cooperation of a few other "peace" activitists in issuing a call to a National Antiwar Conference which was held in Cleveland last July 4–5. The conference was hosted by the Cleveland area Peace Action Council, a MOBE affiliate and the organization that sponsored the September 1966 meeting at which the original MOBE was formed.

NOT COMPLETELY RED

Is New MOBE Communist? Not completely—because the Communists don't want it that way. There just aren't enough full-fledged party members in this country—even when you put the Muscovites, the Pekingese, the Trotskyists and all the splinter groups together—to put on a demonstration of such proportions that it could have national and international importance.

The Communists want impact. To get that they need two things, respectablity and numbers.

How do they get these? By enlisting non-Communists in their operations—many of them: the 100 per cent fellow travelers who can always be counted on to rally to the cause, as well as the lesser fellow travelers who will respond on certain issues; the independent radicals and extremists, the non-party Marxists, the far-out pacifists (particularly useful for "peace" operations), the malcontents and anyone else they can coax, cajole or hoodwink into working for their cause.

MANY FRONTS

Some of the "respectables" they enlist are always pushed to the forefront of their maneuvers and given impressive titles to provide cover for the more unsavory elements and the Communists, open and secret, who share power in the organization with them.

When MOBE originally was formed, there already were many fronts in existence, some formed for the specific purpose of agitating and propagandizing against this country's efforts to prevent a Communist victory in Vietnam. In addition, the outcome of the Vietnam war is tremendously important to world communism. There is more at stake than just South Vietnam. The issue is so vital to Communists of all types that competing groups (Moscow, Peking, etc.) were willing to forget their ideological and tactical differences to unite for the common good.

Do Communists dominate the MOBE coalition? Consider these facts:

The following are some of the many persons, all identified or professed Communists, who were associated with the Cleveland Antiwar Conference at which New MOBE was ostensibly formed and/or are now serving New MOBE in one capacity or another:

Arnold Johnson, legislative representative and public relations director of the Communist Party, who was imprisoned for conspiring to overthrow the United States, and who has been with MOBE since its founding three years ago.

Prof. Sidney Peck of Case-Western Reserve University, a veteran MOBE official.

Irvin Sarnoff, leader of the Peace Action Council in California, who has served on the District Council of the Southern California Communist Party.

DENIED PASSPORT

Otto Nathan, who was denied a passport by the State Department some years ago on the grounds he had been a party member in Germany and invoked the Fifth Amendment in 1956 rather than tell a congressional committee if he was then a party member.

Jack Spiegel of the Chicago Peace Council, who has run for public office on the Communist ticket.

Leroy Wolins, leader of the Veterans for Peace in Vietnam.

Dorothy Hayes, active in the Women's International League for Peace and Freedom and Women Strike for Peace.

Phil Bart, long associated with the Daily Worker who is now chairman of the Ohio Communist party.

Ishmael Flory of the Afro-American Heritage Association in Chicago.

Also involved are International Longshore Workers Union official Louis Goldblatt and party members such as Ben Friedlander, Hershel Walker, Orville Leach, Elliot Waxman and Anne Braden.

The Communist party's youth group, the Du Bois Clubs, are represented by Gene Tournour, their national secretary, and by Jay Schaffner and Marc Beallor.

Dave Dellinger, veteran MOBE official, held the key post of coordinator of the Washington-San Francisco November demonstrations. Dellinger is often described as a pacifist, though he told the House Committee on Un-American Activities last year he is not one and has stated (in May 1963) that he is a Communist, but not of the Soviet variety.

RIVAL REDS

The Trotskyist Communists, rivals and generally more radical, are represented by their long-time leader, Fred Halstead, and also by Harry Ring, Lew Jones and Gus Horowitz. Their youth group, the Young Socialist Alliance, has an official voice in running New MOBE through Larry Siegle, its national chairman and editor of the YSA magazine, Young Socialist, also in Peter Vinther, Allan Myers, and Carol Lipman, all of whom serve on New MOBE's steering committee.

Key MOBE leaders, it is important to remember, have been frequent visitors to foreign Communist capitals such as Hanoi, Havana, Prague and Moscow. Examples are Dellinger; Tom Hayden; Rennie Davis and Prof. Robert Greenblatt.

Greenblatt, a New MOBE steering committee member, went to Europe last year where he met with Viet Cong and North Vietnamese agents. He carried with him a note of introduction from Tom Hayden, MOBE's Chicago Democratic Convention project co-director, to Col. Lau of the North Vietnamese army, who was deputy chief of Ho Chi Minh's Paris negotiators at the time.

The letter explained that Greenblatt had just returned from Hanoi, that he was a National MOBE coordinator, worked closely with Dellinger and Hayden and would be in Paris for a few days in case there were "any pressing questions" Lau might want to discuss with him. Hayden, who had first met Lau in Hanoi, closed his note to Lau with these words: "Good fortune! Victory!"

TASK "VERY CLEAR"

"The task before the New MOBE is very clear," says New Mobilizer, the VMC voice; in addition to demanding the "immediate and unconditional" withdrawal of all U.S. forces in Vietnam, it must further insist that there be "no future wars of intervention at home or abroad against oppressed and exploited people who are asserting their rights of self-determination in the quest for human liberation."

New MOBE considered Moratorium Day and other Washington actions in the Fall Offensive so important that it moved its national headquarters from New York to the nation's capital to be on the scene and in the best possible position to lend assistance. It rented space in the same building with the Vietnam Moratorium Committee, on the floor immediately above its offices.

STUDENT MOBE LINKED WITH ACTIVITIES OF REDS

(By Francis J. McNamara)

The Student Mobilization Committee to End the War in Vietnam, usually referred to as the Student Mobilization Committee (SMC) or "Student MOBE," describes itself as "the national organization of all high school and college students who are united in uncompromising struggle against the war in Vietnam."

Unlike the Vietnam Moratorium Committee (VMC) it does not mince words in proclaiming precisely what it stands for: "Our program is clear and straightforward. We are for the immediate and unconditional withdrawal of all U.S. troops from Vietnam."

Student MOBE's prime role in the Fall Offensive was to organize a national student strike against the war on Nov. 14, the second day of the November Moratorium and the same day New MOBE began its March Against Death in Washington.

PROMOTED BY RED

Student MOBE grew out of a proposal made by Bettina Aptheker, of Berkeley Free Speech Movement fame, that a nationwide student strike against the war be held in 1966. Daughter of the Communist party's chief theoretician, she was a professed party member herself at the time and was elected to the party's national committee in June, 1966.

She promoted her strike concept at the 1966 SDS national convention and in publications and gatherings of the Communist party's youth group, the W. E. B. DuBois Clubs of America. Her organizing efforts led to the issuance of a formal call to a student strike conference which was held in Chicago in December, 1966.

The conference organizers, Bettina Aptheker and other Communists among them, made no secret of the fact that the full spectrum of Communist groups in the United States was represented at the gathering. To those attending, it also was obvious that the representatives of these groups played key roles in the proceedings.

Among them were the Communist Party USA and its youth organization, the W. E. B DuBois Clubs; the Progressive Labor Party which represents the Chinese wing of the U.S. Communist movement; the Socialist Workers party, the Trotskyist Communist organization, and its youth arm, the Young Socialist Alliance (YSA).

Youth Against War and Fascism, the youth group of a Trotskyist splinter movement, the Workers World party, also was present. Students for a Democratic Society and various Communist front organizations were represented.

STRIKE REJECTED

Bettina Aptheker's strike proposal failed to win approval at the meeting—primarily because the delegates doubted they were capa-

ble of successfully organizing a national strike in the near future. Student MOBE, however, was born at this conference.

Since its formation, Student MOBE has served as the right arm of the name-changing adult MOBE, organizing student support for Vietnam Week, the Pentagon confrontation, etc. It also has undertaken various projects of its own—an April, 1968, student strike against the war, for example, in which it claims (with great exaggeration) that about one million took part.

It boasts of its past harassment of President Johnson. "We demonstrated wherever Johnson went until the antiwar movement forced Johnson to go everywhere unannounced."

Now President Nixon is its target. "We have announced our plans to do the same to Nixon. There will be no peace for Nixon until all the troops are brought home."

UNITED FRONT GROUP

In announcing its "No Peace for Nixon Campaign" on Sept. 29, SMC promised to demonstrate at every public appearance the President made until he directed a complete, immediate and unqualified withdrawal of all U.S. forces from Vietnam.

Student MOBE also promotes antiwar agitation and propaganda within the armed forces. For this purpose, it has formed the GI Press Service, edited by Allan Myers, a SMC member, former serviceman, and a member of the Trotskyist Young Socialist Alliance who also serves on New MOBE's steering committee.

From birth, Student MOBE has been a united front organization, a combine of various groups, many openly Communist, uniting their efforts to draw as many youths as possible into the anti-Vietnam War Movement. About a year and a half ago, however, an important change took place. As a result of a long-simmering feud, the Communist party element walked out in a huff, leaving the young "Trots" in command. As J. Edgar Hoover stated earlier this year, Student MOBE "is controlled by members of the Young Socialist Alliance, the youth group of the Socialist Workers party."

Carol Lipman, SMC executive secretary, is the key to YSA control of Student MOBE. A leading YSA member, she serves on the editorial board of Young Socialist, the group's official publication. Miss Lipman also serves on the steering committee of New MOBE.

SDS TAKES OVER

Student MOBE held an antiwar conference in Cleveland on July 6 of this year, the day immediately following New MOBE's gathering. At this conference, according to the Militant, the Trotskyist Communist newspaper, it voted to enter "into building the fall antiwar offensive" which was described as "an ambitious plan to build the most massive and intensive series of antiwar actions yet."

An interesting development took place at this conference. SDS has generally kept itself aloof from formal cooperation with the activities of Student MOBE and similar groups in recent years, although it has permitted its local chapters and individual members to participate on their own if they so desire. An SDS delegation appeared at SMC's Cleveland conference, however, interrupted the proceedings by chanting "Ho, Ho, Ho Chi Minh" and "Dare to Struggle Dare to Win," and then marched up to the podium and took over the microphone.

In a more cooperative mood, the Student MOBE'rs, at the request of the SDS delegation, added an SDS workshop to their agenda.

The Student MOBE conference voted to work on a fall offensive that coincided, point-by-point, with the Fall Offensive approved by New MOBE the day before.

Recounting the action taken at Student MOBE's Cleveland meeting regarding the various operations in the Fall Offensive, the Militant reported: "SMC will also help build the nationwide moratorium against the war, planned by the Vietnam Moratorium Committee for Oct. 15; leaders of SMC and the Moratorium Committee agreed to cooperate in getting the participation of hundreds of thousands of students."

CLAIMS 1,500 BRANCHES

How strong is Student MOBE? How big a role did it play in turning out students for Moratorium Day? It is difficult to say and no one knows exactly. Carol Lipman has claimed SMC has about 1,500 branches. On the other hand, Don Gurewitz, 23-year-old SMC organizer and Case-Western Reserve grad, has given the number of local branches as 1,000—and that may be an exaggeration.

Student MOBE, like New MOBE moved from New York to Washington to be where the key action in the Fall Offensive would take place.

Carol Lipman addressed two Oct. 15 Moratorium gatherings—the Wayne State University and Detroit citywide rallies. She called the President a liar and added:

"We will force Nixon's abdication like we forced Johnson's abdication . . . There will be no peace for you, Mr. President, until . . . all our men are home."

She also had a reply to the vice president's statement that Moratorium leaders and sponsors should repudiate the message of support from the premier of North Vietnam. "No, Mr. Vice President Agnew, we won't repudiate the message . . . We welcome the message."

If you wonder about the violence that took place in Washington Nov. 14 and 15, consider what one of its own members has said about the nature of the Young Socialist Alliance whose members, as Student MOBErs, turned out en masse for the actions on those days.

EX-DU BOIS MEMBER

YSA member Jose Rudder, by his own admission, is a former member of the DuBois Clubs and their parent organization, the Communist party. He left them "greatly disillusioned about the whole left." Then he began to read the literature of the YSA and its parent body, the Socialist Workers party. He came to this conclusion:

"I was a Marxist, a Communist, and I believed in the revolution . . . The only organization that I could see that was concerned about . . . seeing the revolution take place in this country was the YSA. So I decided to join."

There have been two significant changes in Students for a Democratic Society (SDS) since its informal participation in Vietnam Week, 1967.

First, Communist penetration of the organization, particularly by the Peking-oriented Progressive party (PLP), has become more and more evident. At the June, 1969, SDS convention, the PLP made an unsuccessful bid to take over the organization. This led to the splintering of SDS into two factions, the more radical Weathermen group and the Revolutionary Youth Movement II. The PLP element, now known as SDSPL, was expelled and is now a separate group with its headquarters in Boston.

The second change in SDS has been a marked trend toward violence, particularly involving explosives. SDSers in a number of areas have been arrested for bombings and one is now on the FBI's most wanted list for blowing up high voltage towers supplying power to a Colorado plant manufacturing helicopter armor and missile parts.

BRANDED BY HOOVER

In the FBI's annual report for fiscal 1969, J. Edgar Hoover wrote: "The militant core of New Left extremism is the Students for a Democratic Society (SDS). During the last year, this group has reflected an ever-increasing Marxist-Leninist revolutionary posture. Several SDS leaders publicly identified themselves as revolutionary Communists. The SDS openly espouses the overthrow of our institutions of free society (called the 'Establishment') through violent revolutionary action. Never before in American history has there been such a strong revolutionary Marxist movement of young people so eager to tear down established authority."

SDS delegations took part in the Cleveland conferences on both New and Student MOBE, where the actions in the Fall Offensive were planned.

An SDS delegation also spent eight days conferring with Viet Cong agents in Havana early last July. The Vietnam war was a major topic of discussion. The delegation came back to this country resolved "to establish another front against imperialism right here in America—to 'bring the war home.'"

"BRING WAR HOME"

The one action SDS was responsible for in the Fall Offensive, the Oct. 8–11 demonstrations in Chicago, was carried out under the slogan "Bring the War Home!" As expected, the action was marked by destruction, violence, injury and scores of arrests. In a brutal attack, one SDSer broke the neck of a Chicago city attorney. He has been charged, among other things, with attempted murder.

The violence was primarily the work of the ultraradical Weathermen faction of SDS. It was denounced by the Revolutionary Youth Movement II and the Black Panthers and Young Lords, who also had taken part in the action.

The dominant Communist elements in both New and Student MOBE are more concerned about SDS' stand-offishness, the refusal to cooperate with other organizations. They also are annoyed by the tendency of the Weathermen faction to engage in what they consider senseless and counterproductive violence.

The Communist newspaper, the Daily World, published an editorial "Memo to SDS" shortly after the October Moratorium. It criticized SDS for "looking on from the sidelines" at "the very moment of the greatest mass turnout . . . for peace and against imperialism." It also hit SDS for its useless, damaging, "thoughtless" tactics and closed with these words:

"In the coming struggles . . .

the masses of American working men and women could use your help and support. Think it over."

SIZE VITAL FACTOR

SDS' size has been an important factor in the yearning for its help. It is by far the largest of the New Left groups (claiming 40,000 members in some 250 chapters) and its membership greatly exceeds that of any Communist party or front in the country.

SDS participation in any "mass" left-Communist demonstration is still important to an impressive showing.

As was true in the case of past MOBE mass demonstrations, individual members and chapters of SDS turned out with a will for the November actions. Even the Weathermen gave their formal cooperation—and promised no violence. Amazingly, their promise was believed by some officials.

MORATORIUM GROUP LEADERS CALLED PRO-VIET CONG

(By Francis J. McNamara)

The Vietnam Moratorium Committee (VMC) is the babe-in-the-woods of the Fall Offensive, both from the point of view of its existence as an organization and the age of its leaders.

It was formed in June of this year. Two of its four leaders are 26-year-olds; one is 24 and another, the lone female, is 23.

Sam Brown has been the group's chief spokesman. His fellow VMC founders and coordinators are David Hawk, David Mixner and Marge Skenclar.

Brown and Hawk are ex-divinity students (Harvard and Union Theological, respectively). Brown, Mixner and Miss Skenclar worked in Sen. Eugene McCarthy's '68 campaign, and both Brown and Miss Skenclar in the "Dump Johnson" movement. Brown, Mixner and Skenclar have held positions with the National Student Association (Brown is currently on its national supervisory board). Brown and Miss Skenclar were active in the 1967 anti-Viet war operation called Vietnam Summer.

BOOK BY WHITE

In his latest book, Theodore White, the recorder of recent presidential campaigns, quotes Brown as saying:

"We've recognized the true nature of the United States. We saw the United States attack Cuba, it attacked the Dominican Republic, it attacked South Vietnam. The Communists are now a fragmented force; the United States is now the great imperialist-aggressor nation in the world."

That is not a pro-Communist statement. It indicates a distaste for imperialism and aggression and at least indirectly, recognizes that Communist powers have been imperialists and aggressors in the past. Nevertheless it is a demonstrably false statement—a reflection on Brown's knowledge and thus on those who follow his policy recommendations.

More damaging to Brown is a statement made by Dr. Martin Abend (Metromedia TV news commentator) in his Oct. 12 broadcast. Abend, also a professor of political geography at New Jersey State College, said that Sam Brown favors a Communist victory in Vietnam.

Brown's pro-Viet Cong views, Abend believes, explain his "keen interest" in having the United States pull out of Vietnam immediately and unconditionally.

VARIED ASSORTMENT

As previously mentioned, Brown and Marge Skenclar were associated with the 1967 Vietnam Summer project, another anti-Viet War operation that was supported by a varied assortment of radicals and leftists that included Lee Webb, former national secretary of SDS; Mike Ansara of Harvard SDS, and Richard Fernandez, who has served as sponsor, treasurer and steering committee member of the Committee to End the War in Vietnam (MOBE) in various phases of its transition from "November 8" to "Spring," "National," etc.

President Nixon's statement that U.S. policy regarding Vietnam would not be influenced by the moratorium or other street demonstrations Brown found "deeply disturbing." It was "surely unintended;" the President "cannot mean" what he said. It was "distressing . . . the degree of isolation" it reflected, a "rigid stance" and he surely hoped the President would not "further isolate" himself from the American people.

David Hawk, Brown's right-hand man, was an All-American diver at Cornell where he obtained a B.A. degree in social sciences before going on to Union Theological Seminary. He did voter registration work in Hattiesburg, Miss., and also helped organize the Mississippi Freedom Democratic Party, which challenged the regular Democratic party delegation's seat at the Atlantic City convention.

He worked for SNCC again in Georgia in 1966—voter registration work and organizing a tenant's union in a low-cost housing project.

RESULT OF WORK

Though Stokely Carmichael was prominent in Students Non-Violent Coordinating Committee (SNCC) at this time and engaged in inflammatory racial agitation, Hawk says he did not know him.

Earlier this year, working on the staff of the National Student Association (NSA), Hawk organized a draft resistance campaign among campus leaders. The result of his work became evident on April 22 with the public release of a letter addressed to President Nixon and signed by over 250 student body presidents and campus newspaper editors from 190 colleges and universities.

The letter proclaimed the signers would refuse to be drafted, even if it meant going to jail. They could see no justification for the war in Vietnam. Therefore their "integrity and conscience" would not permit them to accept military service.

Hawk admitted to me that he had worked on this project on NSA time and using NSA facilities. I asked if there had been formal NSA approval of it. He said there had not been but that NSA had adopted a resolution against the draft three years ago. When I asked if the resolution approved defiance of the draft, he said it did not. "But it clearly gave a mandate for the letter," he claimed. He pointed out that the letter was not illegal—just saying you will defy the draft at some future time is not a crime.

"A CYNICAL ATTEMPT"

Hawk had been indicted for refusing to report for induction earlier this year. Recently, a pretrial motion to dismiss the charges against him was rejected.

Like Brown, Hawk has a problem seeing integrity or good in the U.S. government. The present draft law admittedly contains inequities. Congress has been wrestling to reform it for years. Yet when the President announced new draft reform measures, temporary draft suspensions, and additional Vietnam troop withdrawals in September, Hawk saw these only as a "cynical and calculated attempt to fool the public."

VMC is against more than the war in Vietnam. It has advocated a general assault on this country's over-all defense organization. Its July 8 letter to government summer interns said that while they worked to build up support for the October moratorium "other antiwar activities . . . will, of course, continue."

What "other" activities? The letter spelled them out—"against the draft, ROTC, ABM, CBW, counter-insurgency research, and so on."

David Hawk announced on Oct. 9 that VMC would distribute throughout the services a GI referendum which would ask servicemen this question: "Should the United States bring the rest of the GIs home from Vietnam now?"

NOT BEEN TOLD

The full story of this VMC effort to promote antiwar propaganda and agitation within the armed services has not been told. Here it is:

On Sept. 29, the VMC addressed a letter to "GI Newspaper Editors," bringing the Fall Offensive and Moratorium Day to their attention and asking their help in organizing GI participation in a "recurring moratorium." The Oct. 15 demonstration, the letter pointed out, would help build a two-day moratorium in November and give the GIs the chance to focus "legal opposition" to the war on military bases.

"We realize that GIs cannot go on strike," the letter said. It also pointed out that a recent DOD directive banned antiwar meetings as such. Therefore, it suggested, say the directive is not clear and ask permission to hold a basewide meeting to discuss GI constitutional rights in the light of the directive. Ask the commanding officer or one of his subordinates to address the meeting—and put him on first if the invitation is accepted.

"Call Us Collect," VMC said, for legal help and outside civilian support if you have trouble getting permission.

OPEN FORUM

If permission is denied, let us know and we will try to arrange an off-base meeting. If a meeting is approved: "We suggest that this meeting be an open forum for ideas on what GIs can legally do to protest the war. Be sure to start by covering exactly what are your rights . . .

"Certainly you will want to discuss the calendar for the 'Fall Offensive' and provide literature about events scheduled in the next two months. We will see that this information and material is provided."

A list of suggested on-base actions followed: pass base resolutions on the war; see chaplain to get a CO application; change insurance beneficiaries to include a "peace" organization; send telegrams to government officials; hold a fast; boycott products of "right-wing," "pro-war" companies (Schick Razor, which has given free razors to servicemen, was named as an example). Finally, there was this suggestion:

"Cancel those damn savings bonds."

"A GOOD FRIEND"

VMC's GI referendum ballots, the letter said, would be returned to Seaman Roger Priest. Priest faces a general court-martial on charges of soliciting servicemen to desert and commit sedition, and promoting disloyalty and disaffection in the armed services. The charges are based on articles published in his "underground" GI newspaper, OM, The Serviceman's Newsletter.

I asked Hawk what GI newspapers the VMC letter had been sent to. Hawk replied, "All of them; as many as there are." What kind of papers? The underground ones. Where did he get the names? Answer: From Carl Rogers, of Servicemen's LINK to Peace, "a good friend of ours who works downstairs."

What is Servicemen's LINK to Peace? I was told, "it helps GIs in incidents—like the Priest defense, publicly and so on."

Hawk indicated a copy of the GI referendum ballot pasted on the wall. I noted that it did not have VMC's name on it. Hawk agreed.

Carl Rogers is on the Steering Committee of Mobilization Committee to End the War (New MOBE) as head of Servicemen's LINK to Peace, one of MOBE's newly acquired "GI organizations." He is also the head of a group called the Committee For the Presidio '27, set up to defend military prisoners in the stockade at San Francisco's Presidio who were accused of mutiny. Both of these organizations have their headquarters at 1029 Vermont Ave. in Washington, the same building that houses VMC, NMC and SMC.

"POLITICAL" CLASS

The "underground" GI newspapers to which VMC mailed its referendum are not, like the civilian type, largely pornographic. They fall into the "political" and subversive class—filled with antiwar propaganda of the type disseminated in Roger Priest's OM.

Student MOBE's GI Press Service, run by the young Trotskyist, Allan Myers, recently circulated a list of these "GI Antiwar Papers." There were 42 on the list, most of them distributed from post office boxes near military bases. Four were published abroad. Myers is on the New MOBE steering committee with Hawk and Rogers.

It was Rogers who arranged a meeting between Hawk, a score or so of other VMC workers and Sen. Charles Goodell (R-N.Y.) in a New York apartment last Sept. 13. The result: the introduction of Sen. Goodell's resolution calling for the withdrawal of all U.S. troops from Vietnam by the end of 1970. Hawk said he and Rogers were the only New MOBE representatives at the meeting.

On a recent visit to New MOBE headquarters I was told 100 organizations had joined

the organization, despite the fact that New MOBE leaders have been reported as claiming only 60.

When I went to see David Hawk I knew that New and Student MOBE had made a big push for Oct. 15.

ADVANCED ARTICLES

In addition to the thousands of leaflets, brochures and posters distributed, New Mobilizer had featured advance articles on Moratorium Day by VMC leaders such as David Mixner and Marge Skenclar. The Communist party, the Socialist Workers party, their youth groups and other Communist organizations affiliated with New MOBE had also gone all-out for Moratorium Day.

Published reports that VMC had its own organizers in the East but had used MOBE organizers in the West and Midwest were mentioned and Hawk was asked how many New MOBE organizers VMC had used.

His reply contradicted his earlier claim that MOBE organizers had not made any difference: "It's not like theirs and ours . . . in the big cities MOBE has the old sectarian left groups . . . a lot of the New MOBE groups are on the moratorium steering committee and on MOBE's so the same people—Clergy and Laymen Concerned and Women Strike for Peace—are working for the Moratorium Committee. . . . Most organizers worked for both."

LATER POINT

Hawk said the VMC founders had come to Washington with an organizing list of 15,000—Kennedy and McCarthy businessmen and contacts, people who had worked for causes, etc. They, too, had been used. But it was clear that MOBE organizers and Communist MOBE organizations had played a very important role in promoting the Oct. 15 turnout.

This was emphasized at a later point when Hawk was asked about the question of Communist influence in MOBE and the Fall Offensive. He deprecated the influence of the Communist party.

"They don't really have any control. That comes from groups that bring prestige, influence, money."

"Which ones?"

"Women Strike for Peace, Clergy and Laymen Concerned about Vietnam, SANE, New Democratic Coalition, Student MOBE. . . ."

When Sam Brown was asked about VMC association with Student MOBE on "Face the Nation," he replied: "We have no association with the Student Mobilization Committee."

Hawk was asked whether he considered Communists enemies of, or a danger to, this country and if he believed in working with them. He answered:

"We do not recognize New MOBE as Communist, nor is Student MOBE, though it is true that the Communist party of the U.S., which is defunct and harmless, more conservative than most New Left groups, has one vote on the steering committee of 70 members (of New MOBE). That is the extent of Communist input in New MOBE."

The issue of communism is "irrelevant; it's an attempt to slander the patriotism of those against war."

What about the Trotskyist influence added to the CP, doesn't that concern you?

"Concern, yes, sure . . . But there's much overlap in the group. New MOBE's center of gravity is a bit to the left of us. Some in New MOBE do not believe in electoral politics. Our center of gravity is people who believe in electoral politics."

The moratorium committee, like New MOBE, has denounced the November violence and said it was not responsible for it.

DAMAGES, INJURY

But this does not clear it of blame for the damages and personal injury to young demonstrators, many of whom were enticed into going to Washington and San Francisco through its earlier moratorium organizing efforts and subsequent direct appeals.

Immediately after the October moratorium there were press reports that serious doubt existed about VMC support for New MOBE's November actions because of the presence of "radicals" in MOBE. It was difficult to believe them. There had been such close ties between the groups and VMC owed so much to SMC and NMC for their help that if they did not reciprocate, they would have been denied any further assistance for future moratoriums, which would hurt VMC badly. Not surprisingly, the alleged doubt was resolved by a VMC decision to help MOBE.

On Oct. 28, VMC sent a letter to its organizers, affiliates and "friends" announcing that the November moratorium would take place on the 13th and 14th. The letter called attention to New MOBE's March Against Death and added that "Many supporters of the moratorium will be participating in this solemn event."

VMC persisted in its support of New MOBE's Washington action, even after it became known that the Weathermen faction of SDS and other violence-prone and revolutionary groups would take part in it.

BULLETS ALONE WILL NOT WIN VIETNAM-TYPE WARS

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, December 17, 1969

Mr. MILLER of California. Mr. Speaker, the Alameda, Calif., Times-Star carried an editorial recently by the distinguished correspondent, Ray Cromley, entitled "Bullets Alone Will Not Win Vietnam-Type Wars."

I know of no man more capable of making a judgment in this field than Ray Cromley. His long experience in the Orient before and during World War II has given him the understanding that few have of how to deal with the people in that area of the world.

I congratulate the Times-Star for placing this article on its editorial page.

The editorial follows:

BULLETS ALONE WILL NOT WIN VIETNAM-TYPE WARS

(By Ray Cromley)

An Army captain, adviser to the district chief in Duc Pho, not too many miles away from the reported massacre at My Lai (Song My), rides in his jeep talking to an associate. He accidentally runs down a chicken. Immediately he turns around, drives back to the hamlet he has just passed through, finds the chicken's owner and apologizes in Vietnamese. He offers to pay. But the farmer says: "No, that's all right." and thanks the captain profusely for caring. The captain says he won't give him money for the chicken, then, but perhaps he can give him a little toward buying a pig.

At the other end of South Vietnam, down toward Ca Mau, an Army truck stalls in the mud and, in getting out runs off the road and destroys a part of a rice field. A major gets out of his vehicle, finds out who owns the field and says, since he is responsible for the damage, it is his responsibility to reimburse the farmer for the loss.

From then on, wherever this unit goes, the word spreads out ahead that "the unit with a heart for the people" is coming.

The contrast between these incidents and what reportedly occurred at My Lai (or Song My) is not only the difference between decency and savagery, it is the difference between winning and losing a war as well.

For the military logic of Vietnam-type wars is that they are not won primarily by bullets (though bullets may be very necessary at times). They are won primarily by incidents such as the episodes above. They are lost by massacres, by calling native people "gooks" or "slopes" or "dinks" and by other acts that show disdain for the dignity and lives of the people living there.

In this type of a war, an army cannot win if it loses sight of its main objective—preserving the people it is there to defend.

Civil action at its best (as the defeat of Che Guevarra in Bolivia proves) is not an incidental good will gesture. It is a basic element of victory.

It may mean the difference between a local government that can stand on its own feet as a visible, democratic entity able to handle subversive totalitarian insurgencies and a country so divided it will crumble regardless of how many U.S. troops are deployed.

Respect for the Vietnamese is not a matter only of good will. It may mean, for example, being informed beforehand by the local citizenry of enemy ambushes . . . or not being informed and falling into VC traps.

As a guerrilla in World War II, this reporter lived behind enemy lines only because he had the support of the local people. If that support goes, a guerrilla is dead.

This friendship with the people (by both Americans and Vietnamese officials) can destroy the very will of the Viet Cong to fight. For a guerrilla cannot operate in a community united against him.

But disdain for local people can make new converts for the Viet Cong faster than bullets can kill VC troops.

COLLUSION AMONG ELECTRIC UTILITIES

HON. LEE METCALF

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, December 17, 1969

Mr. METCALF. Mr. President, on April 24, 1969, 84 electric utility executives gathered at the Northstar Inn in Minneapolis. They represented eight major utilities, the leadership of the industry in the region stretching from Illinois to Montana. They came to attend a municipal seminar sponsored by the North Central Electric Association.

For a number of the executives, the meeting offered an opportunity to renew old acquaintances with men they had planned with at previous municipal seminars. They had gathered at the inn on June 6 and 7, 1968, and on June 8 and 9, 1967. They had met back in April 1966, at Hopkins House, at the intersection of Highways 7 and 494 in Hopkins, Minn. Their North Central Electric Association was 12 years old now, having been formed in 1957, in Minneapolis, "to advance the art and science of the production, distribution and use of electricity for light, heat, and power for public service" in Minnesota, North and South Dakota, and adjacent States.

Two of the companies represented at this year's seminar—Northern States Power and Otter Tail Power—serve portions of Minnesota and both Dakotas.

Of the 84 participants, 50 men came from Northern States Power. One company, Montana-Dakota Utilities, serves portions of those three States and also eastern Montana. Interstate Power serves parts of Illinois, Iowa, Minnesota, and South Dakota; Iowa Public Service serves portions of Iowa and South Dakota. The service area of Black Hills Power & Light covers areas of both Wyoming and South Dakota. Two of the participants confine their electric service to two States. They are Northwestern Public Service, which operates in South Dakota, and Minnesota Power & Light. A Wisconsin Utility, Superior Water, Light & Power, had sent representation to the 1967 and 1968 meetings.

The program in 1967 was typical of the annual seminars. Presidents, vice presidents, and division managers of the member utilities and General Electric discussed various aspects of the perennial subject, municipal; that is, city-owned, electric systems. Members divided into study groups, then reassembled to hear findings and conclusions from a panel consisting of President David Heskett, of Montana-Dakota Utilities, President A. V. Hartl, of Otter Tail Power, Vice President J. W. Hoffman, of Northern States Power; and Robert Asheim, administrative vice president of Black Hills Power & Light. The panel was moderated by E. A. Savage, division manager of Minnesota Power & Light.

President Hartl of Otter Tail served also as president of the North Central Electric Association in 1967. The previous year, at Hopkins House, he had keynoted the seminar after which one of his vice presidents, Bob Bigwood, moderated a report session covering areas of the Upper Midwest where people were threatening to provide themselves with electricity, rather than purchasing it from a member company.

Vice President S. E. Sewell, of Northwestern Public Service Co., then reported which groups of people were troubling the investor-owned utilities. There were quite a few. They included small-town businessmen, politicians, and editors who questioned utility practices, city councilmen looking for revenue, members of the Farmers Union, National Farmers Organization, and rural electric cooperatives, people who commuted from towns served by municipal power, retired farmers, and diesel salesmen.

What could be done about those agitators? R. G. Asheim, administrative vice president of Black Hills Power & Light, and S. Laskin, vice president of Minnesota Power & Light, gave the answers. The utilities should marshal their massive and pervasive strength, to the end that they would be able to buy out small city-owned systems and forestall any attempts to deny renewal of utility franchises by councils or voter referendums.

The minutes of that meeting spell out the details of their recommendations:

Utility should maintain effective control of the campaign at all times, while not having it apparent or obvious . . .

Use the unions for support . . .

Use letters to the editors, preferably by an outsider . . .

Place company insurance in a manner that allows insurance agencies in all communities to share in company's insurance program . . .

Use local banks wherever it is practical and try to get participation from banks in all communities served by the company . . .

Hire housewives for precinct workers during franchise renewal . . .

Encourage employees to belong to local, civic and service organizations and to be active in local politics, and on some occasions run for public office . . .

Be sure election procedure is well organized for poll watchers, babysitters, rides to the polls . . .

Use Home Service girls for customer contacts and franchise work . . .

Have dinner meetings with all news media . . . schedule meetings with news media people on a regular basis. One company was reported to have gone into this aspect "quite intensively." Company officials were reaping dividends from their regular contacts with these (news) people.

The following year, 1967, 80 utility officials gathered at the Northstar Inn. C. T. Sickel, division manager of Minnesota Power & Light, told how utility officials quietly arranged for public officials in Gilbert, Minn., to front for the company in its effort to obtain the city light plant. I quote from the North Central Electric Association's own account of his report:

There was no difficulty in getting the City Council to agree to a special election in which the sale of the municipal system would be placed on the ballot. By law, this requires the unanimous consent of the council. Steps were taken to have a Taxpayers Committee formed for the purpose of selling the city on the advantages of the sale of their municipal distribution system to MP&L Co. Two members of the council were to spearhead this committee. No formal announcement was made to the people of Gilbert, nor was a date set for an election.

Dell B. Raymond, vice president for marketing of Iowa Public Service, discussed an aspect of utility marketing which differs from the image of that specialty which the utilities project, in the Midwestern schools, through their sponsorship of work study booklets and business-education days:

We filed a bill in both the House and Senate,

Reported Vice President Raymond—

Our company had a very favorable chairman . . .

Then Richard Bennett, general sales manager for Montana-Dakota Utilities, issued his plea for "believable" answers to the unsettling statements, abroad throughout the region, which were disrupting the utilities' efforts to increase their monopoly.

Does anyone—

He asked—

have concise believable answers to the following claims advanced by municipal ownership advocates:

a. The private electric utilities are not really a part of the historic American free enterprise system.

b. Since most communities own and operate their water and sewer systems, there certainly is nothing Socialistic or fundamentally wrong with a city owning its own electric facilities.

c. Why shouldn't the city own its electric system and keep all the profits at home for community betterment instead of permitting the utility company to drain off all that money and send it to small groups of wealthy stockholders and bankers in the big cities?

Truly alarmed, Mr. Bennett reported that even chambers of commerce no longer found the utility litany believable. Indeed, the businessmen were organizing the opposition.

In each community, where we have experienced municipal ownership agitation, he reported, "it is the businessmen and their business organizations, such as the Junior Chamber of Commerce and the commercial club, who are spearheading the municipal ownership movement.

The president of Montana-Dakota Utilities, David M. Heskett, summarized the findings of the roundtable study group assigned the topic, "Acquisition of Municipal Systems." He noted:

Many attempts are being made to acquire municipal systems, by different utilities.

He said:

Careful planning and handling was important, adding that the psychological impact of a successful acquisition of a municipally-owned system warrants more time, attention and aggressiveness than this type of effort is apparently receiving in most utilities today.

His panel has stressed, as had previous speakers ,the importance of subterfuge and elaborate, costly political action. President Heskett presented the step-by-step approach to sellouts reported by one utility:

1. Survey the community first for sentiment. (Use a professional survey organization.)
2. Hire a consultant.
3. Use a local man to engineer and front for the effort. Set up an office and put the man to work with the acquisition as his sole assignment.
4. Use retired people, relatives, and similar groups for contact work.
5. Remember that an election won't be won on main street. There has to be contact in the residential areas.
6. Use women to make calls and catalog everyone as to their position on an acquisition attempt.
7. Minimize accounting aspects in any brochure and develop suitable illustrative artwork. Economic factors should be set out and interpreted for understanding.
8. Use voter registration lists for contacts and ignore others.
9. Use newspaper advertising and direct all efforts toward the election.
10. On interviewing, use a tailgate conference each night to determine standing in community and to learn from the combined experience of those making contacts.
11. The consultant's fee could fall in the neighborhood of $100 per day plus costs with an undertaking in a larger community probably costing more.

Mr. President, the documents upon which my remarks above are based have been entered into the record of the Federal Power Commission Docket E–7278. This is an antitrust case regarding the town of Elbow Lake, Minn., which chose to provide its own power. Elbow Lake sought to supplement its diesel generation and obtained an allocation of power from the Bureau of Reclamation. Otter Tail Power, one of the members of the North Central Electric Association, refused to wheel the Bureau power to the municipal and the suit ensued.

This year, on July 19, the Justice Department filed an antitrust suit against

Otter Tail, accusing it of monopolizing the sale of electric power to 464 towns in Minnesota and the Dakotas. I commended the Department for its action at the time. This is a cast of historic importance to all small power systems, municipal-, cooperative-, and investor-owned, which are dependent on transmission facilities which they do not control.

The North Central utilities' own accounts of their actions and further plans to decrease what little competition they have, indicate the seriousness and scope of their effort to undermine independent local governments. These reports by the utilities indicate widespread conspiracy to monopolize the market. They show the need for filing additional antitrust suits. I shall shortly ask the Attorney General to file such additional antitrust suits as are necessary to dismantle unlawful monopoly.

State laws may also have been violated. One Minnesota utility official spoke to this point. I shall refer these documents to the appropriate attorneys general.

The record of these meetings also reveals that the utilities made substantial expenditures which should be borne by the stockholders, rather than customers. The decision as to which group pays is made by the various State utility commissions, not by the Federal Power Commission, which is sharply restricted in its regulatory authority.

However, in two of the States here involved—Minnesota and South Dakota—there are no State utility commissions with responsibilities affecting electric utilities. The other States involved have commissions with exceedingly small staffs, most of them now attempting to analyze the record number of rate increase requests that have been put before them this year by various utilities, including some of the members of the North Central Electric Association.

The audit staff of the Federal Power Commission is so small, in comparison with the mammoth electric and gas industries, that accounts of these utilities are not audited by the FPC more than once every 5 to 7 years.

The FPC can do better than that, and it should. The books of all the members of the North Central Electric Association should be audited now, by the FPC, and the findings made public. The job should begin in the two States where the public does not even have a weak, understaffed State commission, Minnesota and South Dakota. And the audit should cover at least the 4 years that the utility officials are known to have been concerting to kill off their competition.

If the FPC needs more money to do the job, it should ask for it promptly.

The distinguished Senator from Washington will recall that some years ago the FPC investigated a comparable situation in Washington, when investor-owned utilities were attempting to kill off public utility districts. The FPC documented the purchase of politicians and press by the I O U's and widespread use of front organizations by the utilities.

If the FPC does not promptly audit the books of these companies and report its findings, the Congress itself, which has delegated regulatory responsibility to the independent commissions, should do the job.

Mr. President, were S. 607, the Utility Consumers' Counsel Act, now law, the questionable expenditures by members of the North Central Electric Association would be a matter of public record and convenient access. The long-term, commonsense, fair way to curb utility excesses is through illumination of their accounts.

During the hearings on S. 607, witnesses from the city of Danville, Va., testified before the Senate Subcommittee on Intergovernmental Relations. They told how American Electric Power and its subsidiary, Appalachian Power, working closely with a citizens committee, saturated the Media with advertisements in opposition to the bond issue necessary to finance the expansion of the municipal powerplant. An audit this year by the FPC identified almost $25,000 in expenditures by Appalachian Power in its effort to defeat the referendum. The audit further showed that a substantial portion of the political expenditures were improperly accounted by Appalachian Power. And it showed that some expenditures by the citizens committee opposing the bond issue had been billed to Appalachian Power. I would add that the antimunicipal activity in Danville, as reported in the hearings on S. 607, and the FPC auditors report, which appears in the July 24, 1969, CONGRESSIONAL RECORD beginning on page 20735, are strikingly similar to the 11-point program set forth by MDU President Heskett, as referred to above.

Mr. President, I ask unanimous consent to have printed in the RECORD the documents regarding the North Central Electric Association to which I have referred. They are the programs for the 1966, 1967, 1968, and 1969 municipal seminars, reports by NCEA on the 1966 and 1967 seminars and the organization's constitution.

I also ask unanimous consent to have printed in the RECORD the testimony of the Federal Power Commission auditor who went into Otter Tail Power books this year. His testimony describes how political advertising, payments to front organizations, participation in North Central Electric Association activities and costs of bill stuffers were improperly accounted and passed on to the utility's customers.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

NORTH CENTRAL ELECTRIC ASSOCIATION, ONE DAY CONFERENCE ON THE COMMUNITY—UNDERSTANDING IT RETAINING ITS GOODWILL

Harry C. Johnson, Chairman.

Date: Tuesday, April 26, 1966.

Time: 8:30 A.M. Daylight Time (If Adopted).

Location: Hopkins House, Highways 7 & 494, Hopkins, Minn.

The basic conference objective

To study the problem of promotion of municipally-owned electric systems and to discuss and determine: What Is Happening, What's The Problem, Why It's Happening, What Can Be Done About It, How To Keep It From Happening.

The conference program

8:30 A.M. *A Keynote Talk*—Objective: To set the tone of the conference with emphasis on the need and merit of working together in analyzing the problem and in finding solutions. A. V. Hartl, President, Otter Tail Power Company.

What is happening

9:00 A.M. *A Panel Discussion*—Objective: To exchange information on past and existing cases of municipal agitation, with each company, if it wishes, presenting one case where the case was either won, lost, or caught at an early stage of development. Moderator: R. W. Steele, President, Interstate Power Company.

Cases

Montana-Dakota Utilities—Hazen, N.D.—Current problem.

Minnesota Power & Light—Crosby, Minn.—Caught in early stage.

Interstate Power Company—Buffalo Center, Iowa—Won.

Northwestern Public Service Co.—Parkston, S.D.—Re-establish confidence in town and won.

Otter Tail Power Company—Elbow Lake, Minn.—Lost.

Iowa Public Service Co.—Alton, Iowa—Lost.

Black Hills Power & Light Co.—Hot Springs, S.D.—Lost Franchise, not town.

Northern States Power Company—Southwest Fargo, N.D.—Won.

10:30 A.M. to 12:00 Noon. *Round-Table Study Groups.*

What's the problem

Group # 1—Objective: To isolate and identify—

a. The earliest indication of a possible problem.

b. The factors which gave impetus to the movement.

c. The groups and type of people within the community who were most susceptible to persuasion in favor of the movement.

Conference Leader: S. E. Sewell, Vice President, Northwestern Public Service Company

Why it's happening

Group # 2—Objectives:

1. To isolate and identify the factors from outside the community which were at work.

2. To determine if common factors or influences were present in all or most situations and if so, what they were.

3. To establish, if possible, criteria for determining presence of a community bias in favor of municipal ownership.

4. To study the individual "catalyst" and what makes him effective.

Conference Leader: J. W. Hoffman, Vice President, Northern States Power Company

What can be done about it

Group # 3—Objective: To exchange information on effective, proven approaches and techniques used in combating and suppressing either developing or full-blown cases of municipal agitation.

Conference Leader: R. G. Asheim, Administrative Vice President, Black Hills Power & Light Company

How to keep it from happening

Group # 4—Objective: To exchange information on community relations programs of proven value, how such programs are implemented and how their results are measured to the end that no community dissatisfaction comes into being.

Conference Leader: S. Laskin, Vice President—Commercial, Minnesota Power & Light Company

12:00 Noon to 1:30 P.M. Noon Recess.

2:45 P.M. *Report-Back Session—Study Groups*—Objective: To report findings and conclusions of study groups to all those in attendance at the conference and with group leaders serving as a panel to provide the

opportunity for concluding general exchange of opinions and observations. Moderator: R. M. Bigwood, Vice President—Management Services, Otter Tail Power Company

4:00 P.M. Conference Adjourns.

The keynote talk, panel presentation and study group reports, together with such additional pertinent commentary as may come out of the concluding general session, will be assembled in a confidential conference report which will be provided to all conference participants.

WHAT'S THE PROBLEM

Conference Leader: S. E. Sewell, Vice President, Northwestern Public Service Company.

Summary: Dissatisfaction with service, company people or policy, municipal finances, which is translated into a growing fester that ultimately progresses into a relationship problem.

Objective: To isolate and identify.

A. The earliest indication of a possible problem.

1. Where there is a history of municipal ownership agitation in a community, special attention should be given.

2. Attempt to get a new franchise several years ahead of expiration date whenever time appears to be favorable. Then there will be time to take corrective action if trouble develops.

3. Dissatisfaction with rates, either municipal or general. Resistance to street lighting or other municipal contracts. Large number of high bill complaints or large number of arrears.

4. Hostile newspaper with regular appearance of unfavorable editorials or news stories. Unfavorable letters to the editors.

5. Local or state political candidates who raise issue of rates, taxes, franchises, and general policies of utility (such as underground service.)

6. When normally friendly people start changing their attitude toward the Company or attempt to avoid Company employees. Any indication that Company employees are not accepted in civic organizations.

7. Municipal ownership agitation in neighboring communities.

8. REA active in a community, such as a new REA headquarters building, REA seeking to serve municipal loads, etc.

9. Special attention should be given to towns with unusually high municipal debt or where there is gross earnings tax agitation.

10. Communities who have no Company employees located in the community are particularly vulnerable.

11. Low merchandise volume in a community when Company has an active merchandising program.

12. Community which establishes a municipal gas operation.

13. Presence of diesel salesmen.

B. The factors which give impetus to the movement.

1. Isolated cases where customer has an unusually high bill due to high demand, seasonal load, etc.

2. Request for renewal of a franchise or street lighting contracts which usually brings up the amount city is paying for street lighting, water, and sewer pumping.

3. Requests by REA for a franchise.

4. New city administration that finds itself with a depleted city treasury with promises and requests for more municipal services and demands for lower taxes.

5. Lack of good public relations and contacts with community leaders, municipal and school officials.

6. Lack of good public information program on taxes, rate reductions, earnings, and new investments for improved service.

7. REA and Bueau employees, living both in and outside of community, who become active in the community.

8. Activity by engineering consultants, equipment salesmen, and bonding companies.

9. Availability of other sources of low cost wholesale supply power, such as Bureau of Reclamation, Basin Electric Cooperative, etc.

C. The groups and types of people within the community who were most susceptible to persuasion in favor of the movement.

1. Farmers Union and NFO.

2. Employees of REA or Bureau of Reclamation living in the community.

3. Retired and sidewalk farmers.

4. Marginal businessmen, particularly appliance dealers, and those badly in arrears.

5. Businessmen in smaller community who are susceptible to pressure from REA members.

6. Attorneys who represent REAs, cooperatives, or liberal organizations.

7. Council that is not business oriented.

8. Those with historical grudges.

9. Commuters from municipal plant towns.

WHY IT'S HAPPENING

Conference Leader. J. W. Hoffman, Vice President, Northern States Power Company.

Summary: Possibly, in brief, the "Why it's Happening" is:

1. Need for money by the community.

2. Poor representation by the company.

3. Effective leadership for municipal ownership, aided by outside interests such as the Bureau of Reclamation, REA, rate experts, bonding companies, and engineering companies.

Objective:

A. To isolate and identify the factors from outside the community which were at work.

1. There appear to be a number of factors from outside the communities which are common to most cases. There is agitation by those who wish to earn a fee through studies on the feasibility of municipal ownership, such as rate experts, bonding companies and, in some instances, equipment manufacturers, although the promotional work by the diesel engine companies in the past seem to be not too prominent.

2. Publicity originating from communities that are investigating municipal ownership tends to spread the idea to other adjacent communities and cause interest and publicity in these other communities.

3. Communities in the marketing area of the Bureau of Reclamation are particularly vulnerable due to the low rates offered by the Bureau. This situation is sometimes further aggravated by REA's operating in the area who indicate they might supply power requirements beyond the Bureau allocations.

B. To determine if common factors or influences were present in all or most situations and if so, what they were.

1. The most common factor seems to be the community's need for more revenue, and municipal ownership of the electric utility seems to be a possible source.

2. Another factor is a community where the utility investment is relatively low, which was reflected in a low tax benefit to the community. Most municipal agitation occurred in communities under 2500 population—possible in part due to this low utility investment.

3. Sometimes the utility representative in the community is not doing an adequate public relations job. This is difficult to evaluate, but it was the consensus that the best possible personnel be located in the communities that have been historically troublesome.

4. There were always one or two effective community leaders supporting the program where the threat of municipal ownership became serious. Oftentimes these leaders were long-standing opponents of the utility.

C. To establish, if possible, criteria for determining presence of a community bias in favor of municipal ownership.

1. Frequently the community leaders avoid meetings with company representatives and company employees. There is a relatively high level of complaints about service and rates.

2. Where there is some indication of possible favor for municipal ownership, many companies have initiated surveys either directly by company personnel or by public survey organizations. For the most part, results of these surveys have been very helpful.

3. Close examination of newspaper articles and editorials in the local paper might offer evidence of community bias in favor of municipal ownership.

4. Communities in which a large number of cooperative organizations are located tend to be more vulnerable to municipal ownership programs.

5. Nearness to Municipal Plants.

D. To study the individual "catalyst" and what makes him effective.

1. It seems that each troublesome community had one individual capable of organizing a municipal ownership agitation. This "catalyst" in most instances is sincere in his beliefs and dedicated to the program. In some instances his actions and thinking are the result of being a dedicated antagonist of the power company or the capitalistic system. Possibly this individual is a dissident customer of long standing.

2. These individuals almost reach the point of being incorrigible from the viewpoint of the utility, but it was generally agreed that the utility representative should continue to cultivate these people in the hope of neutralizing their attitudes.

3. The effective "catalyst" normally enjoys a good standing in the community, frequently is a politician with considerable ability, and possibly has some personal ambitions. In any event, this individual should not be ignored, for he always remains a potential problem.

WHAT CAN BE DONE ABOUT IT

Conference Leader: R. G. Asheim, Administrative Vice President, Black Hills Power & Light Company.

Summary: Good public relations throughout the companies by constant customer contact and careful education and use of employees were the key points in the discussion. Operate always as if you are getting ready for a franchise election.

Objective:

To exchange information on effective, proven approaches and techniques used in combating and suppressing either developing or full-blown cases of municipal agitation. The subject was divided into two parts: A. What can be done to prevent municipal agitation. B. What can be done to suppress agitation once it has started.

A. What can be done to prevent municipal agitation.

1. Isolate problems and set up priority list to solve them.

2. Keep in contact with people and convince them of your sincerity and interest.

3. Regular contacts with all customers.

4. Work with industrial development groups and be alert to industry moving into your towns.

5. Give good service and then tell the people you gave them good service.

6. Use Home Service girls for customer contacts and franchise work.

7. One company hired housewives for precinct workers during franchise renewal.

8. Have strong public relations-minded employees.

9. If you have problems with an employee, either train him properly or move him out of the area. Unions can be worked with on this problem.

10. Generally, most companies encourage and permit employees to run for council positions. Special permission is required for any state position. Permission will depend

on individual and the job he may hold with the company.

11. Generally, hourly-paid employees are permitted to run for local office by all companies.

12. Most companies would discourage an employee running for office if the company feels problems would result because of it.

13. Careful analysis must be made, however, because it was brought out that some employees have broadened their knowledge and improved themselves considerably even though originally they were thought not to have the capability.

14. One of the dangers involved if an employee is discouraged from running for office and later is successful, you may lose the man to the other side.

15. Take care of the little complaints—good service is expected.

16. Must find ways and means to be important to the customer.

17. Keep employees well informed.

18. Use local employee for customer contacts as much as possible.

19. Operate always as if you are getting ready for a franchise.

20. Be sure to contact all groups including school boards.

21. Take leadership in tax equalization studies. It was felt by most of the group that it would be an advantage for the power companies to have the tax benefits paid on a broader area.

22. Use careful selection of information in ads and brochures.

23. Use Political Action Course in company to improve knowledge of employees in politics.

24. Have dinner meetings with all news media.

25. Discourage franchise "bait" and take franchise election by itself. Most power companies pay franchise election costs. Some companies tie a franchise election in with large expenditures in a given community.

26. The word "franchise" does not connote a favorable reaction. The use of "operating permit" seems to be more readily accepted.

27. One company uses meter readers on their regular routes to tell franchise stories.

28. Merchandise selling has definite public relation assets.

29. If possible, work with consulting engineers in your areas.

B. What can be done to suppress agitation once it has started.

1. Isolate the problems on a priority basis.

2. Door-to-door campaign for telling company story.

3. Develop organization structure to deal with problems.

4. Keep in touch with all the people including your opponents.

5. Use the unions for support.

6. Use letters to the editors, preferably by an outsider.

7. Develop citizens committee. It is desirable to have this committee work in its own behalf.

8. Seek out a leader with equivalent quality or better than the leader of the opposition.

9. Guide citizens committee with accurate, up-to-date information.

10. Try to have at least some of the leaders free from boycott possibilities.

11. Businessmen may be the first to leave your committee under pressure.

12. Use survey to aid in defining the problems.

13. Use local people on house-to-house canvas to determine attitudes of the people.

14. Catalog these people with a card index file.

15. In later stages of campaign, keep a day-to-day contact with all the key people.

16. Be sure election procedure is well organized for poll watchers, babysitters, rides to the polls, etc.

17. Work closely with advertising agency.

18. Analyze opposition report and hit its weak spots.

19. Set up timetable to include all phases of the election.

20. Absentee voting is very important and employees should know the details involved in this procedure.

21. Know legal problems involved with elections.

22. Do not neglect opposition people—a convert is very important.

23. Use common terms to keep the public from being confused—use people talk.

24. Use service clubs to inform the people.

25. Keep utility ads and contacts positive.

26. Utility should maintain effective control of the campaign at all times, while not having it apparent or obvious.

27. Timing is very important—do not use all your material too soon.

28. Coffee parties for telling company story.

29. Do not say during the franchise campaign that you must have the franchise for a particular reason and find yourself defending the issue later.

Reasons why company should have franchise:

1. Gives endorsement of company by the city.

2. Aid for securing financing.

3. Possible elimination of duplication of facilities.

4. Establishes contractual arrangements with the city.

5. Guarantees the city electric service and aid from the utility.

HOW TO KEEP IT FROM HAPPENING

Conference Leader: S. Laskin, Vice President—Commercial Minnesota Power & Light Company.

Summary: Give the best possible service at all times.

Objective:

To exchange information on community relations programs of value, how such programs are implemented and how their results are measured to the end that no community dissatisfaction comes into being.

Conclusions summarized as follows:

1. Get acquainted and stay acquainted with council members, school board members and community leaders. Some companies have made it a practice for their managers to attend a minimum of two meetings per year of councils, school boards, etc., sending reports of these meetings to the General Office. One company has a practice of inviting each council annually to an appreciation dinner.

2. Take surveys from time to time. Many of the companies are using customer surveys on a regular basis. One company said that they are able to trend the results of these surveys and can spot problem areas before they blossom into real problems.

3. Don't trust any one employee to know what is going on in a town. Sometimes an employee is not contacting all of the elements in a community and has a distorted view of the situation in that particular area.

4. Encourage employees to belong to local, civic and service organizations and to be active in local politics, and on some occasions running for public office.

5. Carry on employee information programs, especially for all employees who contact the public. This is being done by various companies through meetings, publications and other data furnished employees.

6. It was suggested in borrowing funds, companies use local banks wherever it is practical and try to get participation from banks in all communities served by the company.

7. Place company insurance in a manner that allows insurance agents in all communities to share in company's insurance program.

8. Make sure you have a well qualified man in a local manager's job. Most of the cases where companies developed trouble could be traced to the fact that the local manager did not know what was happening in his community and had not made contacts with the proper people to keep abreast of the situation.

9. Encourage labor organizations in their opposition to public power. There has apparently developed quite a surge of labor resentment against public power and this could be a very pertinent tool in our fight against the public power advocates.

10. Use area development as a tool to build a good image for your company locally. Most companies have information which is of great help to local communities in area development. Proper use of this information through the local manager and area development staff can greatly enhance our public image in a community.

11. Work with people in education. One of our great problems is to let educators—superintendents, principals and teachers—know something of our business. This problem is being worked on by various means, such as business-education days, scholarships, work study booklet now being used by two companies, and various other methods.

12. Cultivate your enemies. Most managers do not relish the thought of talking to people opposed to our manner of doing business. Many dividends are obtained by cultivating people opposed to us and, although they may not be won over to our side, with the proper approach they can certainly be neutralized in many situations.

13. Organize and encourage plan tours. Many companies are doing this for various groups, such as councils, school people, service clubs, etc.

14. Schedule meetings with news media people on a regular basis. One company has gone into this quite intensively and say that they are reaping dividends from these regular contacts with these people.

15. Use modern street lighting to improve your relationship in municipalities. The greater value of your rate sources should be offered to communities to better their systems and in turn better our relationships with the communities.

16. Settle damage claims promptly. One company has a practice of authorizing their managers to make settlements on claims within 24 hours, if possible.

17. Maintain strong and firm collection policies. It was the unanimous feeling of the group that where good public policies are maintained, public relations are generally better.

NORTH CENTRAL ELECTRIC ASSOCIATION MUNICIPAL SEMINAR, JUNE 8–9, 1967

(Minnesota Power & Light Co., sponsor)

Officers of NCEA: A. V. Hart, President; D. M. Heskett, Vice President; C. K. Larson, Treasurer; R. B. Newman, Secretary.

Municipal Seminar Representatives:

Black Hills Power & Light Company: Robert G. Asheim.

Interstate Power Company: Ken Gordon, K. L. Meyer, Mead Schenck, G. J. Muir, R. W. Steele.

Iowa Public Service Company: Warren Kane, Jack Kinney, Dell Raymond, R. G. Ruisch, Ed Wendell.

Minnesota Power & Light Company: W. L. Claffey, Sylvester Laskin, E. A. Savage, Charles T. Sickel, George Spurbeck, Fred E. Stout.

Montana-Dakota Utilities Company: Irvine Bates, R. T. Bennett, Warren Dotseth, W. L. Hayes, D. M. Heskett, Louis Lenhardt, Robert Naylor, Mark Scharff, John Stewart.

Northern States Power Company: D. L. Anderson, R. H. Slotten, Donald L. Haugum, F. D. Johnson, E. C. Spethman, J. H. Schreier, S. J. Pettersen, A. E. Hassinger, W. R. Williams, H. L. Larsen, Lewis J. Crain, W. A. Daniel, R. D. Cook, S. J. Johnsrud, J. H. Mertz, Dennis F. Sunderman, Wendell D.

Wischer, G. H. Lund, John Mullins, J. W. McKellip, E. V. Berkstrom, D. D. Butterwick, H. J. Dreis, R. L. Vannelli, A. D. Brusven, T. G. Cote, P. J. Cressy, J. W. Hoffmann, D. W. King, R. J. Lebens, J. E. Meyer, Jr., J. E. Rudolph, H. W. Spell, C. L. Sundem, L. W. Tuskey, F. J. Vojta, P. W. Beck, R. E. Hanson.

Northwestern Public Service Company: Jack Boub, Donald Solum, S. E. Sewell, Ivan Strommen, R. A. Wilkins.

Otter Tail Power Company: K. H. Berquist, R. M. Bigwood, P. J. Brewer, A. V. Hartl, Harry Johnson, Ralph Johnson, Ralph B. Newman, Robert Hygard, L. E. Yates.

Superior Water, Light & Power Company: H. W. Holton.

South Dakota Electric Information Institute: William Johnson.

AGENDA: NORTH CENTRAL ELECTRIC ASSOCIATION MUNICIPAL SEMINAR

(Northstar Inn, 618 Second Avenue South, Minneapolis, Minn., Tele. No. 335-9351, June 8 and 9, 1967)

Thursday—June 8, 1967

6:00 p.m. Social Hour.

7:00 p.m. Dinner.

8:30 p.m. Announcements—E. A. Savage.

8:40 p.m. Introduction of dinner speaker by George Spurbeck, General Sales Mgr., Minnesota Power & Light—Duluth.

Speaker—Frank Hershey, District Mgr., Electric Utility Sales Div. of General Electric Company, Milwaukee, Wisconsin, "Street Lighting and the Municipality."

Friday—June 9, 1967

(Ballrooms 4 and 5)

General Chairman—E. A. Savage, Division Manager, Minnesota Power & Light, Little Falls, Minnesota.

General Secretary—Fred E. Stout, Division Manager, Minnesota Power & Light, Duluth, Minnesota.

8:30 a.m. Welcome—E. A. Savage, Chairman.

8:33 a.m. Our Challenge in Municipal Relations: Sylvester Laskin, Vice President, Minnesota Power & Light.

8:45-10:00 a.m. (Ballroom 4 & 5) What Is Currently Happening: A Panel Discussion—Objective: To exchange information on current issues affecting municipal systems.

8:45 a.m. Relations in Company Towns in Which REA Headquarters are Located: Harry C. Johnson, Controller & Treasurer, Otter Tail Power Company, Fergus Falls, Minnesota.

8:56 a.m. Attempted Purchase of Municipal Systems: C. T. Sickel, Division Manager, Minnesota Power & Light, Eveleth, Minnesota.

9:07 a.m. Missouri Basin Municipal Power Agency: Richard Lebens, Mgr., Area Power Contracts, Minneapolis, Minnesota.

9:18 a.m. Are Profits Reported in Municipally-Operated Towns Realistic?: K. L. Meyer, Executive Assistant, Interstate Power Company, Dubuque, Iowa.

9:29 a.m. Association of Municipal Electric Utilities: Dell Raymond, Vice President-Mktg., Iowa Public Service Co., Sioux City, Iowa.

9:40 a.m. With Towns Operating Sewer and Water Systems, Why Not Electric as Well?: Richard Bennett, General Sales Manager, Montana-Dakota Utilities, Minneapolis, Minnesota.

9:51 a.m. Gross Earnings Payments to Municipalities—Legal Identity and Municipal Powers: Arland Brusven, Attorney-at-Law, Northern States Power Co., Minneapolis, Minnesota.

10:02 a.m. Comments: E. A. Savage, Chairman.

10:10 a.m. Coffee.

Round table study groups

10:30–12:00 Noon (Marquette Room). Acquisition of Municipal Systems: Objective: Examine recent efforts in this field, both successful and unsuccessful, in an attempt to learn methods of approach and action most effective.

Conference Leader: D. M. Heskett, President, Montana-Dakota Utilities.

Secretary: Robert Bigwood, Vice President, Mgt. Services, Otter Tail Power Company.

(Hennepin I) Electric Franchises: Objective: To examine methods and practices employed in negotiating franchise renewals, determining most effective methods. (a) Provisions of franchises; (b) Ownership of street lighting and signal systems.

Conference Leader: Robert Asheim, Adm V. Pres., Black Hills Power & Light.

Secretary: R. A. Wilkins, Div. Mgr., Northwestern Public Service, Huron, South Dakota.

(Hennepin II) Organizations of Municipal Groups: Objective: Exchange information relative to newly-formed groups and existing groups that might have the effect of organizing municipalities or encourage them to own and operate electric distribution systems.

Conference Leader: J. W. Hoffman, Vice Pres., Northern States Power Co.

Secretary: Dell Raymond, V. Pres.-Mkting., Iowa Public Service Company.

(Ballroom 6) Needs of Municipalities for Additional Revenue: Objective: Exchange of information relative to experience with municipalities regarding franchise fees, gross earnings, taxes, operating permit, fees, etc. To discuss the municipal electric operation as a source of revenue to municipalities.

Conference Leader: A. V. Hartl, President, Otter Tail Power Company.

Secretary: K. L. Meyer, Exec. Ass't., Interstate Power Company.

1:30–2:40 p.m. Noon Luncheon.

2:40 p.m. (Ballrooms 4 & 5) Report Back Session of the Study Groups: Objective: To report findings and conclusions of study groups to all in attendance in a general session with group leaders serving as a panel.

Moderator: E. A. Savage, Minnesota Power & Light.

Panel: D. M. Heskett, Montana-Dakota Utilities; A. V. Hartl, Otter Tail Power Company; J. W. Hoffmann, Northern States Power; R. G. Asheim, Black Hills Power & Light.

4:00 p.m. General discussion.

4:25 p.m. Remarks by Ralph B. Newman, Secretary.

4:30 p.m. Seminar adjourns.

Sectional meetings

1. Each person will pay for his own room at the hotel.

2. Meals and hospitality will be charged to the N.C.E.A. The Secretary will be sent the bills by the hotel or motel. The total bill will be divided by the number of people participating in the meeting. The Secretary will then bill each *Advisory Committee member* in each *member company;* based on the number participating from the company.

3. The Secretary of the N.C.E.A. will then send the money collected from each company to the treasurer of the N.C.E.A. for payment of bills for the meeting.

4. The chairman of each sectional meeting will appoint a secretary to keep the minutes of the meeting. The minutes will be approved by the *chairman* and the *Advisory Committee member* from the sponsoring company. A copy will be sent to the President and Vice President prior to publication for any comments, prior to general distribution by the Secretary of the N.C.E.A.

5. When they have approved the minutes, the chairman will forward the minutes to the Secretary who in turn will duplicate the approved minutes. The minutes will be forwarded to:

A. Those participating in the meeting.

B. The Executive Committee members of N.C.E.A.

C. The Advisory Committee members of N.C.E.A.

ATTEMPTED PURCHASE OF MUNICIPAL SYSTEMS

(By C. T. Sickel, Division Manager, Minnesota Power & Light, Eveleth, Minnesota)

Many municipally operated electric distribution systems in the State of Minnesota are presently operating less efficiently than systems served retail by investor owned utilities. The measure of efficiency is based on the cost per KWH to the consumer. In the past few years the trend has been for the rates of the investor owned utilities to continue downward, or at least to hold their own, while municipal systems have had to increase rates. In the majority of these municipalities, the relationhip between the investor owned utilities and the municipality is excellent. The municipality is generally a good wholesale customer of the investor owned utility and there has been no animosity between the city or village and the utility.

These statements would lead one to believe that it would be a fairly simple transition for the investor owned utility to acquire these municipal distribution systems, based on the overall benefit that the consumer would realize. This, however, has not been the trend. I would assume that the problems in Minnesota Power & Light Company territory are similar to the problems being uncovered by other investor owned utilities in acquiring distribution systems. In order to more easily analyze the problems, I will take the specific case of the City of Gilbert, Minnesota, as an example in an attempt to point out the main problems which must be overcome.

The City of Gilbert is a community of approximately 2500 population. The city has been a wholesale customer since Minnesota Power & Light Company was formed in 1924. MP&L's relationship with this community has been excellent and there has never been agitation from the electric company towards the City of Gilbert for purchase of their system. On two occasions during the past 10 years the City of Gilbert has inquired into the conditions for purchase of their distribution system by Minnesota Power & Light Co. In these cases, meetings were held with the mayor, council and city clerk. The issue has never been presented to the public for a vote. The present average electric service rates in the City of Gilbert are approximately 20–25% higher than comparable Minnesota Power & Light Co. rates. During the past year the entire council has been working with MP&L Co. representatives in an attempt to reach an agreement on a purchase price, and the conditions surrounding selling their distribution system. All of the numerous meetings held with the council were on an extremely friendly basis and the councilmen have been quite truthful and frank in their comments on the situation.

The basic financial considerations with the City of Gilbert will be overly simplified so as not to burden this talk with statistics. Briefly, the present total cost to taxpayers of the City of Gilbert for electric service is $172,100. The estimated total cost to the taxpayers if Minnesota Power & Light Co. served Gilbert as a retail customer would be $139,500.

[To be put on blackboard or easel]

Present municipal revenue	$167,000
Cost of present municipal services	7,100
Present taxes paid by M.P. & L. in community	(2,000)
Total cost to taxpayer	172,100
Revenue if served retail by M.P. & L	136,000
Cost of municipal services if served by M.P. & L. Co	15,200
Estimate of taxes if distribution system owned by M.P. & L. Co	(11,700)
	139,500

In addition to the direct savings to the electric customer, the purchase price of the system was adequate to retire present bonded indebtedness, plus the city's portion of an additional bonded indebtedness to install a new water system in the City of Gilbert. Federal funds would pay for 50% of the water system with the city to finance the remaining 50%. The City of Gilbert is actually in need of financial help and the financial picture seemed to favor disposing of the electric system.

There was no difficulty in getting the City Council to agree to a special election in which the sale of the municipal system would be placed on a ballot. By law, this requires the unanimous consent of the council. Steps were taken to have a Taxpayers Committee formed for the purpose of selling the City on the advantages of the sale of their municipal distribution system to M.P. & L. Co. Two members of the council were to spearhead this committee. No formal announcement was made to the people of Gilbert, nor was a date set for an election. Again on the surface it would appear that the immediate savings to the customer, coupled with a cash value to be paid for the system, which was to be ear-marked for a necessary facility, would almost assure that a ⅔ majority vote for the proposal would carry in an election. The cold political facts, however, are that this is extremely difficult to present to the voters, especially when legally the investor owned utilities are not free to use their personnel to distribute information on the possible acquisition.

An independent audit was made of Gilbert's electric distribution operation covering the past 10 years. When the audit was completed, the council and city attorney studied the results. The method of figuring savings to a community from the standpoint of the utility and the municipality was then pointed out to be quite different. MP&L showed a savings to the taxpayer of $32,600 per year, plus the advantages to be gained by the purchase price. From the standpoint of the municipality's governing body, a deficit of $30,400 per year was indicated. This peculiar play on figures came about as follows: MP&L indicated the $32,600 savings to the taxpayer by calculating the difference between the present yearly cost of $172,100 and the $139,500 yearly cost if MP&L served the city retail. The audit indicated that the City of Gilbert presently is taxing at their legal per capita limit; consequently the additional taxes that MP&L would pay, whereas it would reduce the taxpayer's burden in the community, would not increase the moneys available to the council. The municipal services which the City of Gilbert would be billed for would have to come out of the general tax fund, which would reduce the moneys available for other projects by the amount of $15,200. This peculiar quirk was interpreted to mean that the governing body would actually have a loss of $30,400 per year over the present moneys available. The reasoning was that they presently could cover the municipal services directly from the electric distribution revenues over and above general taxation levels. This would not be true if the system were sold to the private utility. They arrived at the $30,400 figure by stating that not only would they have to pay $15,200 for municipal services, but $15,200 would not be available to spend on present projects.

The audit which was made was not made public and the council's greatest fear seemed to be that the results of the audit would become generally known, which would probably have caused a clamor for a rate reduction by the taxpayers. It was inferred that the audit showed an annual profit of $15–200,000 which would actually raise the deficit in the council's eyes to between $45 and $50,000 per year. It was pointed out that as long as the municipality retained the electric distribution system, they had a method of collecting additional revenue when needed without going to a vote of the people, and still stay within the legal limit of per capita taxation.

The council realized that whereas a majority of the taxpayers in Gilbert would properly evaluate the issue and vote for the sale of the electric distribution system, the opposition would be supplied with immediate ammunition and could point out that some present services would have to be cut as there would be less money available. This would put the council in the position of having to expain which services should be cut. The fact that the taxpayer would actually save substantially would be overlooked by many voters.

It was the consensus of opinion of the mayor and city council that whereas they still favored selling the distribution system, a ⅔ majority vote on the propositon would be impossible. It was estimated that the proposal would carry by a 50–55% majority, but not a 67% majority. This, coupled with the talk of tax relief to communities through the State government, led all concerned to abandon the idea of a municipal election at the present time.

It is interesting to note in the analysis of the Gilbert situation that the purchase price of the distribution facility was not the major factor. The ⅔ majority vote definitely was the factor which could not be overcome. The organization of a truly effective committee from the City of Gilbert to present information regarding the sale would be extremely difficult. The taxpayer would definitely have to make himself heard and the taxpayer's organization would have to put forth a tremendous effort to acquaint all of the voters of the issues involved in order to hope for a ⅔ majority vote.

MISSOURI BASIN MUNICIPAL POWER AGENCY

(By Richard Lebens, manager, area power contracts, Minneapolis, Minnesota)

Before discussing the Missouri Basin Municipal Power Agency as such, let's put it in proper perspective as to objectives. This Agency is merely the latest addition to a group of organizations having the same goal—the promotion and extension of public power throughout the area. First at the post and the original leader in the field was East River Electric Power Cooperative, Inc. Next came the Mid-West Electric Consumers Association with the first involvement of municipal systems. This was followed by Basin Electric Power Cooperative hurriedly formed to stop Andy Freeman's group in North Dakota, and finally the Missouri Basin Systems Group.

Now it may be that, with all our other problems, we have failed to devote sufficient thought and planning to a very disturbing movement by this group. I refer to the increasingly bold efforts to establish what can best be described as joint cooperative-municipal pooling organizations. There is nothing unique about the concept. It simply applies the principles of the super generation and transmission cooperative to groups of municipals.

There has been a continuously increasing emphasis on municipal systems by the public power oriented organizations since they offer such groups an opportunity for expansion. The municipal systems are scattered throughout the service areas of the investor-owned companies. Their loads can be used by the public power groups to promote generation and duplicating transmission systems.

A good example is the Southwest Minnesota Power Association formed way back in 1959 by seven municipal systems and two cooperatives. The group considered construction of a 69 kv or 115 kv line to tie the member systems together and to extend westward to the Bureau's Sioux Falls substation.

The Missouri Basin Systems Group was formed in January 1963. The Municipal Subcommittee of the Systems Group immediately took over and actively promoted the Southwestern Minnesota activities. Soon, the announced membership included 15 municipal utilities and 8 rural electric cooperatives, and they were in Washington requesting the appropriation of $35,000,000 of federal funds for the Bureau of Reclamation to construct approximately 600 miles of 115 kv and 230 kv transmission lines. We were able to stop this but temporary setbacks do not deter these public power groups, and this plan is far from dead.

In 1964, continuing its "empire building" tactics, the Municipal Subcommittee of the Missouri Basin Systems Group engaged the Washington Law Firm of Ely, Duncan and Bennett to prepare a report and recommendations upon means by which the municipal power systems in the Missouri Basin might secure the "advantages of size" in the cooperative planning and construction of generation and transmission facilities to meet their load growth. The report was submitted in June 1965.

The report recommended the formation of the Missouri Basin Municipal Power Agency as a separate entity under the Iowa Joint Powers Act. A form of agreement to set up the Agency was included and activity to secure members was immediately started.

The Agency is governed by a nine-member Board of Directors selected from the municipal representatives. Arie Verrips, Superintendent of the Sioux Center, Iowa, municipal utility is General Manager of the Agency. Verrips is also Chairman of the Systems Group Municipal Subcommittee and the prime mover in this group.

The Agency is organized on a nonprofit, tax-exempt basis. Preliminary financing was recommended to be by moderate assessments on the members with contributions from the Missouri Basin Systems Group because of their interest in the engineering studies to be made. Generation and transmission construction is to be financed by the issuance of tax-exempt revenue bonds. A recent announcement indicates that the Agency attorneys are working with the bonding companies on language so the Agency can be ready to issue bonds to obtain funds for construction when the time comes.

The first annual meeting was held on November 17, 1966, with 26 municipal members. We know that membership has increased to over 30 with the bulk of the membership from Iowa. As far as I know, only three Minnesota municipals—Windom, Jackson, and Lakefield—have joined.

The Board of Directors authorized R. W. Beck and Associates to make an engineering study for the Agency. The study will include all the municipals in the Bureau marketing area and some of the outside area. Wheeling arrangements and power sources available will be investigated to determine how much transmission and ultimate generation will be needed. Verrips recently announced that the Bureau 115 and 230 kv transmission system for southwestern Minnesota proposed in 1964 will be needed for the municipal loads, so as I said earlier, this scheme to extend the public power system to the east is not dead.

The legal report also suggested that the Agency may operate as the contracting agency with the Bureau of Reclamation for power for its members and bill its members at cost plus a small surcharge. We have recently learned that the Agency is negotiating a contract for 100,000 kilowatts of firm power with the Bureau.

A further activity involves the possibility of cooperation with Basin Electric looking to a joint venture with Basin in financing a second unit in Basin's Stanton Plant. This would be accomplished through a wholly-owned, nonprofit corporation organized under the laws of North Dakota. Basin would operate the plant and deliver power to the

Agency in amounts reflecting the Agency's proportionate contribution to the cost.

In examining the activities of the Agency to date, you will note the close tie into the Missouri Basin Systems Group and Basin Electric. It is readily apparent that the municipals are being used by the powers that be in the Systems Group to expand their empire and any benefits that may accrue to the municipals are purely incidental.

The potential dangers to the investor-owned companies are also readily apparent. If the Agency is successful in obtaining a large block of Bureau power for resale to members, we will surely see activity offering membership to towns outside the marketing area. Large scale generation jointly financed with 2% REA money and revenue bonds can become a reality. The ability to sell to municipal systems the subsidized low cost power from such a unit has some unpleasant connotations such as increased municipal agitation in our retail towns.

A Missouri Basin Systems Group Newsletter contained the following: "With the present difficulty of the Bureau of Reclamation and REA borrowers in getting adequate capital for construction, the Municipal Power Agency's prospective ability to get tax-exempt bond financing could be useful indeed."

Obviously, the public power people recognize the potential for expansion represented by the municipal systems. To counter this we, the investor-owned companies, must increase our activities with the municipals. We must make available some of the benefits of pooling to the smaller systems. The alternatives are obvious.

NORTH CENTRAL ELECTRIC ASSOCIATION
MUNICIPAL SEMINAR, JUNE 9, 1967

(By Dell B. Raymond, vice president—marketing, Iowa Public Service Company)

Municipal enabling legislation passed by the Iowa Legislature

The Iowa Legislature meets every two years for a period of what we use to consider 100 days. After the Legislature changed renumeration of the legislators from an annual basis to a daily basis, the legislative period became prolonged. In the 1965 Session it ran for 145 days and in the 1967 Session, today, June 9, it is 149 days and there appears to be a long road ahead.

During the 1965 Session, a Bill was introduced in the House, "To Authorize Joint Exercise of Governmental Powers by Public Agencies."

This was known as House File 188 and a copy of the entire Bill is attached.

The main purpose of the Bill was set out in Section I, which reads as follows:

Section 1. The purpose of this act is to permit State and local governments in Iowa to make efficient use of their powers by enabling them to provide joint services and facilities with other agencies and to cooperate in other ways of mutual advantage. This act shall be liberally construed to that end.

In Section 12, a "fence" was built around the administration of the Bill, which reads as follows:

Section 12. Any one (1) or more public agencies may contract with any one (1) or more other public agencies to perform any governmental service, activity, or undertaking which any of the public agencies entering into the contract is authorized by law to perform, provided that such contract shall be authorized by the governing body of each party to the contract.

The Bill appeared to be innocuous and frankly, we did not realize the scope of the interpretation of this legislation.

Bill passed both the House and the Senate with very few dissenting votes.

Using this Legislation as a vehical, there were two groups of communities developed within the State of Iowa, one of which was a group of 12 municipals that became members of the Corn Belt Co-op, at Humboldt and the other was 21 municipals in Western Iowa that joined the Midwest Electric Consumers Association, as an agency of the Missouri Basin System. Many of the latter group were located in Iowa, but it was not limited to the Iowa Municipals.

At the start of the 1967 Session, we filed a Bill in both the House (Bill HF-388) and the Senate (Bill S-414) which reads as follows:

An Act relating to joint services by municipal bodies.

Be It Enacted by the General Assembly of the State of Iowa:

Section 1. Section twenty-eight E point ten (28E. 10), Code 1966, is hereby amended by striking from line eleven (11) the period and inserting in lieu thereof the words ": provided, however, no agreement under this chapter shall provide for generation, transmission or distribution of electricity."

There was considerable lobbying on this Bill, both by the utilities and the municipals but the REC's and the State REA were very active in lobbying against it. This was referred to the Cities and Towns Committee in the House and the Governmental Affairs Committee in the Senate.

Our Company had a very favorable chairman in the Cities and Towns Committee (House) and it was brought to the Committee's attention on April 5, 1967. At that time, it was moved to table the Bill by a vote of 12 to 9, with 4 members not voting.

The Senate Committee as of this date, has not considered the Bill.

On May 17, it was moved in the Cities and Towns Committee in the House to reconsider the tabling of this Bill. Again, the Bill lost by a vote of 14 to 19. Inasmuch as the Rules of the House required ⅔ majority to remove from the table, the vote was 3 votes short.

During the week of May 29th, a sifting committee was set up in the House and one of their early actions was to bring House File 388 to the floor.

Final action on the Bill was held on the afternoon of Tuesday, June 6, after an hour and a half of debate and bitter denunciation of the utility lobbying, the Bill lost 48 to 65.

For all practical purposes, the Bill is now dead for this Session. Most of the opposition came from representatives from towns with municipal electric utilities.

The whole point of this paper is this. . . . Each Bill that goes to the Legislature should be watched very carefully for any sleepers or possibility of expanded interpretation. It was the case in this particular piece of legislation.

This of course is a monumental task (over 1500 Bills in the past Iowa Session) and a must, if we are going to keep on top of situations like this.

WITH TOWNS OPERATING SEWER AND WATER SYSTEMS, WHY NOT ELECTRIC AS WELL?

(By Richard Bennett, general sales manager, Montana-Dakota Utilities, Minneapolis, Minn.)

Being assigned a part on this program proves the fallacy of cooperating with the program chairman. When Ralph Newman sent out notice of the meeting, he asked for suggested topics that might be appropriate for the agenda. I sent in several suggestions and—wouldn't you know, I was assigned one of them. Really, I was looking for information rather than a speaking engagement! I was just a bit confused as to how to treat the assigned subject since it is only one part of several questions posed. Since this rash of municipal ownership agitation is an area problem which involves all utilities in the NCEA group, the questions suggest some possibilities for joint action, as follows:

1. Would it be desirable to establish an automatic, dependable clearing house among NCEA utility members for any and all information which might prove useful in combating municipal ownership?

2. How best can such a clearing house be organized?

3. Would it be desirable for NCEA utility members to jointly sponsor a thorough, in depth study by qualified people of the municipal operations currently being held by the pro-municipal forces as "proof positive" of all the benefits and big profits to be achieved by a community through municipal ownership of their electric system. We are thinking of communities like—Howard, South Dakota; Faith, South Dakota; Arlington, South Dakota; Colman, South Dakota; Groton, South Dakota; Maddock, North Dakota; Park River, North Dakota; and others.

4. If desirable, how best could a study of this kind be organized and financed?

5. Since Senator Lee Metcalf's and Vic Reinemer's book "Overcharge" is now being used as the bible by pro-municipal ownership forces to whip up anti-private utility sentiment in municipal ownership campaigns, shouldn't there be an expert analysis of the book to point out areas of bias, half truths, etc. to be used in rebuttal? Who could best make such an analysis?

6. Does anyone have concise, believable answers to the following claims advanced by municipal ownership advocates:

a. The private electric utilities are not really a part of the historic American free enterprise system.

b. Since most communities own and operate their water and sewer systems, there certainly is nothing Socialistic or fundamentally wrong with a city owning its own electric facilities.

c. Why shouldn't the city own its electric system and keep all the profits at home for community betterment instead of permitting the utility company to drain off all that money and send it to small groups of wealthy stockholders and bankers in the big cities—?

It is quite apparent the pressure on our communities is going to get a good deal worse before it gets better. I think we should explore the idea of coordinating the efforts of all of our companies and fight this battle as a well organized group rather than each company more or less going it alone.

These questions were born out of our recent experiences in combatting the municipal ownership forces in several locations but specifically in McLaughlin, South Dakota, where, incidentally, we are batting .500. We won one close election on this issue last November and lost a close one on the same issue last April. Out of the crucible of these two rough and tumble elections, the pro-municipal ownership crowd have, we think, revealed their basic plan and propaganda line. It is skillfully designed to erode any pro-utility sentiment in a community, disassociate private utilities from the American free enterprise system and then build up a community state of mind whereby it appears logical and desirable to vote out their present electric supplier and vote in city ownership of the electric facilities.

It is obvious the municipal ownership crowd have studied communities in the area. They have catalouged franchised expiration dates and decided to "zero in" on towns of 900–1500 population as the most vulnerable. Many of these communities are too small to justify a local utility office. In many instances, they do not have a resident serviceman. Most of these towns are losing population and struggling to maintain schools, streets, water systems and other essential services. Many people in these communities believe that if the town had modern facilities such as playgrounds, swimming pools, hospitals, etc., young people would be encouraged to remain in the town and industry might locate in the community. Of

course, the burning question is how to finance such facilities. It isn't any wonder then that the story of *big profits* from municipal ownership has great appeal. It sounds like a "cure all" for all municipal problems.

Since the "big profit" story is the real "hot button" argument in selling a community on municipal ownership, don't you think a thorough professional study of the actual financial status of municipal systems in our area would be useful? I can assure you, based on our recent experiences, the pro-municipal profit propaganda cannot be "beat down" successfully with generalities.

Businessmen usually are the political and economic leaders of the community, so the municipal ownership propaganda is aimed at this group. The membership of both the junior and senior Chambers of Commerce and commerical clubs are the prime targets. Knowing the vast majority of businessmen in our area are inclined to be pro-private enterprise, they are subjected to skillful propaganda, designed to break down their pro-utility, pro-private enterprise attitudes. It goes something like this:

"Is your present utility company really interested in your town? Are they to be completely trusted? Here's a copy of a recent book on private electric utility operations by Senator Lee Metcalf and Vic Reinemer of Montana called 'Overcharge.' Read it and pass it around to others when finished."

I am sure you are aware that copies of this book are being distributed to City Council members, clergymen, and other thought leaders in many communities in our service area. The purpose, of course, is to sow seeds of suspicion and distrust among our customers. Can we afford to ignore the impact of the book in our communities? Don't we need an antidote for this poison—in the form of an expert analysis written in nontechnical, believable language—an expose that purges out the bias, half truths, etc. contained in this book?

The pro-municipal forces list specific municipal operations with published net profit figures. Now, in the light of sound utility accounting and operating practices, these profits may be overstated but, believe me, the time has come when we have to offer specific proof that such is the case. Making such a study could be a joint effort of the companies represented here.

After sowing seeds of suspicion about the private utility serving the community, the next argument goes like this: "A private utility company is not a part of the historic American free enterprise system." It's a monopoly with guaranteed earnings. Being a monopoly, it has no competition. If you don't like the utility or its service, you can't purchase a similar product from another competing supplier. You have no freedom of choice like you do when you buy cars, gasoline, groceries, clothing, insurance, etc.

And then comes this argument. Certainly there is nothing Socialistic about a town owning and operating its electric system. Practically all cities own their water and sewer systems. These are public utility services rendered to all residents of the community. No one labels these city owned businesses Socialistic. So, what's so different about the city owning its electric system?

Now, since our city needs money desperately, doesn't it make sense to own our electric system and keep all the profits at home for community betterment instead of permitting the utility company to drain off all that money from our town and send it to a bunch of well-heeled stockholders and bankers in the big city?

Is this propaganda effective in convincing small town businessmen that municipal ownership does not violate their belief in the free enterprise system? We believe it is! In each community where we have experienced municipal ownership agitation, it is the businessmen and their business organizations, such as the Junior Chamber of Commerce and the commercial club, who are spearheading the municipal ownership movement.

There are many other side angles to the municipal ownership propaganda but the foregoing are the essentials.

We need the best, the most logical and believable answers to these arguments. I would like to suggest we should organize within this association to obtain the best answers and fight this movement as a coordinated group. It is evident our pro-public power adversaries have attained a high degree of organization and coordination among their many different groups, so let us do likewise!

Thank you.

REPORT OF THE ROUND TABLE STUDY GROUP ACQUISITION OF MUNICIPAL SYSTEMS, JUNE 8–9, 1967

Conference Leader: D. M. Heskett, President, Montana-Dakota Utilities Company.

Secretary: R. M. Bigwood, Vice President, Management Services, Otter Tail Power Company.

The Counter Insurgency

The assignment of this study group was to examine recent efforts in the field of acquisition of municipal systems, both successful and unsuccessful, in an attempt to learn methods of approach and action most effective. While the discussion did not reveal any recent successful acquisition attempts, it did point up that many attempts are being made to acquire municipal systems by different utilities, that these attempts are meeting with varying degrees of success—without the utility—in most instances—losing ground, that the stage can be set for subsequent successful efforts by careful planning and handling of a present attempt, that acquisition is not an impossibility, and that the psychological impact of a successful acquisition of a municipality-operated system warrants more time, attention and aggressiveness than this type of effort is apparently receiving in most utilities today.

The following covers the basic points which came out of the discussion and which would, hopefully, be of the most interest and, therefore, of the most help to the participating companies in any review of the conference proceedings:

Obstacles to Acquisition:

1. The required ⅔ majority favorable vote This is also a protection for the utility in keeping a municipal from voting out the investor-owned utility.

2. Proving without offending that a municipal system is less efficient than an investor-owned system, and that a sale would be to the advantage of the community. Convincing the community is the need and also the problem.

3. Lack of availability of realistic and accurate muncipal financial statements.

4. Metcalf's and Reinemer's "Overcharge" and other unwarranted castings of suspicion on the utilities. "Utility not really free enterprise." Refuting of Metcalf's and Reinemer's book handled briefly and very ably in an article in the Investment Dealers Digest, March 27, 1967.

5. While there is no set pattern, municipal rates are substantially lower than can be offered by the utilities, with commercial rates generally the most favorable to municipal operation in comparison with what the utility can offer. This leads to business support of municipal operation—a matter of dollars, not philosophy.

6. People unwilling to take sides, especially if the feeling is that a vote to sell would not achieve the needed majority.

7. American Public Power Association (A.P.P.A.) underground involvement when continuation of a municipal operation threatened.

8. Citizens of a community believe or have been convinced that a municipal operation can or is doing much for the community.

9. The psychological barrier to a sale imposed by the community citizen having a pride of ownership in "my own system."

10. Delays promoted as "not rushing into this thing" or "let's study for awhile."

A Major Developing Concern:

Cooperating groups of municipals with such groups developing or acquiring blocks of power, engaging in joint plant ventures, contacting other municipals, and in other ways fostering the idea of economic gain community by operating its own municipal distribution system.

Assists to Acquisitions:

1. The merit of taking utility operation out of local politics.

2. The ability to promise an efficient operation and a properly maintained system. (So many municipal systems are in poor condition and are in need of major revamping.)

3. The certainty of developing an expanded tax base for the community.

4. An active citizens committee that willingly takes the initiative and carries the ball—actually a starting "must" in any acquisition attempt.

5. Showing up the opposition as persons with personal axes to grind—no objectivity or making of decisions based on accurate information or merit.

6. Young people under 30 and older people who tend to be more favorable to acquisition and using them in any effort.

7. Staying alert to any municipal acquisitions nationwide and trying for local newspaper publicity on such acquisitions.

8. A good Public Service Commission.

Consultants' Views on Techniques—Reported by one utility:

1. Survey the community first for sentiment. (Use a professional survey organization.)

2. Hire a consultant.

3. Use a local man to engineer and front for the effort. Set up in an office and put the man to work with the acquisition as his sole assignment.

4. Use retired people, relatives, and similar groups for contact work.

5. Remember that an election won't be won on main street. There has to be contact in the residential areas.

6. Use women to make calls and catalog everyone as to their position on an acquisition attempt.

7. Minimize accounting aspects in any brochure and develop suitable illustrative artwork. Economic factors should be set out and interpreted for understanding.

8. Use voter registration lists for contacts and ignore others.

9. Use newspaper advertising and direct all efforts toward the election.

10. On interviewing, use a tailgate conference each night to determine standing in community and to learn from the combined experience of those making contacts.

11. The consultant's fees could fall in the neighborhood of $100 per day plus costs with an undertaking in a larger community probably costing more.

Offering Price to a Community:

This is a matter of considering many factors condition of the system, worth potential, publicity impact of acquiring, etc. The merit of offering a community several options was discussed—a matter of determining how the purchase sum could be provided to a community for the greatest advantage to the community. It was felt that there was merit in assuring that a purchase sum benefit a community over the longest possible period of time.

Illustration of an Acquisition Attempt:

One of the participating utilities reviewed an acquisition attempt with the following of a quick review of that attempt and some of the conclusions reached.

The situation involved a community of approximately 3,500 population, no utility commission in the community, some indus-

try, a 4,000 KW generating plant, and a load of approximately the same dimensions. In 1965, exploring of the possibility of acquisition started. The superintendent of the municipal system was neutral. The city council was 100% in favor of going to an election. A utility committee was assigned to make a study. A past study by Pfeifer and Shultz and other sources of information were used. The utility committee asked the utility for general terms and conditions. This committee came forth with a favorable report and said everything but sell. A citizen advisory committee, which was developed, asked the utility to provide information, and then took over the effort with the utility company working behind the scenes. The biggest problem seem to be that the people felt the issue would be badly defeated and didn't want to commit themselves. This was hindsight.

The selling was undertaken primarily through block parties with the emphasis strictly on the economics of the sale of the system. Opposition to the sale started to develop late and showed up for the first time in January, 1967, with the election following in March, 1967. The vote was 51.1% in favor of the sale, short of the necessary ⅔ majority needed to authorize sale. An accomplishment was that the election stopped installation of additional generation. Another election is likely. The utility company came out of the effort with a good image. A very active citizens committee still viewed as a key to the success of such an undertaking. The utility company in the next effort, when and if undertaken, may speak to community groups, such as service clubs. It should be recognized that the opposition was organized and it was effective. The American Public Power Association appeared.

Needs:

1. A close watch on bills that go to legislatures and a depth study of such. Stumbling blocks to acquisition can be introduced and stumbling blocks can be removed through legislative action.

2. A careful and continuing analysis of community gross earnings. Tax implications and possibilities—contract versus tax aspects of such needs exploration.

3. A task force established on a continuing basis to study problem in more depth, come up with a definitive program which provides step-by-step guidance on acquisitions and to provide for reviewing and updating techniques based on experience.

4. A clearinghouse in N.C.E.A. on matters of municipal agitation or unrest. Desirable as acquisitions may be it has to be recognized that our No. 1 objective and need is to retain those communities we do have and to continue an involvement in their growth and development.

NORTH CENTRAL ELECTRIC ASSOCIATION
MUNICIPAL SEMINAR, JUNE 9, 1967

Round Table Study Group—Electric Franchises

Conference Leader: Robert Asheim, Adm. Vice President, Black Hills Power and Light Company.

Secretary: R. A. Wilkens, Assistant to the President, Northwestern Public Service Company.

Present: Don Eck, Iowa Public Service Company; Don Eng, Otter Tail Power Company; George Spurbeck, Minnesota Power and Light Company; Dennis Sunderman, Northern States Power Company; S. E. Sewell, Northwestern Public Service Company; Irvine Bates, Montana-Dakota Utilities Company; D. L. Anderson, Northern States Power Company; N. L. Larsen, Northern States Power Company; Charles T. Sickel, Minnesota Power and Light Company; R. L. Vannelli, Northern States Power Company; J. E. Rudolph, Northern States Power Company; R. A. Wilkens, Northwestern Public Service Company; Robert Asheim, Black Hills Power and Light Company; Donald L. Haugum, Northern States Power Company; A. D. Brusven, Northern States Power Company.

The purpose of this round table discussion was to examine methods and practices employed in negotiating franchise renewals, determining the most effective methods.

First of all, a general brainstorming session was held to discuss things cities occasionally ask utility companies to put into franchises. Some of the items follow:

1. A percentage of the gross revenue, a tax or an annual operating fee.
2. Free Municipal service.
3. No interest loans, such as for park improvement facilities.
4. Municipal services exemption from the gross earnings tax.
5. Pressure for underground residential distribution.
6. Provisions for determining transmission route selection.
7. Terms of the franchise set as to shorten the normal length of time or duration.
8. Franchise vs. Operating Permit. (the word franchise is often misleading and some prefer to offer an operating permit for a certain number of years.)
9. A periodic review of the franchise after a set of number of years with a "buy out" provision at the time of review.
10. Rate equilization with larger cities or reducing rates in special cases.
11. Set rates included in the franchise.
12. Total service contract.
13. Stated municipal or company ownership of street lights.
14. Ornamental street lights.
15. Economic operating report.

A general discussion followed examining the methods and practices employed in negotiating franchise renewals, and in determining the most effective methods to employ. A detailed breakdown of some problem areas and recommended procedure follow:

I—Renewals of franchises

A—Know and recognize external opposition to normal franchise renewals.

1. REA preparation of booklets.
2. Rural service area agreement granted by REA as an incentive.
3. Engineering and other aids from REA's.
4. Hungry consultants.
5. Bonding companies.
6. Some equipment suppliers or manufacturers.
7. Gas company promoting total energy.
8. U.S.B.R. encourages change to municipal ownership.
9. Municipal electric associations.
10. Empire builders.

B—Know and recognize areas of internal opposition.

1 Some city employees.
2. Opportunists agitating for municipal ownership.
3. Local REA residents on councils and in community action groups.
4. Dissatisfied customers.
5. Consistent agitators.
6. Ethnic groups favoring community ownership e.g. Hutterites, Mennonites.
7. Liberal political groups.
8. Liberal teachers, preachers, bankers and lawyers.
9. Form of city government.

C—General problems and factors to be recognized and acknowledged.

1. Poor and inadequate local utility personnel.
2. Poor company image.
3. Poor utility service.
4. Reluctance of companies to modernize rates.
5. Eliminating offices in communities.
6. Changing or eliminating personnel in communities.
7. Failure to start franchise preparation soon enough.
8. Community demand for two-way feed (electric).
9. Problems in explaining reasons to the community that they should grant the utility company a franchise.
10. Demands or restrictions of P.U.C. or lack of P.U.C.
11. Possible rate differential for franchised towns.
12. Use of "indeterminate permit" by P.U.C. in place of franchise.

D—Techniques used by opposition which should be expected and prepared for.

1. Last minute handout sheets or flyers.
2. Public meetings.
3. "Underground meetings."
4. P.A. system (mobil).
5. Letters to editors and other newspaper articles.
6. Free trips to REA and public power facilities, such as the Basin plant.
7. Youth education or "brainwashing."
a. Washington, D.C. trips.
b. Essay contests.
c. Talent contests.
d. Teachers and textbooks.
8. Organized local citizens and committees.
9. Agitation by other municipal and public electric leaders.
10. Rate comparisons.
11. Half truths and inuendos.
12. Canvassing community attitude.
13. Telephone campaigns.
14. Advertising campaigns.

E—Proper procedure for obtaining franchise.

1. Importance of complying with legal requirements.
2. Adequate and early groundwork.
a. Home service contact.
b. Stepped up advertising.
c. Individual contact.
d. Providing betterment facilities in advance.
e. Providing good service.
f. Maintaining good contacts with municipal leaders and thought leaders.
g. Supporting good community, city and political leaders.
h. Good company citizenship.
i. Proper timing.
3. Anticipating opposition and preparing good defense.
4. Prepared advertising campaign, customer oriented.

II—Ownership of street lighting and signal systems

Some companies felt there is a definite advantage to owning 100% of the street lights.

A—Ownership of Street Lighting.

1. Advantages of 100% utility ownership of street lights.
a. Improved maintenance.
b. Company image.
c. Ownership of street lights makes municipal ownership more difficult.
d. Better standards of street lighting usually results.
e. More opportunities for contact with city fathers.
f. Provides standardization of fixtures and service.
2. Advantages of city owning part or all of the street lighting system.
a. Part of costs of ornamental system can be assessed against property.
b. Lower operating costs to city.
c. Eliminates frequent changes in new system.
d. Decreases demand for company capital outlays.

B—General viewpoint on ownership of Signal Systems.

1. Advantages of company owning them.
a. None.
2. Disadvantages of the company owning them.
a. May be liability if company owns them.
b. Involves company maintenance.
c. Metering or flat rate is a problem.

C—Ownership of Fire and Air Raid Sirens.

1. Some companies include this with water pumping rates, most leave this up to the city.

REPORT OF THE ROUND TABLE STUDY GROUP ON ORGANIZATIONS OF MUNICIPAL GROUPS, JUNE 8 AND 9, 1967

Conference Leader: J. W. Hoffman, Vice President, Northern States Power Company.

Secretary: Dell Raymond, Vice President, Marketing, Iowa Public Service Company.

There were 19 in attendance at the meeting of this group. Very interesting and informative discussion developed and for the most part pertained directly to the subject matter.

There appears to be no national trend in the number of municipals during the past 20 years although there now seems to be more agitation developing particularly in the Missouri Basin. There is also considerable interest among the municipals to group together or become a part of other groups.

There recently was an initial meeting of the "Missouri Basin Municipal Power Agency." This meeting was held in November 1966 and now has 30 members. It is an attempt by municipals in the Missouri Basin to band together for bargaining purposes and develop programs for interconnection. This power agency would own and operate generation and transmission facilities. The agency would also arrange for wheeling, wholesale power, interties with other systems and all associated contractual arrangements. At this early date, it is difficult to predict the future of this organization but it definitely is potentially dangerous.

It appears the greatest single threat toward the organization of municipals as well as the threat of existing retail towns becoming municipally owned is through the efforts of the Basin Electric Power Cooperative and the East River Power Cooperative. These organizations have numerous field men attempting to attract customers of other suppliers. These organizations are also active in securing REA appropriations for the construction of transmission which will permit them to wheel Coop and Bureau power to municipal communities as well as their distribution Coop members. Through this program the REA transmission system would become the backbone for interconnecting muncipals one with another as well as providing access to other power sources. In general this use of the REA transmission system is a new expanding threat and can easily become part of a public power transmission grid.

The MAPP program which now has 26 municipal members was discussed. This organization is in part an association of municipals and is a deterrent to the threat of these municipals becoming part of some competing group.

There does not seem to be any definite pattern among the utilities regarding interconnected with municipal communities. Some utilities do not as a general practice interconnect with municipals in their service territory. Others actively pursue a program of interconnecting where ever possible. Some utilities were connected with all of their communities in their service territory and others are connected with none of these communities. Some companies feel an interconnection obtains good relations with the municipal and some control, and others feel an isolated municipal will become unprofitable and more available for purchase.

The discussion indicated there is a definite acceleration of activity among municipals presumably brought about by national publicity on power pooling and transmission grids and the economic advantages of these programs. There was an instance in Wisconsin where two communities were interconnected by a jointly financed transmission line. There was another instance in Wisconsin where municipal communities purchasing wholesale power were attempting to bargain with the power supplier as a unit.

In summary, the greatest single threat to organizations of existing municipal communities and the loss of existing retail communities was through the activity of some of the REA organizations. These Cooperatives disregard the true intent of REA and attempt to secure funds to expand their generation and transmission programs part of which is to be used to attract municipal communities. Communities in the range of 500 to 1500 population seem to be particularly vulnerable. Recognizing the possible future of some of these new developments in municipal activities would make it highly desirable for the investor owned utilities to be fully advised of all local and regional activity.

NORTH CENTRAL ELECTRIC ASSOCIATION MUNICIPAL SEMINAR, JUNE 6 AND 7, 1968

Officers of NCEA: D. M. Heskett, President; C. K. Larson, Vice President; H. C. Johnson, Treasurer; R. B. Newman, Secretary.

Municipal Seminar Representatives:

Black Hills Power & Light Company: R. E. Furois, Joe Rovere, Robert G. Asheim, Mrs. Kay Nolan.

Interstate Power Company: K. L. Meyer, Ken Gordon, G. J. Muir.

Iowa Public Service Company: E. A. Wendel, Jack Kinney, Rod Robertson.

Minnesota Power & Light Company: Parker Lowell, W. L. Claffey, Glen J. Alden, E. A. Savage, Charles T. Sickel.

Montana-Dakota Utilities Company: David M. Haskett, Warren Dotseth, Richard L. Jacobson, L. N. Lenhardt, H. L. McLarnon, Irv Bates, Mark Scharff, John Stewart, R. T. Bennett, William Murray.

Northern States Power Company: C. K. Larson, D. D. Butterwick, R. L. Vannelli, N. J. Dreis, N. W. Ecklund, R. B. Burg, Russell Slotten, R. E. Pile, John Mertz, N. L. Larsen, W. Rowe Williams, W. A. Daniel, Selmer Johnsrud, L. J. Crain, R. D. Cook, Dennis Sunderman, Lad Karel, John Mullins, Peter W. Beck, Richard E. Hanson, F. E. Utecht, John A. June, Frank A. Graham, James A. Swanson, Forrest Johnson, M. D. Olson, R. J. Lebens, Ed C. Spethmann Merv Tretter, Joe Meyer, Lee Tuskey, Roy Berglund, J. B. McMains, Jack W. Hoffmann, F. J. Vojta, D. W. King, P. J. Cressy, R. E. Setzler.

Northwestern Public Service Company: S. E. Sewell, R. A. Wilkens, G. G. Hoover, Robert Stewart.

Otter Tail Power Company: T. V. Reese, Mel Sunby, Harry C. Johnson, P. J. Brewer, Mel Olson, L. M. Robinson, Henry Berquist, Robert Bigwood, Ralph S. Johnson, R. W. Nygard, Gordon Solee, A. D. Millard.

Superior Water, Light & Power Company: Harold W. Holton, Richard D. Kennedy.

Others: Warren May, Attorney-at-Law, Pierre, South Dakota; A. W. Benkusky, Manager, MAPP, Minneapolis; W. B. Farrell, Coordinator, MAPP, Minneapolis.

Presiding: Robert G. Asheim.

Recording Secretary: John Mertz.

Thursday, June 6

12:00. Noon Luncheon, Ballrooms 4, 5 & 6.

12:45 p.m. Ballrooms 1, 2 & 3: Review of the past two Municipal Seminars—Harry C. Johnson.

1:00 p.m. The Velva, N. D. Campaign. Moderator, R. W. Nygard.

A Mayor's Role in Municipal Agitation: Ernest Sands, Mayor, Velva, N.D.

A Local Employee on the Firing Line: Walter Kraft.

A Manager's Role in Municipal Elections: Henry Berquist.

Wrap-Up; R. W. Nygard.

2:30 p.m. Coffee Break.

2:45 p.m. Acquisition of Municipal Electric Systems: R. J. (Dick) Lebens.

General approach to get request: R. J. (Dick) Lebens.

Details of NSP Offer: R. J. (Dick) Lebens.

Case history of Bayport: Merv Tretter.

Case history of Mazeppa: Joe Meyer:

Case history of LeSueur: Les Tuskey.

These discussions all involve "How to Counteract the Municipal Power Profit Story."

3:40 p.m. The Hot Springs, S.D. Elections. Moderator, Robert G. Asheim.

Pitfalls to Avoid and Getting Results: Joe Rovere.

Door-to-Door Contact by a Home Service Representative: Mrs. Kay Nolan.

4:40 p.m. Supreme Court Decisions in the Cases Involving Miller, S.D. and Salem, S.D.: Warren May, Attorney.

6:00 p.m. Social Hour, Foyer.

7:00 p.m. Dinner, Ballrooms 4, 5 & 6.

8:00 p.m. Trends in Thinking That Lead to Municipal Agitation: Fred Danforth, Central Surveys, Shenandoah, Iowa.

Friday, June 7

(Ballrooms 1, 2 & 3)

8:30 a.m. Plan for the Day: Robert G. Asheim.

8:40 a.m. Municipal Relations, K. L. Meyer: Early warning signals of municipal unrest. Customer contacts, customer relations programs. How do you get closer relationships with community thought leaders? Why should a community grant a franchise to an investor-owned utility?

10:00 a.m. Coffee Break.

10:15 a.m. Municipal Electric Systems: History of Municipal Electric Systems, Ed C. Spethmann. (Who and what is behind the growing threat of municipal power agitation?)

Developing Relations with Municipal Electric Systems: Dick Lebens.

Municipal Utility Power Pooling in the Last Year . . . Ed C. Spethmann.

A Possible Research Program to Determine the Profits of Municipal Systems in the NCEA area:

a. Suggested program: Ed Spethmann;

b. Professor Cowles' Economic Evaluation of LeSueur: Roy Berglund.

c. Development of Economic Purchase Price: Roy Berglund.

The Merits of A Franchise Tax: Merv Tretter.

12:00. Noon Luncheon, Ballrooms 4, 5 & 6.

1:00 p.m. Legislative and REA Matters Moderator: E. A. Wendel.

Panel Members: James McMain, Minnesota; Ken Gordon, Iowa; R. L. Jacobson, N. Dak.; William S. Murray, N. Dak.; Warren May, South Dakota.

Territorial Problems With Distribution REA's.

Territorial Protection and State Laws Governing Same in the NCEA Area.

Legislation to create a Minnesota Utilities Commission.

Serving Municipal Utilities Outside Corporate Limits.

Functions of Municipal Utility Associations in the States Covered by NCEA.

3:00 p.m. Coffee Break.

3:15 p.m. Beautification and its Effects on the Industry, Dave Masten: Trees, Underground, Transformers, Use of Colored Poles.

Reports on Municipal Agitation and Elections. (Ten minutes per person) Paper on each will be given the chairman to be used in the report of the meeting.

1. Freeman, S. D.: R. A. Wilkens.
2. McLaughlin, S. D.: Warren Dotseth.
3. Finley, N. D.: R. W. Nygard.
4. Hankinson, N. D.: Les Robinson.
5. Aurora, S. D.: P. J. Brewer.
6. Elbow Lake, Minn.: Mel Olson.

Summary of meeting and conclusions: John Mertz.

Question and Answer Period.

5:00 Adjournment.

NORTH CENTRAL ELECTRIC ASSOCIATION
MUNICIPAL SEMINAR, APRIL 24, 1969

Officers of NCEA: C. K. Larson, President; F. W. Griffith, Vice President; H. C. Johnson, Treasurer; R. B. Newman, Secretary.

Municipal Representatives:

Black Hills Power & Light Company: Bob Asheim, Joe Rovere, R. E. "Dint" Furois.

Interstate Power Company: K. L. Meyer, C. R. Morley, Paul Larimore, J. G. Halbmaier, A. F. Gertjejansen, Bidney Bergie, G. J. Muir.

Iowa Public Service Company: Scott Phelps, R. J. Reideler, R. G. Ruisch, W. I. Pierce, H. C. Schogren, Jon Cleghorn, S. M. Swanson.

Investor-owned Utilities of South Dakota: William A. Johnson.

Minnesota Power & Light Company: Glen J. Alden, E. A. Savage.

Montana-Dakota Utilities Company: Warren Dotseth, Irv Bates, Louis Lenhardt.

Northern States Power Company: M. L. Blaskey, Arland D. Brusven, O. C. Christianson, P. J. Cressy, J. F. Jordan, D. W. King, J. E. Meyer, E. H. Schentzel, Edward C. Spethmann, M. B. Tretter, F J Vojta, L. C. Whitney, D. L. Anderson, R. H. Slotten, D. J. Chmiel, R. J. Graf, C. D. Moline, F. D. Johnson, M. D. Olson, S. J. Pettersen, F. E. Utecht, J. A. Flynn, R. W. Steuernagel, L. A. Gauthier, A. E. Hassinger, J. B. Delano, D. W. McCarthy, C. L. Sundem, J. C. Pearce, H. K. Junge, H. W. Spell, Norman L. Larsen, L. J. Crain, W. A. Daniel, R. D. Cook, Selmer J. Johnsrud, Robert B. Burg, Darrell D. Butterwick, Nicholas J. Dreis, Norman W. Ecklund, Frank E. Graham, Ronald L. Vannelli, Gerald R. Wallace, Dennis F. Sunderman, Wendell D. Wischer, Lad Karel, John Mullins, R. E. Hanson, J. A. June, A. M. Ryser.

Northwestern Public Service Company: S. E. Sewell, R. A. Wilkens.

Otter Tail Power Company: Harry C. Johnson, P. J. Brewer, R. W. Nygard, Trevor Reese, Vic Zelher, Les Robinson, Ted Rotenberger, Henry Berquist, Al Seltz.

Thursday, April 24, 1969

9:00 A.M. Seminar Objectives: K. L. Meyer.

9:15 A.M. Group Discussions. (Each group will meet in a separate room).

GROUP I—Chairman, Ed C. Spethmann

Legislation: Status of Utility Regulation by States, City Charters, Utility Franchise and/or Gross Receipts Tax, Source of Tax Monies for Municipalities.

GROUP II—Chairman, Robert Asheim

Municipal Acquisitions: "Municipals in Business", Case Histories, Formula for Acquisition.

GROUP III—Chairman, Warren Dotseth

Municipal Agitation: Case Histories, Existing Problems, Review of Elbow Lake Situation.

GROUP IV—Chairman, Scott Phelps

Associations (Friends and/or Foes): Municipal Utilities Organizations, Heartland Project, Rural Electric Cooperatives, Minnesota Valley Co-op.'s Offer To Buy System At Granite Falls.

GROUP V—Chairman, Harry C. Johnson

Customer Relations: Planned Activities, Opinion Surveys, Street Lighting Promotion, Rate Increases.

10:30 A.M. Coffee Break.

10:45 A.M. Continue Group Discussions.

12:00 Noon Luncheon.

1:15 P.M. General Session: Reports on Results of Group Discussions.

1:15 P.M. Group IV—Scott Phelps.

1:35 P.M. Question & Answer Period.

1:45 P.M. Group I—Ed Spethmann.

2:05 P.M. Question & Answer Period.

2:15 P.M. Group II—Robert Asheim.

2:35 P.M. Question & Answer Period.

2:45 P.M. Coffee Break.

3:00 P.M. Group III—Warren Dotseth.

3:20 P.M. Question & Answer Period.

3.30 P.M. Group V—Harry C. Johnson.

3:50 P.M. Question & Answer Period.

4:00 P.M. Adjourn.

Sectional meetings

1. Each person will pay for his own room at the hotel.

2. The noon luncheon will be paid by NCEA. The Secretary will be sent the bills by the hotel or motel. The total bill will be divided by the number of people participating in the meeting. The Secretary will then bill each Advisory Committee Member in each member company based on the number participating from the company.

3. The Secretary of the NCEA will then send the money collected from each company to the treasurer of the NCEA for payment of bills for the meeting.

CONSTITUTION AS APPROVED BY ASSOCIATION MEMBERS AT THE MEETING IN MINNEAPOLIS NOVEMBER 21, 1957, NORTH CENTRAL ELECTRIC ASSOCIATION

Article I—Name

The name of this Association shall be North Central Electric Association.

Article II—Object

The object of this Association shall be to advance the art and science of the production, distribution and use of electricity for light, heat and power for public service.

In the furtherance of this object its activities shall be largely educational and for the fullest development of the electrical engineering arts and sciences in all their branches.

It shall not be engaged in business.

Article III—Membership

Section 1. Members shall be regularly incorporated privately managed electric companies or individuals located in the states of Minnesota, North and South Dakota and adjacent states, engaged in producing and supplying electricity for light, heat and power for public use. Each member shall be entitled, through its regularly accredited delegate, to attend all meetings of the Association, to vote and to hold office.

Section 2. Honorary Members shall be elected upon unanimous recommendations of the Executive Committee and approved by a two-thirds vote of the Association. They shall have all the privileges of members except the right to vote, to hold executive office, and to attend executive sessions.

Section 3. Every application for membership shall be made in writing to the Secretary, and shall contain an agreement on the part of the applicant to comply with the requirements of the Constitution, if elected. The application shall be referred to the Executive Committee, and if approved by a majority the applicant shall become a member.

Section 4. In the case of a corporation the membership shall stand in the name of the company, and such company shall have the right to represented at any meeting of the Association by its accredited delegate

Section 5. Resignations must be in writing, addressed to the Secretary, and will be accepted if the member is not indebted to this Association.

Section 6. A member may be expelled from the Association upon a report and motion to that effect made by a majority of the Executive Committee at any general meeting of the Association. The vote shall be by ballot and shall require two-thirds of the votes cast for its adoption.

Article IV—Dues

Section 1. The annual dues of members shall be a percentage of the gross revenue from the retail sale of electrical energy for the preceding calendar year as determined by the Executive Committee. The minimum dues of members shall be $10.

Section 2. There shall be no dues collected from Honorary Members.

Section 3. All dues shall be payable in advance. Any members in arrears for ninety days from date of billing shall be suspended from all privileges of membership but may be reinstated by action of the Executive Committee.

Article V—Officers

Section 1. The officers of this Association shall be a President, a Vice President, a Secretary, a Treasurer and an Executive Committee. The President, Vice President and Treasurer shall be elected annually by ballot by members' delegates and shall assume office on their election. They shall hold office for one year or until their successors have been duly elected. The Secretary shall be elected by the Executive Committee.

Section 2. The Executive Committee shall be composed of the President, the Vice President, the President of the preceding year and at least seven other members elected from the membership, who shall hold office for one year, or until their successors have been duly elected.

Section 3. Ad interim vacancies among the officers shall be filled by the Executive Committee.

Article VI—Management

Section 1. The Executive Committee shall be the governing body of the Association, subject to the control of the Association by its action in annual or special meetings. All questions before the Executive Committee, except as elsewhere provided, shall be determined by a majority vote of those present. Seven members of the Executive Committee shall constitute a quorum. The Committee shall pass on all applications for membership; shall recommend action upon all members in arrears for dues; shall in the absence of any specially appointed Committee, attend to all business in the interests of the members of the Association.

Section 2. The President shall preside at all meetings of the Association and of the Executive Committee. He shall name all such Committees as may seem to him desirable, subject to the approval of the Executive Committee. He shall be an ex-officio member of all Committees. He may call meetings of the Committee's whenever he deems it advisable to do so, and he shall be required to call a meeting of the Executive Committee on the written request of three members of the same. In the case of his absence or disability, his office shall be filled by the Vice President.

Section 3. The Secretary shall take the minutes of all the proceedings of the Association and of the Executive Committee, and enter them in proper books. He shall collect all moneys, send notices to the members of the meetings and perform whatever other duties may be required by the Executive Committee.

Section 4. The Treasurer shall receive from the Secretary and safely keep all funds of the Association; keep correct account of the same and pay all bills approved by the Executive Committee. He shall submit a report at the annual meeting, approved by the Executive Committee and certified to by an Auditing Committee.

Section 5. The Secretary and Treasurer shall each be bonded for an amount to be fixed from time to time by the Executive Committee, the expense of which shall be paid by the Association. The bond shall be approved by the Executive Committee and shall be in the custody of the President.

Article VII—Election of officers

Section 1. Previous to each annual meeting the President shall appoint a Nominating Committee, none of whom are officers of the Association, and the said Nominating

Committee shall, at each annual meeting, submit a list of nominees for the several offices.

Any accredited delegate may make additional nominations, and when such nominations are seconded by any other accredited delegate, that nominee's name shall be placed before the Association and be voted upon. After the lists have been closed by resolution, a ballot shall be taken and the nominees receiving the greatest number of votes shall be declared elected. When there is no contest the Secretary may be instructed to cast the ballot.

Article VIII—Meetings

Section 1. The annual meeting shall be held at a time and place set by the Executive Committee.

Section 2. Special meetings of the Association may be called by the Executive Committee, and shall be called on the written request of five (5) members of the Association. Any business not otherwise prohibited may be transacted at these meetings.

Section 3. Notice of the time and place of the annual meeting or of special meetings, shall be mailed to all members at least two weeks before the date set for the same, and shall state the purpose of the meeting.

Section 4. At any meeting of the Association a majority of its members shall constitute a quorum for the transaction of business.

Section 5. A roll call shall be ordered on the demand of five (5) members on any question before the Association. Where it is not otherwise specified, the accredited delegates shall cast their vote by rising.

Section 6. Voting by proxy shall not be allowed at any meeting of the Association or of any of its Committees but an accredited substitute representative without vote may attend.

Section 7. The usual parliamentary rules shall apply to all meetings of the Association or of its Committees.

Article IX

Any amendments to the Constitution shall be proposed by not less than three (3) members and shall be presented in writing to the Secretary, and copies of the same shall be sent to all members at least twenty (20) days before being acted upon. A two-thirds affirmative vote of all members in good standing shall be required to adopt the amendment.

Article X

This Association may, with the approval of two-thirds of the members at a meeting called for the purpose, merge with other associations having a similar constitution, and all assets of this Association shall forthwith become the property of the resulting Association and the corporate life of this Association shall cease.

PREPARED TESTIMONY OF WILLIAM CONNELLY

(In the Matter of *Village of Elbow Lake* vs. *Otter Tail Power Company*, Docket No. E–7278)

Q. Would you please state your name and address?

A. My name is William Connelly and I reside at 101 G Street, S.W., Washington, D.C.

Q. And what is your occupation?

A. I am a supervisory auditor in the Division of Audits, Office of Accounting and Finance, Federal Power Commission.

Q. Have you had any formal education in accounting?

A. Yes. I graduated in 1960 from Northeastern University, Boston, Massachusetts, with a Bachelor of Science degree in business administration, with a major in accounting. Since that time I have attended or taken courses to maintain or increase my proficiency in accounting.

Q. What has been your professional experience in accounting?

A. Since September 1960, I have been employed by the Federal Power Commission as an auditor on various field investigations of licensees, electric utilities, and natural gas companies to establish the original cost of utility plant and to determine compliance with the Commission's Uniform System of Accounts, and more recently, in the Washington office as Assistant to Chief, North Central Region, Division of Audits.

Q. I take it your audit reports are used as a basis for Commission action?

A. Yes. They are.

Q. Do you belong to any professional societies?

A. Yes. I am a member of the Federal Government Accountants Association.

Q. Have you had occasion to examine certain books and records of Otter Tail Power Company?

A. Yes, I have.

Q. When did you make your examination?

A. On Friday, June 27, 1969, I was present at the deposition of Mr. Harry C. Johnson, Controller and Treasurer, of Otter Tail Power Company. This deposition related to certain accounting practices and procedures of Otter Tail Power. Following the deposition, I examined certain books and records of the company for compliance with the Commission's Uniform System of Accounts with the assistance of Mr. Dennis Duffy, a Federal Power Commission auditor.

Q. How long did your examination take?

A. The examination took approximately two weeks.

Q. Will you briefly explain the purpose of the FPC's Uniform System of Accounts?

A. The purpose of the Uniform System of Accounts, and the related report forms, is to promote uniformity and consistency in the recording, classifying and reporting, on a functional basis, transactions of the utility. This accounting and the subsequent reporting are useful as a tool to aid management and investors, as well as regulatory commissions, in performing their proper roles to insure that the amounts charged to the consumer are just and reasonable within the framework of regulatory requirements.

Q. What is Account 426.4 of the Commission's Uniform System of Accounts prescribed for public utilities and licensees?

A. Account 426.4 is entitled, "Expenditures for certain civic, political and related activities," and reads as follows:

"This account shall include expenditures for the purpose of influencing public opinion with respect to the election or appointment of public officials, referenda, legislation, or ordinances (either with respect to the possible adoption of new referenda, legislation or ordinances or repeal or modification of existing referenda, legislation or ordinances) or approval, modification or revocation of franchises; or for the purpose of influencing the decisions of public officals, but shall not include such expenditures which are directly related to appearances before regulatory or other governmental bodies in connection with the reporting utility's existing or proposed operations."

Q. When was Account 426.4 promulgated by the Commission?

A. It was promulgated as Order No. 276 in the year 1963 and is found in the Commission Reports at 30 FPC 1539.

Q. Prior to that time were there any accounts prescribed by the Commission to cover expenditures required to be accounted for in Account 426.4?

A. Yes. Account 426, Other income deductions, and prior to the revision of the Uniform System of Accounts in 1961, Account 538, Miscellaneous income deductions. This was based upon the Commission's memorandum opinion in the Northwestern Electric Company case reported at 2 FPC 369 and following that, the ECAP case reported at 24 FPC 278. In addition, the Commission had issued on November 27, 1945 Accounting Interpretation E–110 in regard to this type of expense. Accounting Interpretation E–110 was adopted by the National Association of Railroad and Utilities Commissioners and appears as NARUC Interpretation 58.

The Commission stated in the ECAP case (24 FPC 278, 289) that, "The fact that NARUC likewise adopted this interpretation of its System of Accounts, as set forth in Accounting Interpretation E–110, or the fact that we have, for convenience and uniformity, regarded the NARUC interpretation, as interpreting our System of Accounts, does not detract from our prior interpretation of our System of Accounts, nor does it give rise to any errors in the promulgation of this interpretation of the System of Accounts or its application to respondents."

Q. You have already testified that you were present at the taking of the deposition of Mr. Johnson, is that correct?

A. Yes.

Q. And you heard his testimony as to how he would account for expenditures for advertising for the purpose for influencing public opinion as to the election of public officers, referenda, proposed legislation, proposed ordinances, repeal of existing laws or ordinances, approval or revocation of franchises; for the purpose of influencing decisions of public officers; or having any direct or indirect relationship to political matters?

A. Yes.

Q. Would you give the thrust of his response?

A. Mr. Johnson indicated that under his interpretation and pursuant to his instruction, only exepnditures regarding national political issues would be recorded by Otter Tail Power in Account 426.4.

Q. How is Mr. Johnson's view implemented in Otter Tail Power's accounting procedures?

A. It was implemented by Otter Tail Power Company's Accounting Circular No. 22 dated January 1, 1967 and approved by Mr. Johnson which states, in part, "This account will not include any expenditures for present or proposed legislation or ordinances related directly to our business The appropriate operating expense accounts will be used for these expenses."

Q. Do you agree with Mr. Johnson's interpretation of Account 426.4?

A. No, I do not. The text of Account 426.4 makes no mention of restricting its use to national political issues. Further, the Commission in Order No. 276 which established Account 426.4 specifically included "Advertising in various mass communication media to influence the election or appointment of public officers or proposed legislation at Federal, state, or local levels." (30 FPC 1542). Further, it is difficult for me to construe the words "ordinances" or "franchises" as having anything to do with national political matters.

Q. In your opinion, what are the results of the accounting followed by Otter Tail?

A. Expenditures properly chargeable to Account 426.4 were improperly charged to other accounts of the company.

Q. What was the purpose of your audit?

A. The purpose of my audit was to determine if expenditures of a political nature has been made by the company and to determine the extent of such expenditures. In order to do this, it was also necessary to determine if such expenditures were properly classified according to the Commission's Uniform System of Accounts. This would also be helpful in determining what additional staff action should be taken.

Q. Did you have any material made available to you which would indicate such costs were incurred by Otter Tail?

A. I had available to me advertisements published in newspapers, brochures and other material distributed in municipalities which were supplied by a representative of Elbow Lake Municipal Electric System and purported to be paid for by Otter Tail Power

Company. I also had materials supplied to me which purport to originate with local groups which I discuss later. The representatives of Elbow Lake also supplied press clippings which accused Otter Tail Power of intervening in local elections in its service territory.

Q. Do you have copies of some of the advertisements, brochures, clippings and other material with you?

A. Yes, I do.

Mr. Examiner, I ask that these be marked for identification as Exhibit No. 36 (C1), consisting of eighteen schedules.

Q. What was the scope of the time period covered by your audit review?

A. A review of a general nature was made for the period 1959 through 1968. I then selected two years of this period for examination of certain 900 expense accounts of the company. Due to the time limitations only selected 900 accounts and company subaccounts of these 900 accounts were tested.

Q. What do you mean by 900 accounts?

A. The accounts dealing with customer accounts expenses, sales expenses and administrative and general expenses.

Q. Did you prepare an Exhibit showing the 900 accounts and listing the subaccounts you examined?

A. Yes.

Mr. Examiner, I ask that these be marked for identification as Exhibit No. 37 (C2), consisting of two schedules.

Q. Is it correct that many of the advertisements with respect to Elbow Lake appear in papers prior to 1962?

A. Yes, but the company had destroyed the vouchers which would disclose payments in regard to expenses in connection with Elbow Lake advertisements. This is allowed by the Commission's regulations for preservation of records, but made an audit for years prior to 1962 impractical.

Q. Is there any other way to track down the vouchers once those vouchers have been destroyed, in your opinion?

A. It would be possible that some of the expense vouchers had been retained because charges with a longer expiration time than those destroyed were recorded on the same voucher, but this would be coincidence.

Q. Was it practicable for you to make an audit for the entire period 1962 to the present time?

A. No. Due to the time limitations such an audit would have been impracticable.

Q. Could you explain this briefly?

A. The company's system of recording charges is to show only a voucher number and an amount on the subsidary account ledger card. To examine seven years of the company's records would require examination of several thousand vouchers and would take several months. I, therefore, confined my examination to the years 1966 and 1968 and even for those years, only to selected 900 accounts or subaccounts where I suspected possible misclassified expenses might be found.

Q. What were the results of your audit?

A. We found evidence that the company had made expenditures to influence local political matters and these expenses were improperly classified in that they were not recorded in Account 426.4.

Q. Were there any balances reported in Account 426.4?

A. No. Apparently they have never used the account.

Q. Do you have any examples of such evidence of this type of expenditure?

A. Yes.

Mr. Examiner, I would like to have marked for identification as Exhibit No. 38 (C3), consisting of four schedules.

Q. Could you describe this Exhibit?

A. I refer first to Exhibit No. — (C), Schedule No. 1 which consists of Voucher No. 54653. It shows payment of a billing of Harold E. Flint and Associates by Otter Tail Power Company for a special project in Velva and for other services. The supporting documentation for portion of this charge are billings by the Velva Journal of Velva, North Dakota in the amount of $475.75 on one occasion which was carried forward on account and to which an additional amount of $4.80 was added for a total of $480.55. The billing of $475.75 was to Mrs. Dorothy Becker, Committee for Sound Government. According to the ads run in the Velva papers some of which are identifiable with this billing and are shown in Exhibit No. — (C1), Mrs. Dorothy Becker was also associated with the Committee for Free Enterprise, as its Treasurer. From the ad run it appears that the Committee for Free Enterprise and the Committee for Sound Government were one and the same. The ads in my opinion are political in nature.

Q. Would you please describe schedule 2 of Exhibit — (C3)?

A. Schedule 2 is company Voucher No. 57705 which is a payment to Lewis and Bullis, a law firm, of Wahpeton, North Dakota, in the amount of $634.62. The supporting detail for this voucher shows that it is payment for service rendered to the Taxpayers Association in Hankinson, North Dakota election contest.

Q. What kind of election was that?

A. It is my understanding that it was a political election to provide for a municipal electric power system. The election was contested by a Mr. Roy P. Anderson who wished to enjoin the city of Hankinson, North Dakota from engaging any consultants for preliminary engineering services and spending money on other services to explore the ultimate feasibility of the undertaking of a municipal electric system.

Q. What else does the voucher show?

A. Voucher 57705 in the supporting documentation shows expenses incurred and paid for by Lewis and Bullis in regard to Anderson vs. the City of Hankinson case. I am advised by counsel that the history and facts of this case are discussed in Anderson v. City of Hankerson, N.D. 157 N.W. 2d 833 (Supreme Court of North Dakota, April 3, 1968).

The voucher we are discussing now is a final payment of $634.42 and was charged by Otter Tail Power to Account 426.5, Other deductions. The preceding payment in regard to this matter was made on Voucher 38169, such payment totaled $1,590.48 and was charged to Account 355, Poles and fixtures. Referring back to the supporting documentation of Voucher 57705, it states that $1,590.40 was donated to the Taxpayers Association by Otter Tail Power Company and paid to Lewis & Bullis. In addition to the vouchers mentioned, Voucher 33115 shows a payment of $454.35 to Lewis & Bullis. The supporting documentation shows that this payment for services in the Hankinson matter prior to the Taxpayers Association engaging the firm. This amount of $454.35 was charged to Account 923, Outside services employed. The payments extended over the period November 15, 1966 to September 10, 1968 and show that the company financed the Taxpayers Association suit against the city of Hankinson.

Q. Does that conclude your explanation of this Exhibit?

A. Yes.

Q. What other information did you find with respect to the company engaging in litigation of municipals' electric operations?

A. There were two vouchers that we examined that had to do with the franchise election at Aurora, South Dakota. The first was Voucher 52950, a payment of $147.05 to Cheever and Mydland which was charged to Account 923, Outside services employed, and the second was Voucher 52111 paid Austin, Hinderaker and Hackett in the amount of $271.33 which was also charged to Account 923. The two firms were used because a member of the Cheever and Mydland firm was a candidate for elective office and apparently the firm withdrew to avoid any conflict of interests. The firm of Austin, Hinderaker and Hackett filed a suit for the company in regards to the municipal election. The company was unsuccessful in the suit. This information was secured from Mr. Emmen, an Otter Tail Power employee, when these vouchers were questioned during our examination. In addition, the review of the information supplied by the representative of Elbow Lake disclosed that the company was active also in the Colman, South Dakota election. My review of the Director's minutes indicated this to be the case because in the Directors' minutes of May 29, 1961, it is stated, "Report was made on Colman, South Dakota where the company is resisting the establishment of a municipal distribution system."

Q. Did you find indications of other improper charges?

A. Yes, in the following area. The company has engaged on various occasions Central Survey, Inc. of Shenandoah, Iowa, a public opinion sampling firm, to determine the customers' reaction to regulation of cooperatives and municipals, if the area would be better served by municipals or private power companies, and other general customer reaction to the company's policies and advertising programs.

Q. What were the magnitude of those expenditures?

A. The amounts, which vary, from approximately $500 for a limited study in regards to how North Dakotans feel to regulation of cooperatives and municipalities to approximately $10,000, or more, for a survey of the overall company service area regarding total company operations which would include questions as to preference in power supply.

Q. What other indications did you find of charges having political implications?

A. The District Managers and certain officers of the company regularly entertained members of the State Legislatures and members of the city governments.

Q. Do you have enough information about these dinners to express an opinion as to whether the charges were improperly classified?

A. No, I do not.

Q. What were the magnitude of the amounts spent on these dinners?

A. The amounts would range normally from about $50 to $200 depending on the number of guests. The amounts might total several thousand dollars per year.

Q. How frequent were they during the period of time you studied?

A. The expenses for the dinners where found in many of the expense vouchers we examined with a minimum of an annual dinner for each district, and, more frequently, at the discretion of the District Manager and/or the officer.

Q. What other employee's time and expenses are more clearly chargeable as political expenses?

A. In June 1968, a municipal seminar was sponsored by the North Central Electric Association. The overall theme of this seminar was how to prevent agitation for municipal electric systems and what to do if such agitation was present. A portion of the meeting was devoted to the acquisition of existing municipals' electric systems.

Q. Did you obtain copy of the program of that meeting?

A. Yes, I did.

Q. Who attended the meeting?

A. Approximately 80 employees or officers from ten privately-owned electric companies in the area attended this meeting.

Q. How many were there from Otter Tail Power Company?

A. According to the program 12 employees of Otter Tail Power Company attended the meeting.

Q. Do you have a copy of the program to submit for the record?

A. Yes, I do.

Mr. Examiner, I would like to have marked for identification as Exhibit No. 39 (C4) *twelve* page booklet entitled, "NECA, North Central Electric Association Municipal Seminar" of June 6 and 7, 1968.

Q. Did you find any employee or officer salary or expense charged to Account 426.4 in connection with either this program or any of the other activities discussed above?

A. No, I did not.

Q. Are there any other expenses that should, in your view, be charged to the political advertising account?

A. Yes. I have copies of what are known as "stuffers" which are political in their nature and properly chargeable to Account 426.4. I have copies of advertisements run in the local newspapers, which are properly chargeable to Account 426.4. I also have the copy of a written draft of television advertisement which shows the intervention of the Federal Government into the electric industry in a bad light.

Mr. Examiner, I would like to have marked for identification as Exhibit No. 40 (C5) consisting of three schedules.

Q. What part of the television advertisement are you referring to?

A. Starting on page 6 of the advertisement with Video Item 19 through 23 and Audio which would be broadcasted at that time. On page 13 Video Item 41 and Audio portion broadcasted at that time.

Q. Would you explain your criteria for determining these ads are political in nature?

A. Certain ads which were used in the ECAP case already cited are reproduced or discussed at 20 FPC 108. These ads used by Otter Tail Power are in the same vein as those already indicated by the Commission as political in nature.

Q. Do you have any total cost of these ads to submit for the record?

A. For these various advertisements in newspapers and TV, and the bill stuffers, no attempt was made due to time limitations to determine the cost that was incurred because of the impracticality of segregating costs between Account 913, Advertising, Account 930, Miscellaneous general expenses and Account 426.4 on the various vouchers from Harold E. Flint and Associates, and from other sources from which the company obtained advertising material.

Q. Do you have any figure to supply the Commission which would indicate the total amount of company expenditures properly chargeable to Account 426.4 even in the two years you concentrated on?

A. No. For all the reasons indicated above, a complete audit was not possible and I was unable to determine the magnitude of Otter Tail's total expenditures for this purpose. If such expenditures had been properly accounted for the balances in Account 426.4 would have supplied this information. All I can say is that it is some undetermined part of the amounts shown on Exhibit No. 2 schedule 1.

Q. Does that conclude your testimony?

A. Yes.

AN OLD PRO LOOKS AT THE CAMPUS

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. CUNNINGHAM. Mr. Speaker, Dr. William H. Thompson, dean emeritus of the University of Nebraska at Omaha and a very dear friend of mine, recently discussed the Nation's problems on campus before the West Omaha Rotary Club.

Dr. Thompson is no johnny-come-lately to the campus. He taught 10 years in high school, 10 years in college and spent 30 years as a college professor and administrator.

Mr. Speaker, his remarks, which follow, merit not only the attention of my colleagues here in the House, but concerned people throughout this land of ours:

AN OLD PRO LOOKS AT THE CAMPUS

(By William H. Thompson, Ph. D.)

I submit the following qualifications for appearing before you. I taught 10 years in high school, 10 years as a college teacher, 30 years as a college professor and administrator. I have survived two campus riots and one student body strike. I have fired 10 faculty members in one day and 35 students in one day. I have endured innumerable parades, complaint committees, appearances before my superiors and a bushel basket of unfriendly newspaper items. These, among other matters I will not mention, are my credentials for speaking to you today. During this career I've made many mistakes—among them was the flunking of the mayor's son. I've appeared before boards of education, boards of regents, superintendents, presidents, faculty and ministerial committees to answer for my deeds. I have only one virtue to offer to you and that is—I did not run away! These, gentlemen, are my credentials.

My recent visit to the campus of the University of California in Berkeley is the stimulus that produces my reaction today. As I stood at the entrance to campus of one of the world's most beautiful and famous universities and saw it spew out its scummy product, my heart was sick beyond all description. To walk through Telegraph Street leading to the main gate of this temple reared to learning is an unforgettable experience. It is unbelievable to see the dirty, ugly horde of young people eating, drinking, sleeping, in what was to have been one of the most lovely and attractive streets of the world. This desecration was enhanced by odorous hawkers of newspapers paid for and furnished by Chinese communists as a means for their support. These newspapers are pornographic and contain the most indescribable filth possible to print. The editorial page spoke of the "New Utopia" brought by the revolution which would dissolve the family. The first page ran an ad inviting all to a party, "Come bottom-less or top-less, or both; however, you have to furnish your own pot." The descriptions of filth parties were among the social items of the day. Long diatribes on Mao's Communism was an added feature.

This impossible situation can only be believed by seeing. I am advised that this street has the highest veneral disease ratio in the world. Its denizens are supported by welfare contributions from parents and money from communistic sources.

Policemen on campus describe the population of the university as two kinds—bright, ordinary young people; others extending from the bearded left-wingers to the most degenerated "hippies." I was advised that about one-third of the faculty members were "hippies." I talked with one of these faculty members who had the remnants of last Tuesday's soup in his beard and a breath that reminded one of last night's beer. He smelled like a stable and looked like he had slept in a box car. I asked him what he represented in the university and he said, "The New Left." I felt he should have been left long ago. And this brings out the real villain of the piece—his name is never mentioned; he gets no publicity and yet in my judgment is largely responsible for many of the unspeakable conditions on the faculties of our universities.

He is the man who hires the faculty, too often on the basis of academic proficiency alone. I submit to you that our youth deserve better than the character of "The New Left." Our universities owe it to our young generation to be led and instructed by men of character, personality and appreciation of the issues of life—certainly by men who are loyal to the country that preserves us all.

The policemen surveyed the scene with me and they told me of a new breed called "street people," who are joined by the hippies of the university. They stated that the campus plan of the Chinese communists is to corrupt the bright and young of this generation and thus prepare the downfall of our nation. They told me many people come from all over the world to see this festering menace. They were very emphatic in stating that if it were not for the support of Governor Reagan, the police could not control the situation.

I have talked to many college administrators from various parts of the country. They told me that what is happening in Berkeley is part of the plot by which communism is invading the campus and ultimately plans to achieve the destruction of the Republic by the hands of those who have received its greatest benefactions. They are skillfully and intelligently led; their agents invade every campus, break no laws and prey upon the credulity and the urge for adventure that exists in all youth. They ply their destructive schemes by an ingenious and insidious philosophy which challenges our whole system of values.

I had felt that men like J. Edgar Hoover, Dr. Fred Schwartz and Billy Hargis—and hosts of others—were blowing blatant horns of exaggeration; but as one looks into the existing situation, his mind changes. One asks the question: How can these things be? The agony of this question should be borne by every American. Perhaps we should thank God for the many thousands of dedicated professors and scientists who are faithful to their responsibilities—and for the further fact that they still are in the great majority. I have found administrators more alert to the threatening disaster. They realize it, but often feel helpless for many reasons. I would like to discuss a few with you.

No. 1. It is my opinion that television and news media have been large contributors to the present situation. In my view the modern newspaper is a journal of abnormal psychology and television is the most modern means of confusion, distortion and disorientation of the mind of man yet invented. The dregs of campus society are glorified through the news media presenting their abominations to world-wide audiences. I hesitate to think what would have happened to me when I was wandering through the academic forests attempting to keep the preserves safe for all who wished to learn. I can see myself now . . . running to the moon with the news and TV boys breathing down my neck with the do-gooders just behind in hot pursuit.

One opens the paper to page 16—or must tune in TV soap operas featuring "Over the Back Fence,"—or—"Chatting with Aunt Sally," to find out anything normal or natural about the human animal.

No. 2. Our universities have become temples of data processing. Freshman Joe is only a number. He is too often fed a curriculum of mental pap such as: how to fish in the northwest—play games on the recreation field—fourth-grade English dignified by title, "English I"—contemporary problems where he learns to take a bath, stand up when ladies enter the room and the proper use of Right Guard. He is taught by a graduate student who cares less about Freshman Joe and his cohorts than how to finish his dissertation and go into research and thus disappear from the legitimate function of the university, namely, teaching. Joe is hounded by a horde of disinterested, ill-prepared, poorly-paid harpies known as counselors; and at the end

of the year finds himself depersonalized and descended into probation because he never made his Brownie points—known in the academic world as grade point averages. In the meantime highly-paid academicians empty bottles into test tubes, push rats through mazes, cook bacteria and write scholarly papers for journals and make 13 copies for their government grant. Freshman Joe sees the name of the "Great Man" of the catalogue on his office door, but that's about as far as he gets to knowing him.

It is sad to think that the great multi-university of today has too little place for the Olive Grove of Socrates, or the Crack in the Castle Wall of Pastalozzi, or the Walk to Emaus with Christ.

No. 3. While one may find many difficulties with this great civilizing institution called the university, the predicament we face is not totally explained in terms of the university. I may illustrate my point by telling you of a clinical experience I recently had. A little boy, seven years old, was sent to me for psychological analysis. He had set his home on fire three times and the last time he nearly made it. In talking with him, I said, "Johnny, why did you do it?" He looked at me with big earnest eyes, "Oh, Doctor, it was the only way I could get my folks to come home."

We have produced a generation gap by falling off cocktail stools, rushing into all the social and economic go-getterisms and when at home, cluing in on the TV so that we live with our children as strangers—little realizing that there are some characters who communicate with them and who think with them—but, it is too often, not ourselves. The English have a saying, "We send our son to the schoolmaster, but the school boy educates him."

There are many facets to this problem. I might mention a few: Our political leaders compromise with indolence, greed, sloth and are forging more and more chains upon the producer and adding more and more stuffing to the feather-bedding for those who will not work. We have witnessed the degeneration of the stage and the debauch of the motion picture. We place more emphasis on sex obscenity than any society since the Roman hey-day. We have emptied sex of its spiritual values and accepted the poverty-stricken idea of motel short order sex. In our great city of Chicago, there stands in the city square, a tremendous so-called "art form." The politicians and professors gathered at the acceptance ceremonies. They talked of public relations, international relations and modern art. The ignorant crowd gaped at the "big shots." A taxi driver remarked, "I don't know what it is all about and I don't think they do." And yet, here was a modern exhibit of sculpture, in the center of one of the greatest cities, which daily speaks of the depersonalization of man. Modern art has praised the monsters that have wriggled from the caverns of the subconscious of Picasso—and others.

From the mouths of our clergy, too often, come the dragon-breath of socialism, welfarism, Mao-ism, that lead to personal degeneration in the name of the social gospel. Our educators, too often, compromise with ease and get-something-for-nothing pressures from a public that wants the symbols of education without the price. Consequently we have divested our curricula of the difficult discipline of the classics. We have accepted, too often, the objective of education as a custodial function. Just keep them off the streets; Thanks to the non-failure policy of our public and parochial schools, we have overwhelmed our universities with a host of semi-illiterates. The universities have adjusted to this flood of incompetence by cheapening the curriculum and debasing the degrees—so that a college degree, now, merely serves as an I.D. card when applying for a job or a ticket of admission to the Society of the Lounge.

Our courts have compromised with crime and the officers of the law are badgered as never before in the history of this country. Even the ancient and honorable practice of medicine is gradually sinking into the Fabian morass of mediocrity.

All this is not unnoticed by our youth. You had better believe it! It would be a complete distortion to think what is being said is the real picture of our youth, for never has there been in recorded history, a generation whose average health and strength is greater. Never has there been before, among the children of man, a generation equal to the intelligence, ability and capacity to perform. These now provide the footfalls in the halls of our institutions of learning. They are capable of the challenge for greatness. However, they are the victims, daily bathed, in the glorified dregs of our society and the iniquities of our generation as projected by the news media. They are frustrated by the lock step of inferiority in our schools. They are neglected by their parents; uninspired by our churches; disgusted with our political infidelities—and thus are rendered easy prey for the hot, seductive breath of moral degeneration, political anarchy, religious nihilism and complete personal disaster.

I ask you—what is wrong with an honest devotion to the things that have made this country great, its constitution, its moral fiber, its productive work, its great freedoms, its mighty expressions of mercy and good will, its happy, cooperative living, its unprecedented opportunities?

I ask you—what is wrong with, "In God We Trust?" Every true teacher knows that if these banners are held high—our youth will respond.

I ask you—shall we shake ourselves out of the slough of despond and stand again in the sunshine of our rightness, our strength, our manhood and our proven values—or shall we go stuttering and stumbling, brawling and burning, reeling and bleeding, back over the hill of yesterday to barbarism?

"CURIOUS" RATING APPALLING

HON. DOMINICK V. DANIELS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. DANIELS of New Jersey. Mr. Speaker, the Hudson Dispatch of Hudson County, N.J., recently published an editorial urging review of our present laws against the distribution of obscene materials. The editorial calls upon the Congress to tighten up controls on pornography and cited a recent New Jersey Superior Court case in which the New Jersey court was unable to ban an obscene movie because of the "U.S. Supreme Court's failure to issue a clear-cut definition of obscenity."

Because of the importance of this matter to my colleagues I am including the editorial in the RECORD. The editorial follows:

"CURIOUS" RATING APPALLING

A New Jersey Superior Court judge has given the controversial Swedish film, "I Am Curious, Yellow" a bad review but in the process also gave it a tremendous boxoffice boost. Judge Mintz' refusal to ban the showing of the picture can be linked directly to the U.S. Supreme Court's failure to issue a clear-cut definition of obscenity.

The decision favored the producers and the promoters of the picture because the court found that it had a modicum of redeeming social value. Although it is patently offensive to the community and appealed to purely prurient interests, it did not fail all three standards for obscenity as defined by the nation's highest tribunal and the New Jersey laws.

If ever there was any doubt that the statutes governing obscenity and pornography needed revision, the ruling by Judge Mintz points up the need for revamping of the law. The decision does not reflect the judge's personal view, he found the film appalling and a bore, but is based on the letter of the law and the protections of an individual prescribed in the First Amendment of the constitution.

It was a setback for the counties of Essex, Middlesex and Union who joined in the battle to ban the picture. It also involves legal actions instituted or contemplated in Bergen and elsewhere against exhibition of the film which strangely passed the scrutiny of U.S. censors and customs agents.

There should be no hesitancy among the counsels for the three counties involved in the trial to file an immediate appeal and carry the case to the highest court of the land if need be. Its receptivity there should be amicable and reassuring for Chief Justice Burger has displayed some firm views against smut, which did not prevail under the aegis of Chief Justice Warren who was responsible for the vague obscenity ruling, which tends to be onerous to the local judiciaries and tends to confuse the public.

The State of Arizona has banned "Curious" because it was ruled unqualifiedly obscene. Its dominant theme is abnormal sex life, an element that has gained widespread display in innumerable movies, in books and on the theatrical stage of America. The subject, contrary to the mores of the nation and appalling to the community standards, which so predominates, "I Am Curious, Yellow", was aptly termed a "cesspool of filth" by a priest who is a member of the Presidential Commission on Pornography and Obscenity.

The New Jersey decision provides an appropriateness for a reminder to the presidential board to expedite its study and prepare some meaningful recommendations to the White House and the congress that will tighten the rules against distribution of questionable material and the importation of obviously offensive and lascivious pictures.

MERCHANT MARINE REVITALIZATION

HON. HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. KEITH. Mr. Speaker, the President's recent commitment to restoring America's merchant marine to its rightful place in the world's fleets is a welcome step to me. For too long we have listened to the so-called experts who decided that a competitive merchant marine was no longer in our national interest to support.

The war in Vietnam, where 97 percent of the materiel involved was shipped by sea, proved them wrong. And so today we have a national administration that, for the first time in decades, has committed itself to the goal of a front-rank merchant marine for the United States.

Navy magazine has taken note of this situation, and in no uncertain terms has delineated the steps this Nation must take in this vital area. I commend it to the attention of my colleagues and the public.

The editorial follows:

WHY CAN'T WE TAKE THE MARITIME LEAD?

President Nixon's message to Congress laying out a program for revival of the U.S. Merchant Marine is perhaps the most significant maritime pronouncement that has come from the White House since World War II. It is a breakthrough in that for the first time since 1945, an American President has said in effect, "we must do much more at sea." We must fully exploit and enhance our natural oceanic advantages, our fortunate geography and our fundamental maritime expertise, said Mr. Nixon.

After more than a generation dominated by top level U.S. land-minded strategy, this is the greatest news in years. But it is only a first step, an encouraging beginning. For the first time in many years, we see hope that with a strong, maritime-minded Chief Executive and courageous, dedicated and knowledgeable officials in the key posts of Maritime Administrator and Chairman of the Maritime Commission, ready and willing to take leadership, things are starting to happen.

CONGRESSIONAL LEADERS SUPPORT PROGRAM

Congressional leaders long have been pressing for modernization of both the Merchant Marine and the Navy. They can be counted upon not only to carry out Mr. Nixon's maritime shipping plan, but also support the vital naval ship modernization program.

Those who have been dragging their feet must heed President Nixon's challenge to rebuild the Merchant Marine at a reasonable expense. He spoke specifically, in his challenge, of the shipbuilding industry, ship operators and seamen. But the obstructionists also include those in the Defense Department, Navy and other governmental agencies who have been denying the need of a strong merchant marine as an arm of defense for years. They must get behind the President.

Some years ago, the late Secretary of Defense Charles Wilson made history with a comment that he liked hound dogs, who earned their keep, more than kennel dogs, who took handouts. Engine Charlie was criticized for this but most people agreed. Unfortunately there have been kennel dogs in the maritime industry, ready to take handouts without producing results. They must start building, operating and manning ships and cooperating under the new program or—as President Nixon indicated—the whole deal is off. What he meant is not entirely clear, but his plan includes both a carrot and a stick. Many assume he might build some ships abroad, as some of his land-minded advisors have recommended. We think building abroad would be a fundamental mistake, for the maritime industry is indivisible and the Navy, Merchant Marine and U.S. shipbuilding industry must stand or fall together. We believe Ed Hood when he says the industry will produce. It must.

M'NAMARA POLICY PROVEN WRONG

There also have been administrators and cost analysts in the Pentagon and elsewhere in Government who resist steps to attain a viable U.S. Merchant Marine industry. Andy Gibson, one of the strong men so much needed today, took on the Defense Department last month when he sharply attacked Pentagon officials before a House committee for failing to adequately support the Nixon Program. For many years, former Defense Secretary Robert McNamara had refused to recognize the Merchant Marine as necessary to defense, apparently on the false, money-saving theory that airlift would take care of defense needs. Viet Nam proved him wrong, when sealift carried some 97 per cent of the war supplies to our forces there, but he and his aides never admitted it publicly.

The McNamara anti-maritime policy still evidently lingers among those gifted theoretical thinkers just below the top who write the policy papers in the Pentagon. It is encouraging that when Gibson spoke out publicly, Defense Secretary Laird felt compelled to answer. Laird's statement repudiated his subordinates, asserting his "complete support for the Nixon program."

We say the President's statement is only a beginning for a variety of other reasons. Despite the efforts of Chairman Rivers, Representative Bennett and others, the Navy shipbuilding program seems destined to be limited to about $2.6 billion—up from last year but way below what is necessary to do something about the dangerous block obsolescence of the Fleet.

But we also are optimistic about the prospects of the SS *Manhattan's* feat in opening a Northwest Passage to commercial shipping. It could lead to a breakthrough in maritime affairs, if the Nation follows up by exploiting the northern mineral riches of Alaska and Canada by shipping. This means not only building more giant ice-breaker tankers, but much more resolute research and development in this field—such as redesigning ships, both merchantmen and warships, to penetrate the heavy Arctic ice; new concepts of ice-breaking rather than the use of brute force; and new navigational aids, etc. This development could be revoluntionary, perhaps more important than another Panama Canal or two, and also open the way for newly needed seabased early warning and missile-intercept systems, akin to SABMIS.

MARITIME COORDINATION NEEDED

Many other things must be done to take advantage of President Nixon's precedent-breaking pronouncement. The first must be to convince our top leaders that the future strategy of the United States lies in moving more of America's strength to sea. This means reversing the current division of U.S. military and military-oriented research and development funds, which now give about three-fourths of the large sums available to land-oriented purposes (Army and Air Force) and only one-fourth to seabased systems.

One badly needed move is to provide some sort of high level coordination of all maritime matters, such as now exists in Moscow. Maritime affairs are now badly fragmented, with the Navy under the firm control of the Secretary of Defense (and largely turning its back on its traditional second function of aiding American foreign commerce), and the Coast Guard, Maritime Administration, Bureau of Commercial Fisheries, and the Coast and Geodetic Survey, etc., divided among various departments.

Another step should be setting definite goals, such as the late President Kennedy laid down for putting Americans on the moon in the 1960s. We spent billions and did it. If somewhat smaller goals could be fixed for maritime aims, miracles could be performed. Instead of spending a few million dollars a year for shipbuilding and oceanic research, here and there, with no clear goal, we might, for example, set out to build a new type ship that can cross the Atlantic at an average speed of 100 knots by 1980—there are such craft in test—and do it.

GOVERNMENT AS A GOD

HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. LANGEN. Mr. Speaker, yesterday, I was the discussion leader at the regular weekly prayer breakfast. The breakfast is a meeting of several Members of Congress at which we discuss the issues of the day and how they can be interpreted within the framework of religious belief. In my remarks, I quoted from the text of a sermon that came to my attention some time ago. Several of my colleagues expressed an interest in the sermon. It is written by J. Lester McGee of the Centenary United Methodist Church of St. Louis. The sermon concerns the listlessness of American life in many circles where the Federal Government has tried to be not only the administrator of justice and maker of rules but also giver of life and worker of miracles. The text of the sermon follows:

COME UNTO THE GOVERNMENT ALL WHO ARE WEARY AND HEAVY LADEN

(From a sermon by J. Lester McGee, D.D.)

Many of our visitors, some of whom travel and get to visit all kinds of churches, say to me that everywhere they go to church they hear nothing but socialistic themes—and they get very hungry for a simple Gospel message of inspiration and hope.

You who hear me often know that I do not ride this Social-Gospel Hobby Horse. I believe I have something to share much broader, deeper, and certainly more durable.

To me it is unfortunate that some ministers are so caught up in this socialistic syndrome they have nothing to offer the inner man. All they know to do, or want to do, is to fill his belly with food, provide him a clean pad, a coffee house, and a playboy club and they have fulfilled their divine commission as Christ's minister.

I heard a minister of much experience and sound wisdom say that Jesus was interested in people and He fed them and healed them, and then told them to go and sin no more. But today, he said, we feed them, house them, heal them, and then tell them: "Go right on sinning, fellows, we're with you all the way." This is the one fallacy of the secular gospel.

I was in a meeting a few months ago with the ministers of the downtown-midtown area, and we were discussing what we could do together to help people. Out of my experiences here at Centenary and elsewhere, I suggested among other things a cooperative pastoral counseling center for the poor, the people who can't pay the fees charged by other counseling groups. One of the ministers, in the social ministry vanguard, bowled me over with the question: "What is that?" When I explained it meant sitting down with individual persons and families and talking over their problems in confidence and understanding and trying to help them with solutions, he quickly said he wanted no part of that. You see, that wasn't organizing the ghettos, demonstration for peace in Vietnam, or parading in front of city hall.

Let me hasten to say that I do believe Christianity has a dramatic word to say on the rightful priority of social concerns—including the elimination of pockets of poverty and racial discrimination, and the promotion of public righteousness. There are social implications of Christian commitment which I will discuss in the next few sermons. The point of this sermon is: We are pooped people. We are tired, weary, exhausted, frustrated, anxious and confused. The only hope we see is Prince Charming Government caring for us from the cradle to the grave. We have shifted the plea: "Give us this day our daily bread" from God to government. This I call The Pooped People Philosophy.

Here it is: "I used to think I was poor. Then they told me I wasn't poor, I was needy. Then they told me it was self-defeating to think of myself as needy, that I was culturally deprived. Then they told me deprived was a bad image, that I was underprivileged. Then they told me underprivileged was overused, that I was disadvantaged. I still don't

have a dime, but what the heck! The government will house me, feed me, clothe me, send my kids to school from Head Start through college, provide them with a swimming pool and a playground. The Supreme Court will protect my rights, and brother I've got my rights! Society will excuse me when I do wrong, heal me when I am sick, care for me when I am old, and bury me when I am dead. And when I am dead I am dead. There is no God. I don't need heaven. The government gives it to me here." There it is, a strange new philosophy of life we are instilling in both the old and the new generations.

A curious change seems to have occurred in our national philosophy with respect to problems and work, grit and sacrifice, all conditioned by one word: Gimme!

Our heritage as Americans is that of a people with courage and resourcefulness aplenty for tearing great problems to pieces. Then there arose among us the notion that ideally nobody should have a problem, that part of the function of government, and of civilization, is to relieve us of all problems. This is because we are humanitarians. We don't want anyone to suffer. We want to alleviate pain. This is as it should be. But there is a great danger here, and I fear we have reached that danger line in our American life. America is so busy being its brother's keeper we have perhaps forgotten how to be our brother's brother.

Some one has said if Abe Lincoln had lived today, the Rotary Club would have provided him with books, the Lions' Club with a reading lamp, and Kiwanis would have supplied his cabin with a floor; the minimum wage law and social security would have protected him; unemployment insurance would have paid him between rail-splitting jobs; the Railsplitters Union would have increased his take-home wages periodically; a scholarship would have sent him to college. In fact, Abe would never have found it necessary to study law or go into politics . . .

When I first felt called to the ministry, I had not been to college. I took a student pastoral charge consisting of five small country churches paying me a total salary of $600 for the year. On that I matriculated in college, bought my books, housed and fed and clothed myself, bought an old car to travel to and from my churches. There was no scholarships. I received no outside help. Yet I did have to do considerable evangelistic moonlighting to make ends meet. And I did not go in debt.

A Kentucky minister friend who is the Registrar of the Board of Ministerial training of my old home conference told me a few days ago that now when a young man wants to go into the ministry he is given a nice little church with a parsonage, a minimum salary of $4,200, and practically all his schooling, books, etc. But that conference is now faced with a new kind of dropout problem. The fellows get their education at the church's expense and then promptly drop out of the ministry and enter another field. This is happening all over Methodism and in other denominations as well.

Our college classrooms are filled with irresponsibles who are not there seeking knowledge because they or their parents have paid dearly for it, but there under a "grant" or "loan" which motivates as little as it burdens.

I could talk at length on the innumerable doles, gratuities, handouts and subsidies, and proposals for more and more of them. For example, there is the proposal, put forward in all seriousness by knowledgeable people, that every American be "guaranteed an annual income" by the federal government.

My friends, isn't it just human nature for those who receive handouts to look upon them as something to which they are entitled, as something that rightfully belongs to them?

Then there is the tendency to depend upon such gifts, rather than exert oneself to the greatest possible effort to meet his own needs. From the lowliest panhandler on the street to the worthiest recipient of today's social security benefits we are being "spoiled rotten" and rockabyed to sleep to the strains of that haunting lullaby known as the Beggar-American Rhapsody "Gimme gimme, gimme gimme gimme."

Time does not permit me to discuss the economic problem which commonsense leads us to anticipate as we pay for this paternalism. You know the old bromide about the feasting bureaucrats who say: "Get into poverty. That's where all the money is."

It is a common and careless assumption, but a false and dangerous one, that federal expenditures are from some other source than your own pocket, that the government pays, not you. This is as naive as the patient who told his psychiatrist he was making long distance calls to himself. "Isn't that expensive?" asked the doctor. "Oh no, it doesn't cost me a cent. You see, I always reverse the charges."

Now please do not go away and say I disapprove of helping those really in need. I am a Methodist and Methodists have a great social creed. Just let me read one brief word from that creed: "The concern of both churches and government should be for the inclusive welfare of persons, for their freedom and dignity, and for their successful functioning in community life, as well as for their physical maintenance. But needs should be met in such ways that dependency is discouraged and spiritual development made possible."

Where are the old proverbs: "God helps those who help themselves . . . Man's extremity is God's opportunity."? Are these just silly, sentimental, idealistic back numbers now repealed and ready to be junked?

Not long ago, an outstanding American said that before a nation can have A Great Society it must first have great people. Many people have been stirred by this challenge for a great society, and certainly we need it. But if a great society could be built with economic blueprints, or with brain power, or with money power, it would now be a reality.

America has the knowhow. We are conquering our rivers. We will eliminate air pollution. We will rid our cities of slums and poverty ghettos. We have harnessed the power of electricity, and now the power of the atom is bending to our will. We have comforts and conveniences and luxuries to dispense to all. But unfortunately we are missing the one blueprint by which we can create a great society, and that blueprint deals with values that are moral, spiritual and eternal. I listened to Svetlana Stalin during her press conference and the thing that impressed me in her reasoning to come to America was that emerging spiritual quality which was there dormant in her make-up all the time she was being oriented to communism. We can go secular as far as we dare, but without this depth dimension there is no hope. A few years ago a Russian leader wanted to bury us. Now the danger is that we will bury ourselves under our own potential and abundance of material things.

A teacher asked her class to write essays on that popular picture of the Revolutionary War called The Spirit of '76. Three men are in it. They are marching men. One plays a fife. One beats a drum. The third man has his head bandaged.

Well, one boy wrote his essay this way: "The Spirit of '76 is a picture of three men. One is blowing his horn. One is beating his drum. The other has the headache."

Here is a picture of our present day trying to build a great society. We are blowing our horns telling what we are going to do. We are beating our drums telling what we are doing. But many people still have headaches, and they have headaches because they have heartaches, because our lives are so shallow and irresponsible.

We do not want the Kingdom of God and His righteousness. We do not even want to labor for the things that perish. We want them doled to us. "Give us this day our daily bread—our daily fun, our daily kicks, our daily ease."

Jesus gave us the blueprint for the great society. Hear Him say: "Whoever hears these words of mine and does them, he is like a wise man who built his house on a rock foundation . . ." And that rock foundation must be made up of specific ingredients. As commonplace and cliched as it sounds I must list these ingredients: a sense of personal responsibility, hard work, determination, industry, sweat, perseverance, frugality, sacrifice.

Respectfully, I should like to recommend a change in the Lord's Prayer . . . recommended in the Christian Century. Where it now reads: "Give us this day our daily bread," I would like to see that phrase updated to read: "Give us this day the strength to earn our daily bread." I truly believe that is what Jesus meant. His whole life and ministry typified that. Remember, God decreed a long time ago that man should earn his bread by the sweat of his brow . . .

The Pooped People Philosophy is "Come unto the government all who are weary and heavy laden." I think there are only two ways of really getting pooped, fagged out, exhausted. One is from listlessness, idleness, shiftlessness, irresponsibility, panhandling. Nothing tires and depresses more than that. Isn't it frustrating to have no other source of sustenance and strength than the government? To be so completely at the mercy of a paternalistic society? What does this do to one's pride, self-respect? One of the tragedies of our time is this loss of personal dignity and self-respect.

The other way of becoming exhausted or pooped is from effort, grit, hard work, determination, struggle, perseverance, sacrifice, giving it your best, your all, trying to stand on your own two feet . . . And when you have done that, my friend, on any level of human endeavor, it is to you Jesus says: "Come unto me all you who labor and are heavy laden . . ." It is He and not the government, or anyone or anything else, who gives assurance, a sense of well-being, dignity and rest.

THE GSA NATIONAL PUBLIC ADVISORY COUNCIL

HON. HENRY BELLMON

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, December 18, 1969

Mr. BELLMON. Mr. President, it was most gratifying to me to learn of the effort being made by the General Services Administration to get a firsthand reading on how it can be of most service to the American people. I am speaking, of course, about the National Public Advisory Council which GSA Administrator Robert L. Kunzig, has named to counsel him on agency policies, plans, and programs. Among the 16 distinguished citizens of the United States whom Mr. Kunzig has selected for this important responsibility is Al Snipes of Oklahoma City, a man I have long known

and respected, and whose dedication to the development of the Oklahoma City area and the rest of the State knows no bounds.

I am sure that this same dedication will make Mr. Snipes a most valuable adviser to Mr. Kunzig, who is to be congratulated for this forward step in administration. Mr. Snipes has wide experience in the insurance and real estate investment areas and now is a director of the Grants Square Bank in Oklahoma City. His leadership in civic activities is as outstanding as his business career. Selection of men of such high caliber to advise our Government is a credit to the entire Nixon administration.

CONFEREE'S ACTION ON NUCLEAR NAVAL PROPULSION VESSELS

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. HOLIFIELD. Mr. Speaker, I wish to take this opportunity to commend the conferees on the fiscal year 1970 Defense appropriation conference for their prompt action on the bill. I want to take special note of the accomplishments of the conferees concerning the naval nuclear propulsion appropriations.

First, I was most pleased to see the $20 million, which was deleted by the Senate, for the eighth submarine of the new high-speed SSN-688 class, restored. If the $20 million had not been restored we would have had a significant delay in this important addition to our fleet. The $20 million thus restored permits us to proceed in the way planned in the House-passed appropriation bill. Now we can proceed with the procurement of the long-lead items which control the delivery of these advanced type submarines.

I was also pleased to note that the conferees saw fit to go along with the Senate in the inclusion of $10 million for the fifth nuclear-powered guided missile ship of the new DXGN class, which is to escort our nuclear aircraft carriers. The $10 million permits us to get started with the procurement of controlling items for this ship in accordance with the authorization bill passed earlier—Public Law 91-121—which authorized the procurement of long lead-time items for the fifth DXGN.

The Senate and House Appropriations Committees and the Armed Service Committees, the Joint Committee on Atomic Energy and the Navy have strongly advocated nuclear escorts for all of our nuclear carriers. Only with such escorts is it possible to take full advantage of the outstanding superiority of nuclear propulsion for carrier task groups. The authorization of the fifth DXGN is especially important since this ship will be the first nuclear escort for the nuclear carrier CVAN69—our third nuclear carrier—which was included in the fiscal year 1970 appropriation bill.

I expect the Defense Department to proceed expeditiously on the procurements for both of these ships.

ENVIRONMENTAL POLLUTION

HON. CHARLES H. PERCY

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, December 18, 1969

Mr. PERCY. Mr. President, I ask unanimous consent to have printed in the RECORD four addresses recently delivered by four very prominent Americans. Each has addressed himself to the increasingly critical problems of environmental pollution. That these men would choose this as their common topic bespeaks both the critical state of environmental problems and the quality of leadership they are willing to exert in the struggle to find solutions.

This sort of involvement by members of the private sector in the important problems of our society is one of the hallmark of American democracy. Some of this country's best heritage has grown out of the interest and involvement of the private citizens. Messrs. John Swearingen, Laurance S. Rockefeller, John L. Gillis, and Brooks McCormick fully typify this keen social consciousness.

To illustrate the community of concern they have expressed, I have joined statements made by each into the following single statement. In my judgment, it summarizes the nature of the problem and the commitment required if environmental quality is to be a reality.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

"There is no denying the gravity of the problem. Individually and collectively, we have defied the laws of intelligent housekeeping for so long as to impair the quality of our environment to a serious degree." (Swearingen) "Like a well-known headache remedy, the strategy must be a combination of active ingredients. The ingredients include clearly-defined goals, regulations that are strong yet reasonable, a system of incentives to hasten the adoption of the proper treatment facilities." (Gillis) "There is no substitute for the dedicated desire of industry and government to understand the gravity of the total environmental problem and their earnest resolve to respond to it." (McCormick) "A little over six years from now we will celebrate our 200th birthday as a nation. There is no better birthday present we can give ourselves and our grandchildren than a redoubled effort to preserve, enhance, and redeem the basic building blocks of America's environment and indeed its greatness—our air, our land, and our water." (Rockefeller)

STATEMENT AT NATIONAL EXECUTIVES CONFERENCE ON WATER POLLUTION ABATEMENT WASHINGTON, D.C., OCTOBER 23, 1969

(By John E. Swearingen)

Before getting into the specific factors on which we have been invited to comment here, I would like to note some general considerations which are fundamental to any successful efforts to cope with pollution.

All of us have been exposed to a great deal of rhetoric about pollution in recent years. To the extent it has awakened the public to the existence of the problem, this is positive. To the extent that it has tended to concentrate mainly on industrial pollution, it has been misleading.

There is a danger that the public is coming to believe that most of the problem can be eliminated simply by imposing strict controls on industry. Unfortunately, the problem is far too complex to be legislated out of existence, and crash programs aimed at symptoms rather than underlying causes are more likely to lead to economic waste than to environmental improvement.

In any event, we are not likely to make much headway in the fight against pollution unless we recognize that:

1. Environmental pollution is both a social and an economic problem.

2. It must be approached and solved on a practical basis—in terms of costs versus benefits.

3. In one manner or another, the costs must inevitably be borne by the consuming public—which means all of us.

4. A rational and effective approach to pollution control is impossible without a genuine understanding of what the problem is, why it has developed, and what the roles of industry, government, and the individual should be in meeting the problem. In short, there is urgent need for an overall perspective—a philosophy of pollution control.

The central question is not whether we should have cleaner water, but how clean, at what cost, and how long to take to do the job.

The fact that these considerations are frequently ignored in popular discussions of the problem does not diminish their validity. No one can argue with the premise that wherever pollution can be scientifically demonstrated to be a genuine hazard to human health, it should be eliminated immediately and regardless of expense. But when closely examined, many cases of environmental pollution prove to be esthetic in nature, rather than genuine health hazards.

Beyond question, pollution has increased hand in hand with growth and concentration of population and with the introduction of technology. Some degree of pollution is part of the cost involved in achieving the benefits made possible in a technological society. This is merely one more counter at which no free lunch is available. Our challenge is to identify the complex sources of pollution and keep them within socially and economically tolerable limits.

There are good number of people around who are convinced the curses of technology outweigh its blessings. My own view is closer to that expressed in the findings of a major study of the progress of technological societies, whose authors concluded: "Without its progress since the 19th Century, most men alive today would not have been born; those alive would have been sentenced to disease, filth, and even greater misery than exists in the world today. We are in better shape because of it."

While industry presents one easily identifiable source of pollution, the unhappy fact remains that a water pollution problem of national magnitude would still be with us if pollution were somehow completely eliminated from all industrial operations. As one leading government enforcement official has noted, an underlying cause of water pollution is that all over the country we have municipal sewage systems that are inadequate for the loads imposed on them in the last few years. Or let us consider agriculture. Agriculture withdraws twice as much water from streams and wells as public water utilities and manufacturing industry combined. A portion of this water finds its way back into rivers and streams, and we really don't know very much about the conditon in which it is returned—although there are grounds for concern.

When it comes to paying the tremendous costs which are going to be involved in arresting and reversing pollution of our waters, the public can readily recognize its direct financial involvement when called upon to vote on a local bond issue to underwrite improved sewage treatment facilities. But the same principle applies when it comes

to pollution-control expenditures by industry. These are simply an additional cost of doing business, and—like all other costs—must ultimately be passed on to the consumer. As for government grants to control pollution, that bill will be rendered to us all by the Internal Service.

There is no denying the gravity of the problem. Individually and collectively, we have defied the laws of intelligent housekeeping for so long as to impair the quality of our environment to a serious degree. Before the situation is further compounded by the projected new waves of population about to crash down upon us, concerted action is necessary. But since all segments of society have created the problem, all will have to be parties to the solution.

Turning now specifically to petroleum operations, I should note that the industry's official recognition of its obligation to undertake pollution abatement dates back over 40 years. The first formal program in the industry was launched in the 1920's, with publication of the American Petroleum Institute's first "Manual on Disposal of Refinery Waste." Now grown to more than 500 pages and six volumes, the manual reflects in detail the state of air and water pollution abatement technology in oil refining. Two of its volumes deal with water pollution control, two with air pollution control, one with chemical wastes, and one with solid waste disposal. The manual covers all known sources of potential contamination, and its suggested treatment methods are systematically revised as industry research provides new information on which to base effective action.

Over the years, as the individual oil companies have carried on research into all aspects of pollution problems associated with petroleum operations, the industry has jointly sponsored additional research at leading universities and research institutions—frequently in conjunction with governmental bodies. Sharing of improved technology, along with heavy capital expenditures, has led to significant advances in water pollution abatement.

Let me cite just a few examples:

In production, the industry has worked for many years to solve a particularly difficult conservation problem—the disposal of brine. Brine is present in almost all petroleum-bearing underground formations, and comes to the surface with the oil—typically about two to three barrels of brine per barrel of crude. The newest practice is to return the brine to the underground formation from which is was produced, or to some other brine-bearing formation. Sometimes it is injected down exhausted wells. More often, new wells are drilled specifically for brine disposal. As a result of years of cooperative effort, the industry now safely disposes of nearly six billion barrels of oil-field brine each year.

As the search for oil and gas has moved offshore, new conditions have been met and new techniques developed, to minimize the chance of pollution. During offshore drilling operations, it is normal to use at least three and often four, blowout preventors and numerous control valves. Offshore wells are also equipped with a special automatic safety device, called a down-hole storm choke, which closes when there is a rupture in the system. On a typical offshore drilling rig, every precaution is taken to minimize any contamination. Nothing intentially goes overboard—from soapy water to bathroom waste. The driller's bit never touches the ocean water, and all action takes place within steel pipes, which are sealed off from underground fresh water supplies.

In refining, large quantities of water are essential. Where 1,500 to 1,800 gallons were once used in the process of refining a barrel of crude oil, the fresh-water intake today can be as low as 100 gallons per barrel. Recirculation of cooling water is the principal means by which this reduction has been possible, using the same water as many as 25 to 30 times.

In marketing and transportation, leaks and spills constitute potential pollution sources. On pipeline river crossings where the line would be vulnerable to accidental damage from shipping, and, consequently, to leaks, the pipe is usually wrapped in thick concrete and buried in a trench, well below the river bed. In various parts of the country, where petroleum installations are adjacent to harbors and inland waterways, the industry has joined with local governmental agencies to contain and clean up spillages of oil that may occur. In most instances, industry has agreed to purchase the needed materials, and the local fire department or the Coast Guard has agreed to store the materials until needed and to deploy the equipment should a spill occur. More than 40 of these programs are now in operation or under development, and they illustrate the effectiveness of local cooperative approaches to the solution of local problems.

The cost of these, and the many other steps taken to prevent water pollution, is considerable. To get some appraisal of the expenditures involved, the American Petroleum Institute's Committee for Air and Water Conservation directed a questionnaire to petroleum companies early last year asking for data on their 1966 and 1967 pollution control expenditures in the United States and for projections of 1968 expenditures. Since all companies do not record costs in exactly the same manner, instructions and formulas were provided to standardize reporting for the study. The participating companies, incidentally, process 97 per cent of all the crude oil refined in the United States.

The study found that expenditures for water conservation totaled $145 million in 1966, $190 million in 1967, and were estimated at over $200 million for 1968. As might be expected, capital expenditures account for the largest single portion of costs, followed by operating and maintenance expenditures, and administrative and research and development costs. Within the various operating segments of the industry, the heaviest expenditures are being made in production and manufacturing, with marketing and transportation accounting for smaller shares. While these amounts are not precise, they represent a serious attempt to measure the sums being spent each year for the specific purpose of avoiding water pollution.

Despite the progress made, some difficult problems remain. Among those receiving intensive study are more efficient, lower-cost methods of removing contaminants from a refinery's waste effluent streams, and more effective methods of disposing of the sludge from both intake and effluent water treatment and from process operations.

Beyond this is the larger, and continuing, problem of human error and equipment failure. This will never be completely controlled, and accidents will continue to happen from time to time. Nevertheless, when you consider the scale of the petroleum industry's operations, I think the record of minimizing these occurrences is little short of remarkable.

The U.S. economy is currently consuming oil at a rate of over 13 million barrels a day. That is over half a billion gallons every 24 hours. To find, produce, process, transport, and market this tremendous volume is quite an undertaking—apart from the problem of occasional accidental contamination. At the same time, the petroleum industry recognizes its responsibility and will continue to do all it can to prevent contamination stemming from its activities.

I have already noted the cooperative—or volunteer fire department—approach to deal swiftly with smaller oil spills in harbors and waterways. However, in the wake of the wreck and breakup of the Torrey Canyon off the British coast, and the blowout in the Pacific offshore waters near Santa Barbara, it has become recognized that new measures are needed to deal with spills wherever they occur.

One hopeful approach is contained in the present efforts of the United Nations Intergovernmental Maritime Consultative Organization—or IMCO—to work out appropriate amendments to international conventions that will provide better safeguards against unpredictable marine disasters and establish the right of a nation to take swift action to defend its coastlines against the effects of accidents in international waters.

Meanwhile, the petroleum industry has taken a significant step to deal with some of the legal and insurance problems raised by accidents involving foreign flag vessels. This is the Tanker Owners' Voluntary Agreement Concerning Liability for Oil Pollution—or TOVALOP for short—which was initiated earlier this year.

TOVALOP is a plan under which tanker owners accept, as a contractual obligation, the responsibility for cleaning up oil spills their vessels cause, or for reimbursing any national government for its own cleanup costs. The plan provides up to $10 million per incident per vessel for this purpose. However, this is not merely an insurance plan, but a voluntary assumption of responsibility on the part of participating tanker owners—who must enroll their entire fleets.

Because the plan is international, it solves the problem a government—including our own—would otherwise have in gaining jurisdiction over an offending vessel of foreign registry. Although TOVALOP was initiated only this year, more than 50 per cent of the Free World's tanker tonnage is already enrolled. In addition, a committee within the American Petroleum Institute is considering ways a similar plan might be devised to cover cleanup of spills from both offshore and onshore facilities here at home.

The Institute has also embarked on a major new program of research and development to help forge a new technology for coping with spills effectively and swiftly. Some $600,000 has been appropriated for the remainder of 1969 for the first phase of this program, through which the industry hopes to learn how oil can be recovered from rough water, what treating agents are most effective, and how and where they can be used safely.

The Institute will also be co-sponsor, along with the Federal Water Pollution Control Administration, of a four-day conference on oil spill prevention and control this December in New York City. The program will cover the whole gamut of issues raised by recent oil spills and explore the present state of the art in dealing with spills.

Because of the tremendous publicity given to the Santa Barbara blowout, let me say parenthetically that the threat of such occurrences has been greatly exaggerated, as have the consequences. To date, 8,000 wells have been drilled on Federal offshore lands, with only 16 blowouts. Twelve of these were gas wells, and caused no pollution. Of the remaining four, only one—at Santa Barbara—caused a significant amount of pollution, and the environmental effects were only temporary.

Despite early fears of damage to marine animals, there have been no fatalities due to oil among whales, sea lions, or seals. This has been confirmed by specialists from the Department of the Interior, the California Department of Fish and Game, and the U.S. Navy. Fishing in the Channel is as good as ever, and no serious effects on other marine life have been reported.

Tragically, several thousand birds were lost during the emergency. Fortunately, however, most of the victims were members of very

populous species, so that now—nine months after the blowout—bird counts appear to be back to normal. At the same time, cleaning up after the Santa Barbara spill was an extremely costly, back-breaking chore—and one that the industry devoutly hopes will never have to be repeated.

Turning briefly now to some of the broader considerations bearing on any efforts to make significant further strides toward the goal of cleaner water, I think it is clear that a number of practical obstacles remain to be overcome.

In arriving at decisions in this area, any corporate management faces a dual responsibility—to conserve not only natural resources, such as water, but also social and economic resources, such as capital. The state of the art in waste controls, for example, makes it feasible to design pollution control facilities into a new plant much more economically than they could be added onto an old plant. With a new facility, conservation objectives can be achieved as an integral part of a profitable investment—and can be factored into its cost.

Correction of undesirable situations in older plants is sometimes extremely difficult, both technologically and financially. In some cases it is impossible to bring an old facility up to new standards without such heavy expenditures that a currently profitable facility becomes marginal, or a marginal operation is forced into the red. Many older installations represent a major payroll in their communities, and to close them would constitute local economic disaster.

Even in designing a new facility, it usually becomes apparent at an early stage that, while significant improvements in pollution control can be made at reasonably modest cost, further additional investments will achieve smaller and smaller improvements. Finally one reaches a point beyond which prohibitive incremental investments are required for small incremental improvements. Some place along the line, economic penalties outweigh social benefits, and management—along with society at large—must determine where that occurs in evaluating the cost and benefit involved in a given project.

In arriving at proper solutions to water-control problems, it is essential that decisions be based on facts, not on suppositions or suspicion. Urgent situations create a responsibility to develop facts speedily, but not the responsibility to act before facts are determined. In its planning for conservation, industry needs reasonable assurance that a proposed solution is not motivated solely by a desire to solve the problem, but is backed up by enough facts to insure that it is the best available solution.

When it comes to appraising the attitudes of stockholders and customers, it would appear that while both groups are in favor of cleaner water, the former are also interested in maintenance of dividends, and the latter in low product prices. There is nothing surprising in this, and it runs parallel to the views of the public at large. Opinion surveys have found that the public is increasingly concerned about pollution in general, considers industry the major culprit, and favors control measures. However the surveys also suggest that public enthusiasm for pollution control is matched by reluctance to pay even a modest share of the cost.

This attitude will have to change. As I noted earlier, the benefits of cleaner water will be achieved only by facing the inevitable costs, which promise to be very large. Leaving industrial contamination aside, the cost of providing adequate municipal sewage treatment facilities has, by itself, been estimated at over $30 billion through the year 2000.

The range of cost-versus-benefit choices is already extremely wide, and will grow wider as federal, state, and municipal programs for pollution control are put into effect. Only if the economic facts are widely understood can the public make an informed decision in each case, based on willingness to pay for a stated degree of water cleanliness.

The cost-versus-benefit approach will not result in a Utopia, with an environment as pure as our first pioneers found it; rather, it will result in water quality that is acceptable, and compatible with the multiple needs of a technology-centered society.

It is clear that the responsibility to act in defense of our essential natural resources, such as water, extends across the entire social structure of the nation—individuals, industry, and local, state, and federal governments. As an extension of its internal planning, the petroleum industry recognizes that it should cooperative actively with government. The widespread, yet localized, nature of water pollution has tended to create a situation in which different levels of government—acting more or less independently—have endeavored to cope with problems by applying widely varying forms of legislation and regulation.

It is our belief that scientific knowledge and a sense of social responsibility are the only sound bases for legislation and regulation. Having developed control programs requiring large-scale expenditures to meet varying governmental requirements and being subject to future regulatory activity, we are acutely aware of the need for definite goals. Without clear objectives, crash programs rather than planned ones are likely to result. This leads to a situation in which everyone is sure to lose, but not at all certain to win.

Pollution problems are not monolithic; they vary widely according to geographical conditions. In reference to regulatory responsibility, the petroleum industry supports the principle that the level of government best able to cope with a specific conservation problem has the responsibility to take necessary action.

Such action should be tailored to local conditions. Mere copying of regulations adopted by other governmental units fails to recognize the diversity of local needs. It is part of industry's responsibility to work to help clarify these local needs.

So far as the petroleum industry is concerned, I think we have made commendable progress in trying to work out realistic and attainable timetables for water pollution abatement, in conjunction with the various governmental agencies involved. In nearly every instance of which I am aware, our operations have been scheduled to exceed the established and projected requirements, and we expect to continue on this course.

I might note that this task is not being made any easier for us by recent efforts to increase the level of federal taxation on petroleum operations. In appraising the future, the central long-term problem facing the petroleum industry is how to meet its huge demands for capital.

Total capital and exploration expenditures by the domestic oil industry last year rose to an estimated $9 billion, over half of which was called for in exploration and production. The total represents an increase of 50 per cent since 1963, and the problem of generating funds of this magnitude year after year is acute—especially in an era of inflation compounded by a relentless cost-price squeeze. With rising demand for both oil and gas, it is clear that capital needs are going to accelerate even faster, on the basis of the recent record.

This means that appropriation requests for pollution-control activities will have to compete for a share of increasingly hard-come-by capital funds needed to carry out our basic business of fueling the economy.

If the expenditures called for are based on factual evidence indicating that demonstrable social benefits will outweigh economic costs, and that the timetables are realistic, I have no doubt that the petroleum industry willl accomplish its share of the job. We are committed to do no less.

Water Pollution: Coordination for Control

(By John L. Gillis)

It is a pleasure to be at your very important Convention. But I have a confession to make . . .

I am a "non-expert" in a field in which you people are the acknowledged experts—the control of water pollution. But, like yourselves, I am involved in the quest for practical solutions. And I do have some pretty definite and, hopefully, not-too-uninformed opinions on the subject. So, I thank you for inviting me to share them with you.

My opinions regarding water pollution are tempered largely by two things. First, I spend many leisure hours out of doors—in the meadows, in the woods, or on some lake or stream. I've seen what human negligence does to the environment. But at the same time, as an executive of a large corporation, I know that responsible pollution abatement involves both triumphs and frustrations.

I do not intend to belabor the fact that each of us—whatever our station in the scheme of things—has a responsibility to help improve the quality of our surroundings. We all know that. Rather, I would like to suggest a line of attack—a strategy, if you will—to help bring the problem to manageable proportions by 1980.

Let me start by referring to my home base. To a degree, Monsanto's approach to pollution control summarizes the line of attack I shall discuss in a few moments . . .

First, we cooperate with pollution control officials and agencies at all our location communities. In the past two years, with guidance from those agencies, we have spent roughly 15-million dollars to curb pollution at our locations. We also coordinate our efforts within the company, through seminars, workshops and other exchanges of ideas and experience.

Second, many of our key people are directly involved in a range of pollution abatement activities. The company's president, Ed Bock, for instance, is former chairman of the Manufacturing Chemists' Association's advisory council on environmental health. We are also proud of our Ron Sadow. Two years ago, your organization awarded him your William Rudolfs Award for his outstanding contribution to industrial pollution control.

And third, as you all know, Monsanto recently took an even more dynamic stance by moving into pollution control as a full-fledged business venture.

In short, we believe there is only one rational way to manage pollution problems—and that is through an all-out, fully-coordinated, head-on attack.

A moment ago, I suggested 1980 as a target year to bring water pollution under control. When you consider what we Americans have achieved in the conquest of outer space in the past decade, a ten-year program to cleanse inner space seems to me an altogether reasonable proposition.

It may be that the same idea will be expressed later this month, when the Department of the Interior convenes the National Executives' Conference on Water Pollution Abatement. Assistant Secretary Carl Klein spoke of it in his keynote remarks.

An objective of the Executives' Conference is to bring the environmental program of businesses and government into closer alignment. And I, for one, applaud that objective. Without the fullest cooperation of all concerned, the nation's water pollution will never be truly resolved.

For that reason, I expect the Interior Department might want to consider following through with other Conferences, that are even wider in scope. One such Conference might even represent the widest practical

range of interests, both public and private. Its purpose could be to unify the nation's many abatement efforts in a common attack on water pollution.

Your own Federation, for one, could contribute in many ways to an ecumenical conference of that sort. To give it a descriptive name, it might be called the National Conference to Coordinate Water Pollution Control Activities.

And there are a number of fairly obvious topics I believe such a Coordination Conference would need to cover . . .

The matter of goals, for instance. How much pollution control can we reasonably attain by 1980? By that year, according to one leading scientist, our output of sewage and related waterborne wastes will be sufficient, in dry seasons, to consume all the oxygen in all our river systems. And to magnify the problem, the American requirement for fresh water is expected to about double between now and 1980.

Of course, most of this demand will have to be met by reuse. And that makes the quality requirements of the local water supply *even more* critical.

Then, I image the Conference will want to assess our technological ability to meet those goals. Again and again, we Americans have shown a remarkable facility, where problem-solving is concerned. Witness our space programs. Furthermore, as the American Chemical Society observes in their recent study, a lot of our existing water pollution control technology is being utilized too little—if at all.

To make efficient use of our present technology, though, the Conference would need to ask some pretty basic questions—such as, How pure does the water need to be? . . . and, Can we actually afford to attain that degree of purity?

In other words, whatever standards are established, they should be reasonable. Water of pristine purity is attainable—*if* we are willing to pay the price.

That, in turn, raises another question for the Conference. Namely, are we, as American citizens, willing to pay our share for an improved environment? According to a recent Gallup survey, the answer is, Yes. Nearly three-fourths of the respondents said they would be willing to pay some additional taxes to improve our natural surroundings.

Of course, it is possible that some of Dr. Gallup's respondents did not realize the true cost of pollution control. Let's suppose, for example, that an all-out campaign, nationwide, were to be initiated tomorrow to build or correct the highest-priority waste water treatment facilities. That includes municipal and industrial treatment plants, plus the required sewers. Over the next five years, the cost would be an estimated 29-billion dollars.

That's a lot of money. It's equal to about 150 dollars per year per American. Still, it's less than the total federal expenditures on space programs in the past five years. Whatever the price, however, it will eventually have to be borne by all of us.

Such expenditures will be money down the drain, so to speak, unless there is a strong, clearly defined working relationship among all parties involved. Remarkably enough, this is not always the case. The respective responsibilities among various local, state and federal agencies are sometimes poorly coordinated.

As a case in point, I read recently of a company that has been dumping tons of solid waste into a nearby lake. So far, the complaints of the local citizenry have been to no avail. Last year, the Department of the Interior called upon that company to stop the dumping. Whereupon, the company produced a dumping permit, issued by the Army Corps of Engineers.

Last I heard, Interior had abandoned its insistence, and dropped the problem in the laps of the states bordering the lake. So far as I know, that's how the matter stands today—unresolved.

Take another example. Interior has required each state to guarantee that municipalities will have secondary treatment in operation within the next five years. As you know, many states have already raised their matching share. Some have even prefinanced the federal portion.

Yet, as former Undersecretary of the Interior, David S. Black, recently observed, "The federal government—which imposed this requirement—has not kept its side of the bargain." Dollars sufficient to the task have simply not been appropriated.

In contrast, let's consider an example of well-coordinated environmental control. Not long ago, a large mining company decided to open a new operation in Colorado. Hopefully, the company could carry out the operation with minimum damage to the area. So, it sought—and got—the advice of a number of organizations, both public and private.

With the advice of those groups, the company built two reservoirs, several-thousand feet of underground pipeline and other facilities. As a result, two lovely mountain streams were protected that might otherwise have been virtually destroyed. I understand the company has recently stocked one of the reservoirs with trout, and opened it to fishermen.

A good question to ask at this point might be: Why don't more industries follow the example of that mining company and invest in a clean environment? One reason is that most companies must be able to justify a major capital investment to their stockholders. Pollution control installations are usually costly and non-profit producing, and are, therefore, difficult to justify.

That being so, a sensible idea would be to offer economic incentives—such as tax credits—to businesses that take swift, decisive action to control pollution.

In addition, federal legislators may want to enact laws—stricter than those now on the books—compelling industrial pollution control by a specified time. I expect that approach could be highly successful—*provided*, the laws applied equally to all. Inequitable enforcement would give some companies an advantage over their competitors, and, therefore, the laws would be self-defeating.

Stronger pollution control laws would enable businesses to justify their expenditures for abatement equipment. After all, most of us are happy to obey the law—particularly, when there's a policeman watching us.

Based on past performance, however, I expect that some industries will vigorously oppose the enactment of stiffer pollution control laws. To do so, however, would be to oppose the trend of the times. The fact is, stiffer laws are being enacted right now—whether we like them, or not. California's new water quality act is an example. And some existing laws are being given sharper teeth.

In these circumstances, I believe a more constructive and enlightened stance for the business community would be one of cooperation and coordination. For example, business can—and should—participate directly in the framing of meaningful laws and local water quality standards. Otherwise, we may well find ourselves shackled with strictures we cannot live with.

One major contribution the Conference could make would be to explore a relatively new idea. This is the concept that many pollutants can be recovered and reused. Some people call it "recycling." A friend of mine calls it "cash from trash."

Whatever you call it, there are often business opportunities to be found in the stuff people throw away. When we, at Monsanto, first considered going into environmental control systems as a business, we started by making a checklist of substances that are commonly cast off—to become pollutants of air, water or land.

The resulting list was a long one. Eventually, we had to turn it over to a computer. But that list revealed some interesting facts about pollutants . . .

Aluminum beer and soda cans are an example. You see them every day, cluttering our highways and waterways. Chances are, most of those cans will be around for years, because—unlike some other substances—aluminum does not rust or corrode.

But, if people knew the money they could get for them, I'll bet you'd see the cans picked up in a hurry. According to Reynolds Aluminum, the scrap value of those cans is now about 200 dollars a ton.

Likewise, considerable treasure is going up in smoke—literally. From the stacks of coal-burning power stations and factories, some 300 million dollars' worth of sulfur oxides are lost to the atmosphere each year. Yet those sulfur oxides could be recovered as marketable sulfuric acid.

Fly-ash, from those same stacks, contains potentially recoverable amounts of rare and costly metals—such as beryllium and germanium. After these metals have been recovered, the fly-ash can be further used for construction, road building, or agricultural purposes.

Waste water, both industrial and municipal, makes for special problems, of course. Such pollutants as organics, nutrients, viruses, inorganic salts, and even heat, are difficult to process. And the magnitude of the problem grows with each passing year. Still, given the funds and the will to succeed, I see no reason why these pollutants, too, cannot be utilized—or eliminated altogether.

Heat, for example, is simply good energy going unused. But in Oregon, warm water from industries is being used experimentally to irrigate farmlands. Early reports indicate the extra warmth speeds the growth and increases the size of plants.

In some European industrial communities, factories share their steam and hot process-water, then pipe it to nearby housing developments for central heating.

Removal of biodegradable organics is a perpetual headache, of course. You people are familiar with the shortcomings of most of the conventional procedures. They are often variable in efficiency, and they usually require large tracts of valuable acreage to construct. In this regard, new and novel ideas are needed to reduce BOD more dependably, and with less expenditure of money and land.

My point is, that all of us—we in industry, in particular—can expect ourselves to become increasingly involved in this recover-or-eliminate concept of pollution control. It may even be that, before long, the manufacturer of a new product will be required to account for that product's ultimate disposal.

If it comes to that—and it probably will—the time to plan would be at the product's development stage. At that point, it would be relatively easy to determine:

(1) whether the product can be used and reused, perpetually;

(2) converted to some other useful form; or

(3) neutralized entirely, in some non-polluting manner.

To put it bluntly, those three choices are the *only* alternatives to pollution of water, air or land. There are no other. Therefore, it is upon perpetual use, recovery or total neutralization of pollutants that an abatement strategy must focus.

Like a well-known headache remedy, the strategy must be a combination of active ingredients. The ingredients include clearly-defined goals . . . regulations that are strong yet reasonable . . . a system of incentives to hasten the adoption of the proper treatment facilities.

Most of all, the strategy requires the unswerving cooperation of all those involved—public and private sectors, alike.

I realize there is nothing particularly novel in suggesting that all sectors combine forces to do battle with pollution. The Department of the Interior, among others, has urged as much on many occasions.

The Department has never had a better opportunity than now, to translate that idea into action. For one thing, public sentiment is now inclined toward "doing something" about pollution.

Following the National Executives' Conference, the Interior Department could—and should—announce plans for a National Conference to Coordinate Water Pollution Control Activities. The scope of such a Conference ought to comprise the widest possible representation. And its object should be, to initiate an all-out, fully-coordinated, ten-year program against water pollution.

Arranging for a Conference of such magnitude will not be an easy task, to be sure. But the responses to such a Conference would more than compensate the effect involved.

The Coordination Conference should definitely set its sights high. But there should be no illusions that water pollution can be *totally* eliminated in a ten-year span. Still, given an all-out, adequately reinforced campaign, I firmly believe the problem can be reduced to manageable proportions in that time.

And if we can accomplish that much, I'm sure you agree, we will have accomplished a lot.

ONE COMPANY'S ATTACK ON WATER POLLUTION

(By Brooks McCormick)

I welcome the undersecretary's invitation to participate in the first government-industry water pollution conference. Indeed, I am honored, along with my employer, International Harvester Company, for the privilege of kick-off position in this two-day symposium on water pollution abatement. It may well be true this nation and the world face no graver problems than those of environment. Almost everywhere we look we see the signs of environmental deterioration.

The history of man has been the history of his efforts to take command of his environment, to control those elements around him upon which he depends for his very life. His method throughout most of that period has been extremely primitive and short-sighted. He has been concerned only with the immediate effects of his actions, with solutions for imminent problems and answers to current questions.

He has been so impressed that his environment, out of control, could destroy *him* that he has been oblivious of the possibility that he might destroy *it*—and himself in the process. And he has become aware of that possibility only in the most recent history. It may be one of the most important lessons mankind can ever learn.

This year, we have been privileged and thrilled to witness the first landing of human beings on the moon. Many people have attempted to assess the significance of that feat, and it will probably be years before we will appreciate its full meaning. But if it does no more than offer us the experience of a completely hostile environment, it can be worth its enormous cost. If it helps only to awaken our appreciation of this life-supporting planet and quicken our resolve to preserve it, the money this nation has spent and will spend on lunar exploration will prove to have been a bargain.

So while water is the subject of our deliberations today, I believe we need to be aware that it is concern for *total* environment that has brought us together. There can be no question that we must end the pollution of water. But neither should we doubt for a moment that the measures we take for abatement must be made in context with improving the quality of our total environment. We will be treating one element of something that, in essence, is indivisible. This, it seems to me, must be the underlying qualification of everything we say today.

I will, of course, be speaking for International Harvester Company and, therefore, in a sense, I will be representing the farm equipment industry as some of the advance literature for the conference has suggested. At the same time, I must point out that my Company is also a maker of trucks and construction equipment as well as internal combustion and gas turbine engines, aerospace components, and steel.

In short, I do not represent my assigned category in the same exclusive way some of my colleagues on this program represent theirs. A more pertinent category for us would be "automotive metalworking" because the majority of International Harvester products move on wheels or tracks and are self-propelled and because the bulk of our manufacturing operations are classified as metalworking.

Still, the attitude of my Company toward water pollution in particular, and human environment in general, gets its essential character from our origin as a farm equipment company and our long alliance with agriculture.

It takes little imagination to associate farm equipment companies with a consuming interest in the conservation of water and soil resources. You can go back as far as you like in the history of the industry and find documented evidence of efforts and accomplishments in promoting and teaching conservation.

And incidentally, this was not "conservation for conservation's sake" which, Time Magazine says, has been "freely scorned" by Secretary Hickel. It was conservation to enhance the life support elements for growing plants—conservation to maintain and improve the quality of the agricultural environment.

Now I'm not going to tell you it was sheer altruism that originally motivated farm equipment companies. Nor was it any clairvoyant vision of the day man would begin to realize he was seriously in danger of destroying his environment. It was just plain, good business. Water and soil conservation for the farmer was also market conservation for the Company.

But precisely for that reason, a highly favorable attitude toward the conservation of environmental resources became ingrained very early in the structure of our Company—and, I am sure, in that of other farm equipment firms. A natural feeling of responsibility for our corporate economic well-being became interchangeable with a feeling of responsibility for the quality of the agricultural environment. The relationship between them was as compelling as it was obvious.

Another strong influence on the present attitude of my Company toward environmental problems was the change that occurred nearly thirty years ago in our basic concept of the business. Like many other firms, ours had grown up with the belief that the affairs of our enterprise were largely private, that our major obligation to the public was to be law-abiding, ethical and constructive in our decisions and actions.

Then a former president of our Company introduced the concept that when a corporation reaches a certain size, it ceases to be a purely private business organization and becomes, in a sense, a social institution. He felt this was true because such size made the Company a tremendous influence, for good or bad, on the lives of thousands and thousands of people.

From this change of thinking evolved the concept of an enterprise operated not only in the interests of its owners but equally in those of its customers, its employes and the communities in which its people live and conduct business.

The implication of this point of view are many and varied. But essentially it stands as a formalized statement of social responsibility, a statement made at least a quarter of a century before it became fashionable to charge business and industry with an utter lack of social consciousness.

The significance of this statement in the context of today's conference is readily apparent. For when we talk about water pollution specifically or about environment generally, we're actually talking about society—about people and the effects of environment upon them.

Then there is a third reason for International Harvester's sincere concern about environmental problems. It grows out of the first two, and it is shared by the entire farm equipment industry.

We are justifiably proud of the contribution our Company and this industry have made in lifting the burden of drudgery from the farmer and thereby helping to unlock the door to the highest standard of living in this nation that the world has ever known.

Had it not been for agricultural mechanization, 70 or 80 percent of our population would still be farming—and farming laboriously. The industries represented here today would be vastly different if they existed at all. The professions would have few practitioners. And the Department of the Interior's jurisdiction might still be limited to the general land office, the patent office, the bureau of Indian affairs and the pension office—as it was in 1849. This would still be an agrarian nation.

But we might also not have a water pollution problem or an air pollution problem, or a traffic safety problem, or an urban problem.

As a developing nation, ours needed food and fiber more than it needed almost anything else. We were not unlike many of the struggling new nations of the world today. The farm equipment industry provided the tools to meet the needs of development. As a result, farming eventually ceased to be the inevitable vocation of our people, and for the first time, they were free to choose among a myriad vocations essential to the country's continuing development.

They were also free to choose where they would live, to concentrate themselves in cities where the increasingly sophisticated problems of their advancing civilization could be solved more easily. And essentially it has been this concentration of lives and living that has revealed the problem of environment to which we address ourselves today.

Our industry, as a result of its heritage, is in a unique position to understand its responsibility and that of industry generally, to take the lead in ending pollution where we are directly responsible for it. And I believe the positive, cooperative action of industry and government can set an example that will motivate the kind of total action our very grave situation now demands.

The stated policy of International Harvester in the matter of industrial pollution has evolved from this kind of background. It very simply says in twenty-one words: Within the limits of technical and economic feasibility our Company intends to prevent pollution of water and air by its facilities.

I want to make it clear this is fully as much a description of past practices as a declaration of intentions. For example, we have—I almost said always, but at least for a very long time—collected our spent materials—such as soluble oils and cutting oils and disposed of them through scavenger services. And as long as 16 years ago, before the present level of concern about water pollution was even imagined, we installed a waste treatment plant at our largest truck

manufacturing operation to remove oils from storm sewers. At that time, we even had to establish our own standards for water quality. I think it is significant that we still believe that system is capable of performing within standards that will eventually be set by pollution control authorities.

As of the end of our 1968 fiscal year, we had spent more than $14 million for installation of water and air pollution controls in the present decade.

A few moments ago, I used the generic term "metalworking" and "automotive" to define the essential nature of our manufacturing activities. Compared with many of those represented here today and with some others not represented, these activities do not involve a very large use of water. Therefore, I would be the first to admit that the water pollution problem we faced in most of our plants is considerably smaller than that of some of our other speakers.

We do operate a small steel mill in Chicago, however, which does consume water in significant quantities. There was a time when this plant—which has a capacity of about one million tons of steel a year—probably used as much process water as all our metal working operations combined.

I say "there was a time" this was true. It is not true today, because we have been making dramatic reductions in our requirement for input water in steel making. Perhaps a word about our accomplishment at this plant—IH Wisconsin Steel Works—is in order. For it does represent a type of industrial operation in which water pollution control is particularly difficult.

By the way, this mill is located some ten miles south of the Loop, and the origin of its name is now growing somewhat obscure.

We began earnestly to combat water pollution at Wisconsin Steel 25 years ago when we installed our first thickener for separating blast furnace flue dust from water. At that time we were drawing perhaps 120 million gallons of water per day from the Calumet River and were discharging virtually all of it directly into the river through thirteen outfalls.

Today, through the processes of cooling, cleaning, and recirculation, we have cut our demand for input water by one-half and have completely eliminated all but three outfalls.

This has cost our Company, along with air pollution control devices, $11.5 million at this one installation. Our remaining plans call for expenditures of several millions more. When this program is completed it is contemplated that we will be drawing only five million gallons of water from the river and that there will be no outfalls to it.

Of course, in the process of accomplishing this, we have spent considerably larger sums literally to replace our traditional production method with an entirely new one. We switched from open hearth to basic oxygen steel making, built a new rolling mill, installed continuous casting, vacuum degassing and a new battery of coke ovens, to list just the major changes.

It is clear, I am sure, that the first cost of solving our pollution problem at Wisconsin Steel would have been considerably larger had we attempted it without making these alterations in our facilities. The economic advantage we achieved in modernizing the steelmaking process help to partially offset the cost of pollution control and certainly hastened our accomplishment of it.

No longer can there be any question that such measures as water pollution abatement must occupy the highest levels of priority in industry and government. But it is equally clear that only a profitable enterprise can afford the cost of what must be done. Just as government can spend nothing it does not first collect in taxes, industry can spend nothing it does not first earn in profit.

Any management today that does not understand its responsibility to society for the preservation of a living environment is derelict in its duty. But an even greater dereliction would be its failure to perceive and adopt a strategy of action that will provide income for maintaining the profitability of the enterprise as well as for meeting its pressing social obligations. Bankrupt businesses don't pollute streams. But they don't meet payrolls either. Neither do they pay taxes, manufacture products, patronize suppliers or contribute to education.

The principal industries my Company represents have not been high profit industries. Essentially, we make machine tools for the most cost-conscious professionals you'll find anywhere—the farmer, the truck operator and the construction contractor. In the present decade, our net income has averaged about 3.6 percent on the dollar of sales. We'd like it to be higher and we're doing everything we can think of to make it higher. Still we are not likely, in the near term, to achieve the income levels enjoyed by some other types of U.S. business firms.

On the other side of the picture, first costs of abatement equipment are high—particularly if it must be installed in operating plants not otherwise involved in sales-or income-producing physical changes. In addition, there is the cost (which some people tend to forget) of operating, maintaining and updating abatement systems. The finest equipment available is only as good as the care it receives in use.

Our particular plan of attack on both water and air pollution takes two forms. One is *correction*, the other *avoidance*. Corrective action involves the installation of physical facilities and normally is most practical when an operation is undergoing some extensive physical change or when we are undertaking new construction. Today in my Company, pollution abatement is a primary consideration in every plan for facility rearrangement and a part of every new construction contract.

For example, at our Louisville, Kentucky tractor factory we have just announced a $3.5 million program to install wet scrubbers and two electric furnaces for air pollution abatement in our foundry there. While the wet scrubbers will clean the air, they in effect merely solve an air pollution problem by creating a water pollution problem. So our plans for Louisville also include a complete water filtration and recirculation system. In the case of the new electric furnaces, which will replace a pair of the old cupolas, they will virtually avoid pollution at the very outset.

This then leads to that other arm of our plan of attack—avoidance—which is equally important but somewhat less dramatic. It is required in our Company today that, before a new process or new material may be employed by any operation, prior approval must be secured from our Manufacturing Research department. The physical welfare of our employes and avoidance of pollution are principal considerations of this procedure. If water pollution proves to be the potential result of adopting a new process or material, our people seek alternatives that will avoid it. The success of this program has been impressive in many instances, and we have been able not only to avoid pollution but also the cost of abatement.

These two approaches to water pollution abatement, in my opinion, make it possible for business management to meet its responsibilities to society as well as to the enterprise, its owners, employes and customers. Management has no alternative but to meet *both* obligations to the best of its ability.

Such considerations as these simply have to be factors in setting the timetables of abatement. They have to be taken into account along with such other practical matters as adequate time for planning and engineering, the ability of suppliers to deliver necessary hardware, contractor's schedules, and the adoption of definitive codes by control authorities.

In my view, there is no substitute for the dedicated desire of industry and government to understand the gravity of the total environmental problem and their earnest resolve to respond to it. There also is no substitute for a thorough understanding of the economic needs of business if we are to succeed in solving these problems of natural environment. Nothing could motivate industry to positive action like real improvement in the quality of our economic environment. The two are directly related, and it is not likely we will have one without the other.

What we have to do can be stated simply enough—as Professor Odum of the University of Georgia has expressed it: "We have got to stop thinking of ourselves as being in the growth stage of civilization and realize that we are in the mature stage. Up to now, we have been a consumptive, destructive civilization. We must learn to re-cycle and re-use."

Thank you indeed for your courteous attention. I look forward with keen interest to the views and remarks of others on what appears to be a most interesting panel.

REMARKS OF LAURANCE S. ROCKEFELLER, BEFORE THE FIFTH AVENUE ASSOCIATION, WALDORF ASTORIA HOTEL, NEW YORK CITY, OCTOBER 22, 1969

Thank you Mr. Cutler. I appreciate the honor the Association pays me today. I accept it gratefully, not only for myself, but also for those with whom I have been associated over the years.

I personally feel close to the work of the association. Not only was I born a few doors off Fifth, but I have lived and worked on the Avenue most of my life as have five generations of our family.

Thus, we as a family are particularly indebted to and pleased to be associated with the Fifth Avenue Association. Rockefeller Center has long been an active and enthusiastic member. Father's goals in the design of Rockefeller Center were very much in line with your goals.

As we now know, he was far ahead of his times in insisting that rentable space in the Center be sacrificed so that there would be open space and lower buildings as well as high rise towers. The fact that these buildings, some of them now almost forty years old, are competitive with the newest office space confirms his vision that good planning and aesthetic concern can be good business.

The great environment you have helped to create is testimony to your high regard for these same principles. I shall not dwell on achievements today, but rather I want to bring to your attention what I believe are urgent *new* problems which need your consideration.

The environmental quality of the Fifth Avenue area is closely linked with that of New York City as a whole. You cannot be an island of beauty amidst a sea of ugliness for very long.

Thus, the most pressing environmental threats to the greatness of the Fifth Avenue area are those which face the City generally. I would rank them as air pollution, water pollution, and the collection and disposal of garbage and other forms of solid waste.

Let's look at what air pollution alone means for the Fifth Avenue area.

As reported on the front page of the New York Times Sunday, the Federal Department of Health, Education, and Welfare says that New York's air pollution is the worst in the country.

This is understandable because New York is a complex mechanism.

There are 1.5 million autos, trucks, and busses in the City; 500,000 jets land and take off each year, some 12,000 apartment

house incinerators burn trash, and 150,000 multi-dwelling heating units burn oil or coal.

The City itself operates 47 furnaces burning rubbish, and almost all of these are still sub-standard. Con Edison operates 11 power generating stations within the City.

Together these sources send something like 3 million tons of pollutants a year into our air. For those fascinated with statistics or perhaps just interested in their health, this means that each New Yorker must cope with something like five times his own weight each year in noxious substances in the air.

What does all this stuff do to us?

In the first place, it hurts our health. The research on the medical effects of air pollution is not precise, but it doesn't require unusual perception to know that tons of carbon monoxide and hydrocarbons and sulphur can't do us any good.

We also know that air pollution is expensive. Things get dirty and cleaning costs go up. Chemicals in air pollution react with materials and shorten their lives. Tires, ladies nylons, brass door plates, and even limestone buildings are eaten away by the acids which air pollution creates.

One estimate says that air pollution costs each American some $65 a year. If this is true across the country, the figure must be much higher in the Fifth Avenue area.

The hard fact is that we are not devoting enough of our resources to combating air pollution effectively. New York City spent about $4 million last year. Across the country, the federal government spent $88.7 million and most of this is on research rather than control.

We need particularly urgent efforts to overcome the pollution effects of automobiles. The industry itself is doing research, but we need a partnership effort of business, government, and citizens to accelerate progress dramatically. We, in New York, must join with our California friends in insisting upon and assisting in progress.

I personally believe that we must not only develop cleaner engines for the future, but we must also find a practical means of reducing pollution from cars now on the road. If we do not, cleaner air will indeed be a long way off.

This situation of a growing threat and too little money spent and too little action taken is also true of water pollution and solid waste management across the country and here in New York City.

We don't have time to detail facts and figures, but the significant point is that these threats to our overall environment are direct threats to Fifth Avenue also.

No matter how good a job you do, the air on Fifth Avenue still blows from Hackensack, and the water flows from Poughkeepsie.

The people of this country have decided that they want action to clean up their country. They have demanded action from their political leadership, but in a sense, they have been misled. In response to their concern, the Congress has enacted a number of bold new programs for environmental quality.

They look quite good on the books, but until now, the money to do the job promised in the legislation simply hasn't been forthcoming. For example, the Congress authorized $1 billion for water pollution control this year, but only $214 million appeared in the budget.

There has been a real citizens revolt over this, and it looks as though the Congress is going to appropriate substantially more.

What can you as an association and as corporate and individual citizens do about these general threats to environment?

The answers aren't as easy as they are when you are dealing with your immediate business area, but there are important contributions you can make.

First, make sure that the Fifth Avenue area itself is doing all it can do to minimize its contributions to air and water pollution and to excess solid waste.

Second, city, state, and federal programs need your support. From time to time bond issues appear on the ballot to provide funds for pollution abatement. The dramatic fact is that you and the people of this City voted a billion dollars for state pure water programs. We must continue this outstanding support and encourage all levels of government to become full partners.

Third, your elected officials should know how you feel about these matters. The problems of pollution are so vast that it takes government action to clean them up and government action only comes about when our political leaders know that the public wants it.

Finally, I hope that this association will not only continue its leadership in creating a better environment in which to do business, but I hope that it will expand its influence.

You have demonstrated that a quality environment is good business, that it can bring customers, and profit. But you have also shown that environmental quality can bring a special spirit, a special sense of place to an area which gives it excitement and meaning all of its own.

Fifth, Park, and Lexington are rather long avenues. They run all the way to 135th street and beyond. Perhaps some of you see the Abraham Lincoln Houses or the Rivington Houses on your way to Scarsdale on the New York Central.

Environmental quality is important there as well as further down the Avenue. Trees, flowers, and revitalized open space can bring dignity and pride and hope where only despair existed before.

For the past two years, in this very area, an agressive group of Harlem businessmen and community leaders have been trying to raise funds to create planters and modern sidewalk kiosk facilities to enhance their street scenes. The City has agreed to match their money dollar for dollar. Yet, they have not been able to secure sufficient support, and the destructive rioting after Dr. King's murder has set them back further. This appears to be a project worthy of support, and I hope this association might help.

A little over six years from now we will celebrate our 200th birthday as a nation.

It has been suggested that a major theme of the celebration be a dedication to protecting and enhancing our environment for coming generations of Americans.

There is no better birthday present we can give ourselves and our grandchildren than a redoubled effort to preserve, enhance, and redeem the basic building blocks of America's environment and indeed its greatness—our air, our land, and our water.

I hope that your association will play a major role in marking this date of national rededication—by not only continuing its work of the past but also by expanding its efforts across this island and across this City and in doing so, setting an example for the nation.

WORKING MODELS FOR URBAN REDEVELOPMENT

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. MIVKA. Mr. Speaker, the problem of revitalizing our decaying urban centers troubles all of us. Daily we struggle to find effective ways to halt urban blight and initiate urban progress. The problem is so complex that many people have despaired of finding any workable solutions.

In light of these complex problems, I believe that my colleagues would be interested in the remarks of Mr. Ronald Grzywinski, vice chairman of the board of Hyde Park Bank & Trust Co. Mr. Grzywinski recently addressed the Urban Coalition in Chicago on how to redevelop our cities. His address reveals a depth of understanding about this most perplexing problem.

Mr. Grzywinski explains how the bank which he represents has enabled minority businessmen to found and to develop business enterprises. Though it is a relatively small institution, Hyde Park Bank & Trust has been a leader in backing up its rhetoric with action. Based on his work with the bank and other urban activities, Mr. Grzywinski sets forth some viable models for combining capital, talent, and community control in the crucial effort of redeveloping urban America.

Mr. Grzywinski's timely remarks follow:

REMARKS BY MR. GRZYWINSKI

I have been asked to speak on the activities of the Urban Development Division at the Hyde Park Bank. I will do so briefly, and then turn to the broader and deeper problems of total urban economic development with which I am concerned at the Adlai Stevenson Institute.

The Hyde Park Bank is a small to medium size institution. At year-end it had total assets of $60.8 million and employed approximately 125 persons. By comparison, the Chase Manhattan Bank, second largest in the nation, had total year-end resources of $19.3 billion; approximately 315 times as large. The bank is located in the Hyde Park-Kenwood Community, approximately six miles south of downtown Chicago and the home of the University of Chicago. The community of 50,000 population is liberally oriented, racially integrated, affluent, but economically segregated. Majority ownership of the bank is through a holding company whose stock is concentrated in the hands of community residents and bank management. Illinois law prohibits branch banking.

The Urban Development Division was established in the spring of 1968, with an operating budget of $20,000 to carry it through year-end. Its primary purpose was to extend credit to black entrepreneurs for business establishment or expansion. At the time no Chicago area bank was internally organized specifically to finance and counsel minority businessmen. The Urban Development Division initially was staffed by two non-bankers hired from outside the bank. Milton Davis, formerly employed by the University of Chicago, and for three years president of the Chicago Chapter of CORE, was named director. He is now a vice president of the bank.

Our objectives in establishing the division were three:

First, to make credit available at competitive interest rates through conventional banking channels to credit-worthy black businessmen.

Second, to demonstrate to the banking community that, with appropriate diligence, counseling, and selectivity, loans to black businessmen are not categorically an unmanageable or extraordinary risk.

Third, to finance our urban development activities without sacrificing bank earnings.

To accomplish this third objective the Urban Development Division solicits deposits from major corporations, churches, government units, and philanthropic organizations which would not normally do business at a small, outlying bank. We pay the same rate of interest on their time deposits and provide the same level of service for their de-

mand account as any other bank, but apply a major portion of our earnings on their deposit against the extraordinary expense incurred in counseling, processing, and servicing a portion of loans to inexperienced, small businessmen.

To date, the Urban Development Division has made loans in excess of $1.4 million to approximately 55 businesses. At month end 2 loans were delinquent with no loss anticipated; one loan of $1,500 has been charged off, but recovery has begun and should be completed within four months. The division is supported by deposits totalling $4.6 million, (8.5% of the bank total), from 54 different entities. Nineteen of the corporations are listed on the New York Stock Exchange. The full time staff has grown to five, including a fellow assigned by the Robert Kennedy Memorial. The earnings allocation on supporting deposits not only recovered the bank's initial $20,000 investment, but has completely offset the division's increased operating expenses. Activities have broadened to include the financing of community owned, profit oriented businesses and low income housing projects. The community objective is to use the profits from these businesses to finance such community projects as day care and medical care centers, manpower training facilities, supplemental police protection, sidewalk lighting, and other community needs.

Our experience has taught us several lessons:

First: The availability and use of competent counseling is as important as credit in the success of an inexperienced entrepreneur.

Second: The bank staff must have deep rapport with its clientele; a genuine feeling and understanding for the problem of black deprivation; a commitment to work together; a willingness to spend the required time looking at each credit application as it is presented, knowing in advance that many will not be bankable, but that many must be reviewed to find the viable few. Having found a promising proposition, it must be worked through to completion by exploring all the alternative financing methods. This attitude reflects a philosophical commitment to the concept of change, within and through the existing system.

Third: Fundamental credit principles must be adhered to, but with an understanding of the distinction between principle and practice. As an example, the borrower must not be allowed to become sloppy or careless in meeting loan repayment due dates, but if his business is experiencing sound and accelerated growth, or if his credit needs were legitimately underestimated, we must find ways to increase his credit supply. Also, if the credit report reveals a past history of judgments on an otherwise qualified prospective borrower, the application is not automatically denied. These judgments are investigated with the understanding that unscrupulous and exploitive merchants have often used the judgment device to force uninformed people to continue patronizing their outlets for shoddy, overpriced merchandise. We also believe that the equity to start a business sometimes may not be financially measurable; instead it might include the borrower's work experience and other personal achievements.

Fourth: Senior management must be totally committed to success. Because urban development programs are innovative, experience is lacking and failures are magnified.

Fifth: When cooperation with government agencies is required, the business leader must understand the constraints and tradition under which a public servant labors. Innovative and creative interpretations of federal regulations have not been the historical route to rich rewards. Under Bob Dwyer, and earlier, Tom Gause, the Chicago office of the Small Business Administration has moved from timid, sincere reservation to quick, cooperative responsiveness.

Sixth: Because it has senior management commitment, independent funding through supporting deposits, and the ability to clearly measure successes and failures, the staff of the Urban Development Division feels it has a mandate to plow ahead, to innovate, and to thoughtfully explore the ways in which the bank's resources can be brought to bear on the problem of inner city development.

I will turn now to some general ideas about urban economic development. The majority of this audience already knows that economic injustice and suffering are the rule rather than the exception for millions of black Americans who are unable or unwilling to move out of the nation's ghettos. It is not necessary to recount here how much deprivation manifests itself in housing, in employment, in education, in personal welfare, and safety. It is well known, at least in scope, if not in depth and intensity, to even the most casual reader of the popular press.

During the past several years, the federal government has spent vast sums attempting to remedy one or another facet of the problem, but without the urgent priority of national commitment. Foundations, commissions, some universities and other organizations have prepared volumes of detailed and heavily foot-noted analyses of the problem; some few have recommended specific action and some fewer yet have themselves acted. More recently business has begun to involve itself. However, it is my observation that all these activities, all these programs taken separately, have produced little or no visible effect. They have been a tonic, a band aid on a cancer, an attempt to treat each speckled, smallpoxed, symptom rather than the body ravaged with disease.

Urban redevelopment is a complex task requiring sophisticated planning, specialization, financing, and organization. It requires a system approach to problem solving. It requires the building of new teams of planners, financiers, executive implementors, political relations experts, and entrepreneurs. It requires the belief that there is no one best way to solve a problem, but rather many good ways. It requires bold new ideas, bold action, and bold men.

Urban redevelopment requires three basic elements: capital to seed the regenerative process; talent to intelligently do the seeding; and community control to point out the fertile ground, protect the seedlings and harvest the fruits to be shared.

If we look around the nation today we can find many successful urban development programs. In Boston, Eastern Gas and Fuel Associates took the leading private role in a massive housing rehabilitation program. Using incentives currently available in FHA housing legislation, the company was able to combine low equity investment, depreciation, and the market potential of new gas customers to earn a profit which was large enough to assign key executives to the task. In Chicago, the Kate Maremont Foundation in partnership with the Woodlawn Organization just held its grand opening for a new low-rise, 500 unit housing project. Their community owned shopping center is under construction and, along with several community owned businesses, will contain a food supermarket owned jointly with a major food retailer.

In several cities, such major corporations as Xerox, IBM, Kodak, Aerojet General and others have assisted in establishing new ghetto based manufacturing facilities. The Rev. Leon Sullivan, starting in Philadelphia, has now established over ninety Opportunities Industrialization Centers which draw on existing Dept. of Labor grants, channeled through business corporations, to train people, helping them "to grow self confident through mastering new work skills." In California, Arcata Investment Company has started a minority group Small Business Investment Company to generate equity investments and credit in the urban ghettos. On November 6th, eighteen sponsors, including such giants as Prudential Insurance and Phillips Petroleum announced their intentions to operate similar SBICs. Commercial banks around the country are now beginning to extend urban development credit.

The purpose of the preceding recitation has been only to show that scattered models are not lacking for successful and often profitable urban development in such key areas as housing, education, job creation, equity investment, and wealth building. But as I stated earlier, all these activities are disjointed. They usually attack only a single facet, of a great need, within a single ghetto community. Truly, band aids on a cancer! The need today is to draw on the experience of these models and combine these separate and diverse efforts into a concerted, systems-oriented attack on the problem.

How do we proceed? I suggest the following:

First: The neighborhood or community is the most logical unit for development. It is manageable; the people are usually organized into a community association possessing common complaints and goals for health, education, welfare, and safety. A community base of development is consistent with the current notion that place should serve residents' needs and not those of outside interests. This concept is a response to the lack of participation, the frustrated sense of powerlessness among minorities. Deteriorated housing exists within specific communities; medical, recreational, and day care needs exist within specific communities; the unemployed and underemployed are real people, not just statistics, and they live in specific communities. Urban communities have an identity, a sense of being. They are no different from the thousands of self-governing often smaller, suburban communities we all know, except that the citizens are usually black and usually poor.

Second: The federal government has neither the talent nor the experience to affectively manage and implement an innovative, major systems project. During the past two decades, such programs for research, development, and construction have been contracted out to private industry and institutions which have developed internal systems capabilities. The ghetto economy has an inordinate need for credit, capital infusion, and wealth creation. As Ted Cross has pointed out: "The great talent of the government to achieve political and social change—and indeed its vast economic power as the largest bank in the world, must not be confused with its meager ablity for the job of building production and marketing skills—and blending these skills with credit and risk capital for the creation of wealth." Moreover, when government is not leading, is not remedying a clearly understood and acknowledged social problem of staggering proportions, those of us who are deeply concerned, who are morally committed to the righteousness of social economic justice, and who perceive the ultimate wrath of failure, must not throw up our hands and say there is nothing we can do until the government enacts a viable program. The stakes are too high.

Third: More than any other institution, big business, mature industry as Galbraith says, not only possesses the resources and ability to do the job, but should also have the highest motivation. Financial bigness is one measure of potential capability. As an example of how big business is financially qualified to muster the necessary talents and resources, it is worth noting that several of the nation's largest corporations each have annual gross revenues which far exceed those of any single state. The revenue of General Motors is approximately eight times that of New York State and slightly less than 1/8 of the federal government. On the other hand, it is also worth noting that, while all business involvement in ghetto development

has been infinitesimal in relation to need, Cross pointed out that the most creative urban projects have originated with entrepreneurial organizations, often dominated by a creative businessman skilled in taking risks and in entering seemingly unpredictable market situations. These are companies that are highly innovative and successful, constantly seeking new opportunities.

Business should be fully involved in developing the ghetto, not only because it represents earnings and manpower creation opportunities, but because the public expects business to become involved. There is a growing public reaction against big business based on the feeling that business is exploitative and not developmental, that it is eminently powerful but undemocratic. If big business does not respond to the desires and aspirations of the public which provides its revenues, if it fails to employ its vast resources in leading the way to social economic justice, it first will be cut off from a supply of talent, the non-self-generating factor of production, and ultimately will be subject to growing pressure for increased legislative control. If business and other institutions do not become more responsive and attuned to the just demands of society, we soon will see the formation of new, white-collar unions. These unions will not seek increased personal remuneration; instead, they will try to apply internal corporate and institutional pressure to achieve broad-based social objectives. They will demand personal sabbaticals at full pay, in order to apply the talents of industrial experience to solving the problems of poverty. They will systematically withhold educated talent from socially unresponsive institutions. And they will publicize data ranking the developmental attitudes of industrial and educational institutions competing for the same talent.

However, if farsighted business management does intend to involve itself, if the visionaries intend to commit their institutions, they must learn that business must first *earn the right* to participate in this great challenge of the 20th century. The record for selfless business development has been so dismal that big business is not trusted by the young people or by the urban community leaders; it is thought to be hypocritical, insincere, and inconsiderate of the public interest.

What can the Urban Coalition do? To answer that, let us look at the strengths and assets of the Coalition:

First: The Urban Coalition is founded on the principle of coalition. It is held in high but perhaps fading esteem by both established institutions and the leaders of the poor. As Mr. Gardner remarked at a White House dinner this past June. "The Coalition is a unique organization, bringing together diverse elements of American life."

Second: Because of its stature, the Urban Coalition should be capable of raising far more money to rebuild America than its present annual budget of $4.4 million. However, to do so, the Coalition will need a concrete plan with specifically identified goals and objectives.

Third: Because of studies such as that presented here today by Bill Kaye, and because of its field experience in various cities, the Coalition should be a comprehensive repository of acquired skills and knowledge on urban problems around the county.

In view of these assets, I suggest that the Urban Coalition redirect its major thrust along the following lines:

1. That it select six to twelve urban ghetto communities from around the country which are reasonably well organized, possess a clear understanding of their community needs, and are willing to participate in a massive community development project.

2. That the Coalition then invite several major business and educational institutions to submit bid proposals for each of the target communities. The proposals would recognize the right of community control, and would spell out in specific detail the goals, plan of action, scope of work, method of organization, financing, talent resources, and ownership sharing concepts which the institution would use in a systematic redevelopment of the community, recognizing not only the corporate need for profit, but the community's need to possess a self-generating source of profits and talent to finance and operate a variety of necessary or supplementary local social services, such as medical and day care, recreation, education, etc.

3. The Coalition would then award a development contract of sufficient size to allow that institution with the best proposal in each community to assemble staff and begin operation. In effect, the Coalition award would provide all or a portion of the risk capital required to begin the regenerative process. Thereafter, with private financing and government grants for existing programs, this type of comprehensive systems oriented rebuilding process should be self-generating. Ideally, the Coalition's initial investment would be returned over the long term from housing and business profits.

Obviously there is no guarantee that this approach will work, but there is evidence to show that it works in other applications. We cannot wait; the time for waiting has passed. We cannot go slow; we have been doing that for too long. Whole generations of Americans have been born poor and have died poor as the United States moved slowly. The Urban Coalition still has the opportunity to mold the common faith that our urban problems can be solved, but it must move. The proposal just presented allows for innovative approaches to urban problem solving. It would release the creative talents of American industry and education on our most wretched national problem.

This past spring my wife and I visited the beautiful and ancient city of Bath in southwestern England. As we were touring The Royal Cresent, a residential area of great beauty and architctural unity, we came upon this graffiti which I think is worthy of our continuing reflection: "The city is dying—look to your heads."

AMENDMENT OF RAILWAY LABOR ACT—NATIONAL RAILROAD ADJUSTMENT BOARD

HON. HARLEY O. STAGGERS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. STAGGERS. Mr. Speaker, I have introduced a bill to amend the Railway Labor Act to adjust the membership of the first division of the National Railroad Adjustment Board. As a result of the merger of four unions out of the five formerly represented on that division, it has been impossible for the strict requirements of the law with respect to the composition of the first division to be complied with. Legislation is necessary to adjust the law to the prevailing situation relating to the membership of the first division, but there has been disagreement among the parties as to the terms of that legislation.

Agreement has finally been reached between the two unions involved and representatives of all the carriers involved, and this bill reflects the exact terms of that agreement.

I anticipate expeditious action on this bill, so that it can become law early during the next session of the Congress, so that this first division can get back to work handling its backlog of claims.

SENATE—*Saturday, December 20, 1969*

The Senate met at 11 o'clock a.m. and was called to order by Hon. WILLIAM B. SPONG, JR., a Senator from the State of Virginia.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

As we approach the Christmas celebration, I shall offer as our convening prayer today the first prayer from space made by American astronauts as they orbited the moon in Apollo 8 on Christmas Eve, 1968.

Let us pray:

"Give us, O God, the vision which can see Thy love in the world in spite of human failure. Give us the faith to trust the goodness in spite of our ignorance and weakness. Give us the knowledge that we may continue to pray with understanding hearts, and show us what each one of us can do to set forward the coming of the day of universal peace. Amen."

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will read a communication to the Senate.

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., December 20, 1969.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. WILLIAM B. SPONG, JR., a Senator from the State of Virginia, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. SPONG thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Friday, December 19, 1969, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amend-

ments of the House to the bill (S. 2577) to provide additional mortgage credit, and for other purposes.

The message also announced that the House had disagreed to the amendments of the Senate to the bill (H.R. 15209) making supplemental appropriations for the fiscal year ending June 30, 1970, and for other purposes; agreed to the conference asked by the Senate on the disagreeing votes of the two Houses thereon, and that Mr. MAHON, Mr. WHITTEN, Mr. ROONEY of New York, Mr. BOLAND, Mr. FLOOD, Mr. STEED, Mrs. HANSEN of Washington, Mr. BOW, Mr. JONAS, Mr. CEDERBERG, and Mr. RHODES, were appointed managers on the part of the House at the conference.

The message further announced that the House had passed the bill (S. 2325) to amend title 5, United States Code, to provide for additional positions in grades GS–16, GS–17, and GS–18, with an amendment, in which it requested the concurrence of the Senate.

ENROLLED BILLS SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bills; and they were signed by the Acting President pro tempore:

S. 59. An act to authorize the Secretary of the Army to adjust the legislative jurisdiction exercised by the United States over lands within the Army National Guard facility, Ethan Allen, and the U.S. Army Materiel Command Firing Range, Underhill, Vt.;

S. 2917. An act to provide for the protection of the health and safety of persons working in the coal mining industry of the United States, and for other purposes;

H.R. 9366. An act to change the limitation on the number of apprentices authorized to be employees of the Government Printing Office, and for other purposes;

H.R. 14580. An act to promote the foreign policy, security, and general welfare of the United States by assisting peoples of the world to achieve economic development within a framework of democratic economic, social, and political institutions, and for other purposes; and

H.R. 15090. An act making appropriations for the Department of Defense for the fiscal year ending June 30, 1970, and for other purposes.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that statements in relation to the transaction of routine morning business be limited to 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

PRESIDENT'S COUNCIL ON YOUTH OPPORTUNITY

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 616.

The ACTING PRESIDENT pro tempore. The joint resolution will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. A joint resolution (H.J. Res. 764) to authorize appropriations for expenses of the President's Council on Youth Opportunity.

The ACTING PRESIDENT pro tempore. Is there objection to the present consideration of the joint resolution?

There being no objection, the joint resolution was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report, No. 91–621, explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of House Joint Resolution 764 is to authorize appropriations for the operation of the President's Council on Youth Opportunity. Senate Joint Resolution 116, which is identical to House Joint Resolution 764, was introduced by Senator Mundt on June 2, 1969, and referred to this committee.

The President's budget for 1970 includes an estimate of $357,000 for the expenses of the Council and the appropriation of this amount is dependent upon the enactment of authorizing legislation as required by Public Law 90–479, which provides:

No part of any appropriation contained in this or any other Act, shall be available to finance interdepartmental boards, commissions, councils, committees, or similar groups under section 214 of the Independent Offices Appropriation Act, 1946 (31 U.S.C. 691) which do not have prior and specific congressional approval of such method of financial support.

THE PRESIDENT'S COUNCIL ON YOUTH OPPORTUNITY

The President's Council on Youth Opportunity was established by Executive Order 11330 on March 9, 1967. The Executive order was issued on the recommendation of an interagency task force which had studied existing youth programs in the summer of 1966.

The Council is responsible for the coordination, evaluation, and encouragement of the many youth opportunity programs of employment, education, and recreation administered by various departments and agencies of the Federal Government, and for assuring their effectiveness. A related responsibility is to work closely with the State and local governments and the private sector, to encourage greater participation in youth opportunity efforts, particularly among disadvantaged youth.

The Executive order designates the Vice President as Chairman of the Council and provides for a membership consisting of the Secretaries of Defense, Interior, Agriculture, Commerce, Transportation, Labor, Health, Education, and Welfare, Housing and Urban Development, the Attorney General, the Chairman of the Civil Service Commission, and the Director of the Office of Economic Opportunity.

The establishment of the Council grew out of the need for coordination of all youth opportunity programs at all levels. In the cities federally funded programs were found to be operating out of numerous separate and distinct agencies. There were State-funded programs, city-funded programs, business programs, school programs, voluntary programs, self-help programs, and others. There were hundreds of such programs in each large city—nearly all operating in relative isolation, unaffected by and unaware of similar or related programs. There was both duplication and disorganization, and the net result in many cities was that the young people who needed help the most were not being involved in the countless programs which were intended to serve them.

The following was determined to be essential in making summer youth programs more effective:

First, early and firm decisions by the Federal Government on the assistance it will make available to communities for summer youth programs.

Second, early and effective local planning.

Third, imaginative and innovative programing at all levels that take full advantage of the existing capabilities and resources of individual communities.

Fourth, involvement of young people themselves in the planning, implementation, and evaluation of programs.

Fifth, linking summer programs to ongoing, year-round programs.

Sixth, sound evaluations upon which to base future programs.

Seventh, fuller involvement of private sector resources.

The PCOYO staff was organized into four divisions to respond to these needs:

(1) The Federal program planning and coordination division maintains continuous liaison with Federal agencies. The staff of this division collects and compiles information on Federal youth programs available to the cities and also feeds back to the Federal agencies staff findings and recommendations. The major effort is to provide information on available Federal funds early enough to make it possible for the cities to effectively and meaningfully plan for the use of those funds.

(2) The State-local relations division is the Council's field staff through which technical assistance is provided to cities and States and information is obtained from the cities pertaining to their needs and the impact of Federal programs. This provides the cities and States with one centralized contact covering the full-range of available Federal and national assistance in the youth program area.

(3) The voluntary organizations division maintains continuous liaison with the national offices of about 150 voluntary groups such as the Boys Clubs, United Fund, Boy Scouts, Girl Scouts, and YMCA. Through this office many of the same functions are achieved within the voluntary sector as are achieved at the Federal and local levels by the previously mentioned divisions.

(4) The research and public affairs division is essentially a data gathering and informational clearinghouse. Through it information is collected on all programs at all levels and disseminated to Federal agencies, State and local government, voluntary organizations, and youth program leaders.

The House report contains examples of the impact the work of the Council has had, as follows:

(1) Local communities now have much earlier knowledge of available Federal assistance. In Neighborhood Youth Corps, for example, Secretary of Labor Shultz announced approximate funding levels and slots on March 24. This contrasts with late May in 1967. Also, the Office of Economic Opportunity now makes its summer program funds available to local community action agencies as part of annual refunding rather than as a separate funding process. This makes information available much earlier and is also helping to impress upon local community action agencies the concept of year-round youth programing.

(2) Each of the 50 major cities and many smaller communities now have summer youth programs coordinators and coordinating units composed of representatives of various public and private agencies involved in youth programing. No such local coordination existed prior to establishment of the PCOYO.

In the major cities, where coordination is a particularly difficult undertaking, small Fed-

eral planning grants have been made available to enable the hiring of a full-time coordinator and supporting staff within the mayor's office. The grants were secured through the efforts of the PCOYO.

These steps at the local level have helped to better coordinate Federal assistance, and have had a substantial impact on utilization of existing local resources.

(3) The use of Federal resources other than funds has been significantly expanded. One outstanding example is that more than 600 military installations and National Guard units provided activities or equipment and facilities to 250,000 poor youth in the summer of 1968, an increase of 100,000 youth from the previous summer. Another example is provision of medical services by the Public Health Service to poor youth employed directly by Federal agencies in the summer months.

(4) Private sector efforts have been greatly expanded. This is particularly true of voluntary organizations with which PCOYO has maintained continuous liaison. The Boy Scouts, for example, provided free resident camping for 50,000 poor, non-Scout youth in 1968, compared to 265 in 1966. This summer, the goal is 75,000. In their annual reports, the Boy Scouts have credited PCOYO with stimuating these changes.

The PCOYO obtained the voluntary assistance of local advertising executives in the 50 major cities to work with city officials in promoting youth programs and informing the public of youth activities. The photographic industry is providing equipment and photographic skills training for inner-city youth. Free tickets have been obtained for poor youth to attend movies and professional athletic contests. Free airplane rides were provided for more than 10,000 poor youth in 1968.

(5) A quota system for the hiring of poor youth by Federal agencies was established. The quota in 1967 was one poor youth for every 100 regular employees. In 1968, the quota was one poor youth for every 40 regular employees. More than 78,000 poor youth were employed in this program in 1968.

(6) The establishment of a summer youth jobs program within the National Alliance of Businessmen, and the implementation of that program in 1968 and 1969, is the result of the work of the PCOYO.

(7) The provision of $750,000 in sorely needed transportation assistance for 1969 summer youth programs by the Departments of Transportation and Housing and Urban Development is the result of PCOYO efforts.

(8) Because of PCOYO encouragement, many cities have established youth advisory boards to work with the mayor and his staff on summer programs. Young people from slum neighborhoods have been employed to staff program coordinating units. A few cities have reserved funds specifically for programs designed and operated by youth.

(9) At the request of the PCOYO, four major evaluations of summer youth programs have been made in the past 2 years, and a nationwide survey has been made of camping opportunities for youth in the summer months.

(10) The report of a National League of Cities survey of summer youth programs in 86 cities published in the June issue of Nation's Cities magazine said: "One of the side benefits of the Nation's summer youth programs has been the continuance on a year-round basis of some activities that originally were exclusively summer activities."

These are some of the specific developments which have resulted from the work of the Council. The total effect has been development of a more rational and effective approach to summer youth programs, both within the Federal Government and between the Federal Government, local program sponsors, and the private sector.

Total Federal assistance for 1969 summer youth programs is more than $600 million. These funds will provide jobs for 700,000 and educational and recreational activities for millions more.

The PCOYO staff is presently working with the cities on these programs and will be monitoring and evaluating these programs throughout the summer months. Present staff work also includes preparation of a stay-in-school campaign to reach summer program participants and plans for improving the transition of summer youth programs to the fall months.

In the fall, inter-agency work groups will be established to begin planning for coordination of Federal assistance for 1970 summer youth programs. Recommendations from these work groups will be submitted to the Council and the President for approval and then implemented within the various Federal departments and agencies.

Coordination of Federal youth programs does not happen in the natural course of events. There was little or no coordination prior to the establishment of the PCOYO, and there is little reason to expect that the relationships and coordination which have been developed would continue to exist without the work of the Council staff.

BUDGET JUSTIFICATION

This appropriation will provide funds for the executive director and staff who will direct the development and coordination of summer programs which can contribute to the sound development of youth through special education, employment, recreation, and health services.

OBJECT CLASSIFICATION

[In thousands of dollars]

	1968 actual	1969 estimate	1970 estimate
Personnel compensation:			
Permanent positions	21	28	28
Positions other than permanent	183	142	139
Total compensation	204	170	167
Personnel benefits:			
Civilian employees	9	8	10
Travel and transportation of persons	68	50	63
Transportation of things			1
Rent, communications, and utilities	58	50	66
Printing and reproduction	24	45	20
Other services	129	21	25
Supplies and materials	11	11	4
Equipment	2	2	1
Total obligations	505	357	357

AGENCY REPORTS

Agency reports favoring the enactment of this joint resolution have been received from the Bureau of the Budget, the Civil Service Commission, the Equal Employment Opportunity Commission, and the Departments of Agriculture, Commerce, Defense, Health, Education, and Welfare, Housing and Urban Development, Interior, Justice, and Labor. The General Accounting Office has advised this committee that it has no special information as to the desirability of this measure and therefore would make no comments concerning its merits.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Committee on Labor and Public Welfare and the Committee on Commerce be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nominations on the Executive Calendar.

There being no objection, the Senate proceeded to the consideration of executive business.

The ACTING PRESIDENT pro tempore. The nominations on the Executive Calendar will be stated.

NATIONAL HIGHWAY SAFETY BUREAU

The assistant legislative clerk read the nomination of Douglas William Toms, of Washington, to be Director of the National Highway Safety Bureau.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

DEPARTMENT OF DEFENSE

The assistant legislative clerk read the nomination of Gardiner Luttrell Tucker, of Virginia, to be an Assistant Secretary of Defense.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

U.S. AIR FORCE

The assistant legislative clerk read the nomination of Lt. Gen. James W. Wilson, [redacted] FR (major general, Regular Air Force), U.S. Air Force, to be lieutenant general.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

U.S. NAVY

The assistant legislative clerk read the nomination of Rear Adm. Eugene P. Wilkinson, U.S. Navy, to be vice admiral, and the nomination of Vice Adm. Arnold F. Schade, U.S. Navy, to be Navy senior member of the Military Staff Committee of the United Nations.

The ACTING PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed en bloc.

DEPARTMENT OF JUSTICE

The assistant legislative clerk proceeded to read sundry nominations in the Department of Justice.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the nominations be considered en bloc.

The ACTING PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed en bloc.

NOMINATIONS PLACED ON THE SECRETARY'S DESK—THE ARMY, THE DIPLOMATIC AND FOREIGN SERVICE

The assistant legislative clerk proceeded to read sundry nominations in the Army and the Diplomatic and

Foreign Service which had been placed on the Secretary's desk.

The ACTING PRESIDENT pro tempore. Without objection, the nominations are confirmed en bloc.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to, and the Senate resumed the consideration of legislative business.

ELIE ABEL

Mr. MANSFIELD. Mr. President, it was with a great deal of interest that I noted the other day that one of the most sensitive and one of the most active and accurate reporters in the field of journalism, Mr. Elie Abel, has been appointed dean of the School of Journalism at Columbia University.

Mr. Abel has not only made a reputation in the field of TV journalism but also in the media of the press. He is a highly competent reporter, he is a man who has a decidedly good background, he has a reputation which I believe is worldwide, and his experience covers the globe.

I am delighted with this outstanding appointment. I am sorry that the TV segment of the press is losing one of its most distinguished reporters. I am happy that he is turning to a field in which he has had an enduring interest. I congratulate Columbia University on its good judgment in selecting a man of the character, the talent, the ability, and the integrity of Elie Abel.

I ask unanimous consent that an article entitled "Reporter Turns Dean," written by Lawrence Van Gelder, published in the New York Times of Saturday, December 20, 1969, be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REPORTER TURNS DEAN: ELIE ABEL

(By Lawrence Van Gelder)

When Elie Abel was 12 or 13 years old, he met a man who seemed to him "a dashing fellow indeed." "I liked the cut of his jib," Mr. Abel said, and he also admired the man's flashy convertible.

"How did you manage all this?" Mr. Abel asked.

"I'm a reporter," came the reply. Mr. Abel's course in life was likely charted right then and there. Looking back yesterday, the 49-year-old Mr. Abel said, "There are not many things in journalism that I have not had a chance to do at one time or another."

Next February, Mr. Abel, whose career in journalism has embraced newspapers, radio and television as a national and foreign correspondent, will enter a new phase of his profession.

His selection by the trustees of Columbia University as the dean of its Graduate School of Journalism was announced yesterday by Andrew W. Cordier, president of the university.

The appointment, effective Feb. 1, will return the tall, graying, Canadian-born Mr. Abel to the 57-year-old institution where he was awarded a master of science degree in journalism in 1942.

"We are gratified that a man of such high stature and broad experience has accepted this post," said Dr. Cordier. "Mr. Abel's ability and leadership in both print and broadcast journalism, which he has demonstrated in this country and abroad, prepare him well for the administration of the journalism school's wide-ranging and innovative programs."

LEAVING N.B.C.

To take up his new duties, Mr. Abel will relinquish his post as diplomatic correspondent for the National Broadcasting Company.

"If you had asked me a year ago if I had any interest in this job, I probably would have said you were out of your mind," Mr. Abel said yesterday. "I decided I had done my share of running around the world and in more recent years of running to airports with microphones in my hand."

But Mr. Abel, whose first named is pronounced ELL-ee, sees a challenge in taking on his new assignment at a time when "the business is changing very fast."

"I think it's hard at this point to see where it will be 10 years from now," he said. "I do feel that in such a period of change a school with the resources of Columbia ought to be out exploring in new patterns of journalism and working as closely as possible with newspapers, radio and television to help prepare young people.

"I think we need to develop new sensitivity and above all the capacity to present a story that is of some significance with all the skill and talent we can find."

The selection of Mr. Abel ends a search for a new dean that began with the resignation in August, 1968, of Edward W. Barrett, who served for 12 years. In the interim, Richard T. Baker has served as acting dean.

BORN IN MONTREAL

Mr. Abel, son of the former Rose Savetsky and the late Jacob Abel, was born on Oct. 17, 1920, in Montreal. While studying at McGill University, where he earned a bachelor of arts degree in 1941, he served as a school-news reporter for The New York Times.

After graduation, he joined The Windsor (Ont.) Daily Star as a reporter for several months before crossing the border to attend the Graduate School of Journalism at Columbia.

His master of science degree, he recalled once, was awarded in absentia, as he had been called to service with the Royal Canadian Air Force. Before leaving school, he also won a Pulitzer Traveling Fellowship, "but it was kept in cold storage for me" until V-E Day.

Mr. Abel, stationed primarily in Scotland, served as a radar man aboard flying boats and later as a combat correspondent, attaining—he fondly recalls—the rank of acting sergeant (unpaid), which meant that he received a corporal's stipend.

A day after his discharge, Mr. Abel joined the staff of The Montreal Gazette, but left after a few months to utilize his traveling fellowship by serving as a correspondent in Europe for the North American Newspaper Alliance, covering the Nuremberg war-crimes trials and the first attempts at four-power government in Germany.

He toured the Soviet Union, was arrested by security police in Poland and returned to the United States where he served for two years, until 1949, as United Nations correspondent for the Overseas News Agency.

WAS TIMES REPORTER

For the next decade, he was a reporter for The New York Times, in Detroit, Washington, Europe and in India. After leaving The Times, he served for two years as the Washington Bureau chief of The Detroit News before joining N.B.C.

In 1966, he wrote "The Missile Crisis" and he is hoping to find some spare time to work on some new book-length projects.

Mr. Abel, who became a United States citizen in 1952, has been married since Jan. 28, 1946, to the former Corinne Adelaide Prevost, the red-haired daughter of a newspaperman.

Mr. Abel and his wife, whom he met on a blind date under the clock at the Biltmore Hotel, have two children, Mark, who is 21 years old, and Suzanne, who is 20.

By taking his new post, Mr. Abel will begin apartment-hunting in New York, leaving behind a Federalistera home in Alexandria, Va. He counts music as his "number one extra-curricular interest" and is looking forward to concert-going in the city.

WHY THE TAX REFORM BILL SHOULD BE VETOED

Mr. SAXBE. Mr. President, last night, on receipt of the basic news of what is in the so-called tax reform bill, I sent a letter to the President, suggesting that he veto this bill. Since that time, a number of my friends who have been interested with me in the so-called new priorities have suggested that there might be a conflict, in that I and others are urging that we spend more money in the area of crime—perhaps as much as we are today—that we go into the areas of pollution; that we spend money there and we urge that the States do likewise, and not only air pollution but also water pollution and in all the environmental problems that besiege our country; that we feed our hungry; that we do away with unnecessary misery wherever it is found in this country; that all this takes money; that I voted for the HEW bill, and will continue to do so, because it would do some of the things that I think are extremely important.

The tax bill, it seems to me, is a complete failure in meeting headon this responsibility for a new priority. Some say, "Well, take $20 billion away from the military." I would willingly do this. I want to cut back on the military spending. I have voted that way in the matters that have come up on the floor with respect to the appropriation—certainly, on the ABM and other questionable projects that will build up into many more billions of dollars than the original indication.

But that does not solve the problem, when we do it here; and the only solution, it seems to me, is to meet our responsibility in new taxes—taxes that would hit those not in the $7,000 and below bracket but the great mass of earners in this country. This money can come from no other place. When we borrow money to tackle these so-called priorities, we are diluting the money that is available to the point that we have lost ground.

I cite an example: The city of Toledo has made an effort to cure the pollution of Lake Erie, which is a very serious problem. I might say in that regard that we could clean up industrial pollution of the lake in 10 years. But the big problem is the pollution of the cities by people, by open sewers. The city of Cleveland

has over 50 outfalls into Lake Erie, and every time there is over a half inch rain, they dump the raw sewage into Lake Erie, and then we wonder why this is a sick lake. The city of Toledo, in having a bond issue, in conjunction with Federal money, to try to build a new sewage disposal plant, cannot even sell the bonds. Yesterday, Pennsylvania tax-free bonds sold for 7 percent. As the rates get up to 8 or 9 percent, I believe this amounts to almost 15 percent for a man in the 50-percent bracket.

So the city is trying to sell bonds to solve a problem. It has found the market has disappeared and that it could not sell the bonds; and when they do get the money from the sale of bonds, it will not accomplish the purpose.

The ACTING PRESIDENT pro tempore. The time of the Senator has expired.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senator from Ohio may proceed for 10 additional minutes.

Mr. SAXBE. I thank the Senator.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. SAXBE. In other words, the cost is going up faster than they can get bids to sell the bonds. What is the reason? The reason is inflation.

I heard the argument which took place, and I know that other Members of the Senate have heard the argument, that as long as we increase the indebtedness of this country based upon the gross national product, that this is comparable to a business. It is said that a business must borrow money if it is going to keep going. Those who make that argument refer to General Motors or A.T. & T. and other businesses that borrow huge amounts of money. The difference is that General Motors is not printing money, as we are, and if they were printing money they would have the same problems we do.

Our borrowing is based in good part on credit. It is paper and stands for nothing more than an IOU, a check from our own Government, and as it becomes cheaper and cheaper, people are paying more money for the same thing.

So in this tax bill we come along and say we can do these things and cut taxes without doing irreparable damage. I think many of us want to increase social security benefits. What we have done to older people in this country is a tragedy. People who thought they would live to a dignified old age are public charges because the little money they were able to save and the little money they receive will not do the things that need to be done. One does not have to go very far from here to see old folks living in poorly heated hotel rooms and barely eating because the security they bought with depression dollars will not keep them today.

Mr. President, it could be your parents or my parents because this inflation, once started, affects everyone. Yet we have turned our backs on this problem. We in the Senate have avoided our responsibilities. I do not care if it is politics; and I do not want to denounce anyone. However, it is a plain fact that we have avoided our responsibilities. We have avoided our responsibilities by giving tax relief where tax relief is not needed, by actually cutting rates of taxation, by permitting loopholes to continue, and by avoiding our responsibility. These things seem only too apparent to me.

I do not believe we are fooling anyone and if we are, I do not think we are going to do it very long because an irresponsible Congress simply cannot survive in these times. I want this country to be strong. I want to change the environment for the better. I want the new priorities. I think this is extremely important. I want to give the people hope that we are going to work ourselves out of these differences that are too apparent in this country. But we cannot do it unless we are willing to pay for it, and we have to recognize the only place we are going to get money to do these things is from the graduated income tax. There is not going to be a fairy godmother who is going to come along with a wand.

So we come out with a tax bill in which we say we are going to do these things in connection with health, education, and welfare, and other things on borrowed money, and that the dollar is going to be just as good as it ever was. I do not think that is going to happen.

Therefore, I do hope the President will veto the bill. I do not know that we will be more responsible next year than we have been this year, but I know that if we are not more responsible the people in this country are going to point the finger where it belongs.

PUBLICATION OF "HANDBOOK FOR SMALL BUSINESS"

Mr. BIBLE. Mr. President, early next week the Government Printing Office will publish for the benefit of the American small businessmen everywhere the third edition of the "Handbook for Small Business" which was approved by the Congress recently with its adoption of Senate Concurrent Resolution 46 of which I had the honor of introducing several months ago in my capacity as chairman of the Senate Small Business Committee. The handbook is intended by its sponsors, the House and Senate Select Committees on Small Business, as a comprehensive reference work to explain the programs of the Federal Government which may be of benefit to the Nation's 5½ million small, family, and independent business firms.

Such firms can profit from Federal activity as suppliers of over $50 billion in goods and services purchased yearly by the U.S. Federal Government, as potential buyers of surplus Government property or users of Federal facilities, as entrepreneurs seeking financial and management assistance, as disaster victims eligible for loan help, and as beneficiaries of the $16 billion of annual research and development performed at the public expense. They may also be protected by and subject to regulation by Federal agencies, and should thus be aware of the rules of the game.

In behalf of the committee, I would like to thank all of the administrators, public information officers, and program specialists of the executive branch and independent agencies whose cooperation and work in supplying descriptions of their small-business-related operations made this publication possible. We wish to recognize in particular, the contributions of the Small Business Administration which assisted our two committees in reviewing the material and furnished a series of apt illustrations and a subject matter index which we feel will enable the handbook more attractive and easier to use.

The format of the volume remains the responsibility of our committees. We have expanded its coverage 100 percent, increased its illustrations 200 percent, and its reference systems 300 percent over prior editions. We have included explanations of the most recently enacted assistance programs, such as in the disaster loan, flood, and riot insurance, and strengthened descriptions of already existing aids.

So far as the committee is aware, this handbook is the only volume that draws together the many programs of 25 executive departments, offices, and independent agencies and relates them meaningfully to each other and to the whole picture.

In a world where the sales of the five largest U.S. corporations constitute over 8 percent of the gross national product, and the "Fortune 500" accounts for more than 45 percent, it is important to recall that small business still creates 40 percent of the gross national product and employs 50 percent of the labor force in this country.

In the Small Business Act of 1953, Congress declared as a matter of national policy that—

> The Government should aid counsel, assist, and protect, insofar as is possible, the interests of small-business concerns in order to preserve free competitive enterprise . . . and strengthen the overall economy of the Nation.

It has been my privilege to work with many of the men who pioneered this bill, and the Small Business Investment and Tax Acts of 1958, as well as the many perfecting amendments which created the foundation for small business institutions in this country.

The handbook summarizes this work of many years and reflects credit upon its originators. It is also a practical tool for the small businessman to gain a wider knowledge and wider participation by small firms in Federal activities. This, in turn, can help keep the climate in this country favorable for the founding, growth, and independence of business in the future.

Copies of the handbook, designated as Senate document 91–45, are available to Members of the Congress, House and Senate Select Committees on Small Business, and to the general public from the Superintendent of Documents, Government Printing Office, Washington, D.C., at a cost of $1.75.

CHANGE OF REFERENCE

Mr. MANSFIELD. Mr. President, the RECORD of December 3, 1969, at page

36594, shows that the bill, S. 3197, relating to a bridge between the United States and Canada was referred to the Committee on Public Works. It should have been referred to Foreign Relations.

Mr. President, I ask unanimous consent that the Committee on Public Works be discharged from further consideration of the bill (S. 3197) to authorize the Thousand Islands Bridge Authority to construct, maintain, and operate an additional toll bridge across the St. Lawrence River at or near Cape Vincent, N.Y., and that it be referred to the Committee on Foreign Relations.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

THE REVISED TAX BILL

Mr. GRIFFIN. Mr. President, I do not know whether President Nixon will sign the revised tax bill which has been agreed upon in conference, assuming that both Houses approve the report early next week. On that point, I cannot speak for the President.

But as far as this Senator is concerned, I want to acknowledge with considerable pleasure and relief that the conference agreement is a great improvement over the Christmas tree version of the tax bill which passed the Senate earlier.

In particular, I note that in providing for a personal exemption increase, the conferees rejected the Gore amendment, which would have triggered an excessive first year revenue loss—a loss that could not have been imposed responsibly at this critical stage in the battle against inflation.

On the other hand, I am pleased that the conferees saw the wisdom of the Percy-Dole approach which was offered during the Senate debate as an alternative to the Gore amendment.

The conference agreement, like the Percy-Dole amendment, provides for a very modest first year adjustment in the personal exemption with gradual step increases thereafter until the exemption reaches $750 in 1973. By taking this gradual approach, the revenue loss in the critical first year is minimized—a result which the President is bound to prefer as he considers whether to sign or veto the revised bill.

In the absence of more details, I shall not comment upon other aspects of the complex tax reform agreement. But I do wish to commend the conferees, who represented the Senate and the House, for choosing this more responsible of the two methods for increasing the personal exemption.

And, if those of us who championed the Percy-Dole approach, in preference to the Gore amendment, should feel somewhat vindicated at this point, perhaps it will be understood.

Mr. President, as the chart which follows my remarks will clearly indicate, the provisions on personal exemptions in the conference agreement are much closer to the approach taken by the Percy-Dole amendment than to the so-called Gore amendment. Hopefully, the chart will serve as a useful tool in keeping this issue in perspective in the days ahead.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

COMPARISON OF GORE, PERCY-DOLE AND CONFERENCE PROVISIONS ON PERSONAL EXEMPTIONS

	1970	1971	1972	1973
Personal exemption:				
Gore amendment	$700	$800	$800	$800
Percy-Dole amendment	650	700	750	750
Conference report	[1] 650	650	700	750
Revenue loss:				
Gore amendment	3,267,000,000	6,406,000,000	6,406,000,000	6,405,000,000
Percy-Dole amendment	1,633,000,000	3,267,000,000	4,839,000,000	4,839,000,000
Conference report	816,000,000	1,633,000,000	3,267,000,000	4,839,000,000

[1] Effective July 1, 1970.

Mr. SCOTT. Mr. President, I am so glad that the assistant Republican leader has made these comments on the tax reform-tax relief bill because, as I have been predicting for days, the ultimate conference report on this matter of the exemptions is closer to the Percy amendment as modified by the Dole amendment than it was either to the House or Senate bills. It does not have the excessively heavy inflationary impact of the Senate bill and yet it recognizes that, for the first time since 1948, some relief in the form of an increase in exemptions is desired. It has eased the impact by raising the exemption to $650 next July 1 so that taxpayers will receive an average exemption of $625 for the next calendar year; then the exemption is raised to $700 on January 1, 1972, and $750 a year later.

This will help people with large families, as well as the elderly who will secure a double exemption. It is a useful and desirable compromise.

Moreover, the difference between the Senate bill and the conference report over an 18-month period will be a reduction in the inflationary impact of approximately $9.5 billion.

Well, that is really a lot of "scratch" as the lingo would have it. That is a tremendous easing of an intolerable inflationary pressure which the Senate-passed version would have imposed.

President Nixon made it clear in some of his conversations that he could never have accepted the Senate version. It would have been vetoed; there is no doubt about that.

The hope of avoiding a veto has, of course, improved considerably by the very wise action of the Senate and the House conferees.

There are some things in the bill which are very good news to the poor and the near-poor. About 5 to 5½ million persons in those categoriees will be removed from the tax rolls. The tax impact on millions of others will be increased. A minimum tax has been set which will affect nearly everyone. Nearly everyone outside the lower brackets will have to pay some tax.

A maximum tax is included, too, so that the incentive to go out and produce and add to the gross national product is retained.

The President asked for tax reform in his April tax message. He has received some of the things for which he asked. I think the bill goes far toward achieving the President's main objective, which is that the poor should pay no tax and that no affluent person should escape paying a tax.

Moreover, something must be done to find a way to improve the housing situation, the credit situation, and the extremely tight money policy, which can be bad, ultimately, unless the fight against inflation succeeds at the other end; namely, in the fiscal effects of the tax bill and by way of holding down the levels approximating the budget and the various appropriation bills, without reduction of the inflationary impact at this end.

By these methods, tight money would continue, but the more we hold down the inflationary impact, the greater the chance we will have, sometime next year, of loosening up the monetary controls which in turn will help the construction industry and the housing industry.

For these reasons, I think it is worth noting that the influence of the President has helped to bring about a better bill.

The President's insistence on tax reform, as far back as late April and continuing throughout the procedures on the tax bill, has attained for us some important tax reform and tax relief.

The President's position on the Senate version of the tax bill, the President's position on the HEW-Labor appropriations, is helping to let out some of the steam from the inflationary pressures in the economy.

Therefore, I have considerably more hope today than I had before for the conference report, as we await the action of Congress and the action of the President on the tax bill, but I believe now that the odds of it being signed by the President are better than the projection that it would be vetoed.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senator from Tennessee (Mr. GORE) may have an additional 7 minutes to his 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

THE TAX BILL

Mr. GORE. Mr. President, I listened with surprise and amusement at the pleas in confession and avoidance by the distinguished Senator from Pennsylvania, the able minority leader (Mr. SCOTT), and the distinguished junior Senator from Michigan, the able assistant minority leader (Mr. GRIFFIN). I would like

to remind them of the well-known quotation, "Of all sad words of tongue or pen, the saddest are these: 'It might have been.'"

After their unsuccessful attempt to steal in broad daylight the middle position—an increase to $800—from the senior Senator from Tennessee with respect to the amendment increasing the personal exemption during the course of Senate consideration, which was noticeably and notably abortive, they now attempt jointly to steal from the senior Senator from Tennessee credit for the increase in personal exemption. Indeed, they go so far as to express glee that the conference committee, in their words, rejected the Gore amendment.

Quite to the contrary, Mr. President. The Gore amendment is the principal feature of tax relief in the bill as to which, it is hoped, both Houses will approve a conference report on Monday.

The increase in personal exemption is not as much as the senior Senator from Tennessee sought. The increase is to $750. The amendment approved by the Senate was $800. But, in compromise with the conferees representing the House of Representatives, the conference took those portions of the House bill favorable to the average taxpayer—to wit, a low-income allowance and an increase in the minimum standard deduction—and combined them with the low income allowance, the single individual's tax and the increase in personal exemption, of the Senate bill to produce a tax bill that is slightly more beneficial to the average low and lower middle income taxpayer than the bill that passed the Senate. It is roughly equivalent in benefits to the Senate bill, but for a typical taxpayer in the suburbs with a taxable income of $10,000 or $12,000 and a wife and two children, there may be a few dollars' advantage in the conference report, at least in some instances. It is generally equivalent, however, in tax relief for the mass of our people to the Senate-passed bill.

Mr. President, I ask unanimous consent to include in the RECORD a table of the tax reduction for typical taxpayers that will occur on January 1, 1970, and July 1, 1970.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

AMOUNT OF TAX TO BE WITHHELD UNDER CONFERENCE BILL, H.R. 13270[1]

Wages and salaries			Monthly			Weekly		
Annual	Monthly	Weekly	1st half calendar 1970	2d half calendar 1970	Calendar 1973	1st half calendar 1970	2d half calendar 1970	Calendar 1973
Single person								
$6,000	$500	$115.38	$75.42	$71.30	$61.70	$17.46	$16.51	$14.28
$9,000	750	173.08	127.92	123.80	111.70	29.58	28.63	25.82
$12,000	1,000	230.77	191.22	184.89	163.16	44.17	42.71	37.69
Married with 2 dependents								
$6,000	$500	$115.38	$39.08	$35.64	$24.21	$9.09	$8.28	$3.47
$9,000	750	173.08	82.42	76.14	62.54	19.10	17.63	12.17
$12,000	1,000	230.77	128.41	119.13	102.54	29.72	27.55	21.40
Married with 4 dependents								
$6,000	500	115.38	22.68	17.39	5.88	5.33	4.07	1.40
$9,000	750	173.08	64.42	57.72	42.96	14.96	13.38	9.96
$12,000	1,000	230.77	109.42	100.22	82.54	25.35	23.19	19.10

[1] Based on percentage method of tax withholding.

Mr. GORE. Mr. President, this is a Democratic tax bill—make no mistake about that. This tax reduction for the mass of American taxpayers has been brought about by a Democratic Congress, without aid of either the Republican leadership of this body or of the Treasury of the United States or of the President of the United States or of the Vice President of the United States.

Mr. SCOTT. Mr. President, will the Senator yield at that point?

Mr. GORE. Not yet.

Mr. SCOTT. Since he has referred to the leadership?

Mr. GORE. Not just now. I will in a moment. Let me complete my brief statement on this particular point and I will then yield.

Until the very last night, indeed, at about 3:30 in the morning of the last night of the conference, the Assistant Secretary of the Treasury informed the conferees on the part of both the House and the Senate that President Nixon, to the last, opposed, and then opposed, and it was then stated to us he did oppose, and a statement from the President was read to the conference opposing, any increase in the personal exemption.

So, Mr. President, let the taxpayers of the country know that the increase in take-home pay they will receive in their paychecks of the first week in January, and a still larger take-home pay in the first paycheck they receive in July, is the result of the Democratic Congress, over the objections of the President, over the objections of the Vice President, over the objections of the Treasury Department, and without the assistance of the leadership of the Senate on the other side.

I yield.

The ACTING PRESIDENT pro tempore. The Senator from Pennsylvania.

Mr. SCOTT. Mr. President, if the Senator is finished, I will seek the floor in my own right.

Mr. GORE. I yield to him, if he wishes.

Mr. SCOTT. I have listened with some interest and would have been appalled except I recognize a reelection speech when I hear one——

Mr. GORE. Mr. President, I yield for a question, not a political speech.

Mr. SCOTT. There was no question about that, but I now ask a question. The question is, if the Senator seeks to secure for himself all the credit for an amendment which largely represented the efforts of the Senator from Illinois (Mr. PERCY) and the Senator from Kansas (Mr. DOLE); but if he seeks for himself and the majority of the Congress the credit, he should also accept the blame for the inflationary impact in every appropriation bill. If you are a majority for one purpose, you are a majority for all purposes.

Mr. GORE. I am glad the Senator raised that question, because the record will show that this Congress has reduced the budget requests of President Nixon by more than $5 billion. Ten of the 14 annual appropriations bills passed by the Congress have been in amounts less than those requested by the President. I hope the news media will carry that story to the American people.

Who is responsible for the inflation in expenditures? Not the U.S. Congress. The Congress, let me repeat, has reduced 10 of the 14—I repeat, 10 of the 14—annual bills, to a total reduction below that recommended, requested, and urged by the President, of more than $5 billion.

Mr. MONDALE. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. MONDOLE. Would it not be a fair interpretation of the President's position to say that he is not objecting so much to what he calls the inflationary direction of the expenditures—because we are $5 billion below his budget—but to the way we choose to apply the resources of this country to human needs? That is where the objection is.

The ACTING PRESIDENT pro tempore. The time of the Senator has expired.

Mr. GORE. Mr. President, I ask unanimous consent to have 5 additional minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. GORE. Mr. President, I had not intended thus to speak today, but when I came into the Chamber, the distinguished assistant minority leader was acclaiming to the Senate that the conferees had rejected the Gore amendment.

I do not like to stand here and claim credit, but before the eyes of the entire country, my friends on the other side attempted to steal from the senior Senator from Tennessee the amendment to raise the personal exemption to $800; and now they are attempting to steal credit for the final approval of such an amendment.

It is not that I wish to claim credit, but I do not wish to be stripped of it, nor do I wish to see a false claim for credit laid to it by those who tried to gut it and defeat it, and deny it to the taxpayers who need it so badly.

Mr. SAXBE. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. SAXBE. There are those of us, I am sure, on both sides of the aisle, who have an entirely different attitude from that of the Senator from Tennessee. There are those of us who would like to

have seen the President's budget approved, those who feel there are priorities that require additional expenditures in such areas as pollution and aid to our hungry. That money is needed.

I do not find fault with the HEW bill. I do not find fault with these proposed expenditures. They are very necessary expenditures. What I find fault with is trying to run with the hare and hold with the hounds, where we go into a tax reform bill and wind up with a tax reduction bill, at the same time when we are crying for needed expenditures that the President sees and I think most Senators see and realize that we need.

If we cannot face up to our responsibilities by saying, "Yes, we need these things in this country, and we are going to pay for them rather than giving tax relief to me, tax relief to the Senator from Tennessee, and tax relief to the general taxpayer—not the poor, not the underprivileged, but by giving tax relief so that a fellow can say, 'I got $3 off this month, therefore I am going to vote for this candidate,' " I do not think this is good government, and I think it is an abdication of our responsibility here, because we know that inflation is going to take away, at the grocery store, what we refuse to collect to pay our honest debts. We cannot borrow money to do all the things and correct all the things that harm us in this country—and they are many—and I hope, not on the basis of the expenditures, but I hope that we do not fail to chin the limb when it comes to paying for these things.

Mr. GORE. I appreciate the statement of the able junior Senator from Ohio. I must confess to him that I had doubts that we should have a big tax reduction this year.

But that was not the choice that was presented to the Senate. The President had recommended a big tax cut; but he had recommended the big tax cut mostly for those in high-income brackets, and if we must have a tax reduction, I believe—and now it is established that an overwhelming proportion of the Democratic Congress believes—that the tax reduction should go primarily to those who need it most. That is the victory that was won, over the last 3 months, in the committee, on the floor of the Senate, and in the conference committee at 3:30 in the morning; and credit for that victory does not belong, in any part, to the leadership on the other side of the aisle.

They tried to prevent it. The President tried to prevent it. The Treasury Department tried to prevent it. Yet there will be a tax reduction in the withholding tax, an increase in take-home pay, of almost every taxpayer, beginning with his first paycheck in January 1970, and a still larger take-home pay when the personal exemption goes into effect in July of 1970; and they can thank the Democratic Representatives for that. They cannot thank the Republican leadership, who today are attempting to steal away from the lowly Senator from Tennessee the credit which he does not claim. [Laughter.]

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senator from Pennsylvania is recognized.

Mr. SCOTT. Mr. President, I yield first to the Senator from Florida, though I am barely able to restrain my tears until I have an opportunity to speak further.

Mr. GURNEY. Mr. President, I should like to answer some of this argument about the Democrats being entirely responsible for this increase in the personal exemption. I should like to point out that the first offering of the Senator from Tennessee in committee was for an increase in the personal exemption to $1,250. With stout Republican opposition, aided by some Democrats, we managed to stave that off. It would have resulted in a loss of $18 billion plus—utterly unacceptable.

Then the Senator came to the floor, when the tax bill was open for amendment, with an offering of a $1,000 personal exemption—again with a totally unacceptable loss of revenue. The President could not possibly have lived with it, and it would have added all kinds of gasoline to the fires of inflation.

Then the Senator came up with $800, which we bought, in an amendment of the Senate. I must say that I voted for the Percy amendment, because it was sound, it made sense, and it is now pretty much in the tax bill. It was the Percy amendment the conferees bought.

Mr. GORE. Mr. President, will the Senator yield?

Mr. GURNEY. No; I do not yield. The Senator has had plenty of time. He can get the floor later.

Mr. SCOTT. That is why I have the floor.

Mr. GURNEY. Then finally, in the conference, the conferees came up with a figure of $750, which comes close to the $800 figure that the Senator from Tennessee offered in his amendment, but the timing is entirely different in how it goes into effect, and the end result closely resembles the Percy amendment offered by the Republicans and supported by the Republicans when the tax bill was before the Senate and open for amendment.

I think credit ought to be given where credit is due. Probably had not the Senator from Tennessee offered his amendment, the personal exemption might not have been raised. But it is also true that Republicans, in the committee, on the floor, and in the conference, finally got the thing down to where it could be accepted and where it would make sense; and if there is any kind of a personal exemption that means anything, it was the Republican Party that made is so.

Mr. GORE. Mr. President, will the Senator from Pennsylvania yield on a point of personal privilege, since the Senator has made reference to me?

Mr. SCOTT. I have not referred to the Senator. I am about to refer to the Senator, however. I am wondering if it is not a fact, as I have understood, that the Senator is not a lion——

The PRESIDING OFFICER. The Senator's 3 minutes have expired.

Mr. SCOTT. I ask unanimous consent to proceed for 3 additional minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SCOTT. I wonder if it is not a fact that the distinguished—by no means lowly, but distinguished—senior Senator from Tennessee, who is reputed to be and was indeed a lion on the floor for the vast expenditure of Federal funds; and who seems to have subdued his critics here with notable success as to the excessive cost involved, lion though he was on the floor, he was a lamb in the conference, since the conference preferred, not the Gore amendment at all, but virtually the Percy amendment.

I am sure that will be contested, and therefore some time later today, we shall be prepared to offer some figures and tables that will show that the conference report was indeed much more near the Percy-Dole amendment than the amendment of the Senator from Tennessee, the Gore amendment.

I think we are all inclined to a little politics around here from time to time. But when the categorical imperative enters this Chamber, reason flies out of our nonwindows and the categorical imperative is that all good is on one side of the aisle and all evil is on the other.

"That ain't so, never was, and never will be."

Both sides labored and brought forth what was a monstrosity. And we sent this eight-headed, 11-legged animal over to conference. It lost some of its more horrendous appendages and has returned in somewhat more human form.

That is the point we were trying to make.

Mr. President, I yield to the Senator from Michigan.

The PRESIDING OFFICER. The Senator from Michigan is recognized.

Mr. GRIFFIN. Mr. President, very briefly, the resemblance of the conference agreements to the Percy-Dole substitute which was considered is the fact—and much more—the ultimate fact, that the personal exemption represents $750, which was the case in the Percy-Dole amendment.

The important point, even more than that figure, is what happens the first year in the development of the Percy-Dole substitute.

We were trying to provide for a revenue loss the first year—when the battle against inflation is so critical—that might be acceptable to the President.

The conference agreement provides for an increase in the personal exemption, as I understand it, of only $50 in the first year. And that is only effective during part of the year.

The Percy-Dole substitute provides for an increase of $50 in the first year.

On that point, the conference agreement provision represents a revenue loss of only $816 million in the first year. By contrast, the Gore amendment would have involved an increase in revenue loss by nearly $3 billion.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. SCOTT. Mr. President, I yield myself 3 additional minutes.

The PRESIDING OFFICER. The Senator from Pennsylvania is recognized for 3 additional minutes.

Mr. SCOTT. Mr. President, I yield to the Senator from Michigan.

Mr. GRIFFIN. Mr. President, that is the crucial difference between the con-

ference agreement and the so-called Gore amendment, and also I think it underscores and underlines the similarity between the approach of the Percy-Dole amendment and the conference agreement.

Mr. SCOTT. Mr. President, I have checked with the Treasury in the course of this colloquy and with persons interested in the conference. I am told that the conferees and certainly the Treasury feel that they have excised from the bill with malice prepense the fiscal irresponsibility heretofore imbedded in it by the Gore amendment.

They regarded that as fiscally irresponsible, and I do. And it is out of the bill. And the distinguished senior Senator from Tennessee can labor mightily by voice and speech from now until election day, 1970, or any other date certain.

And perhaps he will convince some. That is the name of the game. But he will never convince me that the Gore amendment is in the bill. It is out of the bill. It has been given a decent burial and what is in the bill is the Percy-Dole amendment for which I am immensely grateful.

Mr. President, I yield the floor.

Mr. GORE. Mr. President, I have just listened to the peroration of the distinguished minority leader. I think it was appropriate that during this colloquy the senior Senator from Wyoming (Mr. McGEE) introduced the subject of supergrades for the civil service system. That causes me to comment that in this day of ours, characterized as it is with the rapidity of change and elevated opinions on super-duper tax bills, it is also the time of super civil service grades and super dum-dums.

Mr. HARRIS. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. HARRIS. Mr. President, this rather ridiculous argument against calling the Gore amendment the Gore amendment reminds me of a story. I cannot remember exactly how it goes. However, it is to the effect that defeat is an orphan, but victory has many fathers.

This is what it now looks as though they are trying to do after they have fought so hard against everything. The workingman wants this tax reduction. And tax relief is a part of tax reform. And I think that the working people of our country well know that we would not have ever gotten to this point except for the efforts of the distinguished senior Senator from Tennessee (Mr. GORE).

Mr. GORE. Mr. President, I thank my able friend, the Senator from Oklahoma.

I would really not like to extend the colloquy much longer. I just want to close it by reminding my friends, the leaders and the assistant leader on the other side, of another reference in our literature to the effect that a rose by any other name would still smell the same.

DEATH OF FORMER SENATOR JAMES H. DUFF, OF PENNSYLVANIA

Mr. SCOTT. Mr. President, it is with extreme sorrow that I report to the Senate that a former Senator from Pennsylvania and former Governor of our Commonwealth, the Honorable James H. Duff, died today. A spokesman for George Washington Hospital announced that Senator Duff, aged 86, collapsed at National Airport, was taken to the hospital, and pronounced dead at 9:43 a.m. We have no further details, so I shall say nothing further now except that I was a longtime friend, associate, and admirer of Big Jim Duff. We will miss him greatly. We shall have more to say in the form of a memorial tribute at a later date.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. SCOTT. I yield.

Mr. JAVITS. I should like to join the distinguished Republican leader in expressing my sadness at the death of Jim Duff, an old friend of mine. He lived a very rich life and died at a ripe old age. We shall miss him.

Mr. SCOTT. He died as he always wished to—with his boots on.

Mr. JAVITS. I extend my condolences to the members of his family.

Mr. SCOTT. And so do I.

GREEK-TURKISH ECONOMIC COOPERATION

Mr. JAVITS. Mr. President, on several occasions, I have brought to the attention of the Senate the work which was initiated by the NATO Parliamentarians Conference, now the North Atlantic Assembly, looking toward Greek-Turkish economic cooperation. Reports on this matter were presented to the Senate on June 3, 1965, October 20, 1965, January 19, 1967, December 15, 1967, January 28, 1969, and some remarks on the subject were included in my report on a trip abroad which was presented to the Senate on July 2, 1969.

A number of important developments have taken place during calendar 1969, which I should like to lay before the Senate.

At the outset, to put the work which has been done on this project in its proper context, requires some brief comment on the political situation in the area, and of the relationship of this project to that situation.

The project for Greek-Turkish economic cooperation, although launched by an inter-parliamentary body, was conceived of as essentially a private effort. Through its good offices, working with the private sector, but with governmental support and approval, possibilities in economic development yielding mutual benefits to Greece and Turkey could be expanded. The effort was designed to function in the economic and not in the political sphere.

Thus, the major thrust of the project has been to bring together participants from Greece and Turkey, where possible mainly from the private sector, to work together in such areas as tourism, the cooperative exploitation of such natural resources as fish, the increase of agricultural exports to Western Europe, and the common development of the border region between the two countries along the shores of the Meric/Evros River. It is, I think, fair to say that although the emphasis of this effort was thus in the noncontroversial area of economic benefit to both sides, the parliamentarians had in mind, when the project was initiated, not only the fact that Greeks and Turks were among the less-developed members of the NATO alliance, but also the fact that work on mutually beneficial development projects would tend to increase contacts between the peoples of Greece and Turkey, and hopefully to ameliorate the tensions which at the time existed as a consequence of the Cyprus dispute.

In these objectives, it is fair to say that the project initiated in 1965 by myself and by my Greek and Turkish parliamentary colleagues, Messrs. Kasim Gülek and Alexander Spanorrigas has been eminently successful. Despite much initial skepticism it has, in fact, proved possible to bring Greeks and Turks together and to produce useful and cooperative work. And that has been done even at a time when tensions in the area were extremely high. The result, I believe, has been a substantial contribution to U.S. foreign policy objectives and, I may note, the U.S. Government has consistently supported this effort. So also has there been a contribution to the security which is the aim of NATO itself. In this latter belief, I am, incidentally, reinforced by the comments on several occasions of the Secretary General of NATO, Manlio Brosio.

The recent course of political developments in Greece cannot pass unnoticed—as I am, also, chairman of the Political Committee of the North Atlantic Assembly—a committee which had occasion to consider a deeply troubled report on this situation as recently as October last.

It has been my hope, as it must be the hope of all friends of human liberty and of the Greek ideal of moderation and tolerance which forms so large a basis of our own political system, that swift progress would be made in Greece, toward restoration of a representative parliamentary system, and that present restrictions on essential liberties would quickly be removed. It remains my conviction that this must come, and that it would greatly contribute to the security, stability, and welfare of the Greek state, and of the Greek people.

In this context a continued and increased measure of cooperation on projects leading to the economic and social betterment of the peoples of Greece and Turkey, and to peace in the southeastern area of NATO continues to be vital. As the project for Greek Turkish Economic Cooperation is such a project, it benefits all. For this reason, I continue the support which I have given in the past to the objectives of the project which are designed to bring together, the peoples of that often-troubled area of the world, to ameliorate the relationships between them, to increase their cooperation on mutually beneficial works, and to set up institutions which can serve as channels of communication between the Greek and Turkish peoples.

With this introduction, Mr. President, I should like to deal with some of the attainments of the project during 1969,

and with some of the prospects for its future work.

First. The project has been administered over the course of the past several years by the Eastern Mediterranean Development Institute, a nonprofit unincorporated association. The board of directors consists of nationals of the NATO countries, with a large majority being nationals of Greece and Turkey.

In the course of the past year, indigenous sister organizations have been set up in Greece and in Turkey themselves, and funds have been raised in local currency to meet their necessary expenses. Work has been going forward on various projects of the sort mentioned above.

In several of these areas, there has been substantial progress.

In the field of tourism, a notable success was achieved when, in March 1969, the Greek National Tourist Organization and the Turkish Ministry of Information and Tourism held a meeting in Istanbul, at which were present as observers the deputy chairman of the EMDI, the Honorable Kasim Gülek, and its executive director, the Honorable Seymour J. Rubin. At the March meeting, the two sides approved, subject to ratification, the first intergovernmental document signed between Greece and Turkey since the eruption of the difficulties over Cyprus. This was a procès-verbal which is intended to lead to a formal agreement on cooperation in the field of tourism. The agreement which is contemplated would call for the establishment of a permanent consultative committee before which can be laid various proposals of mutual benefit in touristic endeavors.

Subsequent to the meeting of officials in March, further meetings of a less formal sort have been held. The most recent of these was held in Athens on December 5, 1969. At these meetings, the private sector of both countries has strongly expressed its support for cooperation on tourism, and has agreed that the lifting of visa restrictions for tourists of Greek and Turkish origin would be of mutual benefit to the two countries. Were this to be done, it would largely restore the freedom of transit between the two countries which had existed after the farsighted arrangements which were made in the mid-1920's by the two great statesmen of the area, Venizelos and Ataturk.

Additionally, others outside the region have expressed strong interest in participating in touristic developments. A meeting thus was held under the sponsorship of the Deutschebank in Frankfurt on October 13, at which various German and Italian interests, together with a representative of the International Finance Corporation, discussed the possible organization of research and financing entities which might help to promote tourism in the region.

Tourism in this region is of great importance. It is already a major source of income so far as Greece is concerned; it promises to be an equally useful source of foreign exchange on the Turkish side. Moreover, the touristic area of the Aegean is so interlaced between the Turkish mainland and the Greek islands as to make regional development not only attractive to tour operators and to developers of touristic areas, but practically at least in the long run, inevitable.

The administrative arrangements which are contemplated under the procès-verbal of March 1969, should make a continuing contribution to this development and should help to develop continuing working relationships between the two sides.

A major endeavor of the project for Greek Turkish Economic Cooperation and the Eastern Mediterranean Development Institute has been that involving the Meric/Evros River. In previous reports, I have noted that this work has moved forward extraordinarily well, with a heavily documented prefeasibility or reconnaissance study having emerged in late 1967 from the joint work of a large group of Turkish, Greek, and German experts. This report was revised and in its final form approved, subject to slight modification, at a large international meeting held in Frankfurt in September 1967. It was then put in the hands of various international financing bodies such as the World Bank and the European Investment Bank, and has been extensively discussed with the United Nations Development Programme which, with the IBRD, had been kept au courant at all stages of the research and study work. After a considerable amount of preparatory discussion, both the Greek and the Turkish Governments have officially notified the UNDP of their desire to move forward with further developmental work on the Meric/Evros, with the help of the UNDP. As of early December 1969, a senior representative of the UNDP has visited both Greece and Turkey for discussions with experts and governmental officials there. These discussions are expected to lead to an official proposal to be laid before the next governing board of the UNDP in the spring of 1970.

Hopefully, this work will lead to a full scale feasibility study financed by the UNDP and the Greek and Turkish Governments, with certain small pilot projects included, in areas of land management, irrigation, and small power projects in this sensitive area, the border between Greece and Turkey in Thrace. Should full scale implementation of this feasibility study be undertaken, the final scale of expenditure is estimated in the neighborhood of $100 to $150 million. This is obviously a matter of great importance both to the economies of Greece and Turkey, and to the population of this politically sensitive border area.

It is important to note, as I have mentioned in previous reports, that the Meric/Evros River rises in Bulgaria, where it is called the Maritsa, and that the Bulgarian Government has in several ways expressed interest in the developmental work which I have just mentioned. This interest was expressed, for example, in a visit to me of the Bulgarian Ambassador in Washington. Prior to its recent contacts with the Greek and Turkish Governments, the UNDP consulted with Bulgarian authorities in Sofia. It would be premature to make any predictions as to whether the Meric/Evros project may evolve not merely into a binational and regional development project, but into one which would form a link based on mutually useful development work between East and West. That prospect in any case remains open, and is partially encouraged by a recent amelioration of relationships between Turkey and Bulgaria and between Greece and Bulgaria.

Finally, in this respect, it should be mentioned that one of the objectives of EMDI has been from the outset to stimulate the activities of others on developmental projects in the Greco-Turkish area. This attempt to achieve a multiplier effect with the efforts of EMDI has had more than a reasonable amount of success.

Thus, not only have tourism projects evolved and have physical and business connections with the two sides developed, but a new project has been set in motion in the field of agricultural research in the Meric/Evros region.

This is a project funded by the Thyssen Foundation of Germany, and led by a group of German agronomists to investigate the conservation of soils which on both the Turkish and the Greek side of the river have been eroded over the course of many years by excessive grazing and by improper methods of land management. This project, which is a direct outgrowth of the work done by the German, Turkish, and Greek team on its Meric/Evros study, is at present under way. Hopefully, other aspects of the basic Meric/Evros study will lead to further exploratory and scientific work of this same general sort. The prospect of this happening seems to be quite good, since the basic material upon which further research proposals can be based is already contained in the Meric/Evros report, and since that report itself demonstrates the feasibility of a joint and cooperative research effort.

On other projects of EMDI, it is not necessary at this stage and in this form to say much in detail. Work is proceeding on projects having to do with the export of agricultural produce to Western Europe and on investigation of the ecological conditions affecting fish resources in the eastern Mediterranean. The recent meeting of the board of directors of EMDI received a new suggestion that EMDI could perhaps contribute to the training of Greek and Turkish guest workers in Western Europe, and to the evaluation of methods by which the skills of these workers could be put more effectively to work when they returned to their own countries.

A proposed meeting of industrialists of the two countries is to take place shortly in Istanbul and its program has been expanded to include the development bankers of both countries.

In short, there are ample opportunities for cooperative work, opportunities which can be seized if conditions permit.

Second. I turn now to a new and potentially extremely important aspect of the work which has, until now, been done on the project for Greek-Turkish economic cooperation under the auspices of the EMDI. This arises out of the

recommendations contained in the report of the rapporteur of the Political Committee of the North Atlantic Assembly, the Honorable Erik Blumenfeld, of Germany. This report, which was considered by the Political Committee of the North Atlantic Assembly at its meetings in Brussels in October 1969, under my chairmanship, suggested the desirability of expanding the objectives of EMDI and of establishing a Mediterranean development organization. The recommendation was carefully considered by the Political Committee. It was, therefore, considered also by the Economic Committee of the Assembly, under the chairmanship of Mr. Bishop, of the United Kingdom. During the discussion, it was suggested that, after preliminary work, a governmental conference should be convened with the aim of establishing a Mediterranean development organization "with the ultimate aim that responsibility for furthering the project should be entrusted to the Eastern Mediterranean Development Institute." I append a copy of the resolution which emerged from the deliberations of both the Political and Economic Committees of the North Atlantic Assembly to this statement.

There are many problems as well as many opportunities presented by this recommendation, which was endorsed at the plenary session of the North Atlantic Assembly. Yet any new type of organization in the field of economic development enters an already crowded arena. It is clear, moreover, that cooperation between donors in any such organization is difficult, and a recommendation which contemplates, as this one does, some type of organizational unity between "donors" and "recipients" makes the task even more complicated. Nonetheless, there is at present no specific organization which deals with the developmental problems of the Mediterranean base, nor is there one which expresses those NATO responsibilities which lie in the field of development. It was for these reasons that both the Political and Economic Committees at the plenary session endorsed the recommendation annexed hereto.

Since the adoption of this recommendation, a number of steps have been taken to move forward with this project. I have consulted with Mr. Blumenfeld and with Mr. Rubin, the Executive Director of EMDI, here in Washington. Subsequently, the matter has been discussed by Mr. Rubin with Greek and Turkish board members of EMDI and, immediately thereafter, with the chairman of the Economic Committee of the North Atlantic Assembly, with Mr. Blumenfeld, and with M. Phillippe Deshormes, the Secretary-General of the North Atlantic Assembly.

Based upon an analysis prepared by Mr. Rubin, further work is going forward to explore both the problems and the possibilities with a view toward a meeting at the International Secretariat of the North Atlantic Assembly in March next, which will consider the establishment of a working group, as called for in the recommendation and which will attempt to establish a program of work for that working group. The timetable set up at the Paris meeting of December 9, 1969, suggests that it should be possible to lay a specific proposal before the fall 1970 meeting of the North Atlantic Assembly.

Many difficulties will have to be overcome before one may reasonably say that progress has been made toward the objectives of the recommendation annexed hereto. But work has been started on this project in a good spirit, with a desirable objective in mind and with the first prerequisite of success; that is, knowledge of the difficulties.

In these circumstances, I think it is justifiable to hope that the experience with the project which was begun by the NATO parliamentarians in 1964–65 and which has yielded highly useful results is only the beginning of an enlarged and even more useful experiment in international cooperation for economic and social development.

CONVEYANCE OF CERTAIN MATERIALS TO EMOGENE TILMON, LOGAN COUNTY, ARK.; ENOCH A. LOWDER, LOGAN COUNTY, ARK.; J. B. SMITH AND SULA E. SMITH, MAGAZINE, ARK.; AND WAYNE TILMON AND EMOGENE TILMON, LOGAN COUNTY, ARK.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Chair lay before the Senate messages on S. 65, S. 80, S. 81, and S. 82, in that order, and that the Senate agree to the House amendment in the case of each measure.

These bills are relatively minor items, all dealing with a related subject.

The ACTING PRESIDENT pro tempore laid before the Senate the amendment of the House of Representatives to the bill (S. 65) to direct the Secretary of Agriculture to convey sand, gravel, stone, clay, and similar materials in certain lands to Emogene Tilmon of Logan County, Ark., which was, on page 2, line 2, strike out ": *And provided further,* That such sand, gravel, stone, clay, and similar materials shall only be used on said tract."

The amendment was agreed to.

The ACTING PRESIDENT pro tempore laid before the Senate the amendment of the House of Representatives to the bill (S. 80) to direct the Secretary of Agriculture to convey sand, gravel, stone, clay, and similar materials in certain lands to Enoch A. Lowder of Logan County, Ark. which was, on page 2, line 2, strike out ": *And provided further,* That such sand, gravel, stone, clay, and similar materials shall only be used on said tract".

The amendment was agreed to.

The ACTING PRESIDENT pro tempore laid before the Senate the amendment of the House of Representatives to the bill (S. 81) to direct the Secretary of Agriculture to convey sand, gravel, stone, clay, and similar materials in certain lands to J. B. Smith and Sula E. Smith, of Magazine, Ark., which was, on page 2, line 3, strike out ": *And provided further,* That such sand, gravel, stone, clay, and similar materials shall only be used on said tract."

The amendment was agreed to.

The ACTING PRESIDENT pro tempore laid before the Senate the amendment of the House of Representatives to the bill (S. 82) to direct the Secretary of Agriculture to convey sand, gravel, stone, clay, and similar materials in certain lands to Wayne Tilmon and Emogene Tilmon of Logan County, Ark., which was, on page 2, line 2, strike out ": *And provided further,* That such sand, gravel, stone, clay, and similar materials shall only be used on said tract."

The amendment was agreed to.

ADDITIONAL POSITIONS IN GRADES GS–16, GS–17, AND GS–18

Mr. McGEE. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on S. 2325.

The PRESIDING OFFICER laid before the Senate the amendment of the House of Representatives to the bill (S. 2325) to amend title 5, United States Code, to provide for additional positions in grades GS–16, GS–17, and GS–18 which was to strike out all after the enacting clause, and insert:

That (a) section 5108(a) of title 5, United States Code, is amended by striking out "2,577" and inserting in lieu thereof "2,727".

(b) Section 5108(b)(2) of such title is amended by striking out "28" and inserting in lieu thereof "44".

(c) Section 5108(c)(1) of such title is amended by striking out "64" and inserting in lieu thereof "90".

(d) Section 5208(c)(2) of such title is amended by striking out "110" and inserting in lieu thereof "140".

SEC. 2. Section 4 of the Act entitled "An Act to provide certain administrative authorities for the National Security Agency, and for other purposes", approved May 29, 1959, as amended (50 U.S.C. 402, note), is amended to read as follows:

"SEC. 4. The Secretary of Defense (or his designee for the purpose) is authorized to—

"(1) establish in the National Security Agency (A) professional engineering positions primarily concerned with research and development and (B) professional positions in the physical and natural sciences, medicine, and cryptology; and

"(2) fix the respective rates of pay of such positions at rates equal to rates of basic pay contained in grades 16, 17, and 18 of the General Schedule set forth in section 5332 of title 5, United States Code.

Officers and employees appointed to positions established under this section shall be in addition to the number of officers and employees appointed to positions under section 2 of this Act who may be paid at rates equal to rates of basic pay contained in grades 16, 17, and 18 of the General Schedule.".

Mr. McGEE. Mr. President, the measure with the adjustment has been cleared with both sides. I move that the Senate concur in the House amendment to the Senate bill which was to strike out a provision for 45 additional supergrades and a provision for eight supergrades specifically allocated to the Smithsonian Institution.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Wyoming.

The motion was agreed to.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

WESTERN HEMISPHERE AFFAIRS

A letter from the Secretary of State, transmitting a draft of proposed legislation to reorganize and strengthen the United States Government structure for dealing with Western Hemisphere affairs (with accompanying papers); to the Committee on Foreign Relations.

REPORT OF THE DEPARTMENT OF DEFENSE ON REAL AND PERSONAL PROPERTY

A letter from the Deputy Secretary of Defense, transmitting, pursuant to law, a report on the fixed property, installations, and major equipment items, and stored supplies of the military departments maintained on both a quantitative and monetary basis (with an accompanying report); to the Committee on Armed Services.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. EAGLETON, from the Committee on the District of Columbia, with amendments:

S. 2694. A bill to amend the District of Columbia Police and Firemen's Salary Act of 1958 to increase salaries, and for other purposes, with amendments (Rept. No. 91–629).

By Mr. MAGNUSON, from the Committee on Commerce, with amendments:

S. 2289. A bill to amend the Interstate Commerce Act, as amended, in order to make unlawful, as unreasonable and unjust discrimination against and an undue burden upon interstate commerce, certain property tax assessments of common and contract carrier property, and for other purposes (Rept. No. 91–630).

NINETEENTH ANNUAL REPORT OF SELECT COMMITTEE ON SMALL BUSINESS—INDIVIDUAL VIEWS (S. REPT. NO. 91–627)

Mr. BIBLE. Mr. President, I submit the 19th annual report of the Select Committee on Small Business.

I ask unanimous consent that the report be printed, together with individual views of Senators JAVITS, SCOTT, and HATFIELD.

The PRESIDING OFFICER. The report will be received; and, without objection, the report will be printed, as requested by the Senator from Nevada.

REPORT ENTITLED "THE EFFECTS OF CORPORATION FARMING ON SMALL BUSINESS"—REPORT OF A COMMITTEE—INDIVIDUAL VIEWS (S. REPT. NO. 91–628)

Mr. BIBLE. Mr. President, from the Select Committee on Small Business, I submit a report entitled "Impact of Corporation Farming on Small Business." I ask unanimous consent that the report be printed, together with individual views of the Senator from Colorado (Mr. DOMINICK).

The PRESIDING OFFICER. The report will be received; and, without objection, the report will be printed, as requested by the Senator from Nevada.

EXECUTIVE REPORTS OF A COMMITTEE

Mr. MAGNUSON. Mr. President, from the Committee on Commerce, I report favorably sundry nominations in the Coast Guard which have previously appeared in the CONGRESSIONAL RECORD and I ask unanimous consent, in order to save the expense of printing them on the executive calendar, that they lie on the Secretary's desk for the information of any Senator.

The PRESIDING OFFICER. Without objection, it is so ordered.

The nominations, ordered to lie on the desk, are as follows:

David W. Hiller, and sundry other officers, for promotion in the Coast Guard; and

Paul L. Milligan, and sundry other Reserve officers, for appointment to the Coast Guard.

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. JAVITS:

S. 3277. A bill to amend the Mental Retardation Construction Act to extend and improve the provisions thereof, and for other purposes; to the Committee on Labor and Public Welfare.

(The remarks of Mr. JAVITS when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. ERVIN (for himself, Mr. ALLEN, Mr. EASTLAND, and Mr. HOLLAND):

S. 3278. A bill to amend the Civil Rights Act of 1964 by adding a new title, which restores to local school boards their constitutional power to administer the public schools committed to their charge, confers on parents the right to choose the public schools their children attend, secures to children the right to attend the public school chosen by their parents, and makes effective the right of public school administrators and teachers to serve in the schools in which they contract to serve; to the Committee on the Judiciary.

By Mr. BIBLE:

S. 3279. A bill to extend the boundaries of the Toiyabe National Forest in Nevada, and for other purposes; to the Committee on Interior and Insular Affairs.

(The remarks of Mr. BIBLE when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. TALMADGE:

S. 3280. A bill for the relief of Sergio I. Leguizamon; to the Committee on the Judiciary.

By Mr. MONTOYA (for himself, Mr. CANNON and Mr. RANDOLPH):

S. 3281. A bill to amend section 139 of title 23, United States Code, relating to additions to the Interstate System; to the Committee on Public Works.

(The remarks of Mr. MONTOYA when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. YARBOROUGH:

S. 3282. A bill for the relief of Jean Rawls Fairbank; to the Committee on the Judiciary.

S. 3283. A bill for the relief of John L. Clark; to the Committee on Armed Services.

By Mr. KENNEDY:

S. 3284. A bill to authorize the acquisition and maintenance of the Goddard Rocket launching site in accordance with the act of August 25, 1916, as amended and supplemented, and for other purposes; to the Committee on Interior and Insular Affairs.

(The remarks of Mr. KENNEDY when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. YARBOROUGH:

S. 3285. A bill for the relief of Mrs. Louise Sheridan; to the Committee on the Judiciary.

By Mr. MAGNUSON (for himself, Mr. GRIFFIN, Mr. PEARSON, Mr. PROUTY, and Mr. SCOTT) (by request):

S. 3286. A bill to assist consumers in evaluating products by promoting development of adequate and reliable methods for testing characteristics of consumer products; to the Committee on Commerce.

(The remarks of Mr. MAGNUSON when he introduced the bill appear later in the RECORD under a separate heading.)

S. 3277—INTRODUCTION OF THE MENTAL RETARDATION SERVICES AMENDMENT OF 1969

Mr. JAVITS. Mr. President, I introduce, for the administration, the Mental Retardation Services Amendments of 1969. The bill assures the continuing support of the Federal Government in providing services and expanded facilities for the mentally retarded, including special incentives to encourage these activities in areas having the most critical need.

Included among the activities for which grants could be made under the bill are the provision of services for the mentally retarded—operation grants—construction of mental retardation facilities; development and demonstration of new or improved techniques for provision of services for the mentally retarded; training of personnel to work on the various problems of the mentally retarded; and State and local planning, administration, and technical assistance.

I am pleased that the administration bill provides:

First, the maximum on the Federal share of the costs of new projects, including construction projects, shall be 75 percent except in poverty areas where 90 percent would be permitted;

Second, the duration of support for projects providing mental retardation services is to be extended from the present 51 months to 8 years except for poverty areas where support could be granted for 10 years; and

Third, the Federal share of support for projects providing services would decline gradually, from a maximum of 75 percent in the first 2 years to 10 percent in the 8th year, and in poverty areas from 90 percent in the first 2 years to 10 percent in the 10th year.

Other major features of the bill provide that operational support would continue to be provided to recipients who have already received commitments for future support under the existing law; Federal funds for all types of mental retardation projects in a State would not be less than the amounts allotted to the State in fiscal year 1970 for construction of community mental retardation facilities; joint funding arrangements with other Federal programs could be entered into; and before grants are made, States must be given an opportunity to review and make recommendations on projects in their jurisdictions.

In order to meet the problem to which the President called attention in his

message of April 30, 1969, to the Congress on improving the administration of Federal programs, the Department of Health, Education, and Welfare has provided in the bill for consolidating the present separate categories of grants for construction of mental retardation facilities, for construction of university affiliated facilities, and for initial staffing of community mental retardation facilities into a single, flexible program of grants to public or nonprofit agencies covering facilities and services for the mentally retarded.

Appropriations authorizations are requested for 3 years.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 3277) to amend the Mental Retardation Construction Act to extend and improve the provisions thereof, and for other purposes, introduced by Mr. JAVITS, was received, read twice by its title and referred to the Committee on Labor and Public Welfare.

S. 3279—INTRODUCTION OF A BILL TO EXTEND BOUNDARIES OF THE TOIYABE NATIONAL FOREST

Mr. BIBLE. Mr. President, I introduce, for appropriate reference, a bill to extend the boundaries of the Toiyabe National Forest in Nevada.

The purpose of the bill, is to aid in the protection, improvement, and proper maintenance of the watershed, wildlife, recreation, and natural environment values of the lands in the Lake Tahoe Basin, much of which is already embraced within the boundaries of this national forest. The bill would extend the national forest boundary to include 12,920 acres of largely undeveloped, privately owned lands along the Nevada side of the lake.

Lake Tahoe is a unique body of water set in a basin which, despite encroachment by urban development, still retains much of its natural environmental beauty. It is one of the Nation's outstanding natural assets.

The stability of the natural conditions contributing to the clarity of the lake waters and the natural beauty of the surrounding area is being threatened by expanding urban development. These lands should not be overdeveloped. Overdevelopment will occur if present trends continue. Outside of the already planned or developed subdivision areas, the land reasonably suitable for development is limited. The portion I am concerned with in Nevada should be made available for the use and enjoyment of the general public through careful development of outdoor recreation facilities and full protection of the area's natural beauty and attractiveness. All of the resources in this and other critical watershed areas within the basin need planned and coordinated management, to provide protection, improvement, and maintenance of the natural environment. This can best be achieved through the controls that can be exercised through additional public ownership.

One of the critical problems is time. The lands covered by this bill are all private, and should be acquired now as parts of the national forest before urban development has expanded to the point where properly planned protection and development would be difficult or impossible.

The terrain surrounding beautiful Lake Tahoe is mountainous. Most of it is steep and rugged but with some relatively level areas along the shorelines and ridgetops. Most of the area is covered with second growth stands of timber, varying in age from 40 to 80 years. A few virgin stands exist in some relatively inaccessible areas.

The watershed is very important for its yield and quality of water. Frequent flood conditions require the maintenance of a healthy vegetative cover to stabilize the soil.

All this area needs to be managed for the protection of important recreation, watershed, timber, wildlife, and other resources. Public ownership and administration would enhance and maintain the natural environment and scenic values so important to the Lake Tahoe area.

The Forest Service administers 48.2 percent of the land within the basin surrounding Lake Tahoe, but only 2 percent of the shoreline. They have an established organization that could assume administration of the particular area with which this bill is concerned.

Adjacent areas are intensively used for residential purposes. There are approximately 4,000 yearlong residents most of whom live adjacent to the Douglas County portion of the area. The main residential areas are at Kingsbury, Tahoe Village, Elk Point, Zephyr Cove, and Glenbrook. In the summer months, the resident population doubles to approximately 8,000 people, and the transient summer population using the recreational resources in the basin is probably over 100,000 per day. There are approximately 10 million people within a 6-hour driving distance of the area.

The Nevada State Legislature passed Nevada Senate Joint Resolution No. 15, February 26, 1969, requesting me to introduce legislation to expand the Toiyabe National Forest boundary to include this area. The Governor of Nevada and other officials also favor the addition and feel action must be taken promptly to bring these critical private lands into public ownership. The Carson City Nevada Board of Supervisors and the Douglas County Board of County Commissioners—both representing directly affected communities—have passed resolutions favoring this proposed forest boundary extension. Also on September 17, 1969, the Nevada-Tahoe Regional Planning Agency endorsed the proposed extension of the Toiyabe National Forest.

This proposed extension of the national forest boundary will preserve the natural beauty and environmental quality of the Lake Tahoe shoreline in Nevada for the benefit of generations to come. This is enlightened, farsighted legislation, and I hope we will be able to move ahead with it expeditiously.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 3279) to extend the boundaries of the Toiyabe National Forest in Nevada, and for other purposes, introduced by Mr. BIBLE, was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

S. 3281—INTRODUCTION OF A BILL RELATING TO ADDITIONS TO THE INTERSTATE HIGHWAY SYSTEM

Mr. MONTOYA. Mr. President, I introduce on behalf of myself and Senators CANNON and RANDOLPH, a bill to amend section 139 of title 23, United States Code, the highway law of the United States, which would provide a means for designating additions to the Interstate System.

This legislation is the result of hearings held by the Subcommittee on Roads at Carson City and Ely, Nev., and Roswell, N. Mex., in October and November of this year. In many places in the United States, of which the New Mexico and Nevada examples are only representative, there are highway routes which should be part of our National System of Interstate and Defense Highways but which are not because of the mileage limitations imposed by the basic law. Without committing the Congress or the Nation on a large scale extension of the interstate program, this measure together with the existing provisions of section 139 will give to the States greater flexibility in deciding where their highway funds should be expended.

The communities not now located on the Interstate System are at a severe competitive disadvantage with respect to those which are. Many changes have taken place in the growth of cities and the development of industries since the system was originally laid out over 20 years ago. The bill, which I introduce today, will in no way commit the Federal Government to spending great amounts of money on another interstate highway program. It will, however, provide States which believe that additional links are needed to use their regular Federal-aid highway funds to construct roads to the standards set for this great national system.

As the chairman of the Committee on Public Works, Senator RANDOLPH of West Virginia, has clearly indicated, next year we will give serious consideration to the further development of our highway program. It is my hope that this legislation which we introduce today, will be part of the explorations and deliberations of the Congress as it provides the statutory framework for meeting our national transportation needs.

Under the bill, the choices will lie with the States and the States must make written commitments to build these roads. In the interim, the areas served by Federal-aid primary highways can be designated as part of the Interstate System and proper community planning and industrial development can be fostered and facilitated. I ask that a copy of the bill be printed in the RECORD at this point.

The PRESIDING OFFICER. The bill will be received and appropriately re-

ferred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 3281) to amend section 139 of title 23, United States Code, relating to additions to the Interstate System, introduced by Mr. MONTOYA, for himself and other Senators, was received, read twice by its title, referred to the Committee on Public Works, and ordered to be printed in the RECORD, as follows:

S. 3281

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the existing language of section 139 of title 23, United States Code, shall be designated as subsection (a) and a new subsection (b) added as follows:

"(b) Whenever the Secretary determines that a highway on the Federal-Aid primary system would be a logical addition or connection to the Interstate System and would qualify for designation as a route on that System in the same manner as set forth in paragraph 1 of subsection (d) of section 103 of title 23, United States Code, he may upon the affirmative recommendation of the State or States involved designate such highway as part of the Interstate System. Such designation shall be made only upon the written agreement of the State or States involved that such highway will be constructed to meet all the standards of a highway on the Interstate System within 12 years of the date of the agreement between the Secretary and the State or States involved. The mileage of any highway designated as part of the Interstate System under this subsection shall not be charged against the limitations established by the first sentence of section 103(d) of this title. The designation of a highway as part of the Interstate System under this subsection shall create no Federal financial responsibility with respect to such highway except that Federal-Aid highway funds otherwise available to the State or States involved for the construction of Federal-Aid primary system highways may be used for the reconstruction of a highway designated as a route on the Interstate System under this subsection. In the event that the State or States involved have not substantially completed the construction of any highway designated under this subsection within the time provided for in the agreement between the Secretary and State or States involved, the Secretary shall remove the designation of such highway as a part of the Interstate System. Removal of such designation as result of failure to comply with the agreement provided for in this subsection shall in no way prohibit the Secretary from designating such route as part of the Interstate System pursuant to subsection (a) of this section or under any other provision of law providing for addition to the Interstate System."

S. 3284—INTRODUCTION OF A BILL TO AUTHORIZE THE ACQUISITION OF THE GODDARD ROCKET LAUNCHING SITE BY THE NATIONAL PARK SERVICE

Mr. KENNEDY. Mr. President, I introduce, for appropriate reference, a bill to authorize the acquisition of the Goddard Rocket Launching Site in Auburn, Mass., by the National Park Service.

In this year of man's first lunar landings, there is special reason to pause and to reflect on the accomplishments of Dr. Robert H. Goddard. He was to the moon rocket what the Wright brothers were to the airplane. His pioneering work—beginning in the early decades of this century—led to his launching of the first liquid propelled rocket on March 16, 1926. It rose 41 feet and traveled 184 feet in 2.5 seconds.

Dr. Goddard was born in Worcester, Mass., in 1882. In later years he became a professor at Clark University in that same city. This man, who has been called the father of modern rocketry, decided on his life's work at the early age of 16. He had read H. G. Wells' "War of the Worlds" and later in a letter to Wells said:

> It made a deep impression. The spell was complete about a year afterward, and I decided that what might conservatively be called "high altitude research" was the most fascinating problem in existence.

We in Massachusetts are particularly proud of the work of Dr. Goddard, but we realize that his accomplishments have significance for the entire country—indeed, the whole world. Therefore I am pleased to introduce this measure which would bring this site of the first rocket launching under the management of the National Park Service.

It is my hope that my colleagues will act on this bill during the next session, so that we can insure that this most notable historic site is not lost to the Nation.

Perhaps the best description of this man's dream can be found among his own writings. Again, in writing to H. G. Wells, he summarized his thoughts on his life's work:

> How many more years I shall be able to work on the problem I do not know. I hope as long as I live. There can be no thought of finishing—for aiming at the stars, both literally and figuratively, is a problem to occupy generations. So that no matter how much progress one makes, there is always the thrill of beginning.

I ask unanimous consent that two articles describing the life and work of Dr. Goddard be printed in the RECORD at this point, and that the text of the bill also be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill and articles will be printed in the RECORD.

The bill (S. 3284) to authorize the acquisition and maintenance of the Goddard rocket launching site in accordance with the act of August 25, 1916, as amended and supplemented, and for other purposes, introduced by Mr. KENNEDY, was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

S. 3284

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in order to preserve for the inspiration of present and future generations the site in the town of Auburn, Massachusetts, on which Doctor Robert H. Goddard launched the first liquid-propelled rocket on March 16, 1926, the Secretary of the Interior is authorized to acquire and maintain such site in accordance with the provisions of the Act entitled "An Act to establish a National Park Service, and for other purposes," approved August 25, 1916 (39 Stat. 535; 16 U.S.C. 1–4), as amended and supplemented.

SEC. 2. There are hereby appropriated such sums as are necessary to carry out the purpose of this Act.

The articles presented by Mr. KENNEDY, are as follows:

[From the New York Times, Nov. 20, 1966]

ROBERT H. GODDARD: THE FATHER OF MODERN ROCKETRY

(By Milton Lehman)

(The late Milton Lehman was the author of a biography of Robert H. Goddard, "This High Man," published in 1963.)

The turning points in history are seldom turned by the aphorisms that historians attribute to them. Possibly Caesar, crossing the Rubicon, actually said: "Jacta alea est." Perhaps Galileo, recanting before an ecclesiastical court his theory that the earth moves around the sun, said sotto voce: "But still it moves!"

The major scientific events of this century which launched the air age and the space age, however, elicited no such ringing aphorisms.

The first flight of a modern rocket—powered by gasoline and liquid oxygen—took off at midday on March 16, 1926, 40 years ago. Its creator, Dr. Robert H. Goddard, a physics professor at Clark University in Worcester, Mass., conducted his experiment in secrecy, a characteristic which marked one of the most inventive careers in American science and engineering.

March 16 was a clear, cold day in Worcester, with snow on the ground and no promise of spring in the sharp morning air. The rocket professor was bundled in a great-coat, muffler, and woolen cap against the Massachusetts chill, thanks to his wife's concern for his health.

NO COUNT DOWN

In this costume, Goddard left the Clark campus with his machinist, Henry Sachs, driving through town and up Pakachoag Hill to nearby Auburn and the farm of Aunt Effie Ward, his distant relative. Parking near a ravine, the two men slid and eased a number of wooden crates packed with rocket paraphernalia to a secluded spot near a cabbage patch and rigged up their gear.

The maiden flight rocket consisted of steel tubing, 10 feet long, framing a two-foot motor and nozzle. In a try for added stability, the inventor had positioned the motor and nozzle ahead of, rather than behind, the small fuel tanks. He believed, in error, that the engine would thereby travel more truly, much as a wagon follows the tug of a child. Later, he installed the motor at the rear of the rocket, where it has remained.

Shortly after noon, the rocket was ready, mounted in a launching frame contrived of pipes. There was no countdown, no electrical system to ignite the fragile machine. The mechanic, Sachs, merely lighted an alcohol stove beneath the motor with a flame on a long stick, and then ran toward a makeshift barricade for protection. There Goddard, allowing 90 seconds for ignition, released the cords that held the rocket down, and the device roared up as oxygen and gasoline combusted.

"ALMOST MAGICAL"

Only two others watched the maiden flight. The professor's wife, Esther K. Goddard, stood by with a cranked-up movie camera which unfortunately ran down just before the lift-off. Dr. Percy M. Roope, Goddard's assistant in the Clark physics department, was assigned to operate a theodolite and a stop watch. Roope reported that the rocket climbed 41 feet high and traveled 184 feet in the two and one-half seconds before it crashed.

Of this flight, Goddard later wrote in his journal: "It looked almost magical as it rose, without any appreciably greater noise or flame, as if it said: 'I've been here long enough; I think I'll be going somewhere else, if you don't mind.'"

Goddard's written comment was hardly stuff for history nor was his spoken com-

ment for the record as recalled by Mrs. Goddard: "I think I'll get the hell out of here!"

He was an invalid, as well as a new Ph.D., at Clark University in 1914 when his first two patents in rocketry were granted. Basic to rocket development, these two patent introduced the essential features of every modern rocket, whatever its thrust or trajectory: the use of a combustion chamber with a nozzle; the feeding of propellants, liquid or solid, into the combustion chamber; and the principle of the multiple or step rocket.

In 1916, he was earning $1,000 a year as an assistant professor at Clark, but these funds were no match for the rocket experiments he had in mind. He applied to the Smithsonian Institution for help and sent along a monograph of his theories called "A Method of Reaching Extreme Altitudes." The Smithsonian asked for "some idea of the expense" in making a high-flying rocket.

"I venture," Goddard said, "to name $250 as perhaps a reasonable figure for one of the rockets. It might, of course, be more. . . ."

It was a fantastic miscalculation. The Smithsonian gave him $5,000 initially and, ultimately, more than twice that amount. He received modest support from the Army Signal Corps during World War I; from the U.S. Navy after the war; and, through the intercession of Charles A. Lindbergh in 1930, a foundation grant of about $20,000 a year administered by Harry F. Gugghenheim.

Through 40 years of rocket research, Goddard had only about $250,000 to spend on all his rocket inventions, his crews, salaries, his "hardware," his patent fees, and the maintenance of his household.

To this support, he added the powerful ingredient of his own purpose to produce:

—The progenitor of the "bazooka" before the end of World War I, the device which helped defeat the Panzer divisions of Nazi Germany in North Africa in World War II.

—The stimulus, through his few published papers and his many published patents, to the rocket developments in Germany and Russia.

—The rocket, ignored by the United States, which became the Germany V–1, or "buzz bomb," of World War II.

—The Goddard rocket of 1939—a miniature in detail and components of the German V–2 rocket of 1943 which was fired against England.

—The basic concepts of rockets now on the drafting boards or still to come, employing ionized and nuclear power, and, among future possibilities, employing solar motors and sails to navigate the universe.

[From the Washington Evening Star, July 16, 1969]

GODDARD DESERVES NICHE AS FATHER OF ROCKETRY—A SCIENTIST'S DREAM OUTLASTED THE TAUNTS

(Harry F. Guggenheim, president and editor-in-chief of Newsday, a Garden City, Long Island, newspaper, was for many years a close friend and supporter of Dr. Robert H. Goddard, the father of modern rocketry. Goddard's research and experiments, many of which were supported by the Guggenheim Fund for the Promotion of Aeronautics, paved the way for the Apollo project. Here Guggenheim reminisces on the impact of this pioneer of space flight.)

(By Harry F. Guggenheim)

There is a special place in our thoughts for Robert H. Goddard. He was to the moon rocket what the Wright brothers were to the airplane.

He has been dead now for almost 25 years. He died without the fame that accrued to the Wright brothers in their lifetime. But he died still believing that man would one day shatter the fetters of Earth's gravity and stride majestically into the vast reaches of space. I wish he were here now to share this moment. It belongs to him.

Goddard was a physicist and professor at Clark University in Worcester, Mass., when I first heard of him.

In 1898, when he was 16, he read H. G. Wells' "War of the Worlds" which, as he would later write personally to Wells, "made a deep impression. The spell was complete about a year afterward, and I decided that what might conservatively be called 'high altitude research' was the most fascinating problem in existence."

He devoted himself to that problem with prodigious energy for the rest of his life. It would cost him isolation, ridicule, and eventually years of his life. "God pity a one-dream man," he wrote as he began his work.

Goddard began to experiment with small rockets early as 1908.

Eleven years later he published a paper entitled "A Method of Reading Extreme Altitudes," which espoused a theory that rocket power could lift a large payload to great heights if the rocket were designed to use its fuel effectively.

IDEA OF LUNAR LANDINGS

He was careful to mention the possibility of lunar landings only casually, lest he frighten away potential sponsors. But despite his almost indifferent mention of the subject, the press seized upon the paper with gross exaggeration.

The headlines were all similar to this one: "Modern Jules Verne Invents Rockets To Reach Moon."

It wasn't so, of course, but the effects were to cause Goddard considerable humiliation.

Goddard was embarrassed—he had intended to stress only the scientific aspects of his research—but he was not deterred. He continued his experiments, without public attention, and on March 16, 1926, launched the first liquid propelled rocket. It rose 41 feet and traveled 184 feet in 2.5 seconds.

The flight was so inconspicuous that no one paid any attention. But Goddard considered it a feat equivalent to the Wrights' first airplane flight.

Three years later, on July 17, 1929—almost 40 years to the day before Apollo 11 would take off for the moon—Goddard tried again. This time he had a model 11½ feet long, 26 inches wide, and weighing 35 pounds when empty. It rose 20 feet above the 60-foot launching tower, turned right, rose another 10 feet and then crashed to earth 171 feet away.

Goddard instantly considered the experiment a success. But as he and his associates were surveying the scene, according to his biographer, Milton Lehman, "they heard the shriek of a siren. They looked up to see a police patrol car, two ambulances and a convoy of automobiles stopping in Aunt Effie's farmyard. Two policemen, perhaps expecting catastrophe, inspected the rural scene, saw the steel tower, and asked questions. . . . Neighbors were saying that an airplane had crashed and exploded."

Goddard tried to quiet the policemen's fears, but two reporters who had come with them were already inspecting the charred field.

"The moon-rocket man," one reporter said. "How close did you get this time?"

Again Goddard was adrift in a sea of publicity. Lehman wrote:

"He wanted to tell the public that, yes, the rocket would be man's great prime mover. Yes, it would eventually reach the moon. But the public kept asking the same old question. When would it happen? When will your rocket do what you say it can do?"

"The headlines and front-page stories were all that he feared. They made him out as a reckless moon seeker, a public amusement." His neighbors in Worcester, afraid that "Moony Goddard" was going to wipe them all out in some mad experiment, demanded that he remove his tests. Goddard was distressed.

But, ironically, that very publicity was to give him a new lease.

At that time, Charles A. Lindbergh was a guest in my home in Port Washington, N.Y. I had met him when he came to Roosevelt Field for his historic flight to Paris—from which, I anticipated, he would never return. He did get back, much to my surprise, and subsequently became a consultant for the Daniel Guggenheim Fund for the Promotion of Aeronautics. This was a fund created by my father to promote research and education in aeronautics and to help encourage flying as a means of transportation. I was then the fund's administrator.

Lindbergh and I had talked on several occasions about the potential of spaceflight. He had often expressed the opinion that airplanes, confined as they were to the Earth's atmosphere, would ultimately prove too "limited" for the full scope of man's aspirations. We had discussed rocketry for its potential in delivering large quantities of mail over great distances.

On this particular day, we were discussing the work of the fund, when Mrs. Guggenheim interrupted us to read aloud from the New York Times an item about a rocket exploding near Worcester, Mass., the day before. When she finished reading the fascinating account of the scientist and his problems with his neighbors, I suggested to Lindbergh that he visit this man Goddard in behalf of the fund and discuss his work.

Lindbergh did call and Goddard, quite surprised, invited him to come to Worcester.

In their meeting, Goddard confessed his vision of one day soaring through the Earth's atmosphere into the reaches beyond. He explained the differences between rockets and the techniques he believed could be employed for invading the unknown limits of space.

From this meeting, Lindbergh returned impressed by the scientist and his ideas. We agreed that support should be obtained to underwrite Goddard's experiments. Lindbergh made the case to my father, Daniel, as I left to begin my duties as ambassador to Cuba. Daniel Guggenheim endorsed our proposals and agreed to provide the funds for a 2-year period. After his death, the Daniel and Florence Guggenheim Foundation took up support of Goddard's work until 1941.

These grants made it possible for him to give up teaching and, for the first time, to devote his full energies to rocket research. They also enabled him to move from New England, where his neighbors regarded him as a nut, to Roswell, N.M., where he would have freedom, privacy and open space.

During the years that followed, I was able to observe the man and his work first-hand. I was deeply touched by his modest, self-effacing manner, his cheerfulness, and his optimism.

NUMEROUS DISAPPOINTMENTS

His disappointments were considerable.

Once, in 1935, Lindbergh and I journeyed to Roswell to watch a test flight. It failed. He refused to accept it as any more than a temporary setback, a problem to be solved. He did solve it, and later, in writing to explain what happened he said, with that wry pleasantness that marked his whole demeanor: "I have not yet forgiven fate for bringing the matter of the gasoline orifices to my attention just at the time you and Colonel Lindbergh were here."

His letters were examples of clear and descriptive prose.

By 1940, Goddard had built a rocket that was very similar to the German V2 missiles which were to assault London three years later.

Goddard and I visited Washington to urge military leaders to consider the military potential of rockets, but they were not interested. It was not until the end of the war

that the oversight was obvious. Questioned by Army officers about the devastating V2, a German scientist incredulously replied: "Why don't you ask your own Dr Goddard?"

His investigations, as the American Rocket Society would say after his death, covered almost every principle involved in both the theory and practice of high-power rockets.

Among his inventions are included the first liquid-fuel rocket, the first smokeless powder rocket, and the first practical automatic steering device for rockets. It is no wonder that the rocket society would concede to Goddard the almost single-handed development of rocketry "from a vague dream to one of the most significant branches of modern engineering."

But it goes far beyond that. He left us more than inventions. He left an example of the extraordinary accomplishments that await the man who perseveres. He left a testimony to the power of one solitary individual to effect change and to transform the future.

And most of all, he left a vision.

"He never lost the dream," his wife, Esther, has said.

"He knew that he would build something that would go higher than anything had gone before, and that eventually man would explore space, with the moon only the first step."

I have thought of him often in these days of preparations for that "first step." When he died his work was generally unrecognized; now it is about to be fulfilled.

"How many more years I shall be able to work on the problem I do not know," Goddard wrote to H. G. Wells in 1932. "I hope as long as I live. There can be no thought of finishing—for aiming at the stars, both literally and figuratively, is a problem to occupy generations.

"So that no matter how much progress one makes, there is always the thrill of beginning."

S. 3286—INTRODUCTION OF CONSUMER PRODUCTS TESTING ACT OF 1969

Mr. MAGNUSON. Mr. President, I introduce, for appropriate reference, the proposed Consumer Products Testing Act of 1969. This bill, a part of the President's consumer package, is designed to assist consumers in evaluating products by promoting development of adequate, reliable methods for testing characteristics of consumer products.

The bill reflects the growing concern of many of us in both the Congress and administration over the adequacy, meaningfulness, and soundness of many consumer standards and laboratory seals on consumer products.

Although the committee will want to review thoroughly the provisions of this proposed legislation, the administration is to be commended in taking the initiative to focus congressional concern on this most significant problem, and it is the intention of the Commerce Committee to schedule hearings promptly during the next session of Congress.

I ask unanimous consent that the text of the bill, together with the letter of transmittal and section-by-section analysis be printed at the close of my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill, letter, and analysis will be printed in the RECORD.

The bill (S. 3286) to assist consumers in evaluating products by promoting development of adequate and reliable methods for testing characteristics of consumer products, introduced by Mr. MAGNUSON (for himself and other Senators), by request, was received, read twice by its title, referred to the Committee on Commerce, and ordered to be printed in the RECORD, as follows:

S. 3286

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Consumer Product Testing Act of 1969."

SECTION 1. (a) For purposes of this Act, the term "consumer product" shall mean a type of article of personal property, without reference to brand name or source, customarily sold for family or household use, consumption, or enjoyment.

(b) For purposes of this Act, the term "testing method" shall mean a test method or procedure by which particular characteristics of a consumer product may be clearly evaluated.

(c) The term "agency" means an executive agency as defined in section 105 of title 5, United States Code, but does not include the General Accounting Office, and the term "responsible officer" refers to the head of an agency designated pursuant to section 2 or the officer designated by the head of such agency to perform the functions under this Act.

SEC. 2. (a) It is the purpose of this Act to assist consumers in obtaining reliable and meaningful information regarding consumer products by promoting the development and use of methods for testing objective characteristics of such products.

(b) The Director of the Office of Consumer Affairs (the "Director") shall, after consultation with the Director of the Office of Science and Technology and giving due regard to the statutory missions and capabilities of the several agencies, designate the appropriate agency responsible for the performance of the functions set forth in section 3 with respect to any consumer product or class of consumer products.

(c) When the Director determines that, with respect to a consumer product or class of products, the interests of consumers would be furthered by the development or approval of testing methods, he may request the responsible officer of the appropriate agency to implement the procedures set forth in section 3 with respect to such class or to one or more products within such class.

(d) In determining to which products priority of consideration should be given under section 3, the Director shall give due consideration to the requests of other officers of the executive branch, consumers, and manufacturers of such products; to the technical complexity, numbers and importance of such products to consumers; and to such other factors as he may deem relevant.

SEC. 3. With respect to each consumer product or class of products as to which a request has been made of him under section 2(c), each responsible officer shall:

(a) Identify which testing methods have been adopted, or from time to time are being considered for adoption, by private standard-making organizations or independent testing laboratories for such product or class;

(b) Evaluate whether the testing methods described in subsection (a) relate to those characteristics of such products or class, including performance, content, and durability, which should and can be tested to provide pertinent information to consumers;

(c) Evaluate whether the methods specified by such private organizations or laboratories for testing the characteristics described in subsection (b) are adequate, and if so approve the same;

(d) Confer and consult with such private organizations and laboratories, and with other interested parties with respect to the activities referred to in subsections (a), (b), and (c);

(e) After appropriate opportunity for comment by interested persons, cause to be published in the Federal Register the results of his evaluation carried out under subsections (b) and (c);

(f) Develop adequate testing methods if he finds that no testing method or inadequate testing methods exist with respect to a product or class of products, and that expeditious development of adequate testing methods through such qualified private organizations or laboratories is not feasible; and cause to be published in the Federal Register such testing methods as he may develop;

(g) Prescribe by order or regulation the information to be included in any advertisement or other public statement by a manufacturer, distributor, or other seller which is to the effect that a consumer product has been tested in accordance with methods approved or developed pursuant to this section in order to make such statement not false or misleading.

SEC. 4. (a) It shall be unlawful for any person, with intent to induce or to encourage the purchase or consumption of any consumer product, (1) to falsely represent that such product has been tested in accordance with testing methods approved or developed pursuant to section 3; (2) to make any false or misleading statement or to omit to state any material fact necessary to make any statement not misleading with respect to the test results on any consumer produce represented as having been tested in accordance with such methods; (3) to make any statement regarding a consumer product which does not comply with an applicable order or regulation issued pursuant to section 3(g); or (4) to falsely represent or imply that any officer, or agency, or instrumentality of the United States has endorsed, certified, or approved such consumer product or the accuracy of any test performed on such product.

(b) The district courts of the United States shall have jurisdiction over suits by the Attorney General to prevent and restrain violations of subsection (a) and over suits by persons injured by such violations for damages and equitable relief without regard to the amount in controversy. A suit under this subsection may be brought in the district court of any district in which the defendant resides or is found.

(c) Any person who knowingly violates any provision of subsection (a) of this section shall, in the case of a natural person, be punished by imprisonment for not more than one year or by a fine of not more than $5,000, or both, or in any other case, be punished by a fine of not more than $50,000.

(d) No publisher, radio broadcast licensee, or agency or medium for the dissemination of advertising, except the manufacturer, packer, distributor, or seller of the commodity to which the violation relates, shall be liable under subsection (c) or liable for damages under subsection (b) by reason of the dissemination of any advertisement or statement in violation of this section, unless he has refused, on the request of the Attorney General, to furnish the Attorney General the name and post office address of the person who caused him to disseminate such advertisement.

(e) The provisions of section 13(b) of the Act of September 26, 1914, as amended (15 U.S.C. 53(b)), shall apply to the grant of equitable relief under this section.

SEC. 5. In carrying out responsibilities conferred upon him under this Act each responsible officer may:

(a) To the extent necessary, acquire or establish additional facilities and purchase

additional equipment for the purpose of carrying out such responsibilities.

(b) Request any Federal agency to supply (on a reimbursable basis if appropriate) such statistics, data, testing methods, progress reports, and other information as he deems necessary to carry out such responsibilities.

(c) Subject to such general guidelines as may be promulgated by the Director, issue, amend, and revoke such rules and regulations as he deems appropriate to carry out such responsibilities.

SEC. 6. Nothing in this Act shall supersede any other law relating to consumer products or any rule of regulation promulgated thereunder.

SEC. 7. There is hereby authorized to be appropriated to each agency whose officers carry out functions under this Act such sums as may be necessary.

The letter and analysis, presented by Mr. MAGNUSON are as follows:

THE WHITE HOUSE,
Washington, D.C., December 8, 1969.

HON. SPIRO T. AGNEW,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: There is enclosed for your consideration and appropriate reference a legislative proposal entitled the "Consumer Product Testing Act of 1969."

This proposed legislation carries out in part the October 30 Consumer Message of the President. As more fully described in the accompanying explanatory statement, the purpose of the proposed Act is to assist consumers in evaluating products by promoting development of adequate and reliable methods for testing characteristics of consumer products.

At present there is no government review of the privately developed methods used to test consumer products. Because of the large number of technically sophisticated products on the market today, it is difficult for the consumer, through his own efforts, to understand the qualities and characteristics of these products. Private standard-making organizations and laboratories currently issue quality endorsements of one kind or another for a wide variety of products. However, there have been instances where information of interest to the consumer is either not made available, or where the information available has not been developed by reliable test methods. Therefore, it would be of great assistance to consumers if the testing procedures on which these endorsements were based had been evaluated and approved by a responsible Government agency.

The purpose of the evaluation is to determine whether the tests are adequate, meaningful and technically sound. The goal is to provide the consumer with reliable and understandable information about the products he buys.

This legislation is needed:

(1) to authorize responsible agencies of the Federal Government to identify which methods have been adopted by private organizations for testing characteristics of consumer products; to determine whether the characteristics are pertinent to consumer needs for information; and to evaluate the test methods employed;

(2) to authorize such agencies to develop testing methods for consumer products where no privately developed methods exist or where the existing methods have been found to be inadequate; and

(3) to authorize the advertising by a manufacturer, distributor or other seller that a consumer product had been tested in accordance with methods approved or developed pursuant to this bill.

The President's message significantly improves the Federal Government's effectiveness in responding to consumer needs. Every citizen will be benefited by enactment of the implementing legislation.

The Bureau of the Budget has advised that the submission of this proposal is in accord with the program of the President.

Sincerely,

VIRGINIA H. KNAUER,
Special Assistant to the President for Consumer Affairs.

EXPLANATORY STATEMENT TO ACCOMPANY THE PROPOSED CONSUMER PRODUCT TESTING ACT OF 1969

Section 1 of the bill contains definitions of the terms "consumer product" and "testing method."

Section 2 of the bill states that the purpose of the Act is to assist consumers in obtaining reliable and meaningful information regarding products by promoting the development and use of objective test methods. It then sets forth certain procedures. First, the Director of the Office of Consumer Affairs, after consultation with the Director of the Office of Science and Technology, determines which of the various Federal agencies should be assigned general responsibility under the Act for particular consumer products or classes of products. Then the Director of the Office of Consumer Affairs determines whether the interests of consumers would be furthered by the development or approval of testing methods for a particular class or product within such a class; and requests the appropriate responsible official to implement the test evaluation and development procedures set forth in Section 3. The Director, after consideration of the requests of interested parties and other relevant factors, also determines the priorities of consideration to be given products under Section 3.

Section 3 provides that the responsible officer of a given agency requested to implement the Act shall first identify the test methods which have been adopted or are being considered for adoption by private standard-making organizations or independent testing laboratories for a particular product or class of products. He will then evaluate whether these test methods relate to characteristics which should and can be tested to provide pertinent information to consumers. An evaluation is made of the test methods used and, if they are adequate, they are approved. He will consult with the organizations, laboratories and other interested parties with respect to the foregoing and, after appropriate comment from these parties, cause to be published in the Federal Register the results of his evaluation.

Should there be no existing or adequate testing methods, he will develop adequate testing methods and cause them to be published in the Federal Register. He may then prescribe by order or regulation the information to be included in any advertisement or public statement by a manufacturer, distributor or seller concerning testing in accordance with approved or developed methods in order that such statement will not be false or misleading.

Section 4 provides that it shall be unlawful to: (1) falsely represent that a product has been tested in accordance with an approved or developed standard; (2) to make a false or misleading statement or omission with respect to test results obtained on a product represented as having been tested in accordance with approved methods; (3) to make statements not in compliance with any applicable regulation or order issued pursuant to Section 3; or (4) to imply or represent any governmental approval of either a product or accuracy of a test method. Jurisdiction is in the Federal district courts with criminal penalties prescribed. Members of the advertising media are exempted from civil damage and criminal sanctions, unless they refuse to divulge the name and address of the person causing publication of material violative of this Act to the Attorney General upon request.

Section 5 allows the responsible officer to acquire or establish the necessary equipment and facilities required to carry out his duties under this Act and to request other Federal agencies' assistance on a reimbursable basis. He is also given the power to issue such rules and regulations necessary to carry out his responsibilities provided they are within the general guidelines prescribed by the Director of the Office of Consumer Affairs.

Section 6 provides that this Act will not supersede any other law, rule or regulation relating to consumer products.

Section 7 authorizes the appropriations necessary to carry out the functions of the Act.

ADDITIONAL COSPONSORS OF A JOINT RESOLUTION

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Texas (Mr. YARBOROUGH), I ask unanimous consent that at its next printing, the names of the Senator from Washington (Mr. JACKSON), the Senator from Maryland (Mr. TYDINGS) and the Senator from California (Mr. CRANSTON) be added as cosponsors to Senate Joint Resolution 156, a joint resolution to establish an interagency commission to make necessary plans for the United Nations Conference on the Human Environment scheduled for 1972.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATE CONCURRENT RESOLUTION 51—CONCURRENT RESOLUTION SUBMITTED RELATING TO AUTHORIZATION FOR SECRETARY OF THE SENATE TO MAKE A TECHNICAL CORRECTION IN THE ENROLLMENT OF SENATE BILL 3016

Mr. NELSON submitted a concurrent resolution (S. Con. Res. 51) to authorize the Secretary of the Senate to make a technical correction in the enrollment of the bill (S. 3016) to provide for the continuation of programs authorized under the Economic Opportunity Act of 1964, to authorize advance funding of such programs, and for other purposes, which was considered and agreed to.

(The remarks of Mr. NELSON when he submitted the concurrent resolution appear later in the RECORD under the appropriate heading.)

ENROLLED BILLS AND JOINT RESOLUTION PRESENTED

The Secretary of the Senate reported that, on the dates as shown, he presented to the President of the United States the following enrolled bills and joint resolution:

On December 19, 1969:

S. 740. An act to establish the Cabinet Committee on Opportunities for Spanish-Speaking People, and for other purposes; and

S.J. Res. 54. Joint resolution consenting to an extension and renewal of the interstate compact to conserve oil and gas.

On December 20, 1969:

S. 59. An act to authorize the Secretary of the Army to adjust the legislative jurisdiction exercised by the United States over

lands within the Army National Guard Facility, Ethan Allen, and the U.S. Army Materiel Command, Firing Range, Underhill, Vt.; and

S. 2917. An act to provide for the protection of the health and safety of persons working in the coal mining industry of the United States, and for other purposes.

SMOKING ON AIRCRAFT—II

Mr. HATFIELD. Mr. President, on Thursday I introduced a bill, S. 3255, to regulate smoking on passenger aircraft. My remarks appear at page 40042 of the RECORD of December 18.

At the conclusion of my remarks, I asked unanimous consent to have printed a petition to the Department of Transportation and the Federal Aviation Authority by Action on Smoking and Health. I am working with ASH, and the petition seeks a similar result to that of my bill.

Due to the Senate's lengthy session on Thursday, only a small part of the petition appeared in Thursday's RECORD. The remainder appeared in Friday's RECORD. Unfortunately, the Friday RECORD had no introductory remarks and did not even indicate who it was that inserted the material, nor to what bill it pertained. I am aware of the logistical problem for the Printing Office which caused this situation. To people reading the RECORD, however, it is very unclear in its present form.

For that reason, Mr. President, I ask unanimous consent to have reprinted at the end of these remarks the ASH petition in its entirety.

Incidentally, I might add that the initial reaction to this bill to restrict smoking on aircraft to certain areas has had very favorable initial response. My office has received several telephone calls of support from people who saw my remarks in the RECORD.

When the Senate reconvenes in January, I plan to request cosponsors for this bill, so I hope that Senators will study the bill.

There being no objection, the petition was ordered to be printed in the RECORD, as follows:

[Before the Department of Transportation and the Federal Aviation Administration]

PETITION FOR PROMULGATION OF A RULE REQUIRING SEPARATION OF SMOKING AND NONSMOKING PASSENGERS ON ALL COMMERCIAL DOMESTIC AIR CARRIERS

To: Honorable John A. Volpe, Secretary, Department of Transportation; Honorable John H. Shaffer, Administrator, Federal Aviation Administration.

Petitioners: John F. Banzhaf III, 530 'N' Street, S.W., Washington, D.C. 20024, (202) 554–5799; Action on Smoking and Health (ASH), 2000 H Street NW., Washington, D.C. 20006, (202) 659–4310; C.R.A.S.H. (Citizens to Restrict Airline Smoking Hazards); Steven I. Bellman, Joseph M. Chomski, Chairman, James R. Coleman, Richard Emanuel, Michael D. Grabow.

Counsel: John F. Banzhaf III, 2000 H Street NW., Washington, D.C. 20006, (202) 659–4310.

Now comes Action on Smoking and Health (ASH), Project C.R.A.S.H. (Citizens to Restrict Airline Smoking Hazards), and John F. Banzhaf III, and pursuant to 5 U.S.C. 553 (e) and 14 C.F.R. 11.25(a) petition the Administrator of the Federal Aviation Administration, and in so far as is appropriate under Department of Transportation Act, 49 U.S.C. 1651 et seq., the Secretary of Transportation, to promulgate a rule requiring all domestic air carriers to effectively separate smoking passengers from non-smoking passengers so as to prevent non-smoking passengers from being subjected to the health hazards and annoyance of being forced to breathe tobacco smoke.

Petitioners move the promulgation of the above rule for the following reasons which will be hereinafter more fully explained and developed in the body of the petition;

(1) Unregulated cigarette smoking on airlines creates a clear and present danger to the safety, health, and very lives of as many as 30 million people (30,000,000) with pre-existing medical conditions.

(2) Unregulated cigarette smoking on airlines creates a significant health hazard for all non-smoking passengers who are thereby forced to inhale the smoke created by other passengers.

(3) Unregulated cigarette smoking on airlines creates a severe annoyance for many non-smoking passengers, infringing on their rights and deterring many from flying, and may also deter courteous smokers from enjoying their flights, thus discouraging the development of civil air commerce.

I. INTERESTS OF THE PETITIONERS IN THE ACTION REQUESTED

Petitioner Action on Smoking and Health (ASH) is a national non-profit charitable, scientific, and educational organization which serves as the legal action arm of the antismoking community by utilizing legal action against the problems of smoking. ASH has in excess of 8000 individual contributing members who support its activities and whose interests in the problems of smoking ASH seeks to further. In addition, ASH is supported and sponsored by a wide variety of health, educational and social welfare organizations, and a distinguished panel of individual Sponsors including leading figures in the fields of medicine and public health, as well as other nationally known public figures. Attached and hereby made a part of this petition is a report more fully describing ASH, its supporting organizations, and its Board of Sponsors. ASH is also assisted in its work by numerous individuals and organizations such as Citizens to Restrict Airline Smoking Hazards (C.R.A.S.H.), a special project of ASH and an organization of five George Washington University Law School students who often fly and who are concerned about the problems of smoking on airlines. ASH has initiated and engaged in numerous proceedings involving antismoking messages before the Federal communications Commission which were largely responsible for enforcement of the Commission's ruling requiring an estimated 75 million dollars a year worth of free broadcasting time for messages about the health hazards of smoking. ASH has filed a number of complaints relating to cigarette advertising and promotion with the Federal Trade Commission, and has testified and appeared through a petition for the amendment of a role in the Commission's rule making proceedings. Thus its standing to initiate and participate in actions before such agencies on behalf of the interests of its contributing members, supporting organizations, project groups, and individual sponsors has been clearly established.

Action on Smoking and Health has received numerous letters from individuals, both contributors and non-contributors, about the health hazard and annoyance created by being forced to breathe the cigarette smoke of others in confined areas. Many of these are from people with an allergy or other preexisting health problem which additionally makes smoking a clear and present danger to their immediate health and welfare. Action on Smoking and Health (ASH) therefore petitions the Secretary of Transportation and the Administrator of the Federal Aviation Administration on behalf of itself as an organization devoted to serving the public interest in the area of smoking, on behalf of its contributing members, supporting organizations, project group C.R.A.S.H., and individual sponsors who are vitally concerned and interested in the problems of smoking, on behalf of its contributing members and non-members who have specifically complained and are adversely affected by the problem of cigarette smoke in confined areas; and on behalf of all other persons similarly situated who are interested in and/or affected by the problem of cigarette smoke on commercial domestic air carriers. [See, e.g., *Associated Industries v. Ickes*, 134 F.2d 694 (2d Cir.), dismissed as moot 320 U.S. 707 (1943); *Pierce v. Society of Sisters*, 268 U.S. 510 (1925); *National Association for the Advancement of Colored People v. State of Alabama*, 357 U.S. 449 (1958); *Joint Anti-Facist Refugee Committee v. McGrath*, 341 U.S. 123 (1951); *Barrows v. Jackson*, 346 U.S. 249 (1953); *Office of Communication of the United Church of Christ v. F.C.C.*, 359 F.2d 994 (D.C. Cir. 1966)].

Petitioner John F. Banzhaf III is an adult male citizen of the United States and a resident of Washington, D.C., who is vitally interested both individually and professionally with the problems of smoking. As a private citizen he filed a petition with the F.C.C. which led to a ruling requiring all radio and television stations broadcasting cigarette advertisements to devote a significant amount of time free to messages about the health hazards of smoking. He successfully defended this decision in the United States Courts [*Banzhaf* v. *F.C.C.*, 405 F.2d 1082 (D.C. Cir. 1968), cert, denied 90 S. Ct. 50 (1969)] and, through ASH, participated in the enforcement of the decision. Petitioner Banzhaf is Executive Director of ASH. He is also Executive Trustee of Legislative Action on Smoking and Health (LASH), the only anti-smoking lobbying organization, and a registered lobbyist on behalf of antismoking interests. In this capacity he has testified in a number of congressional proceedings. Petitioner Banzhaf flies on commercial domestic air carriers often and has frequently been subjected to being forced to breathe the smoke of other passengers which is annoying and harmful to his safety and health. He petitions the Secretary of Transportation and the Administrator of the Federal Aviation Administration on behalf of himself and all other persons similarly situated.

II. STATUTORY AUTHORITY TO PETITION

Petitioners bring this petition for the promulgation of a rule pursuant to 5 U.S.C. 553 (e), 14 C.F.R. 11.25(a), and 49 C.F.R. 5.11

5 U.S.C. 553(e) provides: "Each agency shall give an interested person the right to petition for the issuance, amendment, or repeal of a rule."

14 C.F.R. 11.25(a) provides: "any interested person may petition the Administrator to issue, amend, or repeal a rule within the meaning of section 11.21, or for a temporary or permanent exemption from any rule issued by the Federal Aviation Administration under statutory authority."

With respect to any functions or powers not exercised by the Administrator and exercised by the Secretary of Transportation 49 C.F.R. 5.11 provides: "any person may petition the Secretary to issue, amend, or repeal a rule, or for a permanent or temporary exemption from any rule."

Petitioners, as demonstrated in Part I above, are clearly "interested persons" within the meaning of the acts and regulations.

III. STATUTORY AUTHORITY TO PROMULGATE PROPOSED RULES

The Federal Aviation Act of 1958 established the Federal Aviation Agency to be headed by an Administrator with broad pow-

ers including the power to issue rules for the regulation of commercial domestic air carriers. Although his primary responsibility was to "promote safety of flight of civil aircraft in air commerce" [49 U.S.C. 1421(a)], the statutory grant of power—as will be shown—was far broader and required him to give consideration to the public interest including the highest possible degree of safety for the passengers, and to the encouragement and development of civil aeronautics in the United States and abroad. The Administrator and the Agency have consistently interpreted their grant of authority very broadly, and their interpretations have been upheld. The Department of Transportation Act transferred to and vested in the Secretary of Transportation "all functions, powers, and duties of the Federal Aviation Agency", and provided that a portion of these functions, powers, and duties were to be exercised by the Federal Aviation Administrator [49 U.S.C. 1655(c)]. This Act, which consolidated in the Secretary many transportation functions heretofore fragmented, again stressed that they were to be exercised to promote the public interest and the general welfare. Petitioners therefore jointly petition the Administrator and the Secretary to promulgate the proposed rule under their authority and duty to:

(1) see that the air carriers operate with the highest possible degree of safety;

(2) protect the public interest and promote the general welfare;

(3) encourage and foster the development of air commerce.

Petitioners will demonstrate that the Administrator has repeatedly relied on one or more of these principles as a basis for statutory authority to enact regulations for the promotion and protection of passenger safety, health, and comfort. Such regulations have been directed to the conduct of passengers and the air carriers, not only with regard to the safety of the aircraft, but also with regard to the safety, health, and comfort of passengers within the aircraft itself. Petitioners' rule requiring smoking and non-smoking sections would fall within this category, thus conforming to well established Administration policy.

1. Safety

The Administrator's mandate with regard to safety is set out most specifically in 49 U.S.C. 1421(b), which states that "in prescribing standards, rules, and regulations . . . the Administrator shall give full consideration to the duty resting upon air carriers to perform their services with the *highest possible degree of safety in the public interest.*" [Italic added]. On several occasions the courts have not only recognized this duty but held the Government liable for failure to promulgate or enforce rules consistent with this standard. *Furumizo* v. *United States,* 245 F. Supp. 981 (D. Hawaii 1965); *Rapp* v. *Eastern Air Lines, Inc.,* 264 F. Supp. 673, 680 (E.D. Pa. 1967) ("the Board had to give full consideration to the duty resting upon air carriers to perform their services with the highest possible degree of safety in the public interest."); see also *Airline Pilots Association* v. *Quesada,* 182 F. Supp. 595, 598 (S.D.N.Y. 1960) ("The Federal Aviation Act of 1958 . . . imposes upon the defendant the duty and responsibility of promulgating rules and regulations to provide adequately for the highest possible degree of safety in air commerce.") In cases involving these duties of the air carriers the courts have repeatedly reaffirmed that the "highest possible degree of safety" standard applies not only to the safety of the aircraft but also to passenger safety within the aircraft compartment. Thus in *Wilson* v. *Capital Airways,* 240 F. 2d 492 (4th Cir. 1957) a passenger was injured due to the lack of a handrail in a lavatory. The U.S. Court of Appeals for the Fourth Circuit held that an "airline company, which was a common carrier, was bound to exercise the highest degree of care and foresight for the safety of the passengers." Courts have also established that air carriers are liable for injury to a passenger caused by another passenger. In *Garrett* v. *American Airlines,* 332 F. 2d 939 (5 Cir. 1964), the court found the air carrier liable for an injury to a passenger resulting from the injured party falling over a piece of hand luggage placed in the aisle by another passenger. The court warned air carriers that "they must reasonably take cognizance of the habits, customs, and practices followed generally by its passengers insofar as such actions present hazards to its business invitees." Thus the Administrator has the power and the duty to promulgate regulations providing for "the highest possible degree of safety in the public interest" which applies to the safety of passengers within the aircraft as well as to the safety of the flight.

The "highest possible degree of safety" standard, when applied to the broad grant of authority given to the Administrator in 49 U.S.C. 1421(a)(6) [1], and viewed in light of a number of FAA regulations (Regulations section, *infra*) governing conduct within the passenger compartment, leads one to the inescapable conclusion that the power and duty to regulate the passenger's safety within the passenger compartment lies within the Act. Medical evidence (Medical section, *infra*), has shown conclusively that inhaling tobacco smoke endangers the safety and health of approximately 30,000,000 people who have pre-existing illnesses, and is an annoyance to all non-smokers. It would be incongruous, then, if the Administrator had the power to regulate the safe stowage of carry-on baggage (14 C.F.R. 121.589) in order to prevent one passenger's baggage from falling and injuring a neighboring passenger, and could not regulate the involuntary health and safety hazard one passenger can impose upon another by forcing him to inhale the smoke from his cigarette, cigar, or pipe.

Petitioner contends that the Administrator has not only the authority, but the duty as well, under 49 U.S.C. 1421(b), to promote safety in civil air commerce by requiring the effective separation of smokers from non-smokers on domestic air carriers.

2. Public interest

49 U.S.C. 1303 clearly seems to require the Administrator to follow and be guided by the public interest standard because it sets forth in detail at least five elements that he "shall consider . . . as being in the public interest." 14 C.F.R. 11.25(5) also implies that a proposed rule will be promulgated if the petition can show that "the granting of the request would be in the public interest." 49 U.S.C. 1651(b)(1) provides that "the Congress therefore finds that the establishment of a Department of Transportation is necessary *in the public interest* and to assure the coordinated, effective administration of the transportation programs of the Federal Government." [emphasis added] This concept, despite the various delineations applied to it, remains broad and somewhat flexible. By leaving the definition open-ended, Congress has given the Administrator great latitude to enable him to act with respect to a wide variety of circumstances, both foreseeable and unforeseeable, that might arise.

The term "public interest" encompasses the balancing of the needs and desires of one sector of the population with those of the remainder, so as to effectively satisfy the greatest number, while causing the least hardship (or, ideally, no hardship at all) to the smallest number. Petitioner's rule would beneficially affect a large sector of the population (Medical analysis, *infra*), while causing no harm and virtually no inconvenience to the sector wishing to smoke. The non-smokers whose health is so seriously affected that they have had to forego use of the airways would be able to fly. Non-smoking passengers who are to a lesser degree deleteriously affected by tobacco smoke will be able to patronize the air carriers without being subjected to aggravation of their physical condition. In addition, healthy passengers will not be subjected to health hazards. The passengers who wish to smoke will not be deprived of their smoking privilege. There can be no question that the benefits from the proposed rule far outweight any possible drawbacks, thus serving the public interest.

3. Fostering and development of air commerce

49 U.S.C. 1346 defines the Administrator's authority with respect to civil aeronautics and air commerce as follows: "The Administrator is empowered and directed to encourage and foster the development of civil aeronautics and air commerce in the United States and abroad." Interstate and overseas air commerce, as defined by 49 U.S.C. 1301(20), includes "the carriage by aircraft of persons or property for compensation or hire . . . or the operation or navigation of aircraft in the conduct or furtherance of a business or vocation, in commerce." The significance is that air commerce unquestionably includes business aspects, which necessarily refers to the passenger market. A separation of smokers and non-smokers would significantly enlarge the potential passenger market. The development of air commerce would be beneficially affected because the segment of the population that previously had to avoid commercial air carriers because of serious reactions to smoke would be able to utilize the air carriers, and that segment of the population that flew reluctantly, or only when they had no other choice, would fly more often. Both results would enlarge the air passenger market and further the development of air commerce thereby implementing the intent of the above sections.

4. Applicable regulations

The Administrator has demonstrated the authority and the determination to promulgate rules which regulate the conduct and affect the safety of passengers while inside the airplane. A substantial number of these regulations have been specifically designed to promote the safety, health, and comfort of the passengers during the course of the flight indicating the Administrator's interest in limiting hazards within the craft. The following regulations are similar in nature and scope to the rule requested in this petition:

1. 14 C.F.R. 25.831(b): requiring that passenger compartment air must be free from "harmful or hazardous concentrations of gases or vapors."

2. 14 C.F.R. 91.11: providing that a pilot may not allow a "person who is obviously under the influence of intoxicating liquors or drugs (except a medical patient under proper care) to be carried in that aircraft."

3. 14 C.F.R. 121.219: providing that passenger and crew compartments must be "suitably ventilated", and that "carbon monoxide concentration may not be more than one part in 20,000 parts of air."

4. 14 C.F.R. 121.265: providing that if any toxic extinguishing agent is used in the airplane's fire extinguishers, "precautions must be made to prevent harmful concentrations

[1] This section empowers the Administrator to promote the safety of air commerce "by prescribing and revising from time to time: (6) Such reasonable rules and regulations, or minimum standards, governing other practices, methods, and procedures, as the Administrator may find necessary to provide adequately for national security and safety in air commerce". This section is a departure from the rest of 1421(a) in that it does not deal solely with equipment, maintenance, or design.

of fluid or fluid vapors from entering any personnel compartment"; and, "if carbon dioxide is used, it must not be possible to discharge enough gas into the personnel compartments to create a danger of suffocating the occupants".

5. 14 C.F.R. 121.285: providing that cargo may be carried in passenger compartments if it is installed in a position so as not to restrict access to emergency exits or aisles, and as long as suitable safeguards are provided to prevent the cargo from shifting; and as long as the cargo does not obscure any passenger's view of the "seat belt" or "no smoking" signs.

6. 14 C.F.R. 121.311: providing that there must be an "approved safety belt for separate use by each person over two years of age; and, that during each takeoff and landing, each passenger shall "secure himself with the approved safety belt provided him"; and, that no plane may take off or land unless "each passenger seat back is in the upright position".

7. 14 C.F.R. 121.317: providing that "no person may operate an airplane unless it is equipped with signs that are visible to passengers and cabin attendants to notify them when smoking is prohibited and when safety belts should be fastened"; and that these signs must be "turned on for each landing and takeoff and when otherwise considered to be necessary by the pilot in command", and, that "no passenger or cabin attendant may smoke while the no smoking sign is lighted and each passenger shall fasten his seat belt and keep it fastened while the seat belt sign is lighted."

8. 14 C.F.R. 121.571: providing that before each takeoff passengers must be "orally briefed by the appropriate crew member" on smoking, use of seat belts, and location of emergency exits.

9. 14 C.F.R. 121.575: providing that no passenger "may drink any alcoholic beverage aboard an aircraft unless the certificate holder operating the aircraft has served that beverage to him"; "no certificate holder may serve any alcoholic beverage to any person aboard any of its aircraft who appears to be intoxicated"; no person may be allowed to board any aircraft "if that person appears to be intoxicated".

10. 14 C.F.R. 121.589: providing that no passenger may carry any article of baggage aboard an airplane unless that article can be stowed under a passenger seat in such a way that it will not slide forward under crash impacts severe enough to induce certain specified inertia loads.

These regulations indicate that the public interest requires that a high degree of care be exercised by commercial air carriers. Implicit in this duty of care is a recognition of the fact that individual passengers should be reasonably free from all conditions that may be harmful or annoying, including those caused by the conduct of other passengers. The Administrator has recognized the importance of regulating the conduct of each individual passenger, where such conduct, if unregulated, could adversely affect the health, safety, and comfort of other passengers. This concern and authority is clearly demonstrated by the substantive provisions of the above regulations. Therefore, since tobacco smoke, particularly in confined areas, constitutes a safety hazard and annoyance to others, its regulation would be wholly consistent with past Administration policy and well within the authority, purview and intent of the Act.

IV. MEDICAL EVIDENCE

The average smoker seems to be aware only of the harm he is causing himself. Most people, smokers and non-smokers alike, do not know that cigarette smoke in a confined area is also harmful to those who do not smoke. It has been established beyond any reasonable doubt that cigarette smoking is a severe health hazard causing an estimated 300,000 death a year [estimates by former Surgeon Generals Luther Terry and William H. Stewart, and Dr. R. T. Ravenholt, reported in Diehl, *Tobacco and Your Health: The Smoking Controversy* 34–35, 1969] and that inhalation of cigarette smoke can cause different forms of cancer and chronic non-neoplastic bronchopulmonary diseases, and aggravate or contribute to a variety of cardiovascular diseases and other medical conditions. [See, e.g., U.S. Public Health Service, *The Health Consequences of Smoking*, 1968.]

As a basis for its proposed rulemaking, petitioners contend that cigarette smoking is also harmful to the non-smoker because the formed inhalation of another's cigarette smoke in an enclosed environment creates:

(1) a clear and present danger to an estimated 30 million people with certain pre-existing medical susceptibilities, AND

(2) a significant health hazard and discomfort to most others.

1. Persons suffering from pre-existing medical susceptibilities

The presence of tobacco smoke, especially in a confined area, presents a serious medical threat to the millions of Americans who have certain medical susceptibilities and conditions. This smoke can directly aggravate the condition of anyone afflicted with: chronic sinusitis, asthma, hay fever, an allergy to smoke, chronic bronchitis, emphysema, and many other chronic lung diseases. The total number of people susceptible to this problem is staggering. The National Health Survey which ended in June, 1967, gave the following breakdown for lung disease in the United States:

Estimated number of persons suffering from a preexisting susceptibility to cigarette smoke

Chronic bronchitis	400,000
Emphysema	726,000
Chronic sinusitus	16,818,000
Asthma or hay fever	16,099,000
Other sensitivities to smoke*	----------
Total	More than 34,000,000

*Estimated to be in the millions.

Thus cigarette smoke in a confined area creates a clear and present danger to the safety, health, and very lives of as many as 30 million Americans.

According to Dr. John M. Keshishian, a thoracic and cardio-vascular surgeon at the George Washington University Hospital, the presence of tobacco smoke in the air can trigger an attack in a person plagued with chronic lung disease. This attack can result in either mild discomfort, such as a coughing spell, running eyes and nose, and impaired breathing, or a more serious attack involving extreme discomfort and great difficulty in breathing. [See attached Affidavit from Dr. Keshishian, *infra.*]

Recognized authorities have studied the effects of smoke on persons afflicted with chronic lung disease and allergies. Their research indicates the dangers which airlines currently permit their passengers to be exposed to.

Dr. Irwin Caplin, a respected allergist, sympathizes with the non-smoker exposed to cigarette smoke.

"The truly unfortunate patient is the one who develops severe asthma when he enters a smoke-filled room. It seems that cigars or pipe smoke will usually aggravate the asthmatic more than the cigarette smoke. We see many asthmatics who develops severe asthma from even one cigarette in a room or just by smelling the ashes in an ash tray. There are the patients who can be likened to the man living in Dante's inferno where there is no escape from burnt fingers. Unfortunately, the non-allergic population has no understanding of what they do to their asthmatic members of the family when they smoke in their presence. They are usually annoyed and place the asthmatic in a most embarrassing position. He must either ask ask them not to smoke in his presence or stay home and isolate himself from society. This is indeed a problem, and I do not know the answer. Perhaps if we could have a magic wand and make all smokers asthmatic for one hour a week and then have them sit in a room full of cigar smoke we would certainly have a population with a great deal more understanding." [Caplin *The Allergic Asthmatic*, 1968.]

Dr. J. J. Ballinger discussed cigarette smoke as an air pollutant in the August, 1968, issue of *Laryngoscope*. In an article entitled "The Effect of Air Pollutants on Pulmonary Clearance", he stated that "a recent report indicated that a single one hour exposure of mice to cigarette smoke . . . lowered their resistance to infection, as measured by mortality and survival time; also, exposure to smoke of mice infected with influenza A virus twenty-four hours previously, resulted in significantly higher mortalities, thus suggesting that *cigarette smoke can aggravate an existing respiratory viral infection.*" [Italics added.]

Precise testing of persons with allergies, as conducted by Dr. Bernard Zussman, has shown that "The problem of clinical hypersensitivity to tobacco smoke is assuming greater importance in atopic [allergic] patients, who do not smoke themselves, but who are exposed to smoke either at school, office, or home." The results of the testing showed definite allergic symptoms in these patients when exposed to tobacco smoke. With treatment, and avoidance of smoke, the symptoms disappeared. [Zussman, *Atopic Symptoms Caused by Tobacco Hypersensitivity*, 61 Southern Medical Journal 1175 (1968).]

Additional evidence of the health hazard caused by cigarette smoke is found in a study of the effects of smoke on persons with allergies conducted by Dr. Frederic Speer. [Speer, *Tobacco and the Nonsmokers*; 16 Archives of Environmental Health, 443 (1968).] He states, "A study of both allergic and nonallergic patients revealed that intolerance to tobacco smoke is common to both groups." Strong reactions were recorded, leading to the conclusion that "The many individuals who develop symptoms from tobacco smoke need the understanding and support of the physician in helping them avoid its noxious effects." The "noxious effects" recorded included eye irritation, nasal symptoms, headache, cough, wheezing, sore throat, nausea, hoarseness, and dizziness, as shown in the table below:

REACTIONS TO TOBACCO SMOKE AS REPORTED BY 191 ALLERGIC NONSMOKERS

	Boys[1]	Men	Girls[1]	Women	Total	Percent
Patients	38	44	29	80	191	100.0
Eye irritation	30	32	22	56	140	73.3
Nasal symptoms	25	31	22	59	137	67.1
Headache	6	22	9	50	87	46.0
Cough	20	13	19	35	87	46.0
Wheezing	9	13	8	13	43	22.5
Sore throat	4	13	6	21	44	23.0
Nausea	3	5	3	18	29	15.2
Hoarseness	1	9	1	20	31	16.0
Dizziness	0	2	1	8	11	5.3

[1] Under 16 years of age.

The wide variety of ill effects caused by the inhalation of another's tobacco smoke is well summarized by F. K. Hansel in (*Clinical Allergy*, 1953):

"As a primary irritant, tobacco smoke may cause nasal obstruction, increased nasal discharge, and reduction in the sense of smell. In the lower respiratory tract it is a common cause of coughing. The tobacco tars are now recognized as important carcinogenic agents in the mouth, larynx, and bronchi.

"Tobacco is a very significant factor as a secondary irritant in patients with nasal allergy, hay fever, and bronchial asthma. Even among those allergic patients who do not smoke, tobacco may act as an irritant or primary sensitizer.

"Satisfactory results in the management of allergic patients may depend upon the complete elimination of tobacco as an etiologic (causal) agent or as a secondary factor . . .

"The structure and function of the nose exposes its membrane particularly to the irritating effects of chemical fumes, tobacco smoke, and such air pollutants as photochemical smog, . . .: They are active as secondary irritants aggravating the symptoms of patients who have allergic rhinitis and the attacks that they precipitate are essentially indistinguishable from those due to the primary causative antigen.

"There is little doubt that tobacco smoke is an important secondary factor in precipitating allergic symptoms through its action as a nonspecific irritant."

Bettina C. Hilman ["*The Allergic Child*", Annals of Allergy, Nov., 1967] reports that the National Health Survey of 1959–61 found that over 4.6 million American children have Asthma. Also, that an estimated ten to twenty percent of the children in this country have one or more allergies. [As of 1968, there were almost 60 million children under 14 years of age in this country; 20% would be 12 million.] Dr. Hilman goes on to state, "The immunological load varies with the amount of exposure to offending allergens (inhalants and ingestants). The total allergic load is also influenced by the degree of exposure to offending odors, e.g., paint, hair spray, fish oil, cigarette smoke." Therefore, exposure to air contaminants, such as tobacco smoke, inhibits the control of allergies in children and may lead to dangerous allergic reactions. Even before smoking was widely recognized as a serious health hazard tobacco smoke was known to be irritating to the young hay fever and asthma patient. (Vaugh and Black, *Practice of Allergy*, 1954) Smoke was also seen to "obviously act as a non-specific irritant in many children with respiratory allergy", (Sherman and Kessler, *Allergy in Pediatric Practice*, 1957). Thus several different medical studies have shown that as many as 15 million children would be endangered by the unrestricted smoking conditions on air carriers, and, as flying becomes more popular and more widely available, more children will be exposed to these dangerous conditions. Furthermore, these studies supplement and lend further support to the earlier cited reports showing that smoking in a confined area can be dangerous to all nonsmokers.

Although it is a difficult factor to measure, the presence of smoke may psychologically affect a passenger with chronic lung disease, allergy, or other susceptibility to tobacco smoke. Extensive worry about exposure to smoke may itself bring about the symptoms of an existing malady or make the victim more susceptible to a lower concentration of tobacco smoke. "When we consider that the fumes that annoy people are certain to cause mental distress, it is not easy to assess to what extent the resultant symptoms are psychogenic." [Speer, *Tobacco and the Nonsmoker*, 16 Archives of Environmental Health 443 (1968)] Fear of a fire in flight, air crashes, or even air sickness may likewise psychologically reduce the threshold level at which a person with a pre-established susceptibility will be endangered by the cigarette smoke of others.

Thus there is general agreement within the medical profession, based upon a number of research studies, that persons with chronic sinusitus, asthma, hay fever, an allergy to smoke, chronic bronchitis, emphysema, and many other chronic lung diseases, when exposed to tobacco smoke, are seriously threatened with aggravation of their conditions. Figures provided by the National Health Survey show that more than 30 million Americans, and as many as 15 million children, are susceptible to this danger.

2. Health hazard and discomfort to all nonsmokers

The findings of a research team under the direction of Dr. Giuseppina Scassellatti-Sforzolini show that smoke from an idling cigarette contains almost twice the tar and nicotine of an inhaled cigarette. On the average, smoke from an inhaled cigarette contains 11.8 mg. of tar and 0.8 mg. of nicotine, as compared to 22.1 mg. of tar and 1.4 mg. of nicotine from idling smoke. Thus smoke from an idling cigarette may be twice as toxic as smoke inhaled by the smoker. Although the concentration of harmful substances breathed by the non-smoker is less than the concentration inhaled by the smoker himself, the exposure will be for a greater period of time; an idling cigarette contaminates the air for approximately 12 minutes while the average smoker is actually inhaling on the average for 24 seconds during his "enjoyment" of each cigarette. Thus effects due to decreases in concentration may be more than overcome by increases in exposure time. In some cases, Dr. Scassellatti-Sforzolini reports, smoking "will obviously constitute something of a menace to a . . . nonsmoking passenger." [*Nonsmokers Share Carcinogenic Risk While Breathing Air Among Smokers*, Medical Tribune, Dec. 4, 1967.] Therefore it seems obvious that in the confines of an airplane, where a nonsmoker may be required to sit next to or between two smokers, and where the air circulation is typically poor [and may be next to nonexistant, e.g., while waiting in line for takeoff], the non-smoker will be subjected to a significant health hazard to appease a smoker.

Others who have recognized the danger of smoke to the non-smoker have made similar findings. An editorial in the December 1967 issue of *Science Magazine* concerned the pollution of air by cigarette smoke. *Science Magazine* reported that "in a poorly ventilated smoke-filled room concentrations of carbon monoxide can easily reach several hundreds parts per million, thus exposing smokers and non-smokers present to a *toxic hazard*." [Emphasis added] Carbon monoxide affects the body's hemoglobin, robs the body of needed oxygen, and "commonly leads to dizziness, headaches, and lassitude." One may thus suspect that those who have a tendency to become ill on an airplane will become ill more readily if exposed to cigarette smoke. As to those who do not normally become air sick, carbon monoxide can cause dizziness and headaches, and may also act as a catalyzing agent for air sickness.

Two other harmful components of cigarette smoke are nitrogen dioxide and hydrogen cyanide. The former is an acutely irritating gas, reported *Science Magazine*, and cigarette smoke contains concentrations fifty times the level considered "dangerous." Hydrogen cyanide, a deadly agent particularly active against respiratory enzymes, is present in cigarette smoke in concentrations 160 times that considered dangerous for extended exposure. Furthermore, cigarette smoke contains acrolein, aldehydes, phenols, and carcinogens like benzo(a)pyrene, some of which have been found to have synergistic effects among the toxic agents. In its summation *Science Magazine* concludes: "when the individual smokes in a poorly ventilated space in the presence of others, he infringes the rights of others and becomes a serious contributor to air pollution."

The results of a recent German study on the amounts of tar and nicotine present in confined areas and the effects on the nonsmoker have been startling. In *Deutsche Medizinische Wochenschrift*, Volume 92, November 1967, these findings were reported in answer to a question on the effects of tobacco smoke on a non-smoker: "The test results of Harmsen and Effenberger [Harmsen and Effenberger, Archives of Hygiene and Bacteriology 141 (1957)] show the smoking of several cigarettes in a closed room makes the concentration of nicotine and dust particles in a short time so high that the non-smoker inhales as much harmful tobacco by-products as a smoker inhales from four or five cigarettes." This report was further supported by other studies including: (1) *Smoking and Health. Summary of a Report of the Royal College of Physicians of London on Smoking in Relation to Cancer of the Lung and Other Diseases*, (London, 1962); (2) H. Oettel: *Cancer Research and Fight against Cancer*, IIIrd Book, 6th Conference of the German Cancer Society in Berlin, from March 12th to 14th, 1959; (3) H. Oettel: *Smoking and Health*, Nachrichten aus Chemie und Technik 11 (1963), 28; (4) Journal of Medicin Rheinland-Pfalz 18 (1965) 217; (5) H. Oettel: *Toxic Materials in the Air, Water, and Food* (Short essay in monthly course of instruction for doctors (1967) written after a speech of the International Congress Symposium of the doctors in Davos and Badgastein on March 6th and 8th, 1967).

More evidence of the detrimental effects of tobacco smoke on the average non-smoker has been documented by Dr. Frederic Speer in Archives of Environmental Health, Volume 16, March 1968. The chart below shows that a very significant number of people not allergic or otherwise particularly susceptible to cigarette smoke can suffer severe reactions to the smoke produced by others:

250 NONALLERGIC NONSMOKERS

	Boys[1]	Men	Girls[1]	Women	Total	Percent
Patients	19	71	21	139	250	100.0
Eye irritation	9	54	14	96	173	69.2
Nasal symptoms	5	28	2	38	73	29.2
Headache	5	26	5	43	79	31.0
Cough	7	15	10	31	63	25.2
Wheezing	1	4	0	6	10	4.0
Sore throat	0	7	0	7	14	5.6
Nausea	3	6	0	14	23	9.2
Hoarseness	0	6	0	5	11	4.4
Dizziness	2	2	2	10	16	6.4

[1] Under 16 years of age.

Dr. Cyril D. Fullmer, in a report to the Annual Scientific Meeting of the Utah State Medical Association in September, 1968, also commented on the hazardous effects of tobacco smoke on non-smokers. His report originally concerned a study of the hazards of cigarette smoking to smokers but, during his study he discovered evidence of it being harmful to non-smokers as well.

A health survey in Detroit homes of chil-

dren of smoking and non-smoking parents found that even healthy children are particularly susceptible to cigarette smoke. The survey concluded that smoker's children were sick more frequently than non-smoker's children, and that the presence of tobacco smoke in the environment is associated with "lessened physical health." [Cameron, Kostin, et al., *The Health of Smokers' and Non-Smokers' Children:* Preliminary Report I included in Appendix] On an airplane, it is likely that young children, often excited, restless, and frightened, will be easily affected by cigarette smoke. The report is also further evidence of the susceptibility of healthy nonsmokers to the cigarette smoke of others.

Another inconvenience created by the smoker is pure discomfort. Most non-smokers just do not like cigarette smoke being exhaled in their faces. This often results in eye irritation, coughing, and nausea. Petitioner believes that the discomfort resulting from cigarette smoke is quite apparent and needs little further explanation. For the sake of documentation, Petitioner refers the Administrator to a letter in the AMA News, April 7, 1969, written by Dr. Ralph Berg of Spokane, Washington, and resultant replies to the letter by other physicians. These letters will be found in the Appendix along with a small sample of others.

V. IMPLEMENTATION OF PROPOSED RULE

There appear to be various means by which to accomplish the objective of the proposed rule: the separation of smokers and non-smokers on commercial air carriers. Merely for the purpose of demonstrating several means by which this could be accomplished at no cost to the airlines and no inconvenience to either the smoking or nonsmoking passengers, a number of possible alternatives for implementing the proposed rule are set out below:

(1) Non-smokers would be seated from the rear of the aircraft while smokers would be seated from the front, and the order would be interchanged equitably. Thus, on all but capacity flights, there would be an effective barrier of several rows of seats between the two groups.

(2) Non-smokers would be seated on the left side of the aircraft while smokers would be seated on the right, possible alternating if necessary to achieve fairness. If one side became full the overflow could be seated at the rear of the other section. Thus, on most flights and for most passengers, the center aisle would be an effective barrier between the two groups.

(3) Blocks of seats, perhaps in group of five rows, would be labeled for the use of smokers and non-smokers alternatively by the use of easily movable markers. As these small sections filled up appropriate adjustments for the particular ratio of smokers and non-smokers could be made by the stewardesses.

Obviously, there are many alternatives not suggested in this petition that would accomplish the desired objectives. Most public transportation systems have, at one time or another, effected some means of separating smokers and non-smokers, and such separation by the air carriers would be in accordance with the statutory intent of developing a "coordinated transportation service" 149 U.S.C. 1651(b)(1)]. Smoking cars on trains, and various bus regulations, have dealt with this problem. Certainly the imaginative personnel working for the Administrator, and for the major airline companies, can develop a simple, inexpensive, yet effective means of dealing with this hazardous and annoying situation without inconveniencing any of the passengers.

Enactment of Petitioners' proposed rule would have no detrimental effects on air carrier service and, indeed, would merely involve a designation of certain seats in which smoking would be permitted and would not involve any structural changes in the aircraft. There would also be no inconvenience caused in the preflight preparations. Both smoking and non-smoking passengers would purchase the same tickets, and make the same reservations, as is now done. There would be no problem of an imbalance of smokers or non-smokers, because the solutions suggested above contemplate a flexible policy.

The most significant argument in favor of smoking sections is a basic one: the use of such sections would not infringe the rights of any smoker, but would give non-smokers the rights which they have been deprived of in the past—the right to breathe unpolluted air. While no passengers would be harmed, or inconvenienced, a large number would be greatly benefitted. This clearly includes the courteous smoker who might otherwise be deterred from enjoying a cigarette by his concern for the health and comfort of passengers next to him.

VI. CONCLUSION

The Federal Aviation Administration and the Department of Health, Education and Welfare are scheduled to begin a joint 12-month study "to measure the amounts of tobacco smoke contaminants in air transport aircraft." (Department of Transportation Release #69–108, 19 September, 1969) This study will attempt to "measure the amounts of carbon monoxide and other impurities in both cockpit and passenger cabin areas."

The results of this study will not be reported until late in 1970 or early in 1971. There is no rational justification for the Administrator to wait for the results of this study before requiring smoking sections on airplanes. Little benefit would be gained from such a delay, particularly since the study is expected to re-confirm conditions already known to exist. Non-smokers have for too long been subjected to the unreasonable hazards caused by tobacco smoke.

This petition has presented sufficient evidence upon which the Administrator can and should conclude that tobacco smoke in the passenger compartment of an airplane constitutes a severe and substantial threat to the health, safety, and comfort of non-smokers; so severe, and so substantial, that nothing short of the immediate enactment of the proposed rule would be an acceptable remedy.

It is elementary that where there is doubt as to the danger of an act or substance that doubt should be resolved in favor of protecting the public health and safety, particularly where this can be done with substantially no inconvenience and at no cost to any party. The health of the majority of Americans, including:

(1) the 49% of all American males over 17 who do not smoke;

(2) the 66% of all American females over 17 who do not smoke;

(3) the over 30 million Americans who have pre-existing conditions making them particularly susceptible to cigarette smoke;

(4) And all non-smoking children, particularly the estimated 12 million who have pre-existing medical conditions, making them particularly susceptible to cigarette smoke; should not be wagered on the chance that an investigation would show that it might not be seriously endangered. Many of the components of cigarette smoke—e.g., nicotine—are recognized as drugs, and the law requires that with respect to drugs doubt is to be resolved in favor of the consumer. [See generally 21 U.S.C. 301 et seg.] Tobacco smoke has clearly been identified as both an irritant and as a strong sensitizer[2] and, under the Hazardous Substances Act, doubt as to thesee are to be resolved in favor of the public safety and health. [15 U.S.C. 1261 (f)(1)(A) and 1262(a)(1)] A most striking recent example of this policy was the recent decision of the Secretary of Health, Education, and Welfare to restrict the sale of products containing cyclamate because a dosage 50 times greater than normal human consumption caused cancer in mice. Indeed, this policy is required by the statute for food additives which have been shown to be capable of causing cancer. [21 U.S.C. 348(c)(3); see *Bell v. Goddard,* 366 F.2d 177 (7th Cir. 1966).] Whether directly applicable or not, these statutes are a clear indication of long standing congressional intent which should be followed.

Petitioners respectfully submit that they have shown that:

(1) they are interested persons with standing to petition for the proposed rule;

(2) that the statute gives the Administrator the power, and indeed even the duty, to promulgate rules for the protection of passengers from safety hazards within the aircraft;

(3) that the Administrator has consistently utilized this power, and recognized this duty, to promulgate rules to provide for the safety of passengers from hazards within the aircraft, and that the proposed rule would be consistent with others previously issued;

(4) that the overwhelming weight of the medical evidence indicates that unrestricted smoking aboard aircraft creates a clear and present danger to the safety and health of an estimate 30 million people who because of pre-existing medical conditions are particularly susceptible to tobacco smoke;

(5) that a number of studies have indicated that unrestricted smoking in enclosed environments like aircraft creates an involuntary and inflicted health hazard to every passenger;

(6) that the proposed rule could be effectuated without cost to the airlines or inconvenience to passengers;

(7) and that any doubt as to safety and health of passengers must be resolved in their favor.

Therefore Petitioners respectfully request that the Secretary and the Administrator promulgate the proposed rule, and that the Petitioners be made parties to any related proceedings with the right to further support their proposed rule.

Respectfully submitted,

JOHN F. BANZHAF III,
Attorney for Petitioners.

[2] See, e.g., Hansel, *Clinical Allergy* (1953) ("Tobacco smoke make act as a (1) primary irritant, (2) secondary irritant in an allergic individual, (3) a primary sensitizer.").

PROBLEMS OF THE BALL BEARING INDUSTRY

Mr. McINTYRE. Mr. President, two of New Hampshire's finest firms, the MPB Corp., in Keene, N.H., and the New Hampshire Ball Bearings, Inc., in Peterborough and Lebanon, N.H., are among the principal companies in the Nation with the highly technical ability to produce miniature precision ball bearings.

These minute bearings, some of which are so small they can hardly be seen with the naked eye, are vital to our defense and space programs. The guidance system of our space ships, for example, would not be possible without these bearings.

Now the companies are being threatened with a flood of foreign imports of these bearings. The demand for bearings from American processors has fallen so low that continued manufacture in this country is threatened.

The danger in this situation is such that we might find ourselves completely dependent on foreign sources for this

vital equipment. If there should be troubles in the world and the foreign source cut off our defense and space programs could be placed in real jeopardy.

I have been pressing the Defense Department and the Office of Emergency Preparedness and others to take action to protect our American suppliers. The Assistant Secretary of Commerce, Mr. Kenneth Davis, recently toured the New Hampshire ball bearing plants.

Frankly, Mr. President, I was deeply disturbed by the fact that Secretary Davis did not seem to be impressed by the seriousness of this situation.

I want to bring this matter to the attention of my colleagues because I am sure they will be as concerned as I am.

To help in a further understanding of this problem, I ask unanimous consent to have printed in the RECORD an article published in the Keene, N.H., Sentinel of December 12, which discusses the visit of Secretary Davis and the problems of the industry.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U.S. OFFICIAL TOURS THREE BEARINGS FIRMS; SILENT ON PROTECTION AGAINST IMPORTS

(By Jim Hicks)

The U.S. assistant commerce secretary wound up a tour of New Hampshire ball bearings manufacturing firms in Keene yesterday, but withheld comment on whether he felt the companies deserved federal protection against imports.

Kenneth Davis made the tour of three New Hampshire facilities in response to a petition by MPB Corporation in Keene and New Hampshire Ball Bearings Inc. in Peterborough and Lebanon.

The miniature bearing industry petitioned the Office of Emergency Preparedness (OEP) in January, claiming foreign manufacturers were selling bearings in the United States in such quantity that the national security might be impaired.

Federal law provides that if manufacture of precision bearings is determined to be indispensable to national defense, the President can take steps to protect the domestic industry against imports.

Davis would only say that he found the facilities "extraordinarily modern" and that his inspection added to his feeling that the precision bearing industry is critical to the nation.

The precision bearing industry has been hard hit by imports, principally Japanese, in the last five years. John A. Clements, manufacturing vice president at NHBB, said yesterday the domestic industry has been so undercut by imports that 700 employees of a total of about 3,000 in the three major U.S. firms manufacturing bearings have been lost in the last three years. He emphasized that bearings companies are now attempting to correct for the loss of profits and employees by diversification.

Although NHBB has begun turning away from manufacturing precision bearings exclusively, MPB in Keene has diversified to a much greater extent, with only 25 percent of the local company's operation now devoted to the specialized field.

NHBB and MPB executives said diversification will mean eventually that the firms will have to sell much of their bearings machinery and retool for other products if Japanese imports are not curbed.

With this country depending more and more heavily on the imports, sudden elimination of this source could threaten the national security, they said. Clements pointed out precision bearings are a vital part of aerospace technology and missile guidance systems.

In a national emergency it would take the domestic industry a minimum of two years to rebuild precision bearing production, including hiring and training employees to take the place of those lost to diversification, Clements said.

"I feel we could meet any defense requirement with current companies and machinery," Davis told the executives.

Davis said there may be some reluctance on the part of the administration to curb imports since the U.S. as well as other countries are thriving on the present trade expansion policy.

"The unique thing going for ball bearing manufacturers, though, is the national defense implication," Davis added.

EMPLOYMENT OF THE DEAF BY FINN INDUSTRIES, JACKSONVILLE, FLA.

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Silence—Actions Speak Louder Than Words," published in the December issue of Monsanto magazine. The article concerns the efforts of Finn Industries to employ the services of deaf persons in its Jacksonville, Fla., plant.

Finn Industries is a subsidiary of Potlatch Forests, Inc., of San Francisco, Calif., and Lewiston, Idaho. This expanding company is reaching into our national concerns by submitting a proposal for Secretary Romney's call for low-cost housing in the Operation Breakthrough program. It is cooperating with the national effort to clean up our waters and now Potlatch is expanding its efforts to utilize the deaf in its Florida plants.

Since the employment of our handicapped citizens is of concern to all of us, I think the article makes worthwhile reading. The Finn Industries and its parent, Potlatch Forests, Inc., deserve to be commended for their public-spirited activities in this and other fields.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SILENCE—THESE HARD-WORKING PEOPLE CAN'T SPEAK, BUT THEIR ACTIONS ARE LOUDER THAN WORDS

JACKSONVILLE, FLA.—The virtues of hard work, thrift and perseverance are not the exclusive property of any group of Americans. But one group of persons at The Finn Industries plant here seems especially imbued with these virtues.

This group consists of 15 deaf mutes—one man in eight of the plant's employes. Not easily distracted, alert and conscientious, they are regarded by management—and by their fellow employes—as great guys to work with.

The Finn Industries, a subsidiary of Potlatch Forests, Inc., is a packaging firm concerned with the folding paper carton business. Those of its employes who are deaf mutes are engaged in every aspect of manufacturing from the printing presses to the cutting and gluing machines.

One machine operator has three people under him, all of whom can speak and hear. "Do you have any problem communicating?" one of the articulate was asked.

"He understands very well," the woman replied. "And *we* understand *him*."

Bill Cudahy, the lively Irishman who is general manager of the Jacksonville plant, is largely responsible for the program of employing deaf mutes. Raised in an orphans' home, he met deaf mutes early in life, learned to like them. When he was a young pressman (he's been in the business 42 years), he was given as helper a man with this kind of handicap. Through sign-language, lip-reading and written instructions he trained the new man, and was so impressed with the mute's quickness that he decided he'd hire such men if he ever got the chance.

He got the chance when he became general manager at The Finn Industries plant in 1958. Since he started hiring deaf mutes, several other companies in this area have followed suit. Cudahy's program won a citation for Potlatch from former President Kennedy, and was also cited by the Florida Rehabilitation Association.

Some deaf workers have a real advantage over their colleagues who are not so afflicted. Several of them work all day long with an air-machine stripping perforated cartons from reams of heavy coated paper. The noise level would be almost unbearable to a person with normal hearing.

Most of these men were taught basic communications at the St. Augustine School for the Deaf. Among themselves, they use a kind of shorthand sign language that only the practiced can understand.

But they do far better at knowing what ordinary people are saying than we do at understanding them. Maybe it's because they try harder.

Ben Cancell, president of Potlatch Forests, Inc., is a modest man. He is quick to point out that all the credit for the deaf-mute employment program belongs to Bill Cudahy. Yet it does seem that Potlatch is, as a corporation, markedly public-spirited.

The company has made a point of using mentally retarded youngsters in its reforestation program. When it moved its headquarters from Lewiston, Idaho, to San Francisco, it turned over a palatial residence in Lewiston to the public for a children's home. It has gone into a long-term "partnership" with Western Samoa developing timber resources to provide the natives there not only with employment, but with a share of the profits.

It all seems to fit with the name of the company—Potlatch—which derives from an Indian gift-giving ceremony. Founded in 1903, Potlatch has three major groups and two subsidiaries. Its wood products, paper, and paperboard and packaging groups are all good customers of Monsanto, for paper chemicals, adhesives and agricultural chemicals.

The Finn Industries is one of its subsidiaries. Another is Speedspace Corporation, which provides prefabricated, relocatable buildings that help solve some pressing school housing problems, particularly in California. And this program, too, has its public-spirited aspects. As Ben Cancell says of the Jacksonville program, "It's easy to say, 'Let someone else do it.' But you can't send out orders from the top. This sort of thing must start at the plant level."

AIR POLLUTION—THE THREAT IS NOW

Mr. YARBOROUGH. Mr. President, in an article published recently in the Washington Post, writer Joshua Lederberg pointed out how air pollution could cause genetic mutations.

We already know about the severely adverse effects air pollution can have upon the health of human beings, even to the extent of causing death. Indeed, in 1930 in Belgium, 60 people died from air pollution; in 1948 in Pennsylvania, 2,037 died from air pollution. In 1952, London, 4,000; in 1961, Los Angeles, 75,000.

In Los Angeles alone the schoolchildren are not allowed to exercise, to run, to jump, to skip indoors or outdoors on smog alert days. That is just the beginning of what we are in for.

We pour out 130 million tons of material into the atmosphere each year. That is roughly equivalent to the total tonnage of all steel production in the United States.

Mr. President, it is the epitome of human tragedy that we overfund new military items such as the C5–A and underfund programs so vital to the survival and progeny of man.

Because the problem of pollution is worldwide in scope and severity, I have offered Senate Joint Resolution 156, a bill to establish an interagency commission with the specific duty of planning this Nation's participation in the 1972 U.N. Conference on the Human Environment. This bill, adequate funding of all pollution control bills, and all efforts to deal with this monumental crisis should be given one of the highest priorities of this Nation and all nations everywhere.

Mr. President, I ask unanimous consent that the article, entitled "Air Pollution Ingredients Are Suspect for Mutation," by Joshua Lederberg, published in the Washington Post of October 18, 1969, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AIR POLLUTION INGREDIENTS ARE SUSPECT FOR MUTATION

(By Joshua Lederberg)

Many of the effects of radiation on living cells can be mimicked in laboratory tests with derivatives of hydrogen peroxide and other chemically active forms of oxygen. During the last 25 years we have learned to take a critical view about radiation and have set increasingly suspicious standards for regulating our exposure to it. Were we quite logically consistent, we would be just as critical about peroxides.

Just the reverse has happened, however, and active forms of oxygen are an increasingly important part of our environment. Much of this rise in exposure is an unintended by-product of urban life. For example, much of the eye-irritating part of Los Angeles-type smog comes from ozone and PAN (peroxacyl nitrate), typical peroxide-like compounds.

Peroxides are, however, also used very widely in industry. They were, for example, introduced for bleaching flour in the 1950s to take the place of nitrogen trichloride when this compound was found to generate a nerve poison that caused convulsions in dogs (not, in low doses, in other species). The peroxides received government approval as a good additive on the strength of a limited number of tests on rats and dogs. The required tests do not begin to reach the possibilities of genetic or fetal effects.

On the other hand, a much more searching inquiry has been demanded of radiation sterilization of foods, and after many years, approval is still withheld from this process. There is good theoretical reason to believe that the treatment of foodstuffs by radiation and peroxides will yield very similar kinds of chemical products, and it is preposterous that one and not the other should be subject to such critical scrutiny.

In testimony before Sen. Edmund S. Muskie's subcommittee on air pollution last year, Dr. S. S. Epstein of the Children's Cancer Research Foundation summarized what was known of the mutational effects of air pollution—namely, almost nothing: "With the exception of ozone, which has been found to cause chromosome breaks, there are no published data . . . all the more surprising as certain fractions of air pollutant extracts are known to contain poorly defined compounds which are generally both carcinogenic and mutagenic."

It is painfully obvious that the air of many cities could not meet the quality standards, feeble as they are, for food additives. As far as I know, PAN has not been directly tested for mutational potency. My personal experience with organic peroxides, goes back, however, more than 20 years, and they are indeed powerful mutagens according to a wide variety of tests. On elementary chemical principles, it would be incredible to expect PAN and ozone to behave otherwise.

Ozone is a natural constituent of the atmosphere at high altitudes and supersonic passengers are likely to experience modest amounts of it unless special methods are used to exclude it from the cabin of the SST. It is also being advocated for the treatment of sewage, water supplies and even conditioned air with no thought of the kind of biological testing it ought to have.

Carefully used, ozone may be an advantageous oxidant for cleaning up dirty water, but before it is allowed to pervade the environment we must learn its potential hazards—and especially the kinds of less active, intermediate products it may form with a variety of substances in the environment and in the body.

Our main defense against peroxides is the enzyme catalase, which occurs in most tissues and causes the rapid breakdown of hydrogen peroxide. (This causes the familiar foaming when "peroxide" is applied to a wound.) In normal people, it is supposed (we hope) to minimize the chance of genetic damage.

However, a few rare individuals are lacking in catalase from a genetic defect, and the enzyme may also be altered in certain diseases and under the influence of some drugs. Also, given the variety of reactive compounds formed by peroxides, not all of them equally quickly neutralized by catalase, we cannot afford to be complacent about these compounds as potential causes of mutations and cancer.

SUPPORT OF THE FEDERAL RAIL SAFETY ACT

Mr. SCOTT. Mr. President, I consider the passage of the Federal Railroad Safety Act (S. 1933) a truly historic moment. For the first time in the Nation's history, we have enacted a comprehensive railroad safety law. Instead of a piecemeal approach which attacks only certain areas related to railroad safety, this act will insure the country, both now and in the future, of a continuing emphasis on all aspects of safety in railroading.

Mr. President, I think that all of us recognize that the Federal Railroad Safety Act represents the work of many people. However, I should like to single out one individual who contributed his usual careful and thoughtful analysis to the problem of railroad safety and to the legislation necessary to achieve this very important goal.

The distinguished Senator from Vermont (Mr. PROUTY) is often characterized as one of the outstanding Members of the Senate because of his thorough understanding of the legislative process and his approach toward problem solving. In the Federal Railroad Safety Act, Senator PROUTY has again demonstrated his characteristic abilities as a fine legislator.

In any legislation of this scope, numerous interested groups are affected. Each group has a distinct view of what the legislation should be. Mr. President, I know that Senator PROUTY personally sat down with officials from all of the interest groups involved in order to painstakingly work out conflicting views so that the final act would be both workable and comprehensive.

Senator PROUTY has often stated that cooperation is needed by both the public and private sector of our economy—at the Federal, State, and local level, in order to achieve meaningful success in any program for the public interest. Again, Senator PROUTY has demonstrated through diligence, hard work, and careful analysis, that one can achieve the delicate balance in legislation which insures success rather than constant bickering.

I think we should commend the able junior Senator from Vermont for his dedicated and sincere efforts in helping to make possible the enactment of the Federal Railroad Safety Act.

EDUCATION ADVISORY COUNCIL CALLS FOR NATIONAL LEADERSHIP; DECRIES CUTS IN EDUCATION ADVOCATED BY THE ADMINISTRATION

Mr. YARBOROUGH. Mr. President, the National Advisory Council on Education Professions Development has reported to President Nixon, Vice President AGNEW, and House Speaker MCCORMACK under the title: "Leadership and the Educational Needs of the Nation."

The Council reports that it is "deeply disturbed" by what it has found this year in its review of administration of national education programs.

Its report states:

Everywhere the mood appears to be one of cutting back—withdrawing—seeing how little we can get along with; in short, a steady retreat from the bold plans the nation launched several years ago.

Members of the Council are drawn from all sections of the education community, and from all parts of the country. They know what is going on in the schools, and what is going on at the grassroots of American education.

This report is a ringing cry—almost a plea—for national leadership for the tone and direction of the education system. It should be read by every Senator.

I ask unanimous consent that it be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

LEADERSHIP AND THE EDUCATIONAL NEEDS OF THE NATION

(Report of the National Advisory Council on Education Professions Development)

The National Advisory Council on Education Professions Development is charged with reviewing and evaluating programs of the Federal government which support the training and development of educational personnel. We come to Washington several

times each year to review with those responsible for the administration of these programs the progress they are making in their efforts to provide the best teachers for our schools and colleges. We have just concluded one such meeting. We are deeply disturbed about what we find.

Everywhere the mood appears to be one of cutting back—withdrawing—seeing how little we can get along with; in short, a steady retreat from the bold plans the nation launched several years ago.

Specifics are not hard to come by. Only last week the U. S. Commissioner of Education pronounced the "right to read" for every youngster in the nation. At that very time, the Department of Health, Education, and Welfare was directing the Office of Education to cut $8 million of a $13 million program, a substantial portion of which was designed to improve the preparation of teachers of reading!

Just two months ago, the House of Representatives cut appropriations supporting the chief program of the Federal government for the preparation of college teachers. The 1969 appropriation of $70 million was reduced by $14 million.

In neither case has there been offered any compelling evidence to warrant such reductions.

But it is not only a matter of reduction in funds. There is also an absence of any bold planning to meet the problems of tomorrow. We have reviewed a recently-completed report recommending programs related to the training of educational personnel that should be undertaken by the Federal government. This report, a plan for the next five years, was prepared by one of several sub-groups of a Task Force on Education appointed by the Department of Health, Education, and Welfare. There are many worthy programs in this plan. We commend the Department for taking this kind of initiative in looking ahead. But we find the conception and scale of the plans no match for the needs. In fact, the so-called plans are timid and token. It would appear that instead of taking as a point of departure a searching inquiry into the needs of education and concluding with a determination of the resources required to meet these needs, this group was faced with an assumption of severe financial constraints and the necessity to fit its planning into this assumption.

In dramatic fashion, these decisions and actions add up to default on the proclaimed responsibility of the Federal government to act as a partner with the other levels of government in supporting the nation's educational enterprise. The Council believes strongly in this notion of partnership. We reject any suggestion of domination of the Federal government. But each partner must do its *share*. And when we find that the States have, in the last two years, increased their expenditures for higher education by 38% and for elementary and secondary education by 28%, and when we find that at the same time the Federal government is cutting back, we can conclude only that there is, in fact, a default of responsibility on the part of the Federal government.

Recently the House of Representatives voted a substantial increase in appropriations for education. We commend the leadership of both parties in this effort. But apart from this action—which has yet to be voted by the Senate and signed by the President—retrenchment is the only signal coming out of the Federal government at the present time. This signal creates a mood—a mood that is affecting the thinking and actions of those in the Federal agencies responsible for administering educational programs and of those in the field who are trying to provide new prospects for the young.

While we sit for two days as members of a Federal Advisory Council and read this signal and sense this mood, we bring with us a sense of another reality "out there"—as the principal of an elementary school in a ghetto, as a school board member in Oregon, as president of a university in Appalachia, as a graduate dean in a private university in New England, as a superintendent of schools in the fourth largest city in the nation, as a professor of physics in a Midwest university, as a guidance counselor in Arizona—as people from a variety of educational settings and various parts of the country. Here we read a different set of signals, sense a different mood.

Above all, we sense a worsening climate in American schools and colleges. While increased controls by school and university authorities may be necessary to check the activities of certain small destructive groups, we assert that present national conditions are deleteriously affecting the studies, the hopes, and the convictions of a wide and responsible segment of the educational community. A new and ugly cynicism and anti-intellectualism is infecting American education. Repressive measures will not arrest this trend, and may even accelerate it; positive and affirmative leadership promptly to end the war and to address forthrightly our domestic problems *can* do so. While these attitudes stem from the war and the disparity between the ideals of the nation and present realities, it is the judgment of this Council that, as Representative Brock and his colleagues so sensitively discerned, the source of much of the disquiet can be traced to fundamental inadequacies of education itself. The needed improvements and reforms will come about only if appropriate leadership is offered, leadership in the educational community and leadership in government, particularly—as we have noted earlier—from the national government.

Too many of our young are concerned by what they are *against*—the war, racism, poverty, corruption. They need, as have all youth in all times, to be *for* things, to have a star, a dream. While we recognize that such affirmative leadership is subtle, and will require politically difficult actions, we feel that the growing dismay and cynicism of our youth could develop into a calamity of devastating proportions. The future college and school teachers—*the people of greatest concern to this Council*—are a centrally important group among our youth, and their disaffection can have serious effects in future years.

It would be unfortunate if our political leadership were to take the position that a response to the dissatisfactions of the past—or the yearnings for a different kind of future—must await the ending of the war, or some other development. It is now we must plan. It is now we must act. It is now that we must demonstrate, *mainly to ourselves*, that a nation which can take such just pride in its extraordinary achievements in the material realm is no less resourceful, no less vigorous, no less sacrificing in dealing with matters of the spirit.

Competent observers have noted a growing sense of purposelessness on the part of an influential segment of our student population—a feeling of these young people that it is not possible for our social institutions to cope with an increasing complexity.

If politics is the art of the possible, then our political leaders have a special opportunity to demonstrate to the young that the nation can envision a future of hope and that we can translate that vision to tangible policies and sensible priorities. We could do no better in this than to start with the field of education itself. More policemen in the schools is not a policy; it is an admission of failure.

If the Executive Branch feels that Congress has not moved in a fashion appropriate to the time, let it take leadership. If the Congress feels that the Executive Branch has not sensed the urgent need for a bold educational policy for the nation, let it provide the leadership. But let us have leadership.

NATIONAL ADVISORY COUNCIL ON EDUCATION PROFESSIONS DEVELOPMENT

Adron Doran, President, Morehead State University, Morehead, Kentucky.

Annette Engel, Director of Special Education, Roosevelt School District, Phoenix, Arizona.

Rupert N. Evans, Professor of Vocational and Technical Education, University of Illinois, Urbana, Illinois.

Susan W. Gray, Director, Demonstration and Research Center for Early Education, George Peabody College, Nashville, Tennessee.

Laurence D. Haskew (Chairman), Professor of Educational Administration, University of Texas, Austin, Texas.

E. Leonard Jossem, Chairman, Department of Physics, Ohio State University, Columbus, Ohio.

Marjorie S. Lerner, Principal, George T. Donoghue Elementary School, Chicago, Illinois.

Kathryn W. Lumley, Director, Reading Clinic, Public Schools of the District of Columbia, Washington, D.C.

Carl L. Marburger, Commissioner of Education, State Department of Education, Trenton, New Jersey.

Edward V. Moreno, Executive Secretary of the Mexican-American Commission, Los Angeles City School Districts, Los Angeles, California.

Lloyd N. Morrisett, President, Markle Foundation, New York, New York.

Mary Rieke, Member, Board of Education, Portland, Oregon.

Theodore R. Sizer, Dean, Graduate School of Education, Harvard University, Cambridge, Massachusetts.

Bernard C. Watson (Vice Chairman), Deputy Superintendent for Planning, Philadelphia School System, Philadelphia, Pennsylvania.

Joseph Young, Executive Director.

OIL AND ALASKA

Mr. PROXMIRE. Mr. President, it is unfortunate but true that many excellent newspaper stories originating in the Midwest do not reach readers on the east coast.

Two reporters, William K. Wyant, Jr., and Al Delugach, of the St. Louis Post-Dispatch, wrote a series of articles about the problems of Alaska in dealing with gigantic oil strike so recently discovered.

I think they did a fine job: they pointed out how the oil companies were trying to cooperate in controlling pollution, how the desire to develop Alaska rapidly may lead to actions which may be regretted later, how the gigantic size and power of the oil companies were changing Alaska and its politics for better or for worse and, finally, they reported some rather disturbing facts about Secretary of the Interior Hickel's business interests.

Because I think the articles are important in understanding how the oil companies operate, I ask unanimous consent that they be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the St. Louis (Mo.) Post-Dispatch, Nov. 23, 1969]

HOW OIL STRIKE BOOMS ALASKA ECONOMY

(By William K. Wyant, Jr., and Al Delugach)

ANCHORAGE, November 22.—It is not much of an exaggeration to say that the oil industry has bought and paid for the State of Alaska. And it is moving pell-mell to develop it with the enthusiastic cooperation of state

and federal officials, Congress and most of Alaska's citizenry.

This could be called the Second Alaska Purchase. The first came a century ago, in 1867, when Secretary of State William H. Seward bought Alaska from Russia for $7,200,000. The second was dramatized last September when oil men paid the state more than $900,000,000 for oil leases on the North Slope.

There is sentiment that the state should have received more, billions more, in this dramatic sale. Even so, the amount realized was nearly five times Alaska's total expenditures for fiscal 1968, and it is money in the bank.

Oil is having a tremendous impact on Alaska, a gorgeous but forbidding and largely trackless and unpopulated territory that entered the Union as the forty-ninth state in 1959—only 10 years ago.

The impact is political, economic and esthetic. It has enriched some Alaskans, made others more prosperous and subjected a great many to saber-toothed inflation.

Oil and gas are already a dominant source of state revenue because of production from the Cook Inlet area in south central Alaska over the last decade. They will be more important when the industry taps the North Slope.

The state's political capital is Juneau, far in the southeast and out of the oil action. The commercial capital is Anchorage, the largest city. In some vital decisions, a third capital city of Alaska is Houston, Tex., where petroleum magnificos hang their hats.

As an underdeveloped land rich in potential but low on cash, Alaska got special concessions from Congress. For example, the statehood law gave Alaska 90 per cent of the royalties and net profits from oil, gas and mineral leases on the federal domain. Other western states got less generous treatment.

The North Slope strike, made on newly acquired state lands owned until recently by the people of the United States as a whole, vaulted the state from rags to riches. No longer can Alaska be considered an economic "basket case." The tin cup has become a cornucopia.

Well aware of their state's expanded horizons and broader hopes are Alaska's Eskimos, Indians and Aleuts, and their attorneys. The Aleuts are a southern branch of the Eskimo, hardy seafarers of the Aleutian chain. The native peoples, who owned Alaska long before the white man came, have asserted claim to most of the state. They want to share in the oil riches.

In the nineteenth century, the railroads opened up the West with federal help and not much resistance except from the Indians. The oil industry is opening up in Alaska, and the arrows, such as they are, are coming from a new breed of American—the conservationists.

The United States, the critics say, neglected and mismanaged "Seward's Icebox" as a federal fief for a long time. With oil men now in the saddle, neglect is not the word. Billions have been invested. More will be. Alaska is seized in a burning, tearing rush to get the oil to market.

NEGLECT CHARGED

Not a pint of the black gold from the North Slope has found its way into ordinary commercial channels, but things have been moving at breakneck pace since Atlantic Richfield Co. confirmed an impressive strike at Prudhoe Bay last year.

The oil was more than 8000 feet deep in Triassic sands laid down many millions of years ago. To conservationists bent on preventing damage to the Arctic's fragile tundra and the animal life there, man's extraction of a resource so long in the making could wait a while.

In contrast, and naturally enough from their viewpoint, the oil production men are not thinking in terms of geologic time. They are in a big hurry because there is a lot of money at stake. For one big company alone, it has been estimated, each day's delay in getting the oil out costs $1,000,000.

LEADERS INEXPERIENCED

The resulting crunch has convulsed a state that is more than twice the size of Texas, is largely innocent of roads, has fewer than 300,000 persons, of whom about 60,000 are Eskimos, Aleuts and Indians, and is led by a new team of politicians relatively inexperienced at the national level.

Republican Gov. Keith Miller, a former holly and mistletoe dealer, came in on the coattails of Walter J. Hickel, the Anchorage entrepreneur and booster who left the governor's office to become President Richard M. Nixon's Secretary of the Interior.

Both of Alaska's Senators, Democrat Mike Gravel and Republican Theodore (Ted) Stevens, are freshmen in Congress. Gravel was elected in 1968 and Stevens was appointed by Hickel last year. Another Republican, Howard W. Pollock, Alaska's lone Representative, is a two-termer and is the state's senior member of Congress.

All these men are in the 40s and all are, like most Alaskans, enthusiastic about development. At times the enthusiasm of Alaska politicians goes to the point of embarrassing the oil companies, which must worry about public opinion in the Lower 48.

Secretary Hickel ruined himself, in the opinion of some development-minded Alaskans, by ebullient statements he made just after President Nixon named him to the Cabinet. He would have done better, they feel, to have kept his mouth shut about what he was going to do for the state when he got to Washington.

In like manner, Senator Stevens, who is rated as very intelligent but has a hot temper, riled conservationists and intellectuals with a hell-roaring speech he made at a science conference at the University of Alaska late in August. It may have won him some votes in 1970, but scientists dismissed him as a Neanderthal.

"Alaskans know Alaska," one published report had Stevens saying, "I'm fed up to here with people who try to tell us how to develop our country."

The Senator spoke extempore. No text was available. As Stevens himself, ordinarily a hearty and engaging man, recalled it, he told the conference that Alaskans were not wasters and spoilers, they had the right to develop the North Slope oil, and they had enough experience to run their country in accordance with good conservation practices.

A conservationist who heard the speech complained that Stevens said in effect: "Go back to where you come from, you outsiders." An oil and gas man sympathetic to Stevens's viewpoint praised the new Senator for voicing what was on the minds of many citizens of the state.

PIPELINE IN SPOTLIGHT

The center of attention for months has been the oil industry's Trans Alaska Pipeline System combine and its plan for throwing an 800-mile conduit of 48-inch steel pipe all the way from Prudhoe Bay on the frigid Arctic shore to the deep-water port of Valdez on the Gulf of Alaska.

The project will cost more than $900,000,000—or something like $1,000,000 a mile—and has been described as the biggest single privately financed construction job ever undertaken anywhere.

Involved in the Trans Alaska Pipeline System joint venture, known as TAPS, are Atlantic Richfield (ARCO) with 27½ per cent interest, British Petroleum Co., Ltd., with 27½, Humble Oil & Refining Co. with 25, and several other oil companies holding the remaining 20 per cent.

The three major companies in the venture, taking into account the fact that Humble is a subsidiary of the giant Standard Oil of New Jersey, had a combined net income in 1968 of nearly a billion and a half dollars.

If Prudhoe Bay were in the tropics, the oil could be taken to market by ship and no pipeline across the tundra would be needed. If the pipeline were being built in Oklahoma, it would offer no problem. As things are, the sea route to this oil is ice-blocked much of the year, and the overland route is an engineer's nightmare.

In bisecting Alaska on a north-south line, the pipe draining the Prudhoe Bay field will pass over, on or under hundreds of miles of federal land administered by the Bureau of Land Management of the Department of Interior. More than 95 per cent of the state's 571,000,000 square miles is still in federal hands.

The fact that the pipeline is to cross federal land meant that the TAPS combine had to get the permission of Secretary Hickel's Interior Department to go ahead with it. Hickel, in turn, could not give the green light without approval from the Senate Interior Committee, of which the chairman is Senator Henry M. Jackson (Dem.), Washington.

Under the Statehood Act, the state got the right to select more than 103,000,000 acres from federal lands. Hickel's predecessor as Interior Secretary, Stewart L. Udall, imposed a "land freeze" and halted the selection process to protect unsettled native claims.

OPPOSED BY HICKEL

Hickel opposed the land freeze as Republican Governor of Alaska. After his appointment by President Nixon, he made an off-the-cuff statement to the press that what Udall had done he, Hickel, could undo. Other Hickel utterances sounded good to impatient Alaskans but riled those in the Lower 48.

In consequence, Hickel, a rough-hewn, 50-year-old multimillionaire who made his pile in real estate, the gas utilities business and construction, found himself at a psychological disadvantage when he appeared before Senator Jackson's committee for confirmation to the Cabinet.

The committee gave the then Governor of Alaska a rough time, grilling him about his financial dealings and political actions. This reflected the hue and cry raised by conservationists, who regarded Hickel as anything but an ideal choice for the nation's chief guardian of America the Beautiful.

Before Hickel finally was confirmed, Senator Jackson extracted from him the promise that Udall's land-freeze order protecting the native claims would not be modified without prior consultation with his panel. That meant that Hickel, as Secretary of the Interior, could not approve the pipeline himself but had to take the matter to Congress.

"Actually, the man who controls Alaska is Jackson—and his committee," an Anchorage entrepreneur who has become rich in the oil and gas boom told the Post-Dispatch. "Hickel ruined himself with his first statement."

It is against this background that the oil industry's mammoth project for getting the North Slope's oil to market—the TAPS pipeline—is not simply a matter of getting a state permit but a complex, many-faceted question involving federal and state officials, Congress, conservationists, the state's native claimants and the industry itself.

Hickel, making use of his conservation-minded Under Secreary, Russell E. Train, has made every effort to give assurance that when the pipeline is built across the delicate tundra and its underlying permafrost, it will be constructed right and with proper safeguards.

Hickel created a North Slope task force in the Interior Department last April, puttitng Train in charge. President Nixon in May enlarged the task force to include other federal agencies. In June the oil consortium made its formal application for approval of the pipeline route.

RUPTURE WARNING

Train released a statement last summer warning that breakage of the pipeline, if not provided against, could spill 500,000 gallons for each mile of line. If anything like that amount were lost, it would be more than seven maids with seven mops could clean up.

The Interior Department and President Nixon's federal task force on Alaska oil development—working with state officials, conservationists and industry—labored for months to prepare stipulations regulating construction of the pipeline and a service road paralleling it.

Rules were agreed on for protection of the Arctic terrain and caribou, salmon and other wildlife, and to minimize danger of pipeline break spewing oil onto the land and into the water. In an August revision, there were two fat books of rules—one for the pipeline, the second for the road. A September version boiled the stipulations down to one 34-page document.

At the beginning of October, Hickel won the applause of most Alaskans by asking the Senate and House Interior Committees to allow an easing of the land freeze to permit construction of the pipeline. The next move is up to the committee.

CONSORTIUM ACTIVE

While all this was going on, the TAPS oil consortium under its Houston top management went briskly ahead with preparations for its mammoth task committing millions and millions of dollars on the assumption that all the roadblocks and technical problems would be cleared away in the end.

The timetable was for completing the pipeline by 1972. Under pressure of a tremendous financial investment, no time could be lost. The route was explored and surveyed. TAPS bought the pipe from Japan early this year and got moving on the terminal at Valdez, where shiploads of the massive, five-ton pipe lengths are being delivered.

Hickel, who was being criticized by his fellow Alaskans for dragging his heels on the pipeline project, came through in mid-August with a congressionally approved green light for the first big construction job related to the pipeline.

The Hickel action allowed TAPS to go forward with building of a 53-mile secondary highway from Livengood, north of the boom town of Fairbanks, to the Yukon River. It will serve as a hauling road for the pipeline. Once built, it will be turned over to the state for maintenance.

There are at present virtually no roads north of Livengood, the jumping-off place for the North Slope. The state is 2000 miles across and 1100 miles north-south, but has only about 3000 miles of hard-surface roads connecting Fairbanks with major towns in south central Alaska and with Canada. To reach most places, the traveler goes by air.

TAPS, a private agency dealing with federal and state governments and breaking new ground for Alaska gave the road contract to Burgess Construction Co., a concern established by Lloyd Burgess, who succeeded Hickel as Republican national committeeman from Alaska and resigned from the committee July 22.

Burgess International, the parent company, had been acquired June 18 by Alaska Interstate Co., a Houston-based conglomerate in which Hickel formerly owned close to $1,000,000 worth of stock. A few weeks thereafter, on July 7, Hickel sold his Alaska Interstate stock in compliance with a January directive of the Senate Interior Committee.

Shortly after Hickel announced the clearance for the Livengood-Yukon road in August, TAPS announced the award to Burgess. It is no great shakes in itself—an $8,000,000 to $10,000,000 or more job on a costplus basis—but is regarded as a plum because it puts Burgess in the catbird's seat for bidding on future work.

The road construction is being driven across the tundra and streams and black spruce hills north of Livengood with vigor. Like an armored division, the big cats and heavy machinery are pushing toward the Yukon. The road and the big lengths of pipe waiting in the rain at Valdez are symbolic of the way Alaska is being opened up by oil.

Hickel warned that the fact the road had been approved did not mean the pipeline would be, but to an observer in Alaska—watching the machinery chew up the virgin land—it looked as if all systems were go.

[From the St. Louis (Mo.) Post-Dispatch, Nov. 30, 1969]

U.S. ANTITRUST INQUIRY IN ALASKA OIL LEASES

(By William K. Wyant Jr., and Al Delugach)

ANCHORAGE, November 30.—Superimposed on a map of the North Slope, oil lease tracts look like a giant chessboard.

Something resembling a chess game was played with 179 of these 2560-acre squares on Sept. 10. But the music hall atmosphere and the crowd in the Sydney Laurance Auditorium here were not characteristic of chess.

The United States Department of Justice is curious as to whether that game was played properly by the participants—the oil companies. A salient question: Were antitrust laws violated by the joint bidding arrangement among various oil firms?

A national inquiry by the department into industry practices in bidding on federally controlled offshore oil was made public last month.

But the Post-Dispatch found an assistant U.S. attorney general from Washington at work here, compiling information on the same type of practices in the state lease sale.

He was on loan to the Alaska Legal Services Corp., a federally financed war-on-poverty agency. His assignment was to advise on matters of discrimination against natives, but the patterns of the September oil bidding were undergoing scrutiny.

The lease sale had all the earmarks of a Titanic competition.

After opening speeches and some colorful song and dance, the day-long opening of bid envelopes within envelopes went on in an atmosphere of tension and suspense. Faces of oil executives beamed or fell with the announcements of some of the closer contests. Whistles and cheers broke out at times from the throng of spectators.

For months before the sale, cloak and dagger security precautions were clamped on the oil fields. Helicopter-borne oil scouts (for which can be substituted "industrial spies") peered at drilling rigs at Prudhoe Bay. Others bought drinks for roustabouts on leave in Fairbanks. Frenetic seismic tests and exploratory drilling were rushed by a number of companies to obtain information on the underground prospects.

The drama even included a "mystery train." Hundreds of miles from the Alaskan border in the Canadian Province of Alberta, 60 executives from 10 oil companies spent five days on a chartered train. It shuttled back and forth the 225 miles between Calgary and Edmonton at a cost estimated at $10,000 a day. While security guards foiled inquires from reporters who got wind of the strange journey, the group worked on joint bids for the Sept. 10 sale.

The group was formed by Hamilton Brothers Oil Co. and included Continental Oil, Cities Service and Sun Oil.

Paul Marshall, a vice president of Hamilton Brothers, said after the sale that only he and one other executive were allowed to get off the train during the trip.

He said the isolation was necessary because the companies had planned to bid as a group only on certain tracts. They were also bidding as individual companies or as part of another group. Combinations of the companies won at least 10 tracts.

SHIFTING COMBINATIONS

Other giant oil companies bid in shifting combinations of their own and occasionally against their sometime partners. Most bid only on a limited number of tracts.

The resulting patterns could take months for the Justice Department to analyze.

Question: Was competition substantially lessened by the combined bidding or by any sharing of geological and drilling information?

It is known that the bonus payments on the sale bids fell short of some experts' expectations by as much as $600,000.

One theory is that the state erred in insisting on full cash payment of the bonuses, rather than an instalment plan over two or more years.

According to this hypothesis, the tight money market prevented oil firms from raising any more money than was bid. The oil industry is known to have drawn heavily on the banking community for money to finance the lease purchases.

Hand in hand with this theory is the criticism that the state could have obtained just as much in bonuses by putting up less of its potentially rich land.

The state, critics say also, could have assured itself a greater share by "checkerboarding," reserving alternate tracts for future sale after more was known of the true potential.

ROLLING BIDS

And Alaska might have received a greater benefit, too, by using the Canadian system of "rolling" bids. Under this procedure, a loser on one tract can use the money he bid there to increase his bids on other tracts.

Thomas E. Kelly, state commissioner of natural resources, told the Post-Dispatch he had considered the Canadian system but did not get enough support for it from the oil industry. He said the Canadian system might have been better, continuing: "I don't think we would have got any less."

Asked for his view of the possibility of antitrust violations in the bidding, Kelly was emphatic.

"If you study the bidding there is no way you could say there was trading of information or collusion."

To illustrate, he said that the Amerada Hess group had no acreage in Alaska. They went in to buy a position and they did it—and those with more information were unsuccessful," Kelly said. Indeed, the combine paid the highest bonus for a single tract—$72,277,-113. It edged out a $72,113,000 bid by Phillips, Mobil and Standard Oil of California.

(That's like bidding 72 cents for a $20 bill," says a lawyer, Clem Stevenson, who said he recently came to Alaska but has been contending with the major oil companies for decades in Oklahoma. He maintains the oil under that one tract alone is worth 2 billion dollars.)

One of the quirks of the sale is that Atlantic Richfield, Humble and British Petroleum did not bid enough to come away with much new acreage. They are the big three with the discovery wells on the Slope.

NO PESSIMISM

This should not be assumed to be a sign of pessimism about their find. Opinion of some experts has it that the Big Three decided they were satisfied that the tracts they got at bargain-basement prices in the 1965–67 lease sales contain a big enough slice of the oil field so that they did not find it worthwhile to get more at a cost several thousand times higher.

A University of Alaska resource economist pointed out that the Big Three got their prior leases on nearly 200,000 acres in the Prudhoe Bay area for $5,600,000. He continued:

"A conservative estimate based on the industry's own figures puts the value of this Prudhoe Bay acreage at something over 2 billion dollars, or better than 360 times the

amount that the oil companies spent to acquire it."

43 PER CENT

The economist, Gregg Erickson, said that if the severance tax stays the same, the value would be 3 billion dollars. He estimated the industry rate of return on the pre-September holdings on the North Slope at 43 per cent, which is several times the average of the industry.

Erickson spoke at a science conference Aug. 26, two weeks before the big lease sale. He was making the point that the state's present bonus bidding system was not getting the state a fair bargain. He said the sale should be postponed at least six months to give the legislature time to overhaul the system.

Strong doubts about the policy were voiced at the same meeting by John S. Hedland, supervising attorney for Alaska Legal Services Corp.

"In leasing these lands, the state is trustee for and acting on behalf of its citizens," he said. "The state's role is not that of a neutral arbiter owing equal allegiance to the oil industry and Alaska's citizens, but as a bargaining representative of all of the people of the state."

COMPENSATION OF NATIVES

Hedland said public concern about oil development had focused on problems such as conservation and compensation of Alaska's natives for the taking of their land.

But, he said, all this had diverted attention from the question of whether the public is getting a fair share of the wealth generated through exploitation of public resources.

Hedland noted that some of the firms active in previous North Slope lease sales had merged and that joint ventures had further reduced competition.

He asserted also that state law does not require submission of all the types of exploration information obtained by the oil industry, such as seismic and geological data. The industry is required to give only information obtained through actual drilling, and then in reports filed within 30 days of completion, suspension or abandonment of a well.

The state is therefore at a disadvantage in trying to set a minimum acceptance bid or knowledgeable refusal price on tracts to be leased, Hedland said.

REJECTS CRITICISM

Kelly, who went ahead with the sale under the old system, rejects this type of criticism.

He told the Post-Dispatch the state had "everybody's dope" on Slope exploration. The oil firms were "extremely co-operative" with information, even to the point of giving some on request before the end of the 30-day filing period.

It should be noted that there are those, other than state officials, who do not feel that the public got less than it should from the Sept. 10 sale.

"Alaska was lucky; they made a half billion more than the do-gooders would have us make," said Locke Jacobs, a millionaire gas and oil lease investor.

He said most of the big oil combines "overpaid" for their leases this fall, adding: "This sale was overbid by half a billion dollars. Tom Kelly did a good job."

Gerald Ganopole, a consulting oil geologist formerly with Texaco, said he was convinced the leased lands were worth no more than $500,000,000 in bonuses. If there had been collusion, he said, the companies would not have left the other $400,000,000 on the table.

MORE IN FUTURE

An engineering expert who favors oil development told the Post-Dispatch, not for attribution to him, that the oil on the North Slope is worth a lot more than the state is getting. But, under the circumstances, he said, it has helped the state get "off its back" economically. The state can and should get more for the oil in the future, he went on.

Kelly said the state has 800,000,000 acres still unleased on the North Slope, much of it in tidelands and uplands. In addition, immediately to the south are 2,900,000 acres on which Alaska has filed claims under its statehood allowance of land from the federal domain.

There are no prospects for another North Slope sale in the near future, Kelly said.

The main reason, he continued, is that the oil companies probably don't have any more money available after the recent splurge.

[From the St. Louis (Mo.) Post-Dispatch, Dec. 1, 1969]

CONSERVATIONIST CONCERN IN ALASKA

(By William Wyant Jr. and Al Delugach)

ANCHORAGE, December 1.—John Hakala, the Federal Government's manager of the oil-invaded Kenai National Moose Range, has a reputation for making the oil operators behave. He was asked, recently what he had to say for publication about how things are in his baliwick.

"Everything is hunky-dory," Hakala said. This brought a roar of laughter from the young biologists seated around the table. They are friends of moose and natural enemies of cats—the tractors that roam the range in search of more oil.

Hakala's constituency is composed of 2700 square miles of excellent wildlife habitat and a growing herd of 9000 or more moose, none of which vote. In the last decade or so, oil and politics have penetrated the northern half of the range in a big way.

Under intense pressure, local and national, government let the oil industry into the federal area in 1957 and 1958. Seismic crews charged in. Oil rigs went up. The invaded northern sector now is criss-crossed by more miles of trails than the State of Alaska has highways.

The Kenai Moose Range has only four or five professionals and a starveling operating budget of $150,000 a year. Yet it produced oil valued last year with federal royalties of $5,215,077, of which the State of Alaska gets 90 per cent.

Halaka and his associates in the Interior Department's Bureau of Sport Fisheries and Wildlife do a good job with what they have. David Spencer, associate supervisor of the Wildlife Refuge Division at Anchorage, said there was very little bulldozer damage on the range any more. He said the oil complex on the Moose Range took up parts of about 20 square miles.

"When it is done properly," he said, "you wind up with an industrial complex right inside of a refuge area."

Kenai's fate has its bright side. Kenai town is booming. The state has a golden flow of revenue, sportsmen and tourists are flocking in, and Alaskan leaders—chief among them former Senator Ernest F. Gruening—get credit for carving a juicy steak from the federal ox.

To conservationists, the forces that sliced up the Moose Range are much to be feared as the vast and beautiful land of Alaska—now about 97 per cent public domain—slides into the hands of the newly created state and thence into private ownership of one kind or another.

Alaska's "last frontier" status—a pristine snow maiden awaiting the ravaging Huns—has caught the imagination of the American public. Conservationists do not want to see this state raped and laid waste by destroyers. The sorry record of the past is heavy on the national conscience.

There is a good reason for Alaskans to be weary of the federal yoke. Alaska has been a fief of the Interior Department and Congress. It has a history of exploitation by fishing, timber and mining interests as well as by oil. Wealth has been extracted with small benefits to the people here.

Ten years after statehood, the federal presence is still overwhelming. Among Alaska's civilians employed in 1968, one out of three was in government work at some level and one in six—or thereabouts—was a federal worker. The federal outlay for Alaska was more than three quarters of a billion dollars. The state's total expenditures were about $181,000,000.

Despite the large proportion of Alaskans in government work of one kind or another, conservationists feel that both federal and state agencies are undermanned and underfinanced considering the size of the task ahead.

BURDEN ON BUREAU

A heavy burden falls on the Interior Department's Bureau of Land Management, which has been looking after more than 300,000,000 acres of public domain in Alaska—most of the state—with a force of fewer than 200 people and a budget of only about $4,000,000. The BLM director for Alaska is Burton W. Silcock, who was born in Idaho.

After a struggle with Congress, the way apparently has been cleared for hiring 45 more BLM employes to help the government supervise construction of the Prudhoe Bay to Valdez oil pipeline. Silcock himself has been heavily involved in drawing up "stipulations" to safeguard the land over which the line will go.

"I think they have come out with some real fine stipulations," Silcock told the Post-Dispatch.

If the history of other states repeats itself in Alaska, the state will be even less resistant to the pressures of politics and the private interests than the Federal Government as it faces the difficult job of supervising orderly growth and protecting the public interest.

The Alaska political lobby during territorial status meant for a long time, as economist George W. Rogers has noted, the Alaska Canned Salmon Industry Inc. and the Alaska Miners' Association. They gave way to construction and commercial voices related to military buildup. Now, it is expected, oil will have its day in the legislative halls.

VULNERABLE AREA

Kenai Moose Range was particularly vulnerable because it is close to Alaska's most thickly populated area and yielded the state's first commercial oil. The second big strike, 1,000 miles away on the frigid North Slope, will intensify the pressure on two big federal reserves that now lock up potential oil wealth on both sides of the now-fabulous Prudhoe Bay discovery.

To the west of Prudhoe Bay is Petroleum Reserve No. 4 around Barrow, a 37,000-square-mile tract set aside for the Navy in the 1920s. To the east is the Arctic National Wildlife Range, about 13,900 square miles set up in 1960. There is clamor for oil development of both these federal areas.

When he was Governor of Alaska, Secretary of the Interior Walter J. Hickel urged oil exploration on the Arctic Wildlife Range. He said he just wanted to find out what was there. As for the Navy's reserve, it was proposed this year that the tract be opened to oil leasing and the revenues used to pay native land claims.

There is a small but able and articulate entente of conservationists on the scene in Alaska, backed up by such national organizations as the Wilderness Society, the Sierra Club, the Wildlife Management Institute and others. Allied with them, to some extent, are sportsmen, rod and gun people, recreationists and others.

Three quarters of Alaska's conservationists, it has been estimated, work for the federal or state government. Robert B. Weeden, formerly with the state fish and game department, left recently to become Alaska representative for several major national conservation groups. He has a small basement office near the University of Alaska at Fairbanks, opposite a used clothing shop.

Weeden was president of the Alaska Con-

servation Society, but fell victim to a ukase handed down by Augie Reetz, an Anchorage dealer in office supplies named commissioner of fish and game by Hickel, then governor. Reetz ordered that nobody in his department could hold office in a conservation or sportsmen's group.

"The Bureau of Land Management has done the same thing in a more subtle way," said Gerald Ganopole of Anchorage, a consulting geologist with the oil and gas industry. The BLM, in the Federal Government's Interior Department now headed by Secretary Hickel, manages most of Alaska, including the Navy's petroleum reserve.

THORN IN SIDE

Ganopole, a leader in the Sierra Club and other groups trying to keep Alaska from going the way of all flesh, is a thorn in the side of the wasters. He told the Post-Dispatch the cause of conservation in the state is not going well.

"The state and its policies are some of our biggest handicaps," he said. ". . . Ever since statehood, anybody could go on state lands and do what he wanted. Alaska agencies have no regulatory department at all. . . . There is very little conservation in effect at lower levels that actually do the work."

As Governor of Alaska, Secretary Hickel in 1967 fired the three chief officials of the state's Fish and Game Department. Among those dismissed was James W. Brooks, director of the game division, who then joined the Interior Department's Bureau of Sports Fisheries and Wildlife as a biologist.

Brooks is an expert on polar bears (thalarctus maritimus) and marine mammals. As such, he was invited by the Soviet Union to chair a session on predator-prey relationships at an international wildlife conference in Moscow last September. However, Brooks did not attend the meeting.

The reason for Brooks' non-attendance the Post-Dispatch was told by an Alaska conservationist who was irate about it and said he was certain of the facts, is that Hickel vetoed the travel after it had been approved all the way up the line. Brooks confirmed that he had been invited, but said he did not know who disapproved the trip.

NOT MUZZLED

Although federal and state professionals in Alaska are under wraps to some extent, it cannot be said that conservationists have been muzzled or intimidated. Weeden writes a hard-hitting column in the Fairbanks News-Miner. The conservationists speak out at every opportunity.

Attention is now focused on the 800-mile pipeline the oil industry will construct—at a cost of $900,000,000 or more—to bring the oil of the North Slope from Prudhoe Bay across the mountains and tundra to the year-round, deepwater port of Valdez on Prince William Sound.

The main thrust of conservationist effort is not to block the pipeline, which has to be cleared with Congress as well as the Interior Department, but to see that it is done right. There will be as much as 2,000,000 barrels of hot oil a day driving through the 48-inch pipe. Nobody wants a break.

Under the leadership of Secretary Hickel, in an effort in which President Richard M. Nixon himself has had a hand, the Interior Department has hammered out a set of "stipulations" for the massive construction job. The oil companies have co-operated well, and conservationists themselves have joined in the task. Hickel was careful to get them in early.

MANY PROBLEMS

There are many problems. The pipeline job, to be completed in 1972, will put 3000 to 4000 construction men and their heavy machinery in the wilderness. As it cuts across the country, the line will cross salmon streams and the migration routes of hundreds of thousands of caribou. In Alaska's interior, the temperature can stay in the minus 50s for weeks at a time.

On the Yukon river especially, during the spring break-up, ice can build up two stories high and come scouring down the channel like a grader, said Joe V. Neeper, construction manager for the Trans Alaska Pipeline System, a joint venture among oil companies. He is a 45-year-old Texan, a graduate of Iowa State.

"I don't think we can go through without doing any damage," he said. "I don't think anybody would be naive enough to think that. But we will try to hold it to a minimum."

Neeper said the pipe would be laid above ground, in all probability, but will go under the rivers in every case. The five-ton, 40-foot lengths will be welded in the field.

"There's got to be a lot of ends put together," the construction chief said. He said pipeline had never been laid that far north, but he had no doubt problems could be solved, once they were defined.

PERMAFROST WORRIES

The big cause of engineering and conservationist worries is permafrost. This is defined as "perennially frozen ground". It is the subject of a none too reassuring study published last summer by the United States Geological Survey of the Interior Department.

Most of the research thus far on permafrost has been done in the Soviet Union.

Basically the problem is that when a road or house or pipeline is placed on soil underlain by permafrost the natural equilibrium is disturbed. The structure's warmth causes the ice to melt more than it ordinarily would in summer. There is a similar effect when the Arctic's thin vegetation is scraped off by bulldozers, removing the insulation over the ice.

In summer the structure tends to sink; in winter it is heaved up again by frost. A house tilts at a crazy angle; a railway takes on the appearance of a roller-coaster; a highway develops gullies; bridge piles are heaved up disproportionately. A winter road—like the "Hickel Highway" toward the North Slope—degenerates into a canal when the thaw comes.

In some areas of the Arctic, underlying permafrost causes massacre earth movements. The engineer may find permafrost on the north side of a slope and none on the south slope.

160-DEGREE OIL

The North Slope's oil will be at 160 to 180 degrees fahrenheit as it moves through the pipeline. One mile of the line will have a capacity of 500,000 gallons and each 40-foot section will weight 40 tons filled with oil, Interior Department officials have calculated.

"Permafrost is the overriding environmental problem right now," said Jack Horton of the Interior Department's Alaskan task force a few weeks ago. He had a well-thumbed copy of the Geological Survey's report on his desk.

It is still not clear how the engineers will defeat the permafrost, but they seem confident they can get the oil down to Valdez without spilling it.

[From the St. Louis (Mo.) Post-Dispatch]

RICHES AND DOUBTS IN ALASKA

Booming oil riches are precipitating many of Alaska's problems for solution now, as our series of articles by William K. Wyant Jr. and Al Delugach has made evident; and solution in which the public interest are kept paramount will depend, more than on any other man, on Secretary of Interior Hickel, whose financial interests in the oil industry have still not been unequivocally divested.

As Secretary of the Interior, Alaska's former governor must make crucial decisions on public lands which comprise more than 95 per cent of the state; on whether to build an 800-mile pipeline across fragile tundra to the North Slope; on how to protect the environment from possible damage by the pipeline; on how to settle the land claims of the native Eskimos, Indians and Aleuts.

The chief question of Mr. Hickel's objectivity in making these decisions about the reshaping of Alaska arises from the undisclosed facts about his financial interest in Alaska Interstate. This Houston conglomerate is building the pipeline road and will be a major bidder on the pipeline. Secretary Hickel is reported to have sold his $900,000 stock interest in it in accordance with requirements laid down by the Senate committee which held the hearings on his confirmation last January. But efforts to learn who bought the stock have been unavailing. Nor could it be learned how much was paid for it, or even when it was sold.

So long as Mr. Hickel does not disclose these facts, which are so salient to a genuine divestment, the public can have no way of knowing whether the Senate committee's requirements have in fact been met.

An Anchorage corporation, 700 Building, Inc., owns a building there which is leased by Atlantic Richfield Oil Co., one of the participants in the North Slope exploration, and is constructing a million-dollar addition to it, the contractor for which is Hickel Investment Co., owned by Mr. Hickel and his wife.

It seems to us that Hickel Investment's construction contract represents a clear conflict of interest and a violation of the spirit of Secretary Hickel's promise to the Senate Interior Committee to avoid questionable business relationships.

The president of 700 Building, Gene Silberer, who says he owns it, has sold real estate for Mr. Hickel in the past, and the vice president, his son, Richard L. Silberer, formerly was a carpenter for Mr. Hickel, and is also vice president of Hickel Investment Co.

Adding fuel to the flames of doubt is the apparent certainty of the companies involved in the pipeline project that they are going to get the go-ahead. Not only are they spending millions of dollars on the pipeline road, which will involve a loss if the pipeline should not be built; the president of Atlantic Richfield, Thornton F. Bradshaw, said in May, five months before Secretary Hickel announced his recommendation of the pipeline: "This line will definitely be built." What assurance can he have had to make that statement—and from whom?

Mr. Hickel's response, through a secretary, to questions by the *Post-Dispatch* is quite unsatisfactory. Yet it would be easy for him to dispel all doubts and demonstrate that his personal financial interests are not in conflict with his public service. All he would have to do is ask the Senate Interior Committee for the opportunity to testify under oath, disclosing the purchaser, amount and date of his sale of stock in Alaska Interstate, explaining how his ownership of Hickel Investment squares with his promise of divestment, and putting on record that he has no financial interest in 700 Building, Inc., personal or proxy.

If he is in the clear on these matters, as we certainly hope he is, we should think he would regard it as a duty to himself as well as to the country to make it incontrovertibly plain.

GRAVE IMPACT OF MEDICAL RESEARCH CUTS

Mr. YARBOROUGH. Mr. President, the grievous cuts in medical research by the Nixon administration are having repercussions throughout many vital research activities. Among them are projects that have been in progress many years, with results about to come in.

An article published in the Wall Street Journal of November 10, 1969, pinpoints some of these projects. It notes that a 7-percent cut in budget outlays an-

nounced last spring is in the offing. The reduction is multiplied by the 6-percent price inflation since last year that has further eaten into the value of each research dollar.

I urge Senators to read the article, and to think about the work that will be interrupted on cancer research, on the search for vaccines against infectious mononucleosis, and trial of a new blood test aimed at reducing the transmission of hepatitis through blood transfusions, if these cuts stand.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal, Nov. 10, 1969]

RESEARCH PINCH: CUTS IN FEDERAL FUNDS CURTAIL INVESTIGATIONS OF MEDICAL SCIENTISTS—ROSWELL PARK CANCER CENTER LOSES STAFFERS, POSTPONES CLINICAL TRIALS OF DRUGS—BUT CURBS ENDS SOME WASTE

(By Jonathan Spivak)

BUFFALO.—Dr. George E. Moore, director of research for the New York State Health Department, spends some of his time washing laboratory glassware these days at Roswell Park Memorial Institute, a noted cancer research center here.

Dr. James Grace, who heads the institute has abandoned his efforts to determine whether certain common respiratory germs, known as adenoviruses, cause cancer in humans as they do in test animals.

Roswell Park's tobacco researchers, who seek to develop safer cigarets, are cutting corners by using fewer test animals to assess their findings. "If I get red-hot positive results, I'm home free, but if I get wishy-washy results, I'm dead," frets Fred Bock, who directs the program.

In such ways is the current cutback in Federal research funds coming home to Roswell Park, a New York state institution. In the fiscal year ended last June, the institute lost $750,000 of its $6 million in Federal support, and officials fear further reductions of 10% to 15% in the current year. The institute has already lost 15 young researchers out of a staff of 30, postponed clinical trials of several promising anticancer drugs and curtailed by 30% its work on a vaccine against infectious mononucleosis, a debilitating blood disease that may cause one form of cancer, leukemia.

LEANER RATIONS

Roswell Park's plight mirrows the current pinch at many of the nation's medical schools and research centers, which are being forced to adjust, at times abruptly, to leaner rations from Washington after years of favored treatment.

Nixon Administration officials insist the science budget-cutting is no more severe than other spending retrenchments being made in the effort to fight inflation. But they are deliberately trying to put more emphasis on actual medical care rather than on research, contending the greater need now is for better care. In any case, the squeeze on health research programs actually began with budget cuts imposed in the last two years of the Johnson Administration; Mr. Nixon has merely stepped up the process.

Until the pinch came, some officials privately say, a plethora of Federal funds led to indiscriminate support of science research projects, without due assessment of their value. Hence the squeeze is having some salutary effects, forcing researchers to pick their priorities carefully, dispense with unproductive work and justify their once-unquestioned endeavors to the public and the politicians. The change has also impelled some institutions to seek more private financial help, though without notable success so far.

On the minus side, medical researchers say, promising projects are being dropped or delayed, trained personnel are drifting away and expensive research facilities, mainly built with Federal funds, are being employed ineffectively. So far no one can accurately assess the final consequences. "You really can't predict how much it will set you back; you dont know what insights you have lost, says Dr. Grace, the Roswell Park head.

"HURTING IN ALL AREAS"

The austerity pains are widespread. M. D. Anderson Hospital and Tumor Clinic in Houston is bracing for a loss of $1.5 million of its $8 million a year in Federal research funds; a drug-testing program has already been reduced from $1 million to $700,000 a year. The hospital is able to staff only part of a large new clinical research facility that was five years in preparation, says Dr. R. Lee Clark, president.

"We are just hurting in about all areas of operation—increased costs and decreased funding," complains Dr. Douglas Walker, Associate Dean of Johns Hopkins University School of Medicine in Baltimore, which ordinarily derives 80% of its budget from Federal funds. The school expects this year to run a deficit of about $1.5 million—its first—and will draw on endowment principal to make up the difference.

In New York City, the New York University Medical Center anticipates a reduction of $1.5 million in Federal research grants this year; among projects to be shelved will be the field trial of a new blood test aimed at reducing the danger of transmitting hepatitis through blood transfusions. "We were getting ready for the payoff in terms of patient care," complains Dr. Ivan Bennett, vice president for medical affairs.

Similar problems prevail at Mt. Sinai School of Medicine, Sloan-Kettering Memorial Institute and Albert Einstein College of Medicine in New York City, at the University of California's San Francisco Medical Center School in Chicago, among other institutions.

CUTS IN NIH OUTLAYS

Until 1968, the budgets of Uncle Sam's National Institutes of Health, the mainstay of the nation's biomedical research effort through its grants, had been rising at least 10% a year, and about the last thing a medical scientist worried about was money. Costly, large-scale projects were undertaken in the expectation of an ever-increasing flow of Federal cash, and young researchers were attracted to the field by prospects of steady financial support.

But now all that has changed, NIH outlays for research by other institutions, still running more than $600 milion annually, will probably be trimmed 7% below the Nixon budget plan made last spring for this fiscal year; the sum then proposed was a bit above last year's actual spending. Certain projects will be shut down entirely. Some researchers are getting only part of the Federal dollars originally earmarked for their work. And only 60% of the projects approved by NIH are actually receiving funds, compared with 75% in the past. "It's just a matter of luck," says one scientist.

Moreover, the general budget squeeze is also holding down Federal grants for nonmedical scientific research—money dispensed by the National Science Foundation, the Atomic Energy Commission and other agencies. "The pyramid of science is being reduced," warns William McElroy, director of the National Science Foundation.

"A renewed period of real growth in the nation's investment in basic science is a high-priority item as soon as the fiscal situation permits," comments Lee DuBridge, White House science adviser.

But the situation seems particularly severe for the medical researchers. Federal money has been furnishing more than half the operating costs of many medical research centers. Inflation has been escalating research costs by 6% or more annually. Medical schools, which do much of the NIH-backed research, have taken on added financial burdens in training more needy students requiring scholarship aid.

These pressures have caused medical men to mount an impassioned lobbying campaign for Federal funds. The effort is being coordinated by a loose alliance known as the "Ad Hoc Committee on the Nation's Health Crisis," which includes the AFL–CIO, the American Medical Association, the American Cancer Society and other medical groups.

A FLOOD OF REQUESTS

For lack of more Federal dollars, many of Roswell Park's senior researchers are now spending substantial time seeking funds from foundations, drug companies or grateful patients. "Everyone is scratching like hell to find additional money," observes Dr. Joseph Sokal, who heads one of the main research operations in Roswell's 313-bed hospital. "It's not what I entered medical research for." The major private givers of medical funds, such as the American Cancer Society and the Hartford Foundation, have been inundated and are able to fill few of the researchers' requests.

Roswell Park's problems illustrate the sensitivity of medical research to fluctuations in Federal funds. The institution's main goal is cancer research, but its basic biological studies have implications for treatment of many diseases, including diabetes and bacterial infections, and for successful organ transplants.

Even though New York state furnishes $14 million a year, or about two-thirds of Roswell's budget, the Federal aid cutbacks have had a major impact on productivity here, according to the administrators. A freeze has been imposed on most hiring, and researchers are struggling to make do with less help.

Dr. Julian Ambrus, who heads the Springville Laboratories, a unit of Roswell Park, faces a specific problem: He has the funds to test on animals a possible protective substance against certain bacteria but lacks the money to go ahead with trials on human beings. The bacteria are called "gram negative," and they include the salmonella that causes food poisoning; they are common, highly resistant to drugs and pose special problems to cancer patients.

OTHER TESTS DELAYED

Dr. Ralph Jones Jr. has a similar problem. He lacks funds to begin trials on human beings of a group of substances that could have valuable anti-cancer effects. The substances, derived from the spleen and liver, might regulate the wild reproduction of cancer cells without harming their healthy neighbors.

Roswell Park also serves as headquarters for a group of 20 hospitals collaborating in NIH-sponsored trials of more established anti-cancer drugs. Their aim is to develop more effective methods of employing the drugs, in massive doses and sustained sequence, to eradicate every single cancer cell and thus prevent spread of the disease. Directed by Dr. James Holland, the work has helped lead to longer survival for youthful victims of leukemia and to the hope of curing some eventually.

But the gains are not being extended rapidly enough to other types of cancer, complains Dr. Holland. NIH funds for the hospital members of the group have been cut by 5% to 30%, and he fears he can't hire enough staff to decipher and disseminate to other physicians the data already acquired. "It's a national tragedy," he contends.

POISON ON THE NEWSSTANDS

Mr. DODD. Mr. Speaker, on Tuesday, I reported S. 3246, the Controlled Dangerous Substances Act, which represents the most comprehensive bill dealing with the problem which has ever come before the Congress.

As chairman of the Subcommittee on Juvenile Delinquency, I have learned of a myriad of hallucinogenics and countless methods of getting high.

I must report, however, that the creative purveyors of drugs and proponents of the drug cultlure have discovered a new and dangerous technique of putting poison into the systems of Americans.

The poison was not sold in a dark alley or found in the pockets of a dope peddler lurking outside a high school. No, the poison was found on the newsstands of hundreds of towns and cities all across America. It is contained in a magazine called Caper which was recently removed from the newsstands by the Food and Drug Administration.

That magazine made the suggestion that its readers could take an interesting hallucinogenic trip if they would insert a page of the magazine in methyl alcohol, then drink the solution. The magazine asserted that the solution would be one called diphenylphloroamyl-2-benzoate.

The cold and frightening reality is that, upon examination, the FDA found that the solution produced is nothing more than wood alcohol, a poison which can cause blindness and even death.

This is one of the most shameful and irresponsible accounts of which I have ever heard.

If this magazine should fall into the hands of children, especially younger children to whom the written word is gospel, terrible harm could result.

Accordingly, I urge every Senator to ask his State consumer protection commissioner to take the same swift action the Connecticut State Consumer Protection Commissioner, James J. Casey, has taken, to insure that all the magazines sold thus far be immediately returned.

I ask unanimous consent that a press account of the incident be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Hartford (Conn.) Courant, Dec. 5, 1969]

CAPER MAGAZINE ORDERED OFF STANDS

(By E. Joseph Martin)

A magazine that tells its readers to take a concoction that could kill them has been ordered off Connecticut newsstands.

State Consumer Protection Commissioner James J. Casey Thursday said "Caper" magazines were found on six Connecticut newsstands. The stands voluntarily took the publications off the stands, "and I urge anyone who has purchased the December issues to return them for their refunds," Casey said.

The stands were located in Bridgeport, Danbury, Plainville, New London, Stamford and Waterbury.

The Federal Food and Drug Administration ordered the publications off the market when it found an article asking readers to dip a page in a solution and drink it. If the reader followed the instructions, the FDA said the reader could sustain serious damage, blindness or death.

INSTRUCTIONS

On three pages under a title "Mirage," there are photos of three nudes. The publisher asks the reader to dissolve the pages in methyl alcohol and drink the mixture. "Then look again at these pages," it summons. "If some fondly remembered, identifiable shape begins to form, let us know. In fact, let us know anything you see. Send your impressions to 'Caper.' In the name of science we thank you."

The call is preceded by another appeal. "Intangible, yet enticing, the reflected products of tropical heat and stifled desire, mirages, have long been of interest to science. Caper invites you to participate in a test of your mirageability. The ink used in printing this issue has been mixed with diphenylphloroamyl-2-benzoate, a most powerful hallucinogen."

The FDA said it was unable to determine any such compound as diphenylphloroamyl-2-benzoate.

DEADLY POISON

Commissioner Casey said methyl alcohol is commonly known as wood alcohol and is a deadly poison. Its first effect is usually blindness and even death.

An estimated 150,000 copies of the magazine were published by SEE Magazine, Inc. of New York City. They were distributed in the U.S. and Canada by Kable Distributing Co.

FDA officials in Boston said they have no other legal recourse against the magazine except to act by recalling a product that is determined to be "hazardous substance."

"To attempt to do any more," a spokesman said, "would be censorship."

ABA SECTION OF INDIVIDUAL RIGHTS AND RESPONSIBILITIES RECOMMENDS ADOPTION OF GENOCIDE RESOLUTION

Mr. PROXMIRE. Mr. President, in a recent report, the section of individual rights and responsibilities of the American Bar Association, under the chairmanship of Jerome J. Shestack, recommended that the house of delegates of the American Bar Association approve and adopt a resolution urging the United States to ratify the 1948 United Nations Convention on the Prevention and Punishment of the Crime of Genocide.

I ask unanimous consent that this important resolution by the ABA section of individual rights and responsibilities be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas, in the field of human rights the United States of America has exercised significant leadership;

Whereas, the Charter of the United Nations, in the drafting of which the United States played a major role, pledges all Members "to take joint and separate action in cooperation with the Organization for the achievement of . . . universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion;" and

Whereas, it is in the national interest of the United States to encourage and promote universal respect for and observance of human rights and fundamental freedoms;

Now Therefore, Be It

Resolved that the American Bar Association favors the ratification by the United States of the Convention on the Prevention and Punishment of the Crime of Genocide.

THE BIG THICKET—THE LAST REFUGE OF THE IVORY-BILLED WOODPECKER

Mr. YARBOROUGH. Mr. President, I invite the attention of Senators to an article written by Roy Klotz and published in the Science World of October 27. Science World is a weekly scholastic magazine distributed to elementary and secondary schoolchildren.

In this interesting and timely article, Mr. Klotz points out that the Big Thicket area of southeast Texas is the last known refuge of the legendary ivory-bill woodpecker. As the article states, this rare and beautiful bird could once be found in great numbers in the Southern and Central States of America. Unfortunately, man through his grab for more land and wealth for quick riches, destroyed the great forests where the ivory-bill woodpecker dwelled. As a result, this great bird has all but vanished. In fact for over 20 years naturalists believed the ivory-bill woodpecker to be extinct. However, in recent years this bird has been sighted in the deep forest areas of the Big Thicket.

Now, however, the last remaining home of the ivory-bill woodpecker is under attack by the special interests that would destroy this unique and beautiful wilderness. With each day that goes by, another 50 acres of the Big Thicket is destroyed. Unless action is taken immediately, this area will be lost forever. This is why I have introduced S. 4 which would create a Big Thicket National Park of at least 100,000 acres. This bill has received enthusiastic support from conservationists, civic groups, and concerned Americans throughout the country.

I am pleased that Science World has brought to the attention of our schoolchildren the Big Thicket and the ivory-bill woodpecker. If we do not act soon, the Big Thicket and the ivory-bill woodpecker will only be a memory. Let us not deprive our children and their children of these marvels of nature. As Adlai E. Stevenson stated:

We must be faithful and wise stewards of the riches we have inherited. We must imagine greatly, dare greatly and act greatly. For on what we do now the future will depend—the future not only of our people but of the whole world.

Mr. President, I ask unanimous consent that the article, entitled "Science World Takes You to the Big Thicket," be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCIENCE WORLD TAKES YOU TO THE BIG THICKET

The weather was warm and humid and the going was rough, but John Dennis, a naturalist with the U.S. Department of the Interior, was determined to search every part of the Big Thicket before he called it quits. The Big Thicket, near Shepherd, Texas, is one of the last primitive wildernesses remaining in the United States. It is the home of the armadillo, the bobcat, the coral snake, and other rare animals. John Dennis hoped it would also be the home of the ivory-billed woodpecker.

Actually, the chances of finding the ivory-bill were almost zero. "The ivory-bill was ex-

tinct twenty years ago," one naturalist had said. And many scientists believed it had joined the growing ranks of birds and animals forced off the face of the Earth. Like the great auk and the passenger pigeon, the ivory-billed woodpecker could be seen only in museums.

The ivory-bill was a handsome bird the size of a crow, much larger than most other woodpeckers. Its wingspread was as great as 33 inches, just three inches short of a yard. Most of its plumage, except for the brilliant white markings on its wings, was a glossy, beautiful black. When it flew, it seemed to flash white and black. In addition, the male had a scarlet crest. Its ivory-white, dagger-like bill added to the imposing appearance of the bird.

A hundred years ago the ivory-bill lived in our southern states from North Carolina to eastern Texas, and as far north as lower Illinois. It made its home in the deep, moss-covered forests and along the most remote rivers. The ivory-bill lived in solitude, hunting for food over many miles of forest and building its nest holes high up in cypress trees.

Although it ate berries and other wild fruits, its principal food was the woodboring insects found under the bark of old and dying trees. When feeding, it did not bore holes into the wood as do other woodpeckers. Instead, it used its powerful bill like an ax, and it knocked off great slabs of bark as it searched for food. Its eating habits were beneficial to man, for the ivory-bill did not damage healthy trees, but only those infested with insects and harmful larvae.

Alexander Wilson, an early American naturalist, was much impressed by the strength of the ivory-bill. He once brought a wounded ivory-bill into his hotel room. He left the room for less than an hour. When he returned he found a large pile of plaster on the floor and a hole in the wall up near the ceiling. In a few more minutes the ivory-bill would have hammered his way completely through the wall.

Indians hunted the ivory-bill for its plumage and its bill, which they used for decorations and pipes. Except for man, the ivory-bill had few enemies, and yet the bird began to disappear.

Thirty years ago naturalists were sounding the alarm that the ivory-bill was doomed. The last ivory-bill to be sighted in Florida, for example, was on March 20, 1938. A few more were sighted here and there in the South until the last authentic sighting in 1946. After that the ivory-bill was seen no more. It was surely extinct.

What would account for its disappearance?

WOODPECKER'S LAST HIDE-OUT

As our country grew and the population increased, the demand for lumber became intense. Enormous amount of wood were needed, and loggers moved through one forest after another. One by one, the ancient forests were cut down.

Without the deep, quiet woodlands, the ivory-bill could not survive. Other woodpeckers could move into the farms and suburbs, but not the ivory-bill. It disappeared with the forests.

But not quite.

For the past several years reports were heard that the ivory-bill had been seen again. Some of these reports came from Florida, some from Louisiana, and some from Texas. The Department of the Interior, which is interested in protecting all endangered species of wildlife, sent out naturalists to check all the reports. They all proved to be false except one: John Dennis, struggling through the Big Thicket, was overjoyed to catch a glimpse of several pairs of ivory-bills.

The Big Thicket is enormous, perhaps as large as a million acres or more. It has few roads and settlements, and it is much as it was when Texas was first settled. Indians avoided Big Thicket even then, for they feared its murky swamps and forests. Early settlers on their way west from Louisiana also avoided it, for they found the Big Thicket too difficult to penetrate. They went around it instead. During the Civil War, deserters and bandits hid out for years in its uncharted depths. And now the Big Thicket is the last hide-out for the ivory-bill.

But the ivory-bill is not yet out of danger. Lumbering has already started in the Big Thicket, and hundreds of acres are cut down each week. The U.S. Department of the Interior is recommending that lumber companies leave pockets of cypress and other trees in wet areas when they cut into the forests. It also asks that roost trees and nest trees not be cut down. Efforts are also being made by Senator Ralph Yarborough, of Texas, to preserve at least 75,000 acres as a national park.

The ivory-bill has had a narrow escape from extinction. If proper conservation steps are taken, it will probably survive, and the flashing black-and-white flight of the ivory-bill will again be seen in our forests.

PILLAGE OF THE SEAS

Mr. HANSEN. Mr. President, the people of the Nation, especially the distinguished Members of this body, are concerned and well aware of the crucial importance of conserving our natural resources.

The natural resources of this great North American continent—above and below the surface of the land, in our rivers, lakes, and streams, and in the oceans—must be preserved and must be wisely used if the wealth of the Nation is to be maintained for posterity.

Much progress has been made in this area, by the administration and by Congress, and we will strive for continued gains in this work.

However, it has been brought to my attention that certain areas of this field of endeavor have so far been beyond the control of our Government and the dedicated conservationists among the American people. It appears that certain nations have attacked the North American fishing grounds with a vengeance. These nations have sent their fishing fleets to the richest fishing grounds of the continent and, judging from their performances, with instructions to wipe out the fishing industry of North America.

Mr. President, I ask unanimous consent to have printed in the RECORD an article published in the Washington Star of December 10, 1969, reported from Toronto. The article charges the fishing fleets of Russia, East Germany, and Poland with conducting a "systematic pillage of the seas."

North American fishermen have for years diligently applied the rules of conservation to these fishing grounds, carefully fishing them so that sufficient breeding stock is left to continue annual production.

Mr. President, this is a description from the article of how the Russian fleets abuse the North American fishing grounds:

The Russian trawlers zero in on a shoal of fish and by the time they have finished they have virtually wiped out the entire shoal; there's nothing left.

Mr. President, our friends in Canada are concerned about the crisis in the North American fishing industry, and I am sure that Senators, especially those representing the Coastal States which depend on the fishing industry of the United States, are concerned.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Evening Star, Dec. 10, 1969]

"PILLAGE OF THE SEAS": FOREIGN TRAWLERS DRAW CANADA'S IRE

(By Michael Cope)

TORONTO.—The once-rich fishing grounds of the northwest Atlantic Ocean are being systematically destroyed by huge foreign fishing fleets, particularly from Russia, East Germany and Poland, the Canadians say.

And Canada is demanding fast action to halt what it calls "this systematic pillage of the seas."

The situation has reached crisis proportions, says the Canadian Fisheries Department in Ottawa. And, the Canadians say, the Communist fishing fleets are using similar tactics off the Pacific Coast.

Fisheries Minister Jack Davis said he flew over a huge Russian fishing fleet off Vancouver Island "dragging nets backward and forward over a few square miles off our coast. It cleaned off one of our most productive fishing grounds . . . not just for months, but for many years."

KEY SPECIES HURT

The pillaging is even worse in the Atlantic, according to Davis: "Important species (particularly herring, cod and haddock) have been knocked back to the point where they are of little commercial interest to Canadian fishermen.

"The haddock catch on the East Coast has been reduced in 10 years to 25 million pounds from 100 million pounds. This is exploitation with vengeance and it has to stop."

The Fisheries Department released figures showing the buildup of foreign fishing vessels working the western Atlantic:

In 1959, there were 211 Canadian boats and 744 foreign trawlers, including 111 Russian boats. By 1968, there were 558 Canadian trawlers and 1,815 foreign fishing vessels, including 553 Russian ones.

Although the Russians have nearly as many boats as the Canadians (their total tonnage is more than double as they are all large, ocean-going trawlers) off the East Coast, the Soviet catch last year was 459,564 tons against Canada's 1,160,555 tons.

"CATCH CUT IN HALF"

"The Russian trawlers zero in on a shoal of fish and by the time they have finished they have virtually wiped out the entire shoal; there's nothing left," the Canadians say.

Davis added: "This has reached crisis proportions for some Canadian fishermen, particularly those from Newfoundland. Major grounds off the Atlantic Coast were found to be critically overfished and in 1968 many Newfoundland fishermen found their usual catch cut in half."

Although the huge Russian fleet was only about 40 percent as efficient as Canadian and American trawlers, the minister said, "Our individual enterprisers, our rugged inshore fishermen, our God-fearing little fishermen . . . are no match for these gigantic adversaries."

Canadian and American patrol planes keep a close eye on the Communist fishing boats and have reported that the fleets fish a particular area intensely and then sail to new fishing grounds.

North American fishing fleets which used to fish the once-rich Grand Banks off the Newfoundland coast the year round repeatedly have found few fish as of late.

QUOTAS URGED

Now Canada is taking its case to the 10-nation International Convention for the Northwest Atlantic Fisheries, to which she is a signatory.

It wants the convention to establish a quota system and to declare off-shore fishing limits.

The quota would voluntarily limit the tonnage of each kind of fish nations could net yearly. The allowable catch would be based on the number of fishing vessels each country has in the northwest Atlantic.

The Canadian case for declaring off-shore fishing limits is based on the underwater extension of the Continental Shelf which reaches out under the Atlantic Ocean for as much as 500 miles in places.

Ottawa argues it has been established in international practice that off-shore mineral rights belong to the country whose shoreline the underwater shelf extends from.

"The Russians would have absolutely no right to come and start drilling for oil off our coast and we believe the same rule of thumb should apply to fishing," they say.

OREGONIANS ENDORSE THE FOUNDATIONS' ROLE

Mr. HATFIELD. Mr. President, I, like all other Senators, would want to change certain parts of the tax reform act to suit our personal beliefs and ideas of where reform should be and how relief should be granted. I think the conferees, however, working under difficult circumstances, have reached a compromise that is acceptable to most of us here today.

I address these remarks to the segment of the bill dealing with foundations. As Senators are aware, I was an educator before entering public service, and I currently serve as a trustee of two Oregon private colleges. I have been more involved with this aspect of the bill than any other section, for I realize the vital role played in education by foundations.

I believe that the House tax treatment of foundations was too severe and would have crippled this vital arm of philanthropy. The foundation spokesmen presented meritorious testimony to the Committee on Finance to alter the harsh version. I contacted Finance Committee members to express my dismay about these sections of the bill, and I am sure that many other Senators did so also.

Because I thought that improvements could be made in the Finance Committee version, I cosponsored or vigorously supported all the various floor amendments which I felt improved the tax treatment of foundations.

Mr. President, I have heard from many Oregonians about this section of the Tax Reform Act. They include almost all the college and university presidents in the State. They include many trustees of Oregon colleges. They include many Oregon civic and business leaders, who give much of their time to serve as trustees of the various organizations receiving aid from foundations.

In addition, I heard from many recipients of foundation grants. This included individuals, such as medical research assistants, and the many institutional recipients.

Mr. President, these letters contain thoughtful, persuasive comments. During the floor debate. I mentioned a few of them. I want to thank the many Oregonians who wrote to me on this matter.

I think the conference report put some severe restraints on foundations. The tax on income will generate more revenue than the Senate audit fee, which I believe is more equitable. I supported a lower payout requirement, for I know of some fine Oregon foundations which will be hurt by this 6-percent requirement.

In conclusion, I believe that we should look at the beneficiary and the recipient when we discuss foundations. We are apt to concentrate our attention on the few foundation abuses, instead of the many achievements by the vast majority of reputable foundations.

The good accomplished by foundations, Mr. President, must be undertaken by someone. If we move to put strict limits on foundations and cripple their efforts, we only push this responsibility into the public sector. We should avoid this result, making the Government act instead of the private sector, as we view the future of foundations in American life.

STUDENT AID FOR MEDICAL STUDENTS; TIME TO INCREASE, NOT CUT AID

Mr. YARBOROUGH. Mr. President, in one of its more shortsighted budget actions, the Nixon administration has foolishly cut from the Johnson budget $5 million for health professions student loans. In explaining this amendment to the Johnson budget, the Department of Health, Education, and Welfare said:

> This decrease will result in maintaining health professions student loans at the 1969 budget authority level. Any slack in the program is expected to be more than offset by increases in numbers of health professions students receiving Office of Education Guaranteed Student Loans.

This was another way of saying that the responsibility for aiding and stimulating more young people to enter the medical professions will be passed on to commercial banks and other lending institutions. We have already seen the guaranteed student loan program run into trouble as a result of competitive interest rates. It is totally unreasonable to assume that the guaranteed loan program will accommodate all the young people who would go to medical schools if they can obtain financial assistance.

Worse, termination of the revolving fund will deplete the health professions student loan fund by some $10 million, leaving only $16 million available, compared to $26 million available last year.

There is no element of education that is in shorter supply than medical education. There is no profession in short supply whose services are so desperately needed as are doctors, nurses, dentists, and the technicians in the allied professions.

We should be thinking in terms of doubling the numbers of students in these fields. If the job could be accomplished by private commercial lenders, the shortage with which we are so concerned would not have developed in the first place.

The medical schools have requested $22 million for their student loan funds under this program. Appropriation of the full $35 million authorized would be the most effective way of supporting the entry of more young people into medicine. I am hopeful that the conference report on HEW appropriations will increase the available funds for medical students.

I ask unanimous consent to have printed at this point in the CONGRESSIONAL RECORD correspondence I have received on this matter from Dean Pannill of the University of Texas Medical School at San Antonio, from the student classes of the University of Connecticut Schools of Medicine and Dental Medicine, and from the Student American Medical Association.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

THE UNIVERSITY OF TEXAS MEDICAL SCHOOL AT SAN ANTONIO,
San Antonio Tex., October 15, 1969.

Hon. RALPH YARBOROUGH,
U.S. Senator,
Old Senate Office Building,
Washington, D.C.

DEAR SENATOR YARBOROUGH: I should like to join other medical educators and physicians in expressing to you a very deep concern over any reduction in the federal loan program for medical students. Medical education and the educative period preceding it is lengthy and expensive. Our school, The University of Texas Medical School at San Antonio, is no exception. Our medical students too are caught up in the inflation of the local and national economy: their cost of living rises steadily and many live on fixed incomes. Like Social Security pensioners the needy students suffer most.

In addition, students often accumulate heavy indebtedness even before they start four years of medical school, a year of internship, perhaps two to six years of residency, and a minimum of two years in military service. Even students fortunate enough to procure loans from private and state sources or the federal Office of Education Guaranteed Student Loans over a long period of time incur exorbitant interests which subsequently must be reimbursed.

Hitherto, medical students often work three months during orthodox vacation periods appreciably helping thereby to meet expenses for several months. More and more, however, vacation periods in medical education are continuing education periods or elective courses that serve to increase and broaden a student's health care experiences.

Thus an increasing number of medical students need financial aid. We here have not been in business very long, and several years of financial aid information contribute relatively little pertinent data in this regard. Nevertheless, the accompanying information indicates not only that the number of our students applying for aid is increasing, but the average amount of aid received per student is decreasing.

Obviously we comprehend some of the reasons for many "cuts," as well as proposed reductions in federal appropriations, and we realize too that ways to dampen the inflationary process are often painful. But some cuts hurt most those least able to bear it. In this connection the plight of the medical student is especially pertinent.

Like other schools, our faculty works and plans very hard to be responsive to the health needs of society. But we make no special claims; we simply know we have a very long way to go. There are not enough physicians now, and there may be even in the foreseeable future not enough doctors to care for all the health needs of our citizens. At the same time, we do not want to educate and prepare just one kind of physician; we need

to educate and graduate a wide variety of first-rank physicians better prepared than ever before to help relieve the distress and disease of all human beings. Thus we need very badly to continue to increase our medical school enrollment. We need very badly, too, to capture the positive and constructive idealism and activism of many of today's medical students and particularly, I should emphasize, the medical students who plan to administer their professional service in areas of greatest need. But these are the very students—if their educational and living costs can't be met—who are least able to remain in school. Indeed owing to the extremely high costs borne by individual students, it is unlikely that the number of matriculated students can be substantially increased.

Both health care and health manpower are high level goals deserving special priorities. Indeed it is an expensive field that requires spending at a terribly high level. Nevertheless funds invested heavily in human beings are viable investments: loans and scholarships that serve to educate human being bring health and longevity to others; furthermore, loans invested in human beings are returnable in countless reusable ways. Such yields are rich dividends, rich achievements.

Therefore, I should hope the Health Professions Loans and Scholarship program would be neither decreased nor stabilized; rather it should be increased to assist properly those medical students unable to finance their own education through local, state and private resources. I thank you for your assistance and cooperation and will provide any additional information you may require.

Sincerely yours,

F. C. PANNILL, MD.,
Dean.

THE UNIVERSITY OF TEXAS MEDICAL SCHOOL AT SAN ANTONIO, SUMMARY OF LOAN ACTIVITY 1966-69

Year	Students enrolled	Students applied for aid	Number receiving H-P loan	Number receiving H-P schol.	Total H-P available	Average H-P loan
1966-67	15	0	0	0	0	0
1967-68	21	12	10	4	$12,233.00	$940.00
1968-69	105	56	46	19	54,033.01	1,174.50
1969-70	217	112	57	38	63,687.00	1,080.76

STUDENT AMERICAN MEDICAL ASSOCIATION,
Flossmoor, Ill., September 5, 1969.

RALPH W. YARBOROUGH,
U.S. Senate, Senate Office Building, Washington, D.C.

DEAR SENATOR YARBOROUGH: As you know the House has recently approved H.R. 13111, the fiscal year 1970 Appropriation Bill for the Departments of Labor and Health, Education, and Welfare. One of the Administration's proposals included in this bill is a cutback in the effective funding of the Health Professions Student Loan Program by approximately 10 million dollars or 40 percent for the coming year. Owing to a decrease from 11.4 to 1.1 million dollars in the revolving loan fund operated under this program, the total funds available have dropped from approximately 26 million dollars to 16 million dollars. House action has merely produced a shift of 4 million dollars from the Health Professions Student Scholarship Program to the loan program, thus resulting in no net increase over the Administration's proposal for these two programs.

The Student American Medical Association believes the appropriations proposed by the Administration are inadequate to meet the demonstrated needs of health professions students for financial assistance to complete the several years of extensive and expensive education which they face. This is particularly so in view of increasing enrollments, including large numbers of disadvantaged and minority group students who have been actively recruited by schools and health professions students. The Student American Medical Association further believes that transfer of much needed scholarship funds (used by especially deserving students in extreme financial plights) into the loan category is most unhelpful especially when it is presented in the guise as a means of increasing the total available funds for health professions students' financial assistance.

The Student American Medical Association is actively working for a full appropriation of the 35 million dollars authorized for the current fiscal year for this program and we are supported by the American Medical Association, the Association of American Medical Colleges, and the 65,000 medical students, interns, and residents who are members of our organization. We are keeping our membership closely advised of the progress of this legislation. In addition to our other efforts, we have stated our views before the House Appropriations Committee and I am taking this opportunity to enclose a copy of our testimony for your information. We have also respectfully requested the opportunity to testify before the Senate Appropriations Subcommittee on Labor and HEW.

As a member of the Labor and Public Welfare Committee whose record in developing and supporting recent progressive health legislation, including the Health Professions Student Loan Program, has been very impressive, we would hope you share our concern in this matter and would work actively to insure full funding for this program through your influence with members of the Appropriations Committee and your other colleagues in the Senate.

In order to assess the support which we may expect to receive, we would appreciate hearing from you concerning your specific views on this issue. Until then, I am, with best regards,

Very sincerely yours,

PETER L. ANDRUS,
Vice President—SAMA—Region 3, Executive Council Subcommittee on Legislation.

STATEMENT OF THE STUDENT AMERICAN MEDICAL ASSOCIATION BEFORE HOUSE APPROPRIATIONS SUBCOMMITTEE ON LABOR, HEALTH, EDUCATION, AND WELFARE

(By Edward D. Martin)

(Re: 1970 Appropriations for Health Professions Education Act (Authorized in section 742 of the Public Health Service Act).)

Mr. Chairman, and members of the Committee. I am Edward D. Martin, of Kansas City, Kansas, a senior medical student at the University of Kansas. I am appearing here today as President of the Student American Medical Association. S.A.M.A. is an autonomous organization with more than 24,000 active medical student members in 93 American medical schools, and over 35,000 affiliate intern and resident members.

The purpose of my testimony is to strongly urge on behalf of our membership that this subcommittee increase the 1970 appropriation for the Health Professions Education Loan from the proposed $15,000,000 to the full amount of $35,000,000 authorized in section 742 of the Public Health Service Act.

There are eight facts which, in themselves, speak for the necessity of an increased appropriation in this critically important loan program.

(1) There is a clearly documented health manpower shortage in our country which is becoming more acute year by year.

(2) Medical education and living expenses across the country have risen sharply in the past few years.

(3) An appropriation of $15,000,000 this year will result in an effective decrease of $10,316,000 as compared to last year. Thus, the number of medical students assisted (at an average loan of $1,146) would drop from 12,375 to 7,545 leaving 4,830 students without necessary funds.

(4) The projected increase of 900 entering freshmen next year over last year will compound this problem considerably.

(5) Each year, significantly larger numbers of students come from middle and lower income families and from minority groups and have less available family support.

(6) The availability of long-term loans from private sources is decreasing and they are unevenly available both by state and by individual students.

(7) The Guaranteed Loan Program of the Office of Education will not be able to substitute for the increased need for financial support.

(8) There are a significant number of medical students for which this program is the primary means of support and a significant number would be forced to leave school if funds were not available.

The shortage of physicians in the United States is clearly documented. In order to maintain the 1959 ratio of physicians to population—"a minimum essential to protect the health of the people of the United States"—we will require 40,000 more physicians by 1975 than the present output of U.S. medical schools and continued immigration of foreign physicians can provide.[1] The Board of Trustees of the American Medical Association in 1967 stated that the nation's shortage of physicians was reaching "alarming proportions".[2] The shortage of physicians in our inner cities and in rural America is acute and is rapidly worsening. The President's Commission on Health Manpower, the A.M.A., the A.A.M.C., and numerous other organizations concerned with health care have all stated that there is an acute need for more physicians and health professionals. Without increased and sustained support for the federal government for student, faculty and schools alike, this need will not be met.

School expenses which averaged $1,271 in 1964[3] have increased substantially. The median annual tuition for 45 private schools is $1930 with some tuitions as high as $2,595 per year. The median tuition for public schools is $618 for in-state students and $1220 for non-residents.[4] Books and supplies average $200–250 per year and the mandatory microscopes cost incoming freshmen another $700–750. Living expenses have increased proportionately and where the average non-school costs were $2,000 in 1959, $2,846 in 1964,[5] they were closer to $3500 in 1968. These increases have placed an increasing burden on the already strained financial

[5] Altenderfer, op cit.

sources that help sustain the medical student through the 4–5 years past an already costly college education. A family's contribution to these expenses (which represented 32% of the medical students income in 1964) is heavy even in families with incomes up to $15,000, critical when other children are in the home or in school, and overwhelming to the increasing number of families with incomes less than $10,000 whose children are in medical school.

The Federal Capital Contribution of $15,000,000 last fiscal year was supplemented with $11,429,000 from the revolving loan fund which was not extended for this year and will augment the proposed 1969–70 appropriation by only $1,113,000. Thus, while $26,429,000 was available last year, an appropriation of $15,000,000 this year will result in a real cut of $10,316,000. (See Appendix A). The result of the $15,000,000 appropriation this year will decrease the percentage of medical students aided from 35% to 20%, and decrease the amount funded of that requested by medical schools from 74% to 39%. The medical school share of the cut will reduce funds for medical students by $5,558,000 and if the average loan remains at $1,150, 4830 medical students who received loans last year will have no funds available this September. (See Appendix B).

The substantially increased demand on existing school, state and federal funds is reflected by the projected increase of entering freshmen next fall. The AAMC has estimated that there will be an increase of over 900 new freshmen next year which is almost an increase of 10% over last year's entering freshman class of 9,727.

A most important factor in the consideration of funds available for students is that there has been a successful and widespread effort by medical schools to increase the number of medical students from minority groups and lower socio-economic families. Coupled with this is the clear trend which has been established in many schools toward an increasing percentage of students who are not from affluent professional families. These students cannot obtain the considerable family financial backing that children of affluent families can. In the past this has served as a major obstacle to many students and it is only through programs such as the Health Professions Education Act Loan Program that less privileged students can be guaranteed equal opportunities to become practicing physicians. The $15,000–$25,000 total expense of 4 years of medical school is a considerable barrier to overcome when you are from a family with limited income, and are unable to work part-time because of increasing clinical and basic science responsibilities.

There are some who argue that the Guaranteed Loan Program of the Office of Education would substitute for the decrease in the Health Professions Education Loan Program. From all data available it is clear that this will not be the case. A 1968 U.S. Office of Education Survey[6] concluded that these loans were not available to all students on an equal basis due to lack of lender participation, or a lack of available funds in a majority of states. Also students unknown at a bank, out-of-state students, students from rural areas, and students from low-income families were found to have difficulty obtaining loans. The experience of students in a large number of states indicates that these loans are quite difficult to obtain. With the current prime rate of 7½% and the rate of interest on the loan being 7%, it is even more unlikely that this source will serve as a replacement source or even provide the funds provided in 1968–9. The uneven characteristics of the program are further demonstrated by the fact that, for both 1967 and 1968, 60% of the total amount loaned and 55% of the total number of loans originated in only seven (7) states. This report's general conclusion was that the Guaranteed Loan Program had not fulfilled the need in the past and it is our feeling that there is no indication it will in the future.

The availability of long-term loans from the private sector is decreasing due to increasing prime interest rates and the inability of students to have enough collateral to meet the requirements of local banks. In fact, the largest single source of private guaranteed loans, the American Medical Association Education and Research Foundation, is having increasing difficulty continuing their program and are seriously considering ceasing their efforts in this area—possibly leaving another 1200 students a year without funds.

We have, in the past month, received over 1700 letters from students across the country supporting an increase in the funds available over last year. Over two hundred of these students have indicated that they have exhausted their sources of possible income and without the support of this program will be in jeopardy of having to leave school. For example, I have included selected comments from these students in Appendix C.

The House of Delegates of the Student American Medical Association with representatives from 86 schools unanimously support increased federal loan programs for all health science students for the reasons above and a recent survey of medical students at schools as diverse as Bowman Gray, Cincinnati, SUNY-Downstate, The University of California at San Francisco, North Dakota, Kansas and Georgetown has shown that over 90% of the students support an increase in the appropriations for this program. We have also received over 400 letters from faculty members who strongly support such an increase. The Illinois State Medical Society has recently passed a resolution supporting an increase in the appropriation to medical students through this program, and the Massachusetts Medical Society in a recent letter to a national officer supported at least a continuation of the program at the $26,000,000 level. I quote from this letter: "With the present manpower problems in the country it would be short-sighted policy to reduce any program that will give us more doctors" (John W. Norcross, M.D., President, The Massachusetts Medical Society). Of the 2100 letters from students and faculty we have received on this issue, only one has supported the cut.

Mr. Chairman, we strongly urge an increase in this appropriation to the authorized level of $35,000,000. Without increased resources for long-term loans, medical students all over America, many without adequate support and facing increased living and educational expenses, will be facing a severe financial crisis next September. There are no alternative sources for many of these students and a significant number will be forced to compromise their education or leave school altogether. In a nation facing a growing health care and manpower crisis, and in those states where 1 physician must often serve up to 8 or 10,000 people, these future physicians, each and every one, is a national resource that cannot be considered anything but as a high priority concern of Congress. This is the generation of physicians who with a renewed concern and committment face the health care problems of tomorrow and they sincerely request your aid in helping them through the hard school years until they become physicians and can begin to provide medical care for the American people.

Note: Based on figures available from the Department of Health, Education, and Welfare and the American Association of Medical Colleges.

THE UNIVERSITY OF CONNECTICUT
HEALTH CENTER,
Hartford, Conn., September 30, 1969.

Senator RALPH YARBOROUGH,
U.S. Senate,
Senate Office Building,
Washington, D.C.

DEAR SIR: We, the students of the University of Connecticut Schools of Medicine and Dental Medicine, earnestly desire to express our concern about the Health Professions Educational Assistance Act. The bill passed by the House of Representatives makes available approximately $19 million for student loans. $26.4 million was received the previous year. Therefore, the cutback in available funds is almost 30%. At the same time, first year admissions rose 10% nationally. While doubling its enrollment, the University of Connecticut would receive about the same amount as last year, i.e., a cut of 50% per student.

Our reasons for requesting more funds are many and varied. New medical and dental schools open each year and established schools are expanding. Students from low income and minority groups have been encouraged to enter the health field. Each student has had to pay for a college education before admission. Graduate study grants which cover tuition and living expenses are available in every other field except medicine. A lack of funds causes a student to incur sizeable debts or depend well into the adult years on the largess of parents. The problems are compounded for a young family. Many students will be forced to seek part-time employment and thereby compromise their education.

We have two main concerns for the future. First, the majority of students come from modest economic backgrounds—the government must not force medical and dental schools to give preference to the wealthy student in order to assure that his costs can be met. Secondly, the health needs of citizens should not be jeopardized by increasing the shortage of doctors and dentists. The situation is critical. We need your help.

Thank you for your time and attention.

Sincerely,

JOHN BARTKOVICH,
(The Classes of 1972 and 1973 University of Connecticut Schools of Medicine and Dental Medicine.)

PRESIDENT WILL ACT CORRECTLY IF HE SIGNS COAL MINE HEALTH AND SAFETY MEASURE

Mr. RANDOLPH. Mr. President, the Senate and House have given congressional approval to the coal mine health and safety measure.

Both bodies gave strong endorsement to the bill when it was originally before Senators and Representatives. Then the conferees counseled for weeks and weeks, and labored cooperatively to adjust differences and return to their colleagues a constructive conference report. This was done, and the House approved the compromise legislation by a vote of 333 to 12, and the Senate gave its unanimous support.

Funds in the amount of $22 million have been approved on an amendment I offered to advance the purpose of the act. The cut in money for health and safety and research and disability programs was only $3 million less than my original request for funding.

The American people are eager for the work to begin.

I ask unanimous consent to have printed in the RECORD an editorial published in the Washington Evening Star of today, December 20, 1969, which underscores this sense of national responsibility.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REVERSAL ON MINE SAFETY

President Nixon, in a bewilderingly abrupt reversal, has turned against the Federal Coal Mine Health and Safety Act of 1969. He reportedly has threatened to veto the bill that had—almost up to the moment of passage—enjoyed the backing of the administration.

The maneuver is politically and morally inexplicable.

The safety measure, with the blessings of the administration, sailed through the House in October with only four votes in opposition. The Senate approved it by a vote of 73–27. By November 20, the conference committee had worked out the minor differences and the way was cleared for passage.

It is true that the bill, in final form, went further than the administration asked. But there was no hint that the measure would be disowned.

Then, on Wednesday, word was passed that the bill was unacceptable to the White House.

The belated rub, it seems, centered on the provision that would add a federally guaranteed payment of at least $136 a month to victims of black lung disease. The objection was two-fold: workmen's compensation programs are the prerogative of the states and should not be intruded on; the payments might add as much as $385 million a year to the federal budget, and would contribute unacceptable inflationary pressures.

We're all for states' rights—up to a point. And inflationary pressures should be avoided—whenever it is possible.

But the demonstrable fact is that the coal mining states have not met their obligations regarding the health and safety of the men in the mines, nor have they shown any abundance of zeal in compensating the disabled and the destitute when disaster strikes. The result is a vacuum of compassion that only the Federal Government can fill.

If the program of federally guaranteed compensation would indeed add nearly $400 million a year to the federal budget, that is persuasive testimony to the history of neglect up to the present, and to the urgency of immediate remedial action. And how, in the name of sound economy, an administration can approve a billion-dollar speculation in supersonic transportation while denying a third of a billion to black lung disease, is an exercise in moral rationalization that is—to put it mildly—hard to follow.

The health and safety standards established by the bill are necessitated by the dismal history of sudden death and lingering disease in America's mines. The compensation provisions are demanded by the long tradition of neglect of the victims. Both the House and Senate have disregarded the administration's switch and have passed the final version of the bill. It is now up to the White House. The President should reverse himself one more time and sign the measure into law. Should he fail to do so, Congress should override the veto.

Mr. RANDOLPH. Mr. President, I believe that the Nation's Chief Executive will give his signature to the legislation.

President Nixon will well serve the health and safety of miners and all other Americans with his signature.

Mr. WILLIAMS of New Jersey. Mr. President, the Nation can be gratified indeed for the wisdom and compassion so abundantly evident in the Washington Evening Star editorial of December 20, 1969, entitled "Reversal on Mine Safety."

As chairman of the Senate Subcommittee on Labor and Public Welfare which handled the coal mine health and

safety legislation for the many months leading up to the passage of the conference report, I can appreciate fully the brillance that reduces into this one editorial the moral demand for justice at last for one of the hardest working, least complaining and most overlooked groups in America, the coal miner and his family. I am proud to join my colleague, the senior Senator from West Virginia (Mr. RANDOLPH) with whom I have shared the months of legislative effort needed to perfect and pass this bill, in commenting on this editorial that he has placed in the RECORD today.

DELIBERATE CONSPIRACY IS CHARGED IN UNIVERSITY OF WYOMING DISPUTE

Mr. HANSEN. Mr. President, I ask unanimous consent to have printed in the RECORD an article that I believe every Member of the Congress, who is concerned about the education of American youth and who has concern for the innocent who become tools of the vicious, should have the opportunity to read.

The article is from the Wyoming State Tribune, a Cheyenne newspaper, and it is an accurate report of a special news feature published in the December issue of the NCAA News. The NCAA News is the official publication of the National Collegiate Athletic Association, an organization that I believe represents universities in every State in the Nation, and which I believe has an excellent credibility with most members of this body.

The article points out that some young Americans on college campuses, in this case young American Negroes, who happen to be good athletes and who perhaps could least afford the expenses of a college education without the aid of athletic grants-in-aid, are threatened and intimidated or deceived by militant organizations into becoming publicity tools for those organizations and into endangering their opportunities for college educations.

The article further points out that a particular incident at the University of Wyoming, the only 4-year college institution in my State, was engineered by the Denver, Colo., leader of the Black Panther Party, a group whose intent, it appears, from all evidence brought to my attention, is to promote separation of Americans, or, as the article puts it, to "polarize the races."

I am sure the Committee on Government Operations, under the guidance of the distinguished senior Senator from Arkansas, is far more aware of this situation than I, but, Mr. President, it is my hope that Senators will find the time to read this brief article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wyoming State Tribune, Dec. 16 1969]

DELIBERATE CONSPIRACY CHARGED IN UW DISPUTE

The official publication of the National Collegiate Athletic Association says in its December issue, mailed to subscribers this week, the incident involving the 14 University of Wyoming black football players resulted from a deliberate plan conceived last summer.

The NCAA News said it had reliable information that "plans were laid last summer to create an incident in the Rocky Mountain area."

"A Western Athletic Conference member with a stern-type football coach was to be selected as the target," the publication said in part, in an in-depth study of controversies involving black athletes across the country.

"The candidates colleges were narrowed to two, and the University of Wyoming finally was picked," the article said, adding: "Brigham Young University would be the trigger."

The NCAA News said the "outside leader" in the Wyoming case was the head of the Denver Black Panther Party, Willie Dawkins, whom it identified as a former Harvard University undergraduate who came to Denver from Oakland.

"On campus, the spokesman for the 14 athletes involved, in the final analysis, was Willie Black—neither athlete nor student—in his first year at Wyoming as a graduate teaching assistant in mathematics," the article said.

Black is the chancellor of the Black Student Alliance at the University of Wyoming, officially recognized by the Associated Students of the University of Wyoming last spring.

NCAA News said today the Black Student Alliance is synonymous with the Black Student Union on many campuses such as San Francisco State College. It quoted the San Francisco State BSU chairman, Ben Stewart, that the Black Student Union "is moving toward revolutionary nationalism through the vanguard of the (Black Panther Party)."

"There are undoubtedly a number of persons who have innocently associated themselves with the BSU on various campuses, but the evidence is overwhelming that the BSU and the BPP are destructive forces intending to use almost any device to disrupt and destroy," the publication said.

It asserted that intercollegiate athletics has become a prime target for these organizations "because of the publicity value inherent in sports and the fact that the Negro or black athlete involved in a mild disorder will be a subject of newsprint from coast to coast whereas the acts of a less-publicized BSU party member may only be reported in the campus newspaper."

The NCAA News said the Black Student Union is "proliferating across the country, organizing groups in high schools and colleges."

But it added that interviews indicate that a substantial number of black athletes "do not want to be involved with the hard-core insurrectionists; they do not want to be separated and polarized from their teammates, and they do not wish to be separated and alienated from their coaches."

"In some cases," the publication reported, "it's a matter of 'blood oaths' and threats such as 'we'll get you if you don't or 'you'd better not come home if you make the trip' which force racial loyalty."

The NCAA News said it was evident the basic aims of the militants was to "polarize the races" but warned: "It is equally evident that there cannot be athletic esprit de corps or teamwork on that basis. Several NCAA members have stressed that the black athlete will earn his own self-respect and leadership status in the United States—not only with fellow Negroes but with the American citizenry at large—by his preparation and accomplishments as a student with the assistance of his athletic success."

The NCAA News also claimed that the Black Student Union and the Black Panther Party have identical addresses for their respective national offices, in Berkeley, Calif., and added that police intelligence officers in both Oakland and Washington, D.C., have provided the McClellan Senate investigating committee "with a vast number of documents which establish the structure and violent motives of these groups."

FOREIGN POLICY

Mr. DOLE. Mr. President, never in the history of our Republic has one administration done so much, so quickly, to bring the Nation back from the valley of turmoil and division, and placed it on the high road to peace and unity.

Let me remind Senators that 1968 was a savage year in America.

Young men were burning their draft cards and their draft boards.

Americans were burning their cities and looting their neighbor's property.

The youth of our Nation were doing battle almost on a daily basis with the police and with other established authority.

The affairs of our Nation stood in shambled disarray.

The people had lost confidence in their leaders.

Worse, much worse, the people had begun to lose confidence in their Government.

Not since the Civil War had this Nation stood so divided against itself.

Not since the Revolutionary War had this Nation been so long in battle against a single enemy as it had been against the enemy in Vietnam.

Where, at the beginning of the 1960's, there had been brightness and hope, by 1968 there was darkness and despair.

Where, in 1960, there had been the fervor of a people united, by 1968 there was the fever of a people gone asunder.

There were more people at work than ever before. But it seemed to be a people without ambition.

There were more young people in school than ever before—but they did not seem to be seeking an education.

We were a moving, mobile people, but a Nation that seemed to be wandering aimlessly and without a destination.

All of this, and more.

The year was 1968. And it was not a vintage year for America and Americans.

Then came 1969.

And in January 1969 something startling happened to America.

When President Richard M. Nixon moved into the White House people suddenly became aware that there was a new purpose in our land.

What happened in America that so quickly restored the faith of Americans in their country, that so quickly relit the fires of patiotism?

It was not what President Nixon said. The American people were already so totally inundated by a plethora of words that had the President shouted his voice would have been drowned out in the thunder of dissent.

It was, rather, what the President did.

Acting quietly, calmly, and with confidence in himself and those who surrounded him, the President began moving the country away from endless war and toward peace.

The soft echoes of his inaugural address had barely died away when the President undertook a personal trip to

Europe to talk with our allies and to reassure them about American intentions and plans.

The success of that trip was notable, in large part, because it was such a sharp contrast to the parade ground maneuvers of the man who immediately preceded him in the White House.

There were few headlines. But there were solid results.

Back home, the President devoted himself with single-minded purpose to find a way out of the impasse in Vietnam.

He chose to find for himself alternatives in Vietnam—not to wed himself to a single policy which, if it failed, would result in further bloodshed and a deeper involvement of Americans in the affairs of that tiny land.

He did not commit himself totally to a military solution, as those who went before him had tried to do. Nor did he commit himself solely to the bargaining sessions at Paris, as tempting as that device might have seemed at the time.

Nor did the President simply decide to cut bait, head for shore, and turn the whole affair over to the South Vietnamese.

Instead, he left himself room in which to operate. His detractors said it was breathing room for him personally. Instead, it was diplomatic maneuvering room.

The course he adopted was one of strengthening the South Vietnamese people to that, when the time came, they could assume the full burden of their own defense.

But he refused to be precipitous in his actions. He was, instead, cautious.

His cautious and careful approach almost at once began to pay dividends.

By this summer the President was able to announce the first lowering of the American profile in Vietnam. For the first time since 1961 when the war began its escalation, the American Government was able to make the welcome announcement that our troops would be coming home—not more troops going overseas.

A few months later he was able to increase the rate of withdrawal so that by December 14 more than 65,000 troops had actually been withdrawn from Vietnam.

And on December 15 he was able to announce that another 50,000 troops would be brought back.

I have every confidence more such announcements will be made in the months immediately ahead.

But I also believe firmly that the President will not make any such announcements unless they can be made without in any way endangering the lives of Americans in Vietnam, or the program for American withdrawal from Southeast Asia.

Meanwhile, Mr. President, the Nixon administration has moved ahead forcefully on other diplomatic fronts.

He has launched talks with the Russians designed to bring an end to the arms race.

But he has not allowed this promise of progress to blind him to the dangers that lie in our path. While willing to negotiate with the Soviet Union he has nonetheless insisted that the United States be prepared to meet any eventuality, including the disaster of nuclear attack.

And so it was that he insisted on the ABM program which the Congress voted this summer.

The President has gone further. He has declared that it is the policy of the United States not to indulge in the dangerous, deadly game of preparing and storing nerve gas and the ingredients of biological warfare.

All of this he has done in the area of foreign relations.

And all of it has helped to restore the faith of the American people in their Government.

Mr. President, when the Nixon administration went to the American people and asked for a renewal of the income tax surcharge that request was accompanied by an assurance that the Government itself would curb its appetite for money. The President made no idle promises. He accompanied his words with action. The budget was cut.

This, too, helped restore the faith of the American people in their Government.

In summary, let me say that this administration has been in office just short of 12 months.

During that time it has withstood the storms of criticism which its detractors have leveled against it and has not moved from its solid course of action designed to bring America back onto the road to peace.

This administration has taken no step that would intensify the divisions that exist within the Nation.

Instead, every action it has taken has been designed to restore unity.

This administration has demonstrated from the very first that it is run by men of good will.

Our problems are not solved.

But once again the American people are seeking solutions together.

RESPONSIBILITY FOR THE PROBLEMS OF INFLATION

Mr. ALLOTT. Mr. President, I was interested to hear Senators from the other side of the aisle discussing with such vigor the problems of inflation.

It was intriguing to hear them place the blame for today's inflation on the President of the United States who now occupies the White House. I suppose I cannot blame them—much as I disagree with them. After all, it is so much simpler to blame the administration now in power on the old theory that the best defense is a good offense.

Or, to be a bit more blunt, when you have made a complete mess of things, attack the guy trying to clean up after you.

Yes, my Democratic colleagues have 8 years of performance which they hope to conceal by attacking the person who inherited the whirlwind they sowed.

Mr. President, you will recall that in 1960 the Democrats rode to power in the presidential election on the slogan: "Let's Get America Moving Again." In an effort to make good on that promise, the administration in 1961 launched itself on a deliberate policy on two fronts.

First, they decided that a little inflation is good for the American people. And so they set out deliberately to foster inflation at the rate of about 2 or 3 percent a year.

Second, they set out on a policy of getting the United States more deeply involved in the affairs of South Vietnam—and the fantastic war which followed.

Both of these policies bore fruit.

And it is with that bitter fruit that we are attempting to deal today.

Let us examine first the fallacies of that policy of inflation.

In the early 1960's it was decided that the only way to get the American economy steamed up was by adopting a policy of inflation. To do this the Democratic administration set about making money easy to come by. They set out to overspend the Federal budget—to create continuing deficits. They got through Congress a tax bill permitting tax incentives and credits for businessmen who wanted to expand their capital equipment. They adopted a tax policy of lowering tax rates for individuals to increase the flow of money into the consumer markets.

Voluntary wage and price guidelines were adopted which they claimed would permit a "controlled" spiral of prices and wages. It was determined that a couple of percentage points a year of inflation were good for America. It was further decided that inflation could be controlled without any real effort at discipline.

Mr. President, let me observe here that having a little inflation is just like being a little bit pregnant. There just "ain't no such thing!"

Once the pot began to bubble it inevitably came to a boil. There was no other course open.

When the spiral of inflation took hold, it was inevitable that it should grow and burgeon into the awful monster that today grips the American economy.

There was no other course it could follow.

This engulfing inflation could have been brought under control with comparatively little hardship several years ago. Except for one thing.

That one thing is the war in Vietnam.

For too many years the Johnson administration treated the war in Vietnam as though it were something separate from the rest of America.

During 1965, and 1966, and 1967, the Johnson administration did not even attempt to give Congress and the American people an estimate of what the war in Vietnam was costing when the budget was submitted. It was not until the fiscal 1969 budget came to Congress that an effort in this direction was made, and then the President said the war would cost us about $25 billion a year. Actually it cost a whole lot closer to $35 billion than $25 billion. But at least by 1968 the administration was willing to admit that there was a war going on and that it was costing money. And that the money had to come from somewhere.

But even so, the Johnson administra-

tion—the Democratic administration—refused to go directly to the American people and get the money for Vietnam in the form of higher taxes. Nor was the Johnson administration willing to discipline its own spending excesses in the slightest bit to help pay for the Vietnam war.

Perhaps this was all due to the fact that the previous administration in the White House had sort of inched its way into the Vietnam morass. Under President Kennedy and then President Johnson we got a little further involved with each passing month. First, a little in 1961, when our men in Vietnam stopped being trainers and technicians and began to be field advisers to the South Vietnamese Army. Then in 1962 we got in a little deeper as more Americans were being shot at and killed, and we needed more troops in Vietnam to protect those we already had there. Then in 1963 we found ourselves with 16,000 Americans in Vietnam and 78 dead.

By 1964 we still only had 23,000 troops in Vietnam. At this point let me remind the Senate that it was in the year 1964—which also happened to be an election year—that the President actually submitted a proposed cut in the defense budget. I am not saying that the forthcoming elections of that year actually had anything to do with the President's decision. But the coincidence seems mighty strong.

By 1965 the war was beginning to be an American war in Vietnam. We had nearly 200,000 troops committed. We had started spending money at the rate of nearly $2 billion a month.

But still the war was treated almost as if it existed on another planet in another time. It was not allowed to interfere with the domestic policies of the Johnson administration.

The Democratic Congress continued to spend money for the domestic programs that the Democratic administration kept demanding. With every new appropriations bill that was passed, there came a need to find the money somewhere because still the administration refused to go directly to the American people.

So it was that the Democratic administration of Lyndon B. Johnson began more and more to finance its fantastic spending programs by going to the money market.

The idea was to spend and borrow; to borrow and spend.

No thought was given to the morrow.

No effort was made to impose self-control and self-discipline.

The policy of borrowing for the Great Society forced up interest rates. The law of supply and demand worked in the money market, and when the Federal Government was in that market with both feet, borrowing some $30 billion over the past half decade, the cost of money could do only one thing—go up.

And it has gone up. And up. And up.

Mr. President, Senators have made much over the President's threats to veto the tax bill and some of the more irresponsible spending bills that this Congress has approved.

Let me say this plainly and flatly: Medicine is never very pleasant; and economic medicine is perhaps least pleasant of all because it applies to all of us.

This dreadful disease of inflation was allowed to go unchecked and rampant throughout the decade of the 1960's by the Johnson administration, and by the Kennedy administration before that. Now the medicine has to be applied. It has to be swallowed. And, bitter as that medicine tastes, we must face up to its need.

In another sense, the business of trying to control inflation is somewhat like trying to rear a child. It is possible without too much fuss and feathers to discipline the child when he is young. It gets more and more difficult—if the child is allowed to have his own way at all times and in everything—to discipline him as he grows. Finally, when the undisciplined child reaches the age of manhood, it takes the severest kind of measures to curb his behavior.

Had the Kennedy administration acted with restraint some 8 years ago, the problem could easily have been curbed at that time.

Had the Johnson administration acted to curb inflation just 5 years ago, it would have been a little uncomfortable for the American people, but the job could have been accomplished with a modicum of pain.

But neither President Kennedy nor President Johnson chose to act.

Now, after 8 years of unbridled inflation, President Nixon is facing up squarely to his responsibility to the American people. He is trying to bring inflation under control. And it is painful.

As I said, Mr. President, I do not blame Senators for wanting to place the blame for the present situation on someone else. I just want to set the record straight and place the full responsibility where it belongs—that is, on the shoulders of the Democratic party, which had complete control of all three branches of Government—the White House, Congress, and the courts—from 1961 through to January of this year—all through the decade of the sixties.

Before I close, I should like to recall a Latin proverb:

Serpens nisi cum nederit serpentent non sic Draco.

Translated it means that a serpent, until he has eaten another serpent, cannot become a dragon.

Likewise, until inflation feeds upon itself it cannot become a dragon.

The food for this dragon was supplied by the two Democratic administrations that ruled America in the sixties.

ECONOMIC OPPORTUNITY AMENDMENTS OF 1969—CONFERENCE REPORT

Mr. NELSON. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 3016) to provide for the continuation of programs authorized under the Economic Opportunity Act of 1964, to authorize advance funding of such programs, and for other purposes. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER. The report will be read for the information of the Senate.

The legislative clerk read the report.

(For conference report, see House proceedings of December 19, 1969, pages 40244–40247, CONGRESSIONAL RECORD.)

The PRESIDING OFFICER. Is there objection to the present consideration of the report?

There being no objection, the Senate proceeded to consider the report.

Mr. NELSON. Mr. President, I call attention to the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. NELSON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. BURDICK in the chair). Without objection, it is so ordered.

Mr. NELSON. Mr. President, I have just a very brief 2½ page statement to make on this conference report.

Mr. STENNIS. Mr. President, will the Chair call the Senate to order, so that the Senator may be heard? This is a highly important matter.

The PRESIDING OFFICER. The Senate will be in order.

Mr. NELSON. Mr. President, the Senate passed S. 3016, to extend the Economic Opportunity Act, on October 14 by a vote of 72 to 3. The House passed a similar bill on December 12 by a vote of 276 to 117.

Both bills extend the Office of Economic Opportunity for 2 years, from July 1, 1969, to July 1, 1971, which was also the recommendation of the President.

There were certain differences in the two bills. Conferees appointed by the Senate and House met on December 17 and 18 and reached agreement.

Differences in the authorization level were compromised. The Senate had authorized $2.048 billion for fiscal 1970, which was the amount requested by the President. The House had authorized $2.343 billion. The conferees settled on $2.195 billion.

The Senate had authorized $2.732 billion for fiscal 1971. The House had set no limit, but had specifically authorized increases in funds for several manpower, education and emergency food and medical programs which represented net increases of $99 million. Therefore, the conferees agreed to set the authorization for fiscal 1971 at $2.831 billion, which represents the Senate authorization plus the specific additions authorized by the House.

I will briefly summarize the other issues.

The House conferees were adamant against a Senate amendment to authorize a line-item veto for Governors on OEO Legal Services programs, and to abolish the authority of the OEO Director to override a Governor's veto, and after extensive discussion and consideration, the Senate receded on this issue.

The Senate insisted on provisions in the Senate bill to establish national programs in the field of alcoholism and drug abuse, with a specific reservation of funds to guarantee that these programs would be developed by OEO. After lengthy discussion, the House agreed to recede and accept this section of the Senate bill exactly as written, with the provision that a similar reservation of funds be written into the law for local initiative programs. The amount reserved for local initiative in the bill is the exact amount requested in the budget by the President.

The House conferees accepted, with slight modification, the Senate amendment designed to guarantee that OEO-funded agencies make a adequate provision to pay all their tax liabilities or be denied new grants from OEO.

The Senate insisted on earmarking specific funds for the various programs operated by OEO, rather than giving a lump sum authorization as requested by the OEO director. The House had very limited earmarking in its bill, but agreed to accept the detailed earmarking in the Senate bill.

Having earmarked in such detail, the Senate had given the OEO Director authority to reallocate funds within the various programs, up to 15 percent of the amount appropriated for the program in fiscal 1970 and up to 20 percent for fiscal 1971. The House conferees agreed to accept this principle with the modification that the reallocation authority be limited to 10 percent the first year and 15 percent the second year, and that limits be set on the amount the Director could add to any existing program. For programs of $10 million per year or less, the Director could add no more than 100 percent; for larger programs, he could add no more than 35 percent. These added funds would, of course, have to be taken from other OEO programs.

The end result is that the OEO Director receives a clear directive from Congress on how we expect that the funds appropriated to him will be allocated, but at the same time we give him the flexibility that any program director is entitled to in making limited reallocations within his agency.

Mr. Presdent, I move adoption of the conference report.

Mr. DOMINICK. Mr. President, I should like to ask the Senator whether he wants to yield or whether he wants me to obtain the floor.

Mr. NELSON. Does the Senator want the floor in his own right?

Mr. DOMINICK. I think it would be easier if I had the floor, and I could engage in some dialog with the Senator.

Mr. NELSON. I yield the floor.

The PRESIDING OFFICER. The Senator from Colorado is recognized.

Mr. DOMINICK. Mr. President, I think the Senate should know that many of the Republicans on the House side refused to sign the conference report and the majority of the Republicans on the Senate side refused to sign the conference report. We did so because we thought there were really grave problems in the conference bill which we were presenting to the respective Houses, and I should like to detail some of them.

It will be recalled that when the Senate authorization bill came up in October, I offered an amendment—and succeeded in that amendment—to eliminate the so-called add ons for fiscal 1970 from the bill. This eliminated $292.1 million in separate authorizations for eight specified programs where the $292.1 million had been added on above the budget. That amendment passed. I offered a similar amendment to eliminate $584.2 million in add ons for 1971, which were defeated.

The effect of the conference report as to the 1971 add ons is to take almost the entire amount of the Senate add ons, with two small reductions, and then to add two new items—one for $15 million and the other $34.7 million. The net result for 1971, including the add ons is to authorize the expenditure of $2.832 billion. This represents nearly a 30-percent increase in 1 year from the 1970 to the 1971 budget.

In addition, the administration and the Director of OEO have tried to change the concept of this organization. They have said that the problems that OEO has encountered in acceptance by the public around the country have largely been problems of administering and operating the program.

They said, "We do not want OEO to continue to be a separate agency. As soon as programs have been developed far enough that they seem to be able to run we want to put them in an established branch of government and reserve for the OEO an innovative role."

Unfortunately, because of the lack of flexibility and earmarking brought on in this bill, those types of innovative programs and the ability of OEO to move into that type role is sharply restricted.

There is one other point I want to bring up while the distinguished Senator from Mississippi is in the Chamber. I refer to the so-called Carey amendment. This is the amendment which, when originally presented to us, provided that families of servicemen in cases of extreme hardship shall be entitled to legal services provided for under the Office of Economic Opportunity.

It then went on to provide that the cost of that program shall be reimbursed by the Secretary of Defense. It became perfectly obvious as one looked at the scope of this amendment that everybody in the military would be qualified, speaking in terms of hardship. I have never heard anyone who did not agree with respect to a definition of hardship in that regard. Most members in the military would be asking for legal services and be asking the Department of Defense for the cost of whatever might be involved. This would include office expense, rental expense, telephone expense, cost of the time of lawyers, court expenses, and whatever there may be. It would be an almost totally impossible burden as far as existing legal services are concerned and an almost totally impossible administrative problem to determine the real expenses of the Secretary of Defense to try to take care of them.

As a result, we fought this rather strongly. I had the assistance of the Senator from Wisconsin in that respect. Originally we lost. We had to come back and ask that the conferees reconsider this matter because of the problems I have just outlined and because of other problems, such as the fact that the legal services branch of OEO would not be able to provide this service, and they would not have the funds to accomplish it.

As a result, we were able to effect a change in the language. The conference bill provides that the Director is not required to expand or enlarge existing programs or to initiate new programs in this area unless and until the Secretary of Defense has agreed with the Director on the reimbursement of costs for any such expenses or enlargement.

Because this is so important, I shall read the exact words for the RECORD. The section now reads as follows:

(b) Section 222(a)(3) of such Act is amended by adding at the end thereof the following: "Members of the Armed Forces, and members of their immediate families, shall be eligible to obtain legal services under such programs in cases of extreme hardship (determined in accordance with regulations of the Director issued after consultation with the Secretary of Defense): *Provided*, That nothing in this sentence shall be so construed as to require the Director to expand or enlarge existing programs or to initiate new programs in order to carry out the provisions of this sentence unless and until the Secretary of Defense assumes the cost of such services and has reached agreement with the Director on reimbursement for all such additional costs as may be incurred in carrying out the provisions of this sentence."

I wish to ask the Senator from Wisconsin, in order to establish legislative history, whether I am correct in assuming that, in fact, the conference really did not expect any new services to be provided until agreement is reached as to who is going to provide them and when the funds will be obtained.

Mr. NELSON. Mr. President, as the Senator knows we spent more time on this single point than on any other point in the bill. The Senator from Colorado consistently made clear his strong reservations and objections. He raised the point that we did not want to get into a jurisdictional question. We permitted the matter to go over a day.

It is my interpretation of all the discussion we had, with respect to legal services for members of the military services and their dependents, that there was no intent to add any further burdens on the OEO legal services program—any more than they now have—until and unless the Secretary of Defense and the Director of the Office of Economic Opportunity agree upon a program; until the Secretary of Defense has agreed to fund the program. I think Members on the House side even more strongly emphasized the lack of intent to interject ourselves into the business of the Pentagon.

I shall read from the conference report which is published at page 40247 of the RECORD of December 19, 1969. It states:

The conferees recognize that servicemen, qualifying under legal services guidelines,

are presently eligible for such services and are receiving help and representation. No inference is to be drawn that such assistance is to be curtailed or eliminated. It is the understanding of the managers on the part of the House that the Department of Defense is considering developing its own programs to provide these legal services. The inclusion of this new provision is not intended to supplant this effort but rather to offer an alternative which it is hoped the Department will consider.

So the manager's own language simply says we are offering an alternative which we hope the Secretary of the Department of Defense will consider.

Mr. DOMINICK. I thank the Senator from Wisconsin. I think this colloquy is very helpful to further tie down the matter. It was my intention to provide that nothing should be expended under authority of this provision until further agreement is reached.

Mr. MONDALE. Mr. President, will the Senator yield?

Mr. DOMINICK. I yield.

Mr. MONDALE. Mr. President, I agree with the understanding expressed by the Senator from Colorado and the Senator from Wisconsin. I would like to add one further point. None of us wish thereby to imply there does not exist a very serious area of need here. I have obtained the figures since our conference.

Mr. President, around 265 projects comprising 850 law offices in poverty communities and operating throughout 49 States, District of Columbia, Puerto Rico, and the Virgin Islands were funded at a level of $46 million to offer free legal services to the poor. A caseload of 610,000 was carried by 1,800 full-time attorneys. This means an average caseload per attorney of 339 cases per year. It is estimated that a caseload in fiscal 1970 will rise to around 800,000. This makes a small impact on a poverty population of over 25 million people.

It is estimated that there are presently 500,000 servicemen in the United States within the pay grades E–1 to E–3. These men and their families would be eligible for legal services. There are also some servicemen in the pay grade E–4 who would be eligible, depending on the size of their families. In addition to this group, there are approximately 450,000 servicemen in Vietnam whose dependents residing in the United States might also be eligible for legal services. Approximate figures of the eligible military population are as follows:

First. Of the 500,000 servicemen in the United States with the pay grades E–1 to E–3, an estimated 15 percent or 75,000 men have dependents. If each of these 75,000 men have approximately three dependents each, the dependent population eligible for legal services is approximately 200,000.

Second. In addition to the 200,000 eligible dependents, there are also the 500,000 eligible servicemen within the United States. This means a total of 700,000 people in the military that would be eligible for legal services. It is important to remember the number of dependents of servicemen stationed in Vietnam who would also be eligible for legal services, as well as those families whose sole support is from servicemen within the pay grade E–4. Figures on these last two groups are not available.

Mr. DOMINICK. Mr. President, I thank the Senator from Minnesota. I thought, in conjunction with the colloquy we have just had, that I should refute any inference that the Army has not been providing legal services, by having printed in the RECORD a statistical report of the Army legal services program from July 1, 1968, to June 30, 1969, which shows that the Army legal assistance program, not counting other branches of the service, took care of 1,250,604 cases. This indicates a whale of a lot of effort on the part of the Army legal assistance program to try to be of assistance to members of the service.

I ask unanimous consent to have this table printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

STATISTICAL REPORT OF ARMY LEGAL ASSISTANCE PROGRAM, JULY 1, 1968 TO JUNE 30, 1969 TAB A.

	Total	Adoption and change of name	Citizenship and naturalization	Civil rights	Domestic relations and paternity	Non-support	Personal finance and dependents insurance, etc.	Personal property, autos, etc.	Powers of attorney	Real property, sales, lease, etc.	Taxation, all kinds	Torts	Wills and estates	Miscellaneous
1st Army	211,508	3,056	7,979	407	18,202	6,101	21,882	15,576	23,429	10,167	20,974	5,116	24,105	54,514
3rd Army	231,488	2,153	4,567	767	14,935	3,237	18,423	12,581	32,697	6,771	39,675	3,674	28,519	63,489
4th Army	184,842	1,726	4,382	205	13,252	2,804	18,923	10,053	19,626	5,267	8,105	2,693	20,676	77,130

Mr. DOMINICK. Mr. President, in order to clarify this, under Senate rule XXV, the Committee on Labor and Public Welfare has jurisdiction over soldiers and sailors for civil relief, but does not have jurisdiction, as I understand it, over the military in any way, nor does it have jurisdiction over similar activities of this kind. Yet it originally appeared we might be authorizing legal services groups of the OEO to represent people in criminal cases. That is not our intent. Is that correct. I ask the Senator from Wisconsin?

Mr. NELSON. Our counsel advises me that the Senator from Colorado is correct.

Mr. DOMINICK. Mr. President, I thank the Senator from Wisconsin.

Now, Mr. President, I know that the distinguished Senator from Mississippi (Mr. STENNIS) has some remarks to make on this subject. I believe he would like to make them at this point.

Mr. STENNIS. Yes. I thank the Senator from Colorado.

Mr. President, I am very mindful of the fine work which has been done on this conference report by the Senator from Wisconsin (Mr. NELSON), with his usual diligent and honest attention to the matter. That, I know, is shared also by the Senator from Colorado (Mr. DOMINICK), and other members of the conference committee.

Mr. President, I feel very strongly that the conference report invades and crosses over the line into another department without any proven need. I also feel that this is a matter which can be used and might be used to strike at the very vitals of discipline in our military services.

I have the growing feeling that a serious situation is developing. I do not mean any mutiny, but there are so many people trying to help so many others, and bringing in so many suits which, with the general laxness and permissiveness, whatever it is, that is going on now in our society outside the services, that it is generating a serious problem of maintaining discipline. An atmosphere is beginning to develop that will make it more difficult for the military services to maintain a prevailing and wholesome spirit and attitude toward needed military discipline.

The table the Senator from Colorado just had printed in the RECORD shows that more than 1,250,000 cases within the past year have been attended to by the Army itself, made up of various categories for legal advice, information, or assistance of some kind of remedial help in this general field which was given to the families of the men who are serving in our military services.

It shows what an enormous effort is being made by the military to meet that responsibility. It also shows what demand there is. I want everyone to have their legal rights. My point is that it is time to cut off these things. I know that the military, as the record will show, and as I know from their attitude, has been very genorous in this matter already.

Another question is, Where are we going to draw the line as to the multitude of cases which can be brought in?

The men who work for OEO are young lawyers and will work hard for anyone. I am not attacking the OEO, but these men would naturally like to do business, and they would like to get into things.

Right at the worst part of the Vietnam war, when our casualties were near the highest, a lawsuit was brought to prevent

a National Guard unit, which had been called up for duty, from being sent to Vietnam. That case went as far as a member of the Supreme Court of the United States who issued an order restraining this military command, which came from the Commander in Chief—not expressly from him, but that was his responsibility, it came from the President of the United States—temporarily suspending this lawful military order.

Well, the Supreme Court, in its entirety, reversed that case. But, how far are we going to encourage that kind of litigation? There are a great multitude of cases on that subject. I believe they are already being taken care of. There is every reason in the world for the Secretary of Defense respectfully to decline to go into this matter.

Thus, under the provision of the conference report, and the law agreed on, it would not come into being unless the Secretary of Defense agreed; but he can be told to come in, anyway, regardless of what his judgment may be.

Frankly, I do not think this kind of legislation receives the meticulous consideration we ordinarily accord it.

I will illustrate it by this conference report.

Why, last evening, about 6 o'clock, we all signed the conference report on the HEW appropriation bill. It was all completed and ready for the formalities of being enacted. Still today, we are working on the authorization bill. The HEW bill includes appropriations for the OEO at almost the top amount. Today, after the appropriation bill has been approved, except for the technical finalities, we are getting around to the authorization and I think we are making an exception in these kinds of matters.

I do not know what the Secretary of Defense may be directed to do. If he is to have a program like this, I think, frankly—and I am not looking for more work for the Armed Services Committee—it ought to have the direct judgment of the Senators who have responsibility in that committee, before the Secretary of Defense and the military have to launch into a program like that and the Appropriations Subcommittee on Defense has to appropriate money to pay the bill. That is what the conference report proposes.

Except for the bare judgment of the Secretary of Defense, which could be overruled by the White House, this measure puts the Secretary of Defense in that business and makes it mandatory that we appropriate money, not for OEO, but for the Department of Defense to pay the bill. That is why I say the Armed Services Committee ought to have jurisdiction of this matter.

I have no grievance—in fact, I compliment him—with the Senator for working so hard on it, but we will break down the jurisdictional lines of this great institution, the United States Senate. Sometimes there is some overlapping, but I think this year demonstrates that we have gotten almost into a reckless abandonment of the jurisdiction of committees. When that goes, the Senate goes; we are just 100 individuals, almost, unless we have a high regard for these jurisdictional matters.

I know, as a practical matter, it is virtually impossible to defeat this provision in the conference at this stage of the session, but if it were some other time, I think I would move that we have a full debate on this matter, and at least have a vote on it, and just point out where we are going. It is done, but I am afraid they have overexaggerated the need for this legal relief assistance. I believe the system already in vogue shows that there have been 1,250,000 instances—not legal cases, but instances—in which information for legal relief and legal advice and all other kinds of service have been granted in 1 year in the Army alone.

I want to encourage the Secretary of Defense with all the intelligence and scrutiny and judgment and power that is in being in his office, not to launch and go into this program unless he is fully convinced of the need and necessity. I think his best course would then be to get a communication to the Congress in some way that "I need relief along this line and I want it for the military, and the military appropriation should pay the bill."

As a member of the Appropriations Committee, I say we are just dipping into one bucket or pot of money and putting it in another, and switching back and forth between the departments. They do not know what the other is doing. One pays the bill and the other does the work. I do not want us to enmesh and encumber our military programs with that pattern. It will perhaps come out all right for some of the departments.

Let me ask the Senator from Wisconsin a question. This proposed law and this arrangement and this report certainly do not contemplate any kind of proceeding in court-martial cases, or anything like that, so far as it pertains to a man in the service charged with a military offense. Is that correct?

Mr. NELSON. That is my interpretation. The issue was not specifically raised; but, in the context of the discussion, we were talking about the kind of case in which the poverty client qualifies for assistance from OEO legal services right now. No one in the conference raised that question, and I would assume there was no intent in anyone's mind that it be extended to such a case.

The senior Senator from New York apparently wants to say something about that.

I think everybody here would agree that including in the OEO bill anything which might involve legal services programs in court-martial proceedings would be an unacceptable invasion of the jurisdiction of the Armed Services Committee.

Mr. STENNIS. I wonder if I may address some further questions to the Senator from Wisconsin.

As I understand the intent of this provision and what the conferees understood, it is not to come into operation unless the Secretary of Defense, in his own deliberation and in his own judgment, should decide that it should be done and should be paid for out of those funds, from the standpoint of the welfare of the military service and the individual concerned, and further such funds are appropriated.

Mr. NELSON. That is absolutely correct. We have several members of the conference committee present. If I respond incorrectly, they will correct me. It was repeatedly said on both sides—and I thought Mr. CAREY himself said—that if the Pentagon says "No," refuses to reach agreement, or if the Secretary of Defense refuses to reach agreement on funding, that is the end of it.

Mr. JAVITS. Mr. President, will the Senator yield, so we can affirm it on this side?

Mr. STENNIS. Yes, but first I want to develop this a little more. I address these questions to the Senator from Wisconsin because I understand he was chairman of the Senate conferees.

So the understanding of the Senator from Wisconsin, at least, is that the Secretary of Defense would have to make this independent judgment that it would be to strengthen the military and also the welfare of the individuals concerned, not on each case, but before he went into the program.

Mr. NELSON. That is correct. I think there was no disagreement on that, because several Members said that, if the Secretary of Defense declines to do it, declines to assume responsibility, declines to reach an agreement on funding the additional payment that OEO might become responsible for, the provision would be null and void.

Mr. STENNIS. That is a very wise decision if we are going to have any at all.

Where is the poverty line? We say, "If it comes within the poverty line." What is the standard, so far as this bill is concerned, as to where the poverty line is?

Mr. NELSON. As the Senator knows, a poverty index was established by OEO. Right now soldiers and their families are currently eligible for OEO legal services if they meet the poverty standard, as is any other citizen of the country.

Mr. STENNIS. Those who come within that definition already have that service available?

Mr. NELSON. That is correct.

Mr. STENNIS. What additional service does this bill give?

Mr. NELSON. It does not add any service that they otherwise are not now eligible for.

As the Senator knows, we did not conduct hearings. This matter was not in our proposal. I guess the concern was this: Mr. CAREY looked at this, apparently delved into it, and felt that there are many families of servicemen who really cannot get these services because there is not enough money in the OEO legal services program. I think he discussed this issue with the Pentagon. The Pentagon was aware of that.

I think the intent here was to give this issue some viability, to encourage, hopefully, the Defense Department or OEO to undertake the responsibility to service these families. Members of the

House said in the conference committee that they get loads of letters—for example, a letter from a wife who was going to be evicted from her home and whose husband was overseas. She was in the poverty level and she could not get any legal assistance.

It was that kind of thing. They may not be anywhere near a military base. That was the kind of problem that was discussed in conference.

Mr. DOMINICK. Mr. President, will the Senator yield on that point?

Mr. STENNIS. Yes; I shall be happy to yield in a moment. If they are already eligible, why add this program? Is it just to get the bill paid?

Mr. NELSON. I do not like to try to speak for Mr. CAREY, but——

Mr. STENNIS. Who?

Mr. NELSON. Representative CAREY, who was the sponsor of the provision in the bill passed by the other body.

Mr. STENNIS. Well, the Senator has an idea, though. Why this program, if they already have the service available? Is it just to get the money to pay for it? Is that why it is put over in the military? It is a matter of judgment, is it not?

Mr. NELSON. I think the fact is that if everyone who was eligible, who might be eligible, were to go to OEO, OEO would say, "We do not have sufficient funds to provide the personnel in legal services programs that would be necessary." The feeling was that if they were to extend services to military personnel and their dependents, they ought to have the funds to do it.

There is one further point. The Senator is probably familiar with a letter to Mr. ALBERT QUIE of November 19, 1969, in behalf of the Secretary of Defense, from the General Counsel's Office of the Department of Defense. He wrote saying that, as the Senator well knows, they are evaluating this problem now, and one of the difficulties is the limitation on the kind of services that they can actually give to military personnel and their families. The General Counsel says:

> One of the more significant limitations is that military legal officers in the main are limited to providing office advice, including preparation of some legal documents, and are unable to represent their clients in court proceedings or other legal proceedings or to negotiate fully in their behalf with adversaries.

Later I shall ask that the entire letter of the General Counsel for the Secretary of Defense be printed at an appropriate point in the RECORD.

Then the General Counsel goes on to say that they have had a study group, and it has explored this problem, and that—let me read further from the letter:

> One of the recommendations of the study group proposed that efforts be made, in cooperation with civilian bar associations, to expand the military legal assistance programs so that military legal officers could provide more complete legal services to military personnel—in particular those in the lower enlisted pay grades. This recommendation was approved by the Assistant Secretary of Defense (Manpower and Reserve Affairs) and in October 1969 the military departments were asked to undertake steps to implement this recommendation. If these efforts are successful, it is envisioned that in certain cases military legal officers would be permitted to prepare and file pleadings in civilian courts, negotiate in behalf of clients, and make court appearances. In short, if the efforts now underway are successful, the group of people sought to be benefited by the amendment in question—

Referring to Mr. CAREY's amendment, which the Senator is discussing—

> would be taken care of under the military assistance programs. We believe that it would be preferable for the Department of Defense to provide this service to its personnel than to have them using programs operated by the Office of Economic Opportunity.

The Senator from Colorado argued very strongly against any provision at all. That is the reason the Senator from Colorado insisted that this program not be initiated in any way unless the Secretary of Defense agreed, and agreed to fund it; and then, as I pointed out earlier, in the manager's report on the House side, they state very clearly that it is not the intent of this section to supplant anything which the Secretary of Defense may be doing; it is only as an alternative that the Secretary might consider.

Mr. STENNIS. I thank the Senator for his explanation. He has made some very good points.

But I go back to my original question: Is it not a fact that the main reason for creating this program in this way, after all, is to get the money from the Department of Defense rather than let the OEO pay the bill?

Mr. NELSON. I would assume that that is the reason.

Mr. STENNIS. Yes.

Mr. President, I do not expect to detain the Senate very much longer, but let me point out to the Senate that this table which has been inserted in the RECORD speaks only for the Army alone.

So, just the Army alone, last year had 1,250,000 cases in which they rendered this assistance—just one of the military services—and I should like to list some of the types of cases. They have it outlined here.

Cases involving adoptions and changes of name—they give the exact number—citizenship and naturalization; civil rights or domestic relations and paternity—116,000 cases on that alone; nonsupport, 27,000; personal finance, insurance, and so forth, 26,000 cases; personal property, autos, and so forth, 79,000 cases; powers of attorney, 162,000 cases; real property sales, leases, and so forth—now we come to evictions—the Army alone had 44,000 cases of that kind within the 12-month period ending June 30, 1969.

Taxation of all kinds, 133,000 cases. They are the income tax problems, I suppose. I am stating round numbers only.

Torts—which, as we all know, are personal wrongs—20,000 cases; will and estates, 120,000 cases; and miscellaneous, 361,000 cases.

So, there are the facts. The Army alone is rendering that much service, and it is agreed by the Senator from Wisconsin that the main purpose here is just to get the money.

As I say, we have an appropriation bill already agreed to, ahead of the authorization bill. OEO is getting all it asks for, but if there is a real reason for this service, I would certainly help sponsor the appropriations.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. STENNIS. One other point. There have been no hearings on this. The Senator pointed out that he supposed I was familiar with a letter of November 19. I am not familiar with it. But there have been no hearings, and no real record on this thing, through which one could obtain the facts.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. STENNIS. I think the Senator from Rhode Island asked me to yield. I yield first to him.

Mr. PELL. Mr. President, there is just one point in support of the Senator's argument, which I wanted to point out, and that is, coming as I do from an area of considerable military installation, one sees people falling between two stools, as it were. They may be removed a little bit from where legal services are available; for example, a 20-mile ride, while it seems like nothing in some parts of the country, can be an expense for a woman without a car. Her husband may be overseas, and she may not be able to use the military services available, and may not be aware of the OEO services.

Also, at some places and times, one finds that the military is not as competent in this legal services area as in others. I think Senators will find a certain spottiness in the way the service is rendered.

I had not thought about this problem until it was discussed in conference, but it seemed to me that this provision might help the people who fall between the two stools of the military legal assistance and the OEO legal assistance.

Mr. STENNIS. Yes. Well, I certainly want them to have all the assistance they justifiably need, and as conveniently as possible, but if we turn it over to OEO lawyers and have someone else paying the bill, we are not only going to have a bill run up, but we are likely to have duplication of services, and everything else.

Mr. DOMINICK. Mr. President, will the Senator yield to me for just a moment?

Mr. STENNIS. I yield to the Senator from Colorado.

Mr. DOMINICK. I have been listening with great interest, because the chairman has expressed many of the feelings I myself have on this issue. I have decided to offer a motion to recommit with instructions, and I will request a rollcall vote.

The motion will include striking this particular provision, as well as striking one other and putting back one Senate-passed provision.

Mr. STENNIS. Mr. President, I yield the floor.

Mr. JAVITS. Mr. President, I may say to the Senator from Mississippi that it was not my purpose in any way to interrupt him. However, as I am the ranking minority member of the committee and as I did sign the report, I was only trying to lock in, as it were, the explanations which were made by our chairman.

Mr. STENNIS. Mr. President, I thank the Senator. I certainly did not ignore him. I did not realize he was present.

Mr. JAVITS. Mr. President, I would point out this question and then deal with the whole report. Speaking now as a lawyer, just as the Senator from Mississippi is a lawyer, I wish to say that the real issue is really court appearance in the cases which are cognizable under the jurisdiction of the Committee on Labor and Public Welfare. They are cases for veterans and servicemen that are cognizable under the following headings and are committed to the Committee on Labor and Public Welfare: vocational education and reeducation of veterans; medical and training for veterans; soldiers and sailors civil relief; and readjustment of servicemen to civilian life.

Those are the four categories which give veterans affairs jurisdiction, which is headed in the other body by the Veterans' Committee.

The real gist of the problem, however, was not in the bill. And I do not think we would have had it if it had not been raised in conference. That is the inability of military officers to appear in court in civil cases and to be acceptable to the court, because often they are admitted in different States, or for other reasons are not acceptable in the particular place where the veterans problems or those of his family occur.

According to the figures of the OEO, 25 percent of their legal services cases are court cases. That means that one-fourth of their caseload is in the courts.

This bears very materially, therefore, on the letter which was written by the general counsel of the Army which has now been printed in the RECORD. He admits that the real place in which there is a lacuna or interspace is the limitation with respect to the military officers who are limited in many cases to providing office advice.

It is fair to say that we are trying to provide an interim plan under which certain legal services would be provided and this missing element would be supplied until such time as the Army services catch up with the requirements of their personnel.

As to the compensation which is involved, I think the Senator is absolutely right. It would have been better since we are rendering all the legal service to the poverty program, to have an autonomous poverty program financing the arrangement.

The difficulty arose through the fact that neither the poverty budget nor their budget for legal services nor the incidence in our bill—and there we get into the timelag which the Senator from Mississippi mentions of appropriations preceding, as it were, the final authorizing legislation—had caught up with each other. Again, as an interim proposition, we had to place reliance on the resources which might be available to the Department of Defense.

If both the Secretary of Defense and the Director of the OEO are really satisfied that there is an area which does not include courts martial and does not include the status of the soldier as a soldier—and I confirm that on the part of the minority, as the chairman has on the part of the majority—but in which there is a lack of justice or equity in respect of the serviceman and his family as to which something ought to be done, then they can proceed to fill that vacant place.

If they find that is not so and that the superior public policy requires that it be denied for the time being because the Armed Forces have not quite caught up with that particular problem, I assume then that the Secretary of Defense will say, "I am sorry. I am not going to act."

I think that might be a little better than taking some absolutely rigid stand and saying no under all circumstances.

However, if they agree that there is an extraordinary need and something ought to be done about it, we can expect and hope that they will do their utmost to do it.

I hope very much that that may be a reasonable reconciliation of the points made by the conference report and, also I think, the quite proper concern expressed by the chairman of the Armed Services Committee that we do not want to introduce another echelon of litigation that will embroil the military service and adversely affect military morale, and military discipline.

I can assure the Senator, having signed the report as the ranking minority member, that we had no such thought in mind in doing so.

Mr. NELSON. Mr. President, I concur in what the Senator has said.

Representative HUGH CAREY was expressing his honest and sincere concern about affording a fair opportunity for servicemen's families to be represented, just as the Senator from Mississippi would like to have them represented.

If this matter had been raised in the committee on our side, I do not think anyone on our committee, representing either the Republican or Democratic side, would have consented to putting in anything in the Senate bill when we were considering it here, since the issue ought to be considered by the Armed Services Committee. And that was our attitude, strongly expressed through the Senator from Colorado (Mr. DOMINICK), at all times.

I interpret the provision we are discussing as a section to encourage the Defense Department to do something more about legal assistance for military personnel and their dependents.

Mr. JAVITS. I think that is a fair interpretation.

Mr. NELSON. I interpret it as being a section which everyone agrees means that if Defense refuses to do it, that is all.

That is my interpretation of the conversation that went on in conference committee, that the intent was to encourage them. If the Secretary of Defense says no, there is nothing this section of the bill can do.

Mr. JAVITS. Mr. President, I add one other dimension to that. If both agreed that there were extreme hardship and there was a vacant space where people were not represented, in view of the inability on the part of the military officers to supply legal service—for example, appearances in local courts—then I think we would have the right to express the hope that something would be done. Our provision is intended to induce both the Director and the Secretary, in the presence of a manifest need which our military services cannot fill, to see if it could be filled by agreement between them. That is the one dimension I would add.

Mr. MONDALE. Mr. President, in the letter referred to earlier from the Acting General Counsel of the Department of Defense to Mr. Quie, the Defense Department concedes that there is an area of great need here. There is an area of need here that cannot be denied and which the Defense Department asserts continues to be unmet.

Mr. JAVITS. Exactly. I think that what we have all said is not disagreeable to the Senator from Mississippi. He does not object to it. However, silence is not consent.

I might point out that I think we have presented a situation which is susceptible of agreement, and probably requires agreement, and we have a right to present a framework in which an agreement between the Department of Defense and the Director of OEO may be brought about.

Mr. MONDALE. I ask unanimous consent that this letter be printed at this point in the RECORD, because it shows that the Defense Department agrees that there is a serious area of concern.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

GENERAL COUNSEL OF THE
DEPARTMENT OF DEFENSE,
Washington, D.C., November 19, 1969.

Hon. ALBERT H. QUIE,
House of Representatives,
Washington, D.C.

DEAR MR. QUIE: Secretary Laird has asked me to reply to your letter dated November 6, 1969, requesting comments on a proposed amendment to section 222(a)(3) of the Economic Opportunity Act of 1964, as amended.

The proposed amendment would establish eligibility for members of the Armed Forces and their immediate families who are "living in poverty" to obtain legal services in certain cases under programs established under the Economic Opportunity Act of 1964. The Department of Defense recognizes and supports those objectives of the proposed amendment which are intended to make available more complete legal services for certain military personnel and their dependents.

For many years each of the military departments has operated a legal assistance program for members of the military services and their dependents. These legal assistance programs are operated by the Judge Advocates General of the respective military departments and are administered by military legal officers. Admittedly, these programs have certain limitations which impair their effectiveness and make it impossible for complete legal services to be provided. One of the more significant limitations is that military legal officers in the main are limited to providing office advice, including preparation of some legal documents, and are unable to represent their clients in court proceedings or other legal proceedings or to negotiate fully in their behalf with adversaries. These limitations are due to a number of factors including the attitude of the organized civilian bar regarding such matters. These restrictions have been a source of concern and some frustration to military legal officers who

would like to provide more complete legal services to their clients.

The problems posed by the aforementioned limitations on military legal assistance programs were recognized in a Defense Department study which was concluded in October 1968. That study explored problems relating to military lawyer procurement, retention, and utilization and included a look at various problems pertaining to the rendering of legal services in general. One of the recommendations of the study group proposed that efforts be made, in cooperation with civilian bar associations, to expand the military legal assistance programs so that military legal officers could provide more complete legal services to military personnel—in particular those in the lower enlisted pay grades. This recommendation was approved by the Assistant Secretary of Defense (Manpower and Reserve Affairs) and in October 1969 the military departments were asked to undertake steps to implement this recommendation. If these efforts are successful, it is envisioned that in certain cases military legal officers would be permitted to prepare and file pleadings in civilian courts, negotiate in behalf of clients, and make court appearances. In short, if the efforts now underway are successful, the group of people sought to be benefited by the amendment in question would be taken care of under the military assistance programs. We believe that it would be preferable for the Department of Defense to provide this service to its personnel than to have them using programs operated by the Office of Economic Opportunity. Accordingly, the Department of Defense recommends against the adoption of the amendment.

Sincerely,

L. NIEDERLEHNER,
Acting General Counsel.
ALBERT H. QUIE.

Mr. JAVITS. The Senator is correct, especially when it is coupled with the fact that 25 percent of the legal services rendered by the OEO legal service program consists of appearance in court.

Mr. MONDALE. One point that I think everyone agreed on is that the small funding of the OEO legal services program today makes it impossible for them to move into this field any more than they are now, without some source of additional support.

Mr. JAVITS. I think that is a very fair statement.

Mr. President, I should like to address myself briefly to the conference report itself, which I signed, which Senator PROUTY signed, and which Senator MURPHY and Senator DOMINICK did not sign.

To me, it is not necessarily the happiest compromise; but, so hard fought was this conference—and it is not unusual—that in my judgment it is the best resolution of the differing points of view that can be obtained to get the legislation underway.

I should like to affirm that if there is a motion to recommit, I think the main argument the Senate has to decide is whether or not we can get any further or make any real basic change, in the absence of authorizing legislation, or whether it would really just throw the whole thing up in the air for a very considerable time. It is almost inconceivable, considering the substantive nature of the differences, that we can get together in 24 hours or over the weekend and into Monday night, which is probably the outside time. I saw the conference. It went on for a considerable period of time. It deals with substantive policy issues. It is not a matter of resolving the difference between $1 billion and $1.1 billion, where men probably can get together in a brief time. I believe that once you shatter this, you will just have the continuing resolution, rather than a substantive mandate upon which the agency can proceed.

I believe deeply that public policy is greater in terms of giving the agency a legal basis upon which to proceed and plan than the other way, for this reason: This is the first bill for the OEO that characterizes what this administration wants it to be. With this administration, the concept is that it is essentially an agency for innovation and local action. Also, that those elements which are in traditional departmental areas of responsibility in education and, for example—shall go over to traditional departments which administer programs in those areas, but that this relief of responsibility on OEO's part brings with it a break-out in terms of innovation and local initiative. Those are the distinguished characteristics of the OEO to be, as the administration sees it.

Naturally, it requires an enormous labor, in order to bring about that change of character; and the sooner the agency can get on with this effort, the sooner it will be likely to be a success along this new line of policy.

One other thing which I think experienced men in this Chamber will understand is that if you leave an agency like this up in the air, an agency like this, where the work is pretty tough, you jeopardize very seriously its best personnel. The one thing that is indispensable is the human equation. If you expect to keep the good people in OEO or to attract good people to OEO because of its innovative character, you have to give them some feeling of certainty and of the framework in which they work. I do not think anyone expect that in the poverty area they are going to stay on the job because they get big pay, if they are good people, or because the work is very pleasant. The work is probably pretty tough. They are dealing with the most difficult elements in our communities. So I deeply feel that on that ground, if we can possibly do it, if a Member can reconcile it with his conscience, the burden of proof will be on the opponents to show why we should not put a firm base of authority under this agency.

Now to proceed to the merits. As I see them, the main points in this measure relate to the issue of flexibility, which I have described. This was probably as hotly contested an aspect of the conference as there was and it related to the question of how to transform this agency to an innovative agency of our Government and one which could most encourage effort at the local level. Therefore, the transfer provisions which are contained in the law—the degree of flexibility which you would have between programs—became supremely important. There, I think, a very fair adjustment was made. It was very difficult adjustment to make for both sides. The unlimited flexibility which we had collided with the extremely limited flexibility in the House bill, which did not change the 10-percent add-on provision of current law.

We reconciled that by agreeing that we ought to have the maximum flexibility for programs in their infancy, and we set that ceiling at $10 million. Under the bill, any program that is $10 million or less can be increased by 100 percent. In the case of more settled programs, above that figure, we limited the add-on to 35 percent.

To me, that was one of the very fundamental aspects of the conference, and I think the arrangement was very hard fought and very difficult to arrive at. I doubt that we could have agreed at all had we not been at the end of the session; and finally, at the very last minute, we did come to this agreement. I am not happy about it. I think the Senator is absolutely right and that the agency would be infinitely more creative if the add-on possibilities were unlimited. But we live in a practical, working world, and I think we have made a real achievement in terms of the Senate's original position in getting the House to accept a 100-percent add-on where the program does not exceed $10 million and to accept triple the figure the House had in mind where the programs were over $10 million.

The second matter which, in my judgment, was very serious was the question of local, State, and municipal administration. This is a very big one, because it may be recalled that in 1967 there was a very great struggle in the Congress on the poverty amendment to transfer practically all administration to the States; the opposition to that, in which I joined, was equally determined. It did not happen, but it was a very close call. This question still obtains—now in even sharper focus—because now the agency is essentially an innovative and experimental agency, and there is all the more reason for giving it great flexibility rather than tying it down to State vetoes or a priority or preference to State administration.

Bearing in mind that the managers on the part of the House write their own managers report and that all we can do is express our intention on the floor, I think it is very important to see whether or not the view of the conferees in the Senate coincides with the view of the managers on the part of the House in respect of a matter of intent. I should like to read to the Senate, on this question of administration which is so critically important, how the House managers conclude their report. They say:

> It must be quite clear that State domination over program planning, conception, or administration is not intended. Any changes in policy or regulations that would establish a preference for State rather than local determination and local control of community action programs will be inconsistent with the intention of Congress.

Mr. President, the Congress consists of two Houses. We must assume that when the House has approved the conference report this represents the intention of the House as expressed by its managers.

But if I were asked to interpret it—

and I greatly appreciate the view of the principal manager on the part of the Senate, the chairman of our subcommittee or his designee—it is my concept that what we wanted to do was to establish the most efficient and creative solution.

I would say, interpreting the views which are implied in this report, that both House and Senate conferees would agree that State domination is not intended. On the other hand, I would not wish the implication that there is an existing preference for local determination and local control. To the extent that the House managers imply support for an arbitrary preference for local community administration—that, too, should be rebutted.

I rather think what we want is a wide open field in which there shall be no preference but in which there shall be no domination or compulsion or guidelines that it must be a State or local control or a municipal administration that has priority; but whatever creatively is in the best interests of the program.

Mr. MONDALE. Mr. President, I agree. Actually, what the conference committee did in effect, was not to change the law, but to keep the law as it was and is relating to community action programs—community based and operated programs. There has been no change at all. The purposed Quie-Green amendment to drastically increase State control over these programs was defeated in the House.

The Murphy amendment, which was adopted on the floor of the Senate, to give nonoverridable Governors' veto power over the legal services program was dropped in conference.

So, in effect, there is no change. The law is as it has been since the 1967 amendments, set forth in section 210(a) of the Economic Opportunity Act, and there is no change at all.

Mr. JAVITS. Except that the legal services program is made nondelegable.

Mr. MONDALE. Yes, but, in terms of local or State control, the law is the same.

Mr. JAVITS. Yes. It does not change the situation on local or State control even as to legal services.

Mr. MONDALE. The Senator is correct. As the Senator knows the nondelegability of legal services was adopted to prevent it from being delegated to another Federal agency of Government.

Mr. JAVITS. I thank my colleague. I think that spells it out accurately. We do not want any implication that there is a preference for anyone and the Director of OEO, subject to our legislative oversight, will call them as he sees them on the basis of the best job that can be done.

I have one other point and then I shall be finished. My point relates to manpower training, which is a very important part of the work under the Economic Opportunity Act. Again, managers on the part of the House express themselves as follows:

> The managers on the part of the House are fully aware that the Director has delegated to the Secretary of Labor authority to carry on programs similar to those provided for in this new part. The conferees agreed that those existing programs could continue to be carried particularly, but not exclusively, in connection with the concentrated employment programs, and that the scope of their activities not be reduced by reason of the enactment of this additional provision. It had been the plan of most of the House Managers that the Director would be directed to retain, rather than delegate, this new authority.
>
> They did not insist, however, that he do so; but they do insist that these programs and other manpower and job programs be carried on as originally conceived and designed by the Congress, that there be no reduction in their magnitude, that recent limitations on eligibility (such as those dealing with older workers) be removed, that the "New Careers" program retain real substance and not be limited to public service activities, that substantive efforts such as those going on at the University of Minnesota be encouraged to improve and continue. In short, the managers on the part of the House will insist that the policies and purposes enunciated by the Congress be adhered to. It is their expectation that under this part special emphasis will be placed on single purpose programs, that programs of limited size and scope will be carried out, especially in rural areas, and that the rural poverty areas will receive an equitable share of the assistance being provided.

Again, I am expressing my own understanding of the Senate conferees, as I understand it, that except for specific legal changes which are made with respect to Mainstream and New Careers—and they are not major in nature—the manpower programs will go on as at present but that they must be subject to whatever we do about new manpower legislation because both the Senate and the House will have before them manpower bills proposed by the administration. There may be a manpower bill from the party in control of Congress. Both sides in their original reports on the OEO made it very clear that there is to be a comprehensive review of the manpower policy scheduled for early in the next session of Congress.

For example the House says, in its report, No. 91–684, on its bill:

> With a comprehensive review of manpower policy scheduled for early in the next session of this Congress, the committee decided that it would not undertake substantial revision of title I at this time.

Similarly the Senate in its report on the OEO bill this year, Senate report 91–453, provided:

> The administration has requested prompt consideration of its proposed Manpower Training Act of 1969. The committee intends to begin extensive hearings on this comprehensive proposal in the near future. The hearings will give administration witnesses, local officials and citizens an opportunity to comment on that proposal in the light of experience gained through the manpower program administration since the passage of the Manpower Development and Training Act in 1962.

The only qualification, then, to the expression of Members on the part of the House is that programs are not necessarily frozen for the entire 2 years during which this bill will operate. Both the Senate and House understand that as a result of consideration of the Manpower Training Act—undoubtedly next year—and any proposal made by the majority, there may be changes, but that presently we do not contemplate any until we actually get to the point of hearings and possibly legislation on new manpower approaches which the administration has submitted. With that qualification, I think the managers have properly suggested what both groups of conferees had in mind.

Mr. MONDALE. In response to the Senator from New York, let me say that his understanding is correct. We have already begun hearings on the manpower program. There will be more, which will include a review of the manpower aspects of OEO.

The conference report expresses concern that the mainstream program continue as a strong program. Although a small one, it is one of the few programs that is successful and well received in rural America. We very much want it continued. That is the reason the House asked that it remain as a separate title, and we receded to the House in that effort.

Second, the mainstream program has been very useful to persons who have reached the later years of life. We hear rumors that shortly there will be promulgated a regulating limiting mainstream eligibility to persons under 55. That may not be correct, but the rumors are persistent enough to make us apprehensive. That is why that language appears. It expresses the will of the conference.

Many of us fear the developmental and quality aspects of the new careers program are being eliminated by the Department of Labor. It is being converted into a small public service employment effort without any quality career development effort.

We are proud of the University of Minnesota new careers program. I appreciate the help the Senator from New York has given us on this. We have one of the outstanding new careers program in the country tnere, which seeks not only to provide employment to persons but also to assist them in going on to college or to a vocational educational school; there are other aspects of the program to help persons move up the career ladder.

We hope that the highly successful but yet experimental efforts will be continued. That is the reason for the language to which the Senator from New York has referred.

Mr. JAVITS. I want to be sure we understand what we contemplate, that we would not expect to hold that for 2 years. As we go into the manpower training hearings, it could be changed.

Mr. MONDALE. The Senator is correct.

Mr. JAVITS. The last point. It is my judgment that the very best result that could be obtained from the differing views of the two Houses—and I signed the report after much consideration—is that it will vest in the Director a program in which he can prompt the creativity and the innovation which will provide a way to redeem people from poverty, leaving to the other agencies the services which other people require.

That is the basic objective of the President. It is my judgment that if the conference report is approved, the fundamental concept of the administration as to what shall happen to the war on

poverty will have been incorporated as a firm foundation into law.

I hope very much, because of the problems of personnel, and so forth, with the greatest respect to the views of my colleague, it is my deep conviction that we should not go home from this session of Congress without giving a statutory base for a settled period of time to this agency if we really expect—and I know that we do—to do the creative and the innovative job which President Nixon has designed.

Mr. YARBOROUGH. Mr. President, as chairman of the Labor and Public Welfare Committee, I am very pleased with the final outcome on the bill to extend the Office of Economic Opportunity.

As you know, the Senate and House passed very similar bills, to extend the present program for 2 years. The Senate and House conferees, under the chairmanship of Senator NELSON, who is chairman of our Subcommittee on Employment, Manpower, and Poverty, have now resolved the differences and agreed to a very fine compromise bill.

What this bill does is continue some very worthwhile programs. No one is going to make the claim that this bill does everything that needs to be done to correct the very serious and very widespread poverty we have in this country. But it at least maintains and to some extent strengthens and improves the programs which we have been developing over the past 5 years in our long overdue effort to fight poverty.

We have more than 25 million Americans living in poverty. An estimated 15 million of them suffer from actual hunger or malnutrition.

More than 75 percent of the funds authorized in this bill will go to provide job training, health programs, and education programs for these people. Those are the areas that the Economic Opportunity Act emphasizes—job training, health, and education.

This bill will enable us to continue operating some 40 Job Corps camps, including the outstanding Gary Job Corps Center at San Marcos, Tex. It will provide funds for the Neighborhood Youth Corps program which provides employment for several hundred thousand young men who would otherwise be out of work.

It continues and substantially expands the program known as Operation Mainstream, which has enabled local units of government and private organizations such as the Farmers Union to hire thousands of unemployed men in rural areas to do worthwhile work in conservation, forestry, highway beautification, and other forms of public service.

It continues the Headstart program, which is giving more than 600,000 preschool children their first chance at medical and dental examinations and the special services needed to prepare them for school.

It provided a much needed expansion of the emergency food and medical services program, which is now operating in 1,000 counties, mostly in rural areas. It continues our comprehensive health services program, which operates health centers in 50 poor communities.

It enables us to continue our special programs for migrant workers, which have helped more than 10,000 people with training and with the adjustments necessary to shift to new lines of work and settle in new communities. It allows us to continue our rural loan program, which has already helped about 45,000 poor people to improve their farms and their homes.

Mr. President, this is a badly needed program. It has been forced to operate in the glare of controversy ever since it was established. But it is proving itself.

Early this year there were published reports that the President was going to let the war on poverty die.

One of the first things Senator NELSON and I did in this Congress was to write to the President and urge him not to do that. The chairman of the House Education and Labor Committee, Congressman PERKINS, of Kentucky, joined with us in that appeal. Ultimately, the President came around to requesting a 2-year extension of the present program.

We are glad that after carefully considering all the evidence he came to that conclusion.

The Nation cannot do otherwise. As long as we have some 25 million desperately poor people in this country, we cannot escape the responsibility of offering at least some of them the opportunity for job training, health service, and educational assistance without which they can never hope to win a place in our society as productive, self-sufficient citizens.

Mr. President, I want to congratulate all those who worked so hard on developing this bill and perfecting it to the point where it has won such broad acceptance. The conferees have done an exceptional job, of which both Houses can be proud. And as we accept this conference report today and send this bill on to the President, we can at least feel some assurance in that we have faced up to a responsibility which this Nation can never ignore again.

Mr. CURTIS. Mr. President, my basic reasons for not signing the conference report on the tax bill are budgetary and fiscal. I shall make a full statement on this later.

While the bill makes a number of tax reforms of which I heartily approve, it contains one manifest departure from historic tax policy, indeed, from national policy, which I believe is so grave that I am impelled to comment on it at once. I refer to the imposition of an income tax on foundations.

I am convinced that this is a grievous error. For the first time in our history, the income tax exemption of a large class of our private philanthropic and charitable organizations has been destroyed, and only the rate of tax will differentiate them from other taxpayers. This is a serious blow, with unfathomable long-range implications, to the private sector and to the vital part that private philanthropy historically has played in American life. We have now crossed the line toward total secularization of our society and total dependence on government for the educational, philanthropic, and charitable activities which traditionally have been, and should be, carried on by the private sector.

I hope at an early date that this unfortunate action will be reconsidered.

Mr. KENNEDY. Mr. President, passage of this conference report on the Economic Opportunity Amendments of 1969 marks an important moment in our Nation's battle against poverty. It is an endorsement of the antipoverty approaches which have developed over the last 4 years. It is a recognition that we must continue to seek new ways to combat deprivation. It is a clear expression of our commitment to assist the poor and the disadvantaged in our society.

In total wealth and in individual opportunity, no nation in the world can match the United States. Our gross national product is nearing $1 trillion a year. Median family income is over $8,000 a year—almost $2,000 higher than in the country with the next highest standard of living. We are surrounded by the trappings of material wealth.

Despite our aggregate prosperity and national wealth, however, an estimated 25 million Americans still live in serious poverty—without necessities such as food, clothing, shelter, and medical attention, which the fortunate of us take for granted; and without the opportunities for education and employment required to enjoy a satisfactory standard of living.

For the last 4 years, the Office of Economic Opportunity has been the focal point for a concentrated Federal effort to combat poverty in America. The problems it has faced have been great. The results it has achieved have been encouraging.

For example, from 1965, when the OEO program began, through 1967, 7 million Americans escaped from poverty status. In 1968, approximately 4 million more rose above the poverty line for that 1 year alone. The trend is continuing. Programs under the Economic Opportunity Act have been an important influence in achieving these results.

The action by both the Senate and the House on extension of the Economic Opportunity Act has indicated a strong congressional commitment to local initiative and the community action approach. For this is the heart of our Federal antipoverty program. And Congress expressly rejected attempts to weaken this commitment.

In its report to the congressional Committees on Appropriations, dated November 1969, OEO reiterated its commitment to local initiative:

> Local initiative funds are the core of the Community Action concept. They make possible the structure through which the process of community action is carried out; they enable each community to tailor its total antipoverty program to its peoples' needs, and they are the primary means by which self-help by the poor is undertaken.

I endorse that view on the importance of local initiative and community action. And I agree with the statement of priorities spelled out by the House conferees in their "statement of managers" on S. 3016:

> The managers on the part of the House encourage the Director of OEO to explore, along the lines previously mentioned in the House

committee report, the opportunities for increased State involvement in poverty programs. It must be quite clear, however, that State domination over program planning conception, or administration is not intended. Any changes in policy or regulation that would establish a preference for State rather than local determination and local control of community action programs will be inconsistent with the intention of Congress.

Antipoverty efforts cannot succeed if they are paternalistic. They must be generated and carried out at the local level, by the people who themselves have experienced poverty and know the desires and the needs of our low-income citizens. Long-run progress cannot be thrust upon the poor; it must be developed and supported from within, even if this ultimately means inconvenience and change and loss of power among our more established institutions of society.

Mr. President, I think that as chairman of the Poverty Subcommittee, Senator NELSON has done a superb job in developing and carrying through Congress this year's economic opportunity amendments. He has been thorough and dedicated and diplomatic in managing an extremely important, and equally controversial, piece of legislation. I commend the distinguished Senator from Wisconsin for his successful work.

I should add that the House of Representatives should also be recognized for its strong support of the local initiative approach to antipoverty programs, especially in light of the concerted effort to vitiate the present program and turn it into a State-controlled block-grant system. It was a singular triumph for the legislators who are dedicated to helping the poor help themselves, for the 25 million poverty-stricken citizens in this Nation, and for the distinguished chairman of the Education and Labor Committee, CARL PERKINS, who persevered and saved the program at a time when it was in imminent danger of being destroyed.

Mr. President, again I commend Senator NELSON for his important work and contribution on behalf of our Nation's poor. I strongly support the conference report on the Economic Opportunity Amendments of 1969 and feel that their passage reaffirms once again our national commitment to eliminate poverty.

Mr. DOMINICK. Mr. President, for the information of Senators, I want to repeat that I will send a motion to recommit to the desk shortly, and that there will be a rollcall vote on it. I shall not be long in expressing my reasons.

One reason that I refused to sign the bill is that the flexibility which we had built into the area of the program, even in previous years, is not retained in the bill.

Although the conference bill increases over present law the percentages of program funds which can be moved from one program to another, the increases in what can be transferred out of a program are not as great as those in the Senate bill, and the Senate bill did not put a limit on the increases which can be transferred into a program. Yet the conference bill includes extensive earmarking of funds.

Since we did not earmark funds last year, the 10–10 provisions of present law were not a major problem. The 10–35 provisions of this bill for 1970 and 15–35 for 1971 may be. It is interesting that when the Democrats were in charge of OEO, they were against earmarking. Now that Republicans are in charge of OEO, the Democrats are in favor of earmarking.

I say that not necessarily to chide, but to bring it up so that they will not think we have forgotten that particular point.

In previous years there have been problems in transferring money even without the added restriction of earmarking. In the comprehensive health centers, last year, for example, the OEO was unable to use the amount of money it had originally available for this type of program, $70 million. The amount actually obligated was only $52 million. This was much more than the 10-percent reduction permitted by present law so the excess unused money could not be transferred to other needy programs. In like manner, on some of the programs which they wanted to start, OEO representatives feel that they will be increasing the programs, if they can have more flexibility, by more than the 35 percent which is permitted under the bill.

Why do we find ourselves in this position? We increased the flexibility in our Senate bill and also put in earmarking. The House retained the old flexibility and did not have earmarking. The core of the problem today is that the conference bill takes a different twist. It reduces the flexibility and increases earmarking. So we have the situation in which the innovative features which Mr. Rumsfeld and the OEO would like to initiate are sharply restricted under the conference report.

There is another item which should be pointed out. In the Senate bill, at the request of the Comptroller General, we included the power to audit and examine the financial records of grantees under the OEO program. For reasons that are totally unknown to me, it was knocked out of the conference at a time when I could not be there. The conference bill provides no power or authority for the Comptroller General to be able to audit accounts of people receiving benefits under the OEO.

It is my understanding that there is some authority in the appropriation conference report. It seems to me it is rather ironic to have it in the appropriation bill and not to have it in the authorization bill.

Mr. NELSON. Mr. President, will the Senator yield so I may respond to that specific point?

Mr. DOMINICK. I am happy to yield to the Senator from Wisconsin on that point.

Mr. NELSON. First, the authority of the General Accounting Office to have access to grantees' records for purposes of audit has always been in the appropriation bills. It is contained in the item appropriating funds for OEO. It has never been in the authorization bill. However, that was not the reason why the House declined to go along with the provision for the audit in the authorization bill. Although I assume it was a technical mistake in drafting, the Senate-passed OEO authorization bill provision was drafted so that it authorized the GAO to have access to records for audit purposes only with respect to title II funds. He could not have such audit access under the terms of the provision in the Senate-passed version of the OEO bill. I am sure the author did not intend to have it limited only to title II. The House had nothing in its bill with respect to GAO audits. The point was raised that if the House had nothing in its bill, it could not accept expansion of the authority to cover all titles in the Economic Opportunity Act because it would be subject to a point of order. Therefore, since it was limited to title II, and is covered in the HEW-Labor appropriations bill, H.R. 13111, that passed the Senate this week, that is, the appropriations bill which contains the OEO appropriations, and in the conference report on that bill, it was resolved in that way. That was the discussion that went on when the Senator from Colorado could not be there, and that provision was dropped for that reason.

Mr. DOMINICK. I thank the Senator, I think it is better to leave the authority in so the Comptroller General can audit some than to strike out the provision because it covers only one title instead of all of them.

As pointed out in the colloquy between the Senator from New York and the Senator from Wisconsin, another thing that was knocked out of the conference was the Murphy amendment, giving the Governors some authority over the legal services. Retained was a provision in the Senate bill, which the Senator from Minnesota had proposed, and which the House bill did not have, providing that the legal services program cannot be delegated. The conference bill specifies one program out of all the programs of OEO which cannot be delegated. It is the only program which cannot be delegated to another agency, whether it is working well or not.

I know the Senator from Minnesota felt deeply about this. The effect, however, is a national legal services program. We are not going to be able to operate it through any other agency or through regional offices, but it must be directly under the director.

For the reasons I have stated, and others, I send to the desk a motion to recommit the conference report with the following instructions, which I ask the clerk to read.

The PRESIDING OFFICER. The clerk will read.

The ASSISTANT LEGISLATIVE CLERK. The Senator from Colorado (Mr. DOMINICK) moves to recommit the OEO conference report with the following instructions:

(1) The Senate conferees insist on the elimination from the conference report of any language relative to Section 104(b), legal services for members of the Armed Forces.

(2) The Senate conferees insist on the Senate's provision relative to audits.

(3) The Senate conferees insist on the elimination from the conference report of any language relative to the making of a specific reservation of funds for local initiative programs.

Mr. DOMINICK. Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. DOMINICK. Mr. President, I shall be rather brief.

The instructions to conferees are limited to three points.

The first point is to limit the potential of jurisdictional conflict where OEO starts moving in on the Department of Defense. That is the position I took in the process of discussing the Carey amendment. Debate on it went on for a considerable time. At one time I thought we were going to get simply a statement and a report. We did not get that. This is the position the Senator from Mississippi (Mr. STENNIS) has taken in the process of discussing this particular provision of the bill.

The second instruction is relative to audits. There is in the hearing record a letter from Mr. Staats, Comptroller General of the United States, to the chairman of the Senate Labor and Public Welfare Committee, which reads as follows:

In our reports on proposed grant programs, we have consistently called attention to the desirability of including in new authorizing legislation specific provisions requiring grantees to keep records which would fully disclose the disposition of the funds received and authorizing the administrative agencies and the Comptroller General to have access to the grantees' records for the purpose of audit and examination.

Under present authority, our right of access to all OEO grantees' records ended with the close of our investigation under title II of the Economic Opportunity Amendments of 1967. We had broad access authority under our title II investigation and prior to the 1967 amendments we had access to grantees' records bearing exclusively on grants under section 202 as amended by Public Law 89-794, 42 U.S.C. 2782(b) (Supp. II). Also under chapter III of the Supplemental Appropriation Act, 1968, Public Law 90-239, 81 Stat. 774, we had the same access right for fiscal year 1968. In view of these circumstances, we feel that our Office needs clearly stated authority for audit of OEO contractors' and grantees' records in any legislation that would extend or revise the activities of the Office of Economic Opportunity. Such authority is provided to Federal grantor agencies and to the Comptroller General, with regard to grants-in-aid to States, pursuant to section 202 of Public Law 90-577, the Intergovernmental Cooperation Act of 1968. It is suggested that language along the lines of that cited in Public Law 90-577 applicable to all OEO grantees would be appropriate in S. 1809.

The Senate attempted to give this authority, but apparently limited it intentionally to programs funded under title II, instead of all OEO. Now it is stated that since the Senate bill did not encompass all OEO programs, the conferees struck out the right to audit even under the title II programs. I would say this is a strong reason for insisting on the Senate's provision with respect to audits.

The third provision in these instructions is an interesting one. Neither the Senate nor the House—I want my colleagues to note this—had anything in the bill with regard to having a mandatory reservation of funds for local initiative programs. It was adopted, however, by the conference. That means $328,900,000 must be reserved and made available for each of the fiscal years for local initiative programs carried on under section 221 of the act.

This is a reservation off the top of the funds. Only the remainder of the appropriations for each such year would be allocated and prorated in the prescribed manner among the earmarked programs.

The amount reserved is not subject to transfer under section 616 of the act. That means that this amount of $328,900,000 cannot be either increased or decreased under section 616, and there is no flexibility in it whatsoever as a result.

Furthermore, it also says that although we have a provision for pro rata reductions where the appropriations do not meet the level that is expected, the funds received for local initiative programs would not be subject to such reductions.

This reservation was not in the Senate or House bill, so it would seem to me that the conferees have not only exceeded their authority—and I may bring up a point of order on this later—but it also seems to me that they have done something to anchor in local programs which we may want to change, we may want to increase or we may want to reduce, which we cannot do under the language of the conference report.

Mr. President, we ought to insist that local initiative programs should be as much subject to the other provisions of the act as all the other programs enumerated in the conference report.

Mr. PROUTY. Mr. President, will the Senator yield?

Mr. DOMINICK. I am happy to yield.

Mr. PROUTY. I was absent from the Chamber during a part of the Senator's statement. I was wondering if the Senator intends to take action to restore the powers of the Comptroller General.

Mr. DOMINICK. I certainly do. It was the Senator from Vermont who first offered this amendment, I believe, which was included in the Senate bill. I have put that in as a second provision, that the Senate conferees insist on the Senate provision relative to audits.

Mr. PROUTY. I thank the Senator. I believe the action the Senator is seeking is proper, and I support his motion.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Colorado to recommit the conference report, with instructions.

Mr. JAVITS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. JAVITS. Is it true that those who wish to recommit should vote "yea," and those who are against recommittal "nay"?

The PRESIDING OFFICER. The Senator is correct.

Mr. JAVITS. Will a second vote then recur on the conference report itself?

The PRESIDING OFFICER. Assuming that the motion is not agreed to, the Senator is correct.

The question is on the motion to recommit of the Senator from Colorado. On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. FULBRIGHT. On this vote I voted "nay." I wish to pair with the Senator from Louisiana (Mr. ELLENDER). If he were present, he would vote "yea." I therefore withdraw my vote.

Mr. MANSFIELD. Mr. President, the Senator from Louisiana is absent on official business at my request. That explains why he is not in the Chamber.

Mr. KENNEDY. I announce that the Senator from New Mexico (Mr. ANDERSON), the Senator from Mississippi (Mr. EASTLAND), the Senator from Alaska (Mr. GRAVEL), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Hawaii (Mr. INOUYE), the Senator from Louisiana (Mr. LONG), the Senator from Minnesota (Mr. MCCARTHY), the Senator from Wyoming (Mr. MCGEE), the Senator from Montana (Mr. METCALF), the Senator from Rhode Island (Mr. PASTORE), the Senator from Georgia (Mr. RUSSELL), the Senator from Missouri (Mr. SYMINGTON), the Senator from Georgia (Mr. TALMADGE), and the Senator from Maryland (Mr. TYDINGS) are necessarily absent.

I further announce that the Senator from Louisiana (Mr. ELLENDER) is absent on official business.

I further announce that, if present and voting, the Senator from Rhode Island (Mr. PASTORE), and the Senator from Montana (Mr. METCALF) would each vote "nay."

Mr. GRIFFIN. I announce that the Senator from New Jersey (Mr. CASE), the Senator from Arizona (Mr. GOLDWATER), the Senator from California (Mr. MURPHY), the Senators from Illinois (Mr. PERCY and Mr. SMITH), the Senator from Kansas (Mr. PEARSON), the Senator from Alaska (Mr. STEVENS), the Senator from Texas (Mr. TOWER), and the Senator from Delaware (Mr. WILLIAMS) are necessarily absent.

The Senator from Kentucky (Mr. COOPER) is absent because of illness in his family.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

If present and voting, the Senator from California (Mr. MURPHY), the Senator from Illinois (Mr. SMITH), and the Senator from Texas (Mr. TOWER) would each vote "yea."

The result was announced—yeas 31, nays 42, as follows:

[No. 267 Leg.]

YEAS—31

Allen	Dole	Miller
Allott	Dominick	Packwood
Baker	Fannin	Prouty
Bellmon	Griffin	Randolph
Bennett	Gurney	Smith, Maine
Boggs	Hansen	Sparkman
Byrd, Va.	Hruska	Stennis
Byrd, W. Va.	Jordan, N.C.	Thurmond
Cannon	Jordan, Idaho	Young, N. Dak.
Cotton	McClellan	
Curtis	McIntyre	

NAYS—42

Aiken	Harris	Montoya
Bayh	Hart	Moss
Bible	Hartke	Muskie
Brooke	Hatfield	Nelson
Burdick	Holland	Pell
Church	Hughes	Proxmire
Cook	Jackson	Ribicoff
Cranston	Javits	Saxbe
Dodd	Kennedy	Schweiker
Eagleton	Magnuson	Scott
Ervin	Mansfield	Spong
Fong	Mathias	Williams, N.J.
Goodell	McGovern	Yarborough
Gore	Mondale	Young, Ohio

PRESENT AND GIVING A LIVE PAIR, AS PREVIOUSLY RECORDED—1

Fulbright, against.

NOT VOTING—26

Anderson	Long	Russell
Case	McCarthy	Smith, Ill.
Cooper	McGee	Stevens
Eastland	Metcalf	Symington
Ellender	Mundt	Talmadge
Goldwater	Murphy	Tower
Gravel	Pastore	Tydings
Hollings	Pearson	Williams, Del.
Inouye	Percy	

So the motion to recommit with instructions was rejected.

Mr. MONDALE. Mr. President, I move to reconsider the vote by which the motion was rejected.

Mr. NELSON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HOLLAND. Mr. President, I ask for the yeas and nays on final passage.

Mr. DOMINICK. Mr. President, a point of order.

The PRESIDING OFFICER. The Senator will state the point of order.

Mr. DOMINICK. I have a point of order on a section of the bill, that the conferees have exceeded their authority, under rule XXVII.

The PRESIDING OFFICER. The Senator from Florida had the floor and asked for the yeas and nays.

The yeas and nays were ordered.

The PRESIDING OFFICER. If the Senator from Colorado desires to raise the point of order at this time, he will be recognized.

PERSONAL STATEMENT

Mr. COTTON. Mr. President, will the Senator yield to me for a moment?

Mr. DOMINICK. I yield to the Senator from New Hampshire, with the understanding that I will not lose my right to the floor.

Mr. COTTON. Mr. President, I think it is an appropriate time for the Senator from New Hampshire to be permitted to make a request for unanimous consent on a personal matter, because it pertains to this subject.

In the conference between the House and the Senate yesterday on the Health, Education, and Welfare appropriation bill, we had nearly completed our conference when the House Members were called to the floor of the House by a rollcall vote. As has been customary for years, the clerks of the conference committee came to each Member and said, "When you come back and finish up the conference, you gentlemen may be leaving hurriedly. Will you sign the conference report in advance, so we will not have to pursue you all over Capitol Hill?" As we have done dozens of times, we did sign the report in advance.

We reassembled after the House rollcall, and a couple of final matters pertaining to the language in the bill were determinated, and then the Senator from New Hampshire addressed the chairman of the conference committee, a Member of the House, and asked to be heard, and started discussing this very appropriation on OEO, to make some observations and possible suggestions that might influence the conference committee to alter their decision somewhat.

To the amazement of the Senator from New Hampshire, the Chair gaveled him down, said that he was out of order, that the conference was terminated, that he had the signed conference report in his pocket, and that the Senator from New Hampshire could not even be heard.

The Senator from New Hampshire sought afterward to remove his name from the conference report, but was not allowed to do so. He intends to go over to the House side and take the matter up with the Parliamentarian of the House to see if it can be removed over there.

But in this peculiar circumstance, which is the most astounding exhibition that this Senator has seen in his 23 years in the House and Senate, the Senator from New Hampshire does want, if possible, to let it be known publicly that he desires his name off of that report. That report will not come to the Senate, presumably, under the present arrangements until the 19th of January.

The Senator from New Hampshire asks unanimous consent now, that when the report of the conference committee on HEW reaches the desk of the Senate, his name be removed therefrom.

The PRESIDING OFFICER (Mr. PACKWOOD in the chair). Is there objection?

Mr. FULBRIGHT. Mr. President, reserving the right to object, will the Senator inform me who the chairman of that conference was?

Mr. COTTON. It was an old and close friend of mine, with whom I have served on the Appropriations Committee of the House and whom I greatly like and admire, Representative FLOOD, of Pennsylvania. It had been a long conference and Mr. FLOOD was tired. I bear him no ill will but want my name off that report.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

ECONOMIC OPPORTUNITY AMENDMENTS OF 1969—CONSIDERATION OF CONFERENCE REPORT CONTINUED

Mr. DOMINICK. Mr. President, I am raising this question of a point of order on the fact that the conferees may have exceeded their authority, and I think they did.

What I have referred to is the so-called local initiative programs, or the CAP programs. Under title II, the Senate bill authorized over 1 billion dollars, and earmarked a portion of that for seven programs under that title. The CAP programs were not earmarked or reserved by the language of the Senate bill. The House bill did not have any earmarking, nor did it set aside funds in the form of a reservation for the CAP program. When we went into conference, although title II contemplates local initiative type of programs, there was no reservation of funds for local initiative in either the House or Senate bills for the conferees to act upon. Yet the agreement by the conference requires that $328.9 million must be reserved—positive language, "must be reserved"—and made available for each of the fiscal years for local initiative programs. This reservation comes off the top—before allocation to earmarked programs so it is not subject to transfer under section 616 of the act, the flexibility portion.

We had a House bill which made no earmarking or reservations of any kind and, then, the conference comes up with a reservation of one-fourth to one-third of the total amount of money in title II reserved for the CAP program. Let me make clear that, unlike the earmarked programs, this reservation of $328.9 million is not subject to any rate of reduction when appropriations do not fully fund the authorization.

Mr. President, I make the point of order that the reservation exceeds the authority of the conferees. I did not want to do this. I had hoped my motion to recommit would straighten it out but since that motion was defeated I find myself in a position where I must make a point of order. I raise it under rule XXVII.

Mr. MANSFIELD. Mr. President, before the Chair rules, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. MONTOYA in the chair). The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senate stand in recess for 5 minutes.

There being no objection, (at 2 o'clock and 25 minutes p.m.) the Senate took a recess for 5 minutes the same day.

On the expiration of the recess, the Senate reconvened, when called to order by the Presiding Officer (Mr. MONTOYA in the chair).

The PRESIDING OFFICER. Will the Senator from Colorado restate his point of order?

Mr. DOMINICK. Mr. President, the point of order is that, under rule XXVII, it is my opinion that the Senate bill did not contain any specific reference to local initiative programs; certainly did not reserve any funds for it; that the House did not; and that the conferees, to be specific, put in a reservation for local initiative programs in the amount of $328 million; not only have they done that but they also said that it is not subject to transfer or pro rata reduction if appropriations are insufficient to fully fund. I make the point of order that the conferees have exceeded their authority under rule XXVII.

Mr. NELSON. Mr. President——

The PRESIDING OFFICER. The Senator from Wisconsin.

Mr. NELSON. Did the Senator complete his remarks?

Mr. DOMINICK. Did the Senator want me to go over it again?

Mr. NELSON. No. Did the Senator give up the floor?

Mr. DOMINICK. For the moment, yes.

Mr. NELSON. Mr. President, the Senate sent——

The PRESIDING OFFICER. The Chair will state for the RECORD that the Chair does not have to entertain debate on this point of order, but the Chair is entertaining debate at this moment for the edification of the Senate on this point.

Mr. NELSON. Mr. President, the Senate passed a bill in which all of the money in the bill was earmarked. The House took the Senate bill and struck everything in the bill except the enacting clause, and then it passed a bill without earmarking.

The issue raised by the Senator from Colorado is that within title II there are local initiative programs. They are in the law now. We, in our bill earmarked all of title II excepting some unearmarked reserve within the title. We earmarked for title II a total of $1,012,700,000. Within the title we earmarked specific amounts for several items. There then remained within that title II an unreserved residue of about $400 million.

Then, in the committee language, so it will be understood how that money was to be spent, on page 14 of the Senate committee report (S. Rept. 91-453) which accompanied the Senate bill we said:

> The committee bill authorizes $1,012,700,000 for title II—Urban and Rural Community Action programs. More than half of this authorization is earmarked, program by program, for the so-called "special emphasis" programs such as Headstart, Emergency Food and Medical Services, etc., some of which are operated by Community Action agencies.
>
> The remainder of the title II authorization—a total of $412.9 million for fiscal 1970 and $397.9 million for fiscal 1971 after reserving funds for the two new special emphasis programs for Alcoholic Counseling and Recovery and Drug Rehabilitation—remains unearmarked and may be allocated by the Director in the manner he deems suitable. It is expected by the committee that the bulk of this unearmarked money will be spent for Community Action "local initiative" programs—

These are the programs we are talking about—

> those distinctive local programs developed by the 969 CAA's and approved by OEO.

So we are referring in here exactly to the money in question and to the local initiative programs and we mentioned it in the Senate report.

> Other activities financed out of this title's authorization are (using the categories as described by the Administration in its budget presentation): Program direction; training and technical assistance; State economic opportunity offices; research, pilot programs and evaluation.

So I submit it was perfectly clear in the Senate report which accompanied the Senate bill before this body acted upon it in October—perfectly clear to everybody—that this unreserved amount of total earmarked money in title II was specifically intended to cover the local initiative programs. There was never any doubt about that by OEO or anyone in the House or this body.

Mr. DOMINICK. Mr. President, in order to repeat my point again, under the language of the Senate bill, as the Senator from Wisconsin has clearly stated, there was $1,012,700,000 for the purpose of carrying out title II.

From that amount, the Senate bill earmarked $338 million for the Project Headstart program, $60 million for the Follow Through program, $58 million for the legal services program, $80 million for the comprehensive health services program, $25 million for the emergency food and medical services program, $15 million for the family planning program, and $8,800,000 for the senior opportunities and services program.

Not a word about CAP or the local initiative program—not one word in this whole section. As a matter of fact, there is not a word in the entire Senate bill about it.

We have a rule which says we cannot go beyond the two bills. There is nothing in the House bill, either. All of a sudden, in the conference, along comes a House Member who says, "We are going to reserve $328.9 million for CAP, and you have got to spend it. You cannot change it or have it flexible."

I submit that, as a matter of rule, we have a situation here where the only reference in either bill to CAP programs of any kind is in the committee report accompanying the Senate bill. That report states the director "is expected" to use "the bulk" of the nonearmarked title II funds for local initiative programs. He does not have to: He can legally take the entire $328.9 million and spend it somewhere else under the title II program. I doubt if he would, but he could. He could do anything he wishes, including transferring funds in or out of the CAP's just as with other programs. So the Senate committee report language is not binding on him. It does not require him to spend the money on the CAP projects.

It seems to me, under those circumstances, that the conference has gone beyond what either bill anticipated or permitted.

The PRESIDING OFFICER. The Chair is ready to submit the question.

Mr. JAVITS. Mr. President, does the Chair wish to hear me? I shall be very brief.

The PRESIDING OFFICER. The Senator from New York.

Mr. JAVITS. Mr. President, the issue is really epitomized by the rule that the conferees may not include in the report matter not committed to them by either House. They may, however, include matter which is a germane modification of subjects in disagreement.

So the question is, Was this committed to us by either House? I respectfully submit it was, and for the following reasons——

Mr. DOMINICK. Mr. President, will the Senator admit reservation of local initiative funds was not a subject in disagreement?

Mr. JAVITS. The purpose of the House was to give a generic appropriation for $1,563 million for the year ending June 30, 1970, and to leave open the year ending June 1971.

The approach of the Senate, as has been explained, was to earmark for carrying out title II $1.012 billion of the total amount authorized by the Senate, which was $2.048 billion.

Mr. President, the reason that I say that the item was committed to us is that there is a distinct difference between unearmarked funds and earmarked funds, and that raises the issue of earmarking. Therefore that issue was committed by both houses. The House of Representatives preferred unearmarked funds in the amount of $1,563,000,000; we preferred earmarked funds, and our figure was $2,048,000,000.

As to the second qualification at issue, which is, whether we submitted a germane modification, I submit that we did. We earmarked $1,012,000,000 for carrying out title II. In the resulting conference, the earmarking of $328 million which is complained of was specifically for section 221 of the Economic Opportunity Act of 1964.

Section 221 of the Economic Opportunity Act of 1964 is a part of title II, and therefore it is germane to settle between the parties what shall be encompassed within an earmarking which relates to title II, assuming that the Senate prevailed on the issue of earmarking at all.

Therefore, it seems to me, first, the issue was committed as between unearmarked funds and earmarked funds; and second, that it was a germane agreement that the conferees made, because the Senate allocated the resources to title II, and the settlement extracted a part of the money which was provided for those resources for a given section of title II.

So I believe that what was done in the conference qualifies on both scores.

Mr. DOMINICK. Mr. President, will the Senator yield for one or two questions or comments?

Mr. JAVITS. Certainly.

Mr. DOMINICK. What we have here is not an earmarking, it is a reservation. That means that if the Appropriation Committees should, under title II, only appropriate $328,900,000, all of that money would have to go to CAP and none of the money would go to anything else. So it is a reservation of funds, which goes far beyond earmarking, because it is not subject to reduction, allocation, or transfer.

I ask unanimous consent that section 102 of the conference bill and the explanation in the conference report be printed in the RECORD.

There being no objection, the materials were ordered to be printed in the RECORD, as follows:

[Bill]

AUTHORIZATION OF APPROPRIATIONS

SEC. 102. (a) For the purpose of carrying out the Economic Opportunity Act of 1964, there are hereby authorized to be appropriated $2,195,500,000 for the fiscal year ending June 30, 1970, and $2,295,500,000 for the fiscal year ending June 30, 1971.

(b) Notwithstanding any other provision of law, unless expressly in limitation of the provisions of this section, of the amounts appropriated pursuant to subsection (a) of this section for the fiscal year ending June 30, 1970, and for the next fiscal year, the Director shall for each such fiscal year reserve and make available not less than $328,900,000 for the purpose of local initiative programs authorized under section 221 of the Economic Opportunity Act of 1964, and the remainder of such amounts shall be allocated, subject to the provisions of section 616 of such Act, in

such a manner that of such remaining amounts so appropriated for each fiscal year—

(1) $890,300,000 shall be for the purpose of carrying out parts A and B of title I (relating to work and training programs);

(2) $46,000,000 shall be for the purpose of carrying out part D of title I (relating to special impact programs);

(3) $20,000,000 shall be for the purpose of carrying out part E of title I (relating to special work and career development programs);

(4) $811,300,000 shall be for the purpose of carrying out title II, of which $398,000,000 shall be for the Project Headstart program described in section 222(a)(1), $90,000,000 shall be for the Follow Through program described in section 222(a)(2), $58,000,000 shall be for the Legal Services program described in section 222(a)(3), $80,000,000 shall be for the Comprehensive Health Services program described in section 222(a)(4), $62,500,000 shall be for the Emergency Food and Medical Services program described in section 222(a)(5), $15,000,000 shall be for the Family Planning program described in section 222(a)(6), and $8,800,000 shall be for the Senior Opportunities and Services program described in section 222(a)(7);

(5) $12,000,000 shall be for the purpose of carrying out part A of title III (relating to rural loans);

(6) $34,000,000 shall be for the purpose of carrying out part B of title III (relating to assistance for migrant and seasonal farmworkers);

(7) $16,000,000 shall be for the purpose of carrying out title VI (relating to administration and coordination); and

(8) $37,000,000 shall be for the purpose of carrying out title VIII (relating to VISTA).

If the amounts appropriated pursuant to subsection (a) of this section for any fiscal year are not sufficient to allocate the full amounts specified for each of the purposes set forth in clauses (1) through (8) of this subsection, then the amounts specified in each such clause shall be prorated to determine the allocations required for each such purpose.

(c) In addition to the amounts authorized to be appropriate pursuant to subsection (a) of this section, there are further authorized to be appropriated the following:

(1) $14,000,000 for the fiscal year ending June 30, 1971, to be used for the Special Impact programs described in part D of title I;

(2) $34,700,000 for the fiscal year ending June 30, 1971, to be used for the Special Work and Career Development programs described in part E of title I;

(3) $180,000,000 for the fiscal year ending June 30, 1971, to be used for the Project Headstart program described in section 222(a)(1);

(4) $32,000,000 for the fiscal year ending June 30, 1971, to be used for the Legal Services program described in section 222(a)(3);

(5) $80,000,000 for the fiscal year ending June 30, 1971, to be used for the Comprehensive Health Services program described in section 222(a)(4);

(6) $112,500,000 for the fiscal year ending June 30, 1971, to be used for the Emergency Food and Medical Services program described in section 222(a)(5);

(7) $15,000,000 for the fiscal year ending June 30, 1971, to be used for the Family Planning program described in section 222(a)(6);

(8) $3,200,000 for the fiscal year ending June 30, 1971, to be used for the Senior Opportunities and Services program described in section 222(a)(7);

(9) $15,000,000 for the fiscal year ending June 30, 1971, to be used for the program of assistance for migrant and seasonal farmworkers described in part B of title III; and

(10) $50,000,000 for the fiscal year ending June 30,1971, to be used for Day Care projects described in part B of title V.

[Conference report]

AUTHORIZATION OF APPROPRIATIONS

The Senate bill provided authorization of appropriations for the fiscal year 1970 of $2,048,000,000. The House amendment in contrast authorized the appropriation for fiscal year 1970 of $2,343,000,000, of which $1,563,000,000 was authorized for carrying on programs for which the House did not make separate authorization of appropriations. The bill agreed to in conference authorizes the appropriation of $2,195,500,000 for the fiscal year 1970.

For the fiscal year 1971, the House amendment authorized the appropriation of such sums as may be necessary. The Senate bill authorized the appropriation for that year of $2,148,000,000, but, in addition, authorized the appropriation of the following:

(1) $14,000,000 for Special Impact programs under part D of title I,

(2) $240,000,000 for Project Headstart programs,

(3) $32,000,000 for Legal Services programs.

(4) $80,000,000 for Comprehensive Health Services programs.

(5) $150,000,000 for Emergency Food and Medical Services programs,

(6) $3,200,000 for the Senior Opportunities and Services programs,

(7) $15,000,000 for assistance for migrant and seasonal farmworkers under part B of title III, and

(8) $50,000,000 for Day Care projects under part B of title V.

The conference substitute authorizes $2,295,500,000 for the fiscal year 1971 and authorizes the additional amounts which were authorized by the Senate bill with the following exceptions: (1) an additional authorization of $15,000,000 for family planning programs; (2) the additional amount for Headstart is reduced to $180,000,000; (3) the additional amount for Emergency Food and Medical Services is reduced to $112,500,000.

ALLOCATIONS

The House amendment did not provide allocations to specific programs of amounts appropriated, except to the extent the separate authorizations contained in the House amendment for special work and career development programs, special preschool and Follow Through programs, and intensive programs to eliminate hunger and malnutrition constituted a separate allocation of appropriations.

The Senate bill in contrast provided special allocations for a number of the programs carried on under the Act. These were the following:

(1) $890,300,000 for work and training programs under title I.

(2) $46,000,000 for special impact programs under part D of title I.

(3) $1,012,700,000 for community action programs under title II, of which $338,000,000 would be for Project Headstart programs, $60,000,000 for Follow Through programs, $58,000,000 for legal services programs, $80,000,000 for comprehensive health services programs, $25,000,000 for emergency food and medical services programs, $15,000,000 for family planning programs, and $8,800,000 for senior opportunities and services programs.

(4) $12,000,000 for rural loan programs,

(5) $34,000,000 for migrant and seasonal farm worker programs,

(6) $16,000,000 for administration and coordination under title VI,

(7) $37,000,000 for carrying out VISTA.

The conference substitute adopts the plan of the Senate bill with a major change. As adopted by the conferees, $328,900,000 must be reserved and made available for each of the fiscal years for local initiative programs carried on under section 221 of the Act, and only the remainder of the appropriations for each such year would be allocated in the prescribed manner. The amount so reserved is not subject to transfer under Section 616 of the Act. The allocations described above are retained in the conference substitute, except that a new allocation of $20,000,000 is made for carrying out the new part E of the Act. It should be noted that the provisions of the Senate bill requiring pro rata reductions in allocations where appropriations are insufficient to make such allocations in full are retained in the conference substitute, but, of course, the funds reserved for local initiative programs would not be subject to such reductions. It should also be noted in considering these allocations that the conference substitute retains the provisions of the Senate bill which require the Director to reserve and make available not less than $10,000,000 for the fiscal year 1970, and not less than $15,000,000 for the fiscal year 1971 for carrying out the new Alcoholic Counseling and Recovery program and to reserve and make available not less than $5,000,000 for the fiscal year 1970, and not less than $15,000,000 for the fiscal year 1971 for carrying out the new Drug Rehabilitation program.

Mr. JAVITS. I respectfully submit, in reply, that the Senator's point goes to the qualitative issue involved, which is: having once decided that it is germane, what do you do about it?

That was tested by the Senator's motion to recommit. All we are arguing now is the jurisdiction to do anything about it. I do not think that contests the jurisdiction. The Senator does not like what we did, and I respect his position, but I submit that that is not the point at issue.

The PRESIDING OFFICER. The Chair is ready to submit the question.

The point of order is directed to the propriety of the so-called reservation in the conference report under section 102 of the conference report.

The Senate rule; namely, rule 27.3, reads as follows:

(a) In any case in which a disagreement to an amendment in the nature of a substitute has been referred to conferees, it shall be in order for the conferees to report a substitute on the same subject matter; but they may not include in the report matter not committed to them by either House. They may, however, include in their report in any such case matter which is a germane modification of subjects in disagreement.

In this particular case, there was a lump sum authorization which anticipated various programs which were not enumerated in the legislation, but were mentioned in the committee report. In this case, the program which is made the point of discussion and of the point of order was mentioned in the Senate committee report which brought out the authorizing legislation.

The question that the Senate must decide now is whether, in view of the mention of that program in the Senate report, it was encompassed within the lump sum authorization, so that the reservation or modification may be a subject for the conferees to act upon.

Under these circumstances, and under rule XX, the Chair submits the question to the Senate.

The question is, Did the conferees exceed their authority by including this proviso in the conference report?

Mr. NELSON. Mr. President, I move to lay the point of order raised by the Senator from Colorado on the table.

The PRESIDING OFFICER. I might add that the Parliamentarian has advised me that this question is debatable at this stage.

Mr. NELSON. I move to lay the point of order on the table.

Mr. DOMINICK. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. DOMINICK. Is that motion in order?

The PRESIDING OFFICER. The motion is in order, and is not debatable.

Mr. DOMINICK. I ask for the yeas and nays.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Wisconsin (Mr. NELSON) to lay on the table the point of order raised by the Senator from Colorado (Mr. DOMINICK). On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The bill clerk called the roll.

Mr. KENNEDY. I announce that the Senator from New Mexico (Mr. ANDERSON), the Senator from Mississippi (Mr. EASTLAND), the Senator from Alaska (Mr. GRAVEL), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Hawaii (Mr. INOUYE), the Senator from Louisiana (Mr. LONG), the Senator from Montana (Mr. METCALF), the Senator from Rhode Island (Mr. PASTORE), the Senator from Georgia (Mr. RUSSELL), the Senator from Missouri (Mr. SYMINGTON), the Senator from Maryland (Mr. TYDINGS) and the Senator from Ohio (Mr. YOUNG), are necessarily absent.

I further announce that, if present and voting, the Senator from Montana (Mr. METCALF) and the Senator from Rhode Island (Mr. PASTORE), would each vote "yea."

Mr. GRIFFIN. I announce that the Senator from New Jersey (Mr. CASE), the Senator from Arizona (Mr. GOLDWATER), the Senator from California (Mr. MURPHY), the Senators from Illinois (Mr. PERCY and Mr. SMITH), the Senator from Kansas (Mr. PEARSON), the Senator from Alaska (Mr. STEVENS), the Senator from Texas (Mr. TOWER), and the Senator from Delaware (Mr. WILLIAMS) are necessarily absent.

The Senator from Kentucky (Mr. COOPER) is absent because of illness in his family.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

If present and voting, the Senator from California (Mr. MURPHY), the Senator from Illinois (Mr. SMITH), and the Senator from Texas (Mr. TOWER) would each vote "nay."

Mr. DODD. Mr. President, how am I recorded?

The PRESIDING OFFICER. The Senator from Connecticut is recorded in the affirmative.

Mr. BAKER. Mr. President, am I recorded?

The PRESIDING OFFICER. The Senator from Tennessee is recorded.

Mr. NELSON. Mr. President, I ask for the regular order.

Mr. President, I withdraw the request for regular order.

Mr. GRIFFIN. Mr. President, I ask for the regular order.

The PRESIDING OFFICER. The Chair is waiting for the vote count. That is the regular order.

The result was announced—yeas 39, nays 38, as follows:

[No. 268 Leg.]

YEAS—39

Aiken	Hart	McIntyre
Bayh	Hartke	Mondale

Byrd, Va.	Hansen	Spong
Byrd, W. Va.	Holland	Stennis
Cook	Hruska	Talmadge
Cotton	Jordan, N.C.	Thurmond
Curtis	Jordan, Idaho	Young, N. Dak.
Dole	McClellan	

NOT VOTING—23

Anderson	Long	Smith, Ill.
Case	Metcalf	Stevens
Cooper	Mundt	Symington
Eastland	Murphy	Tower
Goldwater	Pastore	Tydings
Gravel	Pearson	Williams, Del.
Hollings	Percy	Young, Ohio
Inouye	Russell	

So the motion to lay on the table was agreed to.

The PRESIDING OFFICER. The question recurs on the adoption of the conference report. On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The bill clerk called the roll.

Mr. KENNEDY. I announce that the Senator from New Mexico (Mr. ANDERSON), the Senator from Mississippi (Mr. EASTLAND), the Senator from Alaska (Mr. GRAVEL), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Hawaii (Mr. INOUYE), the Senator from Louisiana (Mr. LONG), the Senator from Wyoming (Mr. MCGEE), the Senator from Montana (Mr. METCALF), the Senator from Rhode Island (Mr. PASTORE), the Senator from Georgia (Mr. RUSSELL), the Senator from Missouri (Mr. SYMINGTON), the Senator from Maryland (Mr. TYDINGS), and the Senator from Ohio (Mr. YOUNG), are necessarily absent.

I further announce that, if present and voting, the Senator from Montana (Mr. METCALF) and the Senator from Rhode Island (Mr. PASTORE), would each vote "yea."

Mr. GRIFFIN. I announce that the Senator from Massachusetts (Mr. BROOKE), the Senator from New Jersey (Mr. CASE), the Senator from Arizona (Mr. GOLDWATER), the Senator from California (Mr. MURPHY), the Senators from Illinois (Mr. PERCY and Mr. SMITH), the Senator from Kansas (Mr. PEARSON), the Senator from Alaska (Mr. STEVENS), the Senator from Texas (Mr. TOWER), and the Senator from Delaware (Mr. WILLIAMS) are necessarily absent.

The Senator from Kentucky (Mr. COOPER) is absent because of illness in his family.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

If present and voting, the Senator from Texas (Mr. TOWER) would vote "nay."

On this vote, the Senator from Massachusetts (Mr. BROOKE) is paired with the Senator from California (Mr. MURPHY). If present and voting, the Senator from Massachusetts would vote "yea" and the Senator from California would vote "nay."

On this vote, the Senator from New Jersey (Mr. CASE) is paired with the Senator from Illinois (Mr. SMITH). If present and voting, the Senator from New Jersey would vote "yea" and the Senator from Illinois would vote "nay."

The result was announced—yeas 54, nays 21, as follows:

[No. 269 Leg.]

YEAS—54

Aiken	Griffin	Montoya

Hollings	Percy	
Inouye	Russell	

So the conference report was agreed to.

Mr. NELSON. Mr. President, I move to reconsider the vote by which the conference report was agreed to.

Mr. MANSFIELD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

SENATE CONCURRENT RESOLUTION 51—AUTHORITY FOR SECRETARY OF THE SENATE TO MAKE A TECHNICAL CORRECTION IN ENROLLMENT OF S. 3016

Mr. NELSON. Mr. President, I submit a concurrent resolution, and ask unanimous consent for its immediate consideration.

The PRESIDING OFFICER. The concurrent resolution will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. A concurrent resolution to authorize the Secretary of the Senate to make a technical correction in the enrollment of the bill (S. 3016) to provide for the continuation of programs authorized under the Economic Opportunity Act of 1964, to authorize advance funding of such programs, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the concurrent resolution?

There being no objection the Senate proceeded to consider the concurrent resolution.

Mr. NELSON. Mr. President, the printer made a mistake and designated one section as section 620(d), when it should be designated as section 602(d). That is what the concurrent resolution is about.

The PRESIDING OFFICER. The question is on agreeing to the concurrent resolution.

The concurrent resolution (S. Con. Res. 51) was agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That the Secretary of the Senate, in the enrollment of the bill (S. 3016) to provide for the continuation of programs authorized under the Economic Opportunity Act of 1964, to authorize advance funding of such programs, and for other purposes, is hereby authorized and directed to make the following correction:

In section 114 strike out "section 620(d)" and insert "section 602(d)".

CORRECTION IN ENROLLMENT

Mr. MANSFIELD subsequently said: Mr. President, I ask unanimous consent that the vote by which the Senate earlier today agreed to Senate Concurrent Resolution 51 be reconsidered.

The PRESIDING OFFICER. Is there objection? There being no objection, the vote by which Senate Concurrent Resolution 51 is reconsidered. The resolution is before the Senate.

Mr. MANSFIELD. Mr. President, I send to the desk an amendment to the concurrent resolution and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read the amendment as follows:

SEC. 2. That the Senate recede and concur in the House amendment to the title of S. 3016.

Mr. MANSFIELD. Mr. President, it is my understanding that this has to do only with the title and does not interfere in any way with the content of that which was discussed by the Senate.

The PRESIDING OFFICER. Is there objection to the amendment offered by the Senator from Montana? The Chair hears none, and the amendment is agreed to.

The question now is on agreeing to the concurrent resolution, as amended.

Senate Concurrent Resolution 51, as amended, was agreed to as follows:

S. CON. RES. 51

Resolved by the Senate (the House of Representatives concurring), That the Secretary of the Senate, in the enrollment of the bill (S. 3016) to provide for the continuation of programs authorized under the Economic Opportunity Act of 1964, to authorize advance funding of such programs, and for other purposes, is hereby authorized and directed to make the following correction:

In section 114 strike out "section 620(d)" and insert "section 602(d)".

Sec. 2. That the Senate recede and concur in the House amendment to the title of S. 3016.

NATIONAL ENVIRONMENTAL POLICY ACT OF 1969—CONFERENCE REPORT

Mr. JACKSON. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 1075) to establish a national policy for the environment; to authorize studies, surveys, and research relating to ecological systems, natural resources, and the quality of the human environment; and to establish a Board of Environmental Quality Advisers. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER. The report will be read for the information of the Senate.

The assistant legislative clerk read the report.

(For conference report, see House proceedings of December 17, 1969, pp. 39701–39702, CONGRESSIONAL RECORD.)

The PRESIDING OFFICER. Is there objection to the present consideration of the report?

There being no objection, the Senate proceeded to consider the report.

Mr. JACKSON. Mr. President, the House amended the bill as passed by the Senate by striking all after the enacting clause and substituting the text of a new bill. The House bill included provisions similar to those of title III of the Senate bill which would establish a Council on Environmental Quality. It also included a short policy statement, but it omitted most of the provisions of titles I and II of the Senate bill.

The conference report represents a sound compromise worked out in three meetings of the conferees. It is a strong measure which will be an important step toward evolving a sound program of environmental management for the Nation.

S. 1075, the National Environmental Policy Act of 1969, was passed by the Senate on July 10, 1969, had three major titles. Title I provides a "declaration of national environmental policy" which set national goals for environmental management and established supplementary operating procedures for all Federal agencies to follow in planning and decisionmaking which have an impact on man's environment. Title II authorized certain research and data gathering functions. Title III authorized the creation of a three-member Board of Environmental Quality Advisers in the Executive Office of the President.

S. 1075 was amended and passed by the House of Representatives on September 23, 1969. As amended and passed by the House, S. 1075 consisted of one title which authorized the creation of a five-member Council on Environmental Quality.

On October 8, 1969, the Senate disagreed to the amendments of the House of Representatives, agreed to the House's request for a conference, and authorized the Chair to appoint the conferees on the part of the Senate. Prior to the Senate's agreeing to the House's request for a conference on S. 1075, and in connection with debate on S. 7, the Water Quality Improvement Act of 1969, there was a discussion by members of the Senate Public Works Committee and the Senate Interior and Insular Affairs Committee on the relationship between title II of S. 7 and the provisions of S. 1075 as passed by the Senate on July 10, 1969. As a result of that discussion, it was agreed that the Senate conferees on S. 7 and on S. 1075 would seek certain agreed upon changes in each measure in conference committee with the House of Representatives.

The purpose of the agreed upon changes in S. 7 and in S. 1075, which to some extent, dealt with similar subject matter are set out in the October 8, 1969, CONGRESSIONAL RECORD at pages 29050 through 29089.

It was understood during the discussion of this matter on October 8 that the Senate conferees on S. 1075 would make every possible effort to gain House agreement to the text of S. 1075 as passed by the Senate as well as to the agreed-upon changes discussed on the floor. This understanding was referred to in a motion offered by the chairman of the Interior Committee that the conferees on S. 1075 be instructed to insist upon the provisions of S. 1075 as passed by the Senate and as modified by the agreed-upon changes discussed in connection with debate on S. 7. As was stated on the floor in connection with this motion:

It is also understood, however, that the purpose of a conference committee is to compromise and adjust differences between the House and Senate passed bills, and that the final product of the conference committee will probably have to involve some changes in the language of both the House and Senate passed bills on S. 1075. It is, however, the hope and the intent of all concerned on the Senate side that these changes will not in any way affect the substance of what has been agreed upon. (October 8, 1969, CONGRESSIONAL RECORD, page 29087.)

Mr. President, S. 1075 as agreed upon by the conference committee is very close to the bill as passed by the Senate. Most of the substantive provisions of the Senate passed bill have been retained. In addition, most of the substantive provisions of the agreed-upon changes which were discussed on October 8 were adopted in the report of the conference committee.

Mr. President, I might point out that during the conference, the junior Senator from Washington had an opportunity to work with the junior Senator from Maine, who is the chairman of the Subcommittee on Public Works which is directly involved in the environmental area. It was agreed that certain statements should be adjusted in the statement of the Senate managers and this has been done. The junior Senator from

Maine will comment on that in a moment.

The changes the conference committee made in S. 1075 as passed by the Senate and as agreed upon are reflected in the section-by-section analysis of the conference report accompanying the statement of the managers on the part of the Senate. The changes are also discussed in a separate attachment, titled "Major Changes in S. 1075 as Passed by the Senate."

Mr. President, I ask unanimous consent that the major changes in S. 1075, as passed by the Senate, be printed at the conclusion of my remarks, together with a section-by-section analysis of the bill.

The PRESIDING OFFICER (Mr. DODD in the chair). Without objection, it is so ordered.

(See exhibits 1 and 2.)

Mr. JACKSON. Mr. President, it is my view that S. 1075 as passed by the Senate and now, as agreed upon by the conference committee, is the most important and far-reaching environmental and conservation measure ever enacted by the Congress.

Mr. President, it is my view that S. 1075 as passed by the Senate and now, as agreed upon by the conference committee, is the most important and far-reaching conservation-environmental measure ever acted upon by the Congress.

This measure is important because it provides four new approaches to dealing with environmental problems on a preventive and an anticipatory basis. As Members of the Senate are aware, too much of our past history of dealing with environmental problems has been focused on efforts to deal with "crises," and to "reclaim" our resources from past abuses.

First. The first new approach is the statement of national policy and the declaration of national goals found in section 101.

In many respects, the only precedent and parallel to what is proposed in S. 1075 is in the Full Employment Act of 1946, which declared an historic national policy on management of the economy and established the Council of Economic Advisers. It is my view that S. 1075 will provide an equally important national policy for the management of America's future environment.

A statement of environmental policy is more than a statement of what we believe as a people and as a nation. It establishes priorities and gives expression to our national goals and aspirations. It provides a statutory foundation to which administrators may refer to it for guidance in making decisions which find environmental values in conflict with other values.

What is involved is a congressional declaration that we do not intend, as a government or as a people, to initiate actions which endanger the continued existence or the health of mankind: That we will not intentionally initiate actions which will do irreparable damage to the air, land, and water which support life on earth.

An environmental policy is a policy for people. Its primary concern is with man and his future. The basic principle of the policy is that we must strive in all that we do, to achieve a standard of excellence in man's relationships to his physical surroundings. If there are to be departures from this standard of excellence they should be exceptions to the rule and the policy. And as exceptions, they will have to be justified in the light of public scrutiny as required by section 102.

Second. To insure that the policies and goals defined in this act are infused into the ongoing programs and actions of the Federal Government, the act also establishes some important "action-forcing" procedures. Section 102 authorizes and directs all Federal agencies, to the fullest extent possible, to administer their existing laws, regulations, and policies in conformance with the policies set forth in this act. It also directs all agencies to assure consideration of the environmental impact of their actions in decisionmaking. It requires agencies which propose actions to consult with appropriate Federal and State agencies having jurisdiction or expertise in environmental matters and to include any comments made by those agencies which outline the environmental considerations involved with such proposals.

Taken together, the provisions of section 102 directs any Federal agency which takes action that it must take into account environmental management and environmental quality considerations.

Third. The act in title II establishes a Council on Environment Quality in the Executive Office of the President. This Council will provide an institution and an organizational focus at the highest level for the concerns of environmental management. It will provide the President with objective advice and a continuing and comprehensive overview of the fragmented and bewildering Federal jurisdiction involved in some way with the environment. The Council's activities in this area will be complemented by the support of the Office of Environmental Quality proposed in the Water Quality Improvement Act of 1969.

The Council also will establish a system for monitoring environmental indicators, and maintaining records on the status of the environment. The Council will insure that there will be complete and reliable data on environmental indicators available for the anticipation of emerging problems and trends. This data will provide a basis for sound management.

Fourth. Finally in section 201, S. 1075 requires the submission by the President to the Congress and to the American people of an annual environmental quality report. The purpose of this report is to provide a statement of progress, to establish some baselines, and to tell us how well—or as some suspect how bad—we are doing in managing the environment—the Nation's life support system.

It is the clear intent of the Senate conferees that the annual report should be referred in the Senate to all committees which have exercised jurisdiction over any part of the subject matter contained therein. Absent specific language on the reference of the report, the report would be referred pursuant to the Senate rules. It is the committee's understanding that under the rules all relevant committees may be referred copies of the annual report.

This was the intent of the Senate when S. 1075 was passed. In the section-by-section analysis of section 303 of S. 1075 at page 26 of the committee report No. 91–296 it is expressly stated that:

It is anticipated that the annual report and the recommendations made by the President would be a vehicle for oversight hearings and hearings by the appropriate legislative committees of the Congress.

The Senate conferees intend that under the language of the conference report, the annual report would be referred to all appropriate committees of the Senate.

Mr. President, one of the provisions of the Senate passed bill which the conference committee agreed to change requires special comment. Section 101(b) of S. 1075 provided that:

(b) The Congress recognizes that *each person has a fundamental and inalienable right to a healthful environment* and that each person has a responsibility to contribute to the preservation and enhancement of the environment.

The conference committee changed this provision so that it now reads:

(b) The Congress recognizes that *each person should enjoy a healthful environment* and that each person has a responsibility to contribute to the preservation and enhancement of the environment.

I opposed this change in conference committee because it is my belief that the language of the Senate passed bill reaffirmed what is already the law of this land; namely, that every person does have a fundamental and an inalienable right to a healthful environment. If this is not the law of this land, if an individual in this great country of ours cannot at the present time protect his right and the right of his family to a healthful environment, then it is my view that some fundamental changes are in order.

To dispell any doubts about the existence of this right, I intend to introduce an amendment to the National Environmental Policy Act of 1969 as soon as it is signed by the President. This amendment will propose a detailed congressional declaration of a statutory bill of environmental right.

Another provision which should be brought to the attention of the Senate is section 102(e) of the conference report. This section directs all Federal agencies to:

Recognize the worldwide and long-range character of environmental problems and, where consistent with the foreign policy of the United States, lend appropriate support to initiatives, resolutions, and programs designed to maximize international cooperation in anticipating and preventing a decline in the quality of mankind's world environment.

This provision was added to the bill as an amendment I offered in the Senate Interior Committee in June. The purpose of the provision is to give statutory authority to all Federal agencies to par-

ticipate in the development of a positive, forward looking program of international cooperation in dealing with the environmental problems all nations and all people share. Cooperation in dealing with these problems is necessary, for the problems are urgent and serious. Cooperation is also possible because the problems of the environment do not, for the most part, raise questions related to ideology, national security and the balance of world power.

We must seek solutions to environmental problems on an international level because they are international in origin and scope. The earth is a common resource, and cooperative effort will be necessary to protect it. Perhaps also, in the common cause of environmental management, the nations of the earth will find a little more sympathy and understanding for one another.

I am hopeful that the United Nations Conference in 1972 on "the Problems of the Human Environment" will unite leaders of nations throughout the world in the effort of achieving solutions to international environmental problems. I am, however, concerned that at the present time the Federal Government is not doing enough to plan and prepare for the 1972 U.N. Conference. Section 102(E) of the conference report on S. 1075 provides the Federal agencies and the administration with the authority to make a positive and a far-reaching contribution to this international effort to deal with this critical and growing international problem. I am hopeful that this authority will be utilized.

Mr. President, there is a new kind of revolutionary movement underway in this country. This movement is concerned with the integrity of man's life support system—the human environment. The stage for this movement is shifting from what had once been the exclusive province of a few conservation organizations to the campus, to the urban ghettos, and to the suburbs.

In recent months, the Nation's youth, in high schools, colleges, and universities across the country, have been taking up the banner of environmental awareness and have been seeking measures designed to control technology, and to develop new environmental policies which reflect the full range of diverse values and amenities which man seeks from his environment.

S. 1075 is a response by the Congress to the concerns the Nation's youth are expressing. It makes clear that Congress is responsive to the problems of the future. While the National Environmental Policy Act of 1969 is not a panacea, it is a starting point. A great deal more, however, remains to be done by the Federal Government, both in the form of legislation and executive action, if mankind and human dignity are not to be ground down in the years ahead by the expansive and impersonal technology modern science has created.

Mr. President, the inadequacy of present knowledge, policies, and institutions for environmental management is reflected in our Nation's history, in our national attitudes, and in our contemporary life. It touches every aspect of man's existence. It threatens, it degrades, and destroys the quality life which all men seek.

We see increasing evidence of this inadequacy all around us: haphazard urban and suburban growth; crowding, congestion, and conditions within our central cities which result in civil unrest and detract from man's social and psychological well-being; the loss of valuable open spaces; inconsistent and often, incoherent rural and urban land-use policies; critical air and water pollution problems; diminishing recreational opportunity; continuing soil erosion; the degradation of unique ecosystems; needless deforestation; the decline and extinction of fish and wildlife species; faltering and poorly designed transportation systems; poor architectural design and ugliness in public and private structures; rising levels of noise; the continued proliferation of pesticides and chemicals without adequate consideration of the consequences; radiation hazards; thermal pollution; an increasingly ugly landscape cluttered with billboards, powerlines and junkyards; growing scarcity of essential resources; and many, many other environmental quality problems.

A primary function of Government is to improve the institutional policy and the legal framework for dealing with these problems. S. 1075 as agreed to by the conference committee is an important step toward this end.

There should be no doubt of our capability to cope with environmental problems. The historic success of Apollo 11 last month demonstrates that if we—as a nation and as a people—commit our talents and resources to a goal we can do the impossible.

If we can send men to the moon, we can clean our rivers and lakes, and if we can transmit television pictures from another planet, we can monitor and improve the quality of the air our children breathe and the open spaces they play in.

The needs and the aspirations of future generations make it our duty to build a sound and operable foundation of national objectives for the management of our resources for our children and their children. The future of succeeding generations in this country is in our hands. It will be shaped by the choices we make. We will not, and they cannot escape the consequences of our choices.

Mr. President, I believe that the bill agreed upon by the conferees is a sound measure. This measure will be an important step toward building a capability within the Federal Government to cope with present and impending environmental problems.

Problems of environmental management may well prove to be the most difficult and the most important problems we have ever faced. I urge the Senate to prepare the Federal Establishment to face them. I urge the approval of the conference report.

EXHIBIT 1

MAJOR CHANGES IN S. 1075 AS PASSED BY THE SENATE

TITLE

The title of S. 1075 as passed by the Senate was amended to reflect the major changes in the bill agreed to by the Conference Committee. These were the deletion of Title II and changing the name of the "Board" to "Council."

Section 1

No change was made in the "short title."

Section 2

The statement of "purpose" is unchanged except that it was agreed that the new institution created in the Executive Office of the President would be designated as the "Council on Environmental Quality" rather than a "Board of Environmental Quality Advisors" as in the Senate passed bill. All other references to the "Board" were also changed to "Council."

TITLE I

Section 101(a)

Section 101(a) of the Senate passed bill was divided into subsection 101(a) and (b) and subsection (b) was redesignated as subsection (c).

Section 101(a) of the Conference Report combines language from Section 1 of the House passed bill and from Section 101(a) of the Senate passed bill. As revised, this section declares that it is the continuing responsibility of the Federal government, in cooperation with state and local government and others to use all practical means to promote the general welfare and insure that man and nature exist in productive harmony.

Section 101(b)

The new Section 101(b) with appropriate transitional language has been unchanged. This section declares national environmental goals and was taken from Section 101(a) of the Senate passed bill.

Section 101(c)

This language was found in Section 101(b) of the Senate passed bill. The Conference Committee amended the language which read "each person has a fundamental and inalienable right to a healthful environment". Section 101(c) now reads "each person should enjoy a healthful environment".

Section 102

The language of the first paragraph of Section 102 of the Senate passed bill was modified by the Conference Committee so that the phrase "to the fullest extent possible" modifies both directives. The directives were also given number designations.

Section 102(a)

In view of the changes in the first paragraph of Section 102, the phrase "to the fullest extent possible" was deleted from Section 102(a).

Section 102(b)

This section was modified by the adoption of language requiring all agencies to consult with the Council. In part, this was a language change which was discussed and agreed to on October 8, on the Senate floor.

Section 102(c)

This section, with two minor changes, is the language of Section 102(c) of S. 1075 as passed by the Senate and as discussed and agreed to on the Senate floor on October 8.

Section 102(d)

This section is identical to Section 102(d) as passed by the Senate and as agreed to on the Senate floor on October 8.

Section 102(e)

This section is the same as Section 102(e) of S. 1075 as passed by the Senate except

that the phrase "where consistent with the foreign policy of the United States" was added.

Section 102(f)

This language is identical to Section 201 (d) of title II of the Senate passed bill. Title II of S. 1075 was deleted by the Conference Committee, but this and other provisions from this title were incorporated into title I and II of the bill reported by the Conferees.

Section 102(g)

This language is identical to Section 201 (e) of title II of the Senate passed bill.

Section 102(h)

This language is a modification of language found in Section 201(g) of title II of the Senate passed bill.

Section 102 in general

The conference substitute provides that the phrase "to the fullest extent possible" applies with respect to those actions which Congress authorizes and directs to be done under both clauses (1) and (2) of Section 102 (in the Senate passed bill, the phrase applied only to the directive in clause (1)). In accepting this change to section 102 (and also to the provisions of Section 103), the conferees agreed to delete section 9 of the House amendment from the conference substitute. Section 9 of the House amendment provided that "nothing in this Act shall increase, decrease or change any responsibility or authority of any Federal official or agency created by other provision of law." In making this change in favor of the less restrictive provision "to the fullest extent possible" the Senate conferees are of the view that the new language does not in any way limit the Congressional authorization and directive to all agencies of the Federal Government set out in subparagraphs (A) through (H) of clause (2) of Section 102. The purpose of the new language is to make it clear that each agency of the Federal Government shall comply with the directives set out in such subparagraphs (A) through (H) unless the existing law applicable to such agency's operations does not make compliance possible. If this is found to be the case, then compliance with the particular directive is not required but the provisions of Section 103 would apply. However, as to other aspects of the activities of that agency, compliance with the provisions of this bill is expected. Thus, it is the intent of the conferees that the provision "to the fullest extent possible" shall not be used by any Federal agency as a means to avoiding compliance with the directives set out in Section 102. Rather, the language in Section 102 is intended to assure that all agencies of the Federal Government shall comply with the directives set out in said section "to the fullest extent possible" under their statutory authorizations and that no agency shall seek to construe its existing statutory authorizations in a manner designed to avoid compliance.

Many existing agencies such as the National Park Service, the Federal Water Pollution Control Administration and the National Aid Pollution Control Administration already have important responsibilities in the area of environmental control. The provision of Section 102 (as well as 103) are not designed to result in any change in the manner in which they carry out their environmental protection authority. This provision is, however, clearly designed to assure consideration of environmental matters by all agencies in their planning and decision making—especially those agencies who now have little or no legislative authority to take environmental considerations into account.

Section 103

This section is based upon a provision of the Senate passed bill (Section 102(f)) not in the House amendment. This section as agreed to by the conferees, provides that all agencies of the Federal Government shall review their "present statutory authority, administrative regulations, and current policies and procedures to determine whether there are any deficiencies and inconsistencies therein which prohibit full compliance with the purpose and provisions" of the bill. If an agency finds such deficiencies or inconsistencies, it is required under this section to propose to the President not later than July 1, 1971 such measures as may be necessary to bring its authority and policies into conformity with the purposes and procedures of the bill. Section 103 thereby provides a mechanism which shall be utilized by all Federal agencies (1) to ascertain whether there is any provision of their statutory authority which precludes full compliance with any of the provisions of the bill, and (2) if any are found, to recommend changes in their statutory authority to the President, and, if recommended, to the appropriate Congressional Committees having jurisdiction. In conducting the review noted above, it is the understanding of the conferees that an agency shall not construe its existing authority in a manner which avoids full compliance with this Act. Rather, the intent of the conferees is that all Federal agencies shall comply with the provisions of Section 102.

It is not the intent of the Senate conferees that the review required by Section 103 would require existing environmental control agencies such as the Federal Water Pollution Control Administration and the National Air Pollution Control Administration to review their statutory authority and regulatory policies which are related to maintaining and enhancing the quality of the environment. This Section is aimed at those agencies which have little or no authority to consider environmental values.

Section 104

This language, with a minor reference change, is identical to language discussed and agreed to on the Senate floor on October 8 as a proposed Section 103 to S. 1075 when a conference with the House on S. 1075 was agreed to.

Section 105

This language is a modification of Section 103 of S. 1075 as passed by the Senate. As modified this section provides that the provisions of this Act are "supplementary to those set forth in existing authorizations of Federal agencies." The effect of this section is to give recognition to the fact that the bill is in addition to, but does not modify or repeal existing law. This section does not, however, obviate the requirement that the Federal agencies whose activities may have an adverse effect on the quality of the environment conduct their activities in accordance with the provisions of this bill unless to do so would violate their existing statutory authorizations.

TITLE II

Title II of S. 1075 as passed by the Senate was deleted. This title had authorized certain research and data gathering functions, a small grant-in-aid program, and the creation of a new position of Deputy Director in the Office of Science and Technology. The most important provisions of title II relating to research and data gathering were retained by the Conference Committee in Section 102 of title I and in Sections 204 and 205 of title II of the Conference Report.

Title II of the language agreed upon by the Conference Committee is largely from the House amendment to S. 1075 with a number of important substantive changes and exceptions. The language of the House amendment paralleled very closely the language of title III of S. 1075 as passed by the Senate. Major changes between the two provisions as well as substantive changes adopted by the Conference Committee are noted below.

Section 201

This section requires the President to transmit to the Congress an annual Environmental Quality Report. With minor word changes, this language was taken from Section 2 of the House amendment to S. 1075. The parallel language from the Senate passed bill is found in Section 303 of S. 1075.

On October 8, when the Senate disagreed to the House amendment and requested a conference it was agreed that the Senate conferees would seek to have language placed in the Conference Report which would provide that the annual Environmental Quality Report would be referred in whole or in part to the Committees of each House of the Congress which have exercised jurisdiction over the subject matter therein. This language would have been a new Section 303(b) of the Senate passed bill. The Senate conferees made every possible effort to have this language made a part of the Conference Report. When agreement could not be reached, an effort was made to have language which applied only to reference of the Report in the Senate made a part of the Conference Report. Again, agreement was not reached.

It is the clear intent of the Senate conferees that the annual report should be referred in the Senate to all Committees which have exercised jurisdiction over any part of the subject matter contained therein. Absent specific language on the reference of the report, the report would be referred pursuant to the Senate rules. It is the Committee's understanding that under the rules all relevant Committees may be referred copies of the annual report.

This was the intent of the Senate when S. 1075 was passed. In the Section-by-Section analysis of Section 303 of S. 1075 at page 26 of the Committee Report No. 91–296 it is expressly stated that:

"It is anticipated that the annual report and the recommendations made by the President would be a vehicle for oversight hearings and hearings by the appropriate legislative committees of the Congress."

The Senate Conferees intend that under the language of the Conference Report, the annual report would be referred to all appropriate Committees of the Senate.

Section 202

Section 202 was drawn, in part, from Section 3 of the House amendment and, in part, from Section 301(a) of the Senate passed bill. The conferees agreed that the Council should consist of "three" members and should be subject to Senate confirmation as provided in S. 1075 as passed by the Senate.

Section 203

This section, with minor reference changes, is the same language found in Section 4 of the House amendment. It is almost identical to Section 304 of the Senate passed bill.

In connection with the Senate's request for a conference on S. 1075 on October 8, it was agreed that the Senate conferees would seek to have language incorporated into the Conference Report authorizing the Council to establish advisory committees and to convene a biennial forum on environmental quality problems. The Senate conferees sought to have specific language of this nature incorporated into the Conference Report, but no agreement was reached. In large measure this was because of the fact that the language of Section 203 of the Conference Report, which authorizes the Council to employ experts and consultants, is broad enough to allow for the establishment of advisory committees and the convening of forums on environmental problems.

Section 204

This section, with minor language and reference changes, was drawn from Section 5 of the House amendment. In addition, Sections 201 (a) and (b) and Section 302(a)(1) from titles II and III of the Senate passed bill were

included by the Conference Committee as subsections 204 (5), (6) and (7).

Section 205

This section, with a couple of modifications, was drawn from Section 7 of the House amendment. Section 205(1) requires consultations with representatives of various groups and the Conference Committee added the Citizens Advisory Committee on Environmental Quality to those groups with which the Council should consult.

Section 205 (2) is designed to avoid duplication of expense and effort in connection with the Council's activities. The Conference Comimttee added new language, and language which the Senate had agreed to for Section 201 (a) in connection with the request for a conference on S. 1075. This language provides assurance that the Council's activities will not unnecessarily overlap or conflict with similar activities authorized by law and performed by established agencies.

Section 206

This section sets forth the compensation of the Council members and is substantially the same as Section 301(b) of the Senate passed bill.

Section 207

The appropriation authorization language in this section was drawn from Section 10 of the House amendment. The appropriation authorization for fiscal year 1971 was, however, increased from $500,000 to $700,000.

EXHIBIT 2

SECTION-BY-SECTION ANALYSIS

Section 1

This section provides that this act may be cited as the National Environmental Policy Act of 1969.

Section 2

This section sets forth the purposes of the act. The purposes of the act are to declare a national environmental policy; to promote efforts to prevent environmental damage and to better the health and welfare of man; to enlarge and enrich man's understanding of the ecological systems and natural resources important to the Nation; and to establish in the Executive Office of the President a Council of Environmental Quality Advisers.

TITLE I

Section 101(a)

This section is a declaration by the Congress of a national environmental policy. The policy is based upon a recognition of man's impact upon the natural environment particularly the influences of population growth, urbanization, industrial expansion, resource exploitation, and technological development. The Congress further recognizes the importance to the welfare of man of restoring and maintaining the quality of the environment.

The continuing policy of the Federal Government is declared to be, in cooperation with State and local governments and concerned public and private organizations (such as professional and technical societies, conservation organizations, industry and labor organizations and resource development organizations), to use all practicable means and measures, including financial and technical assistance, in a manner calculated to foster and promote the general welfare, to create and maintain conditions under which man and nature can exist in productive harmony, and fulfill the social, economic, and other requirements of present and future generations of Americans.

Section 101(b)

The continuing policy and responsibility of the Federal Government is declared to be that, consistent with other essential considerations of national policy, the activities and resources of the Federal Government shall be improved and coordinated to the end that the Nation may attain certain broad national goals in the management of the environment. The broad national goals are as follows:

(1) Fulfill the responsibilities of each generation as trustee of the environment for future generations. It is recognized in this statement that each generation has a responsibility to improve, enhance, and maintain the quality of the environment to the greatest extent possible for the continued benefit of future generations.

(2) Assure for all Americans safe, healthful, productive, and esthetically and culturally pleasing surroundings. The Federal Government, in its planning and programs, shall strive to protect and improve the quality of each citizen's surroundings both in regard to the preservation of the natural environment as well as in the planning, design, and construction of manmade structures. Each individual should be assured of safe, healthful, and productive surroundings in which to live and work and should be afforded the maximum possible opportunity to derive physical, esthetic, and cultural satisfaction from his immediate surroundings and from the environment he shares with the rest of humanity.

(3) Attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences. The resources of the United States must be capable of supporting the larger populations and the increased demands upon limited resources which appear inevitable in the immediate future. To do so, it is essential that the widest and most efficient use of the environment be made to provide both the necessities and the amenities of life. In seeking intensified beneficial utilization of the earth's resources, the Federal Government must take care to avoid degradation and misuse of resources, risk to man's continued health and safety, and other undesirable and unintended consequences.

(4) Preserve important historic, cultural, and natural aspects of our national heritage, and maintain wherever possible an environment which supports diversity and variety of individual choice. The pace of urbanization coupled with population growth and man's increasing ability to work unprecedented changes in the natural environment makes it clear that one essential goal in a national environmental policy is the preservation of important aspects of our national heritage. There are existing programs which are designed to achieve these goals, but many are single-purpose in nature. This subsection would make it clear that all agencies, in all of their activities, are to carry out their programs with a full appreciation of the importance of maintaining important aspects of our national heritage.

This subsection also emphasizes that an important aspect of national environmental policy is the maintenance of physical surroundings which provide present and future generations of American people with the widest possible opportunities for diversity and variety of experience and choice in cultural pursuits, in recreation endeavors, in esthetic appreciation and in living styles.

(5) Achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities. This subsection recognizes that populaton increases underlie many of the inter-related social and environmental problems which are being experienced in America. If the Nation's present high standards of living are to be made available to all of our citizens and if the general and growing desire of our people for greater participation in the physical and material benefits, in the amenities, and in the esthetic enjoyment afforded by a quality environment are to be satisfied, the Federal Government should—and it is hoped that State government and private enterprise will—strive to maintain levels and a distribution of population which will not exceed the environment's capability to provide such benefits.

(6) Enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources. In recent years a great deal of the emphasis of legislative and executive action regarding environmental matters has concentrated upon the protection and improvement of the quality of the Nation's renewable resources such as air and water. It is vital that these efforts be continued and intensified because they are among the most visible, pressing, and immediate concerns of environmental management.

It is also essential, however, that means be sought and utilized to improve the effectiveness of recycling depletable resources such as fiber, chemicals, and metallic minerals. Improved material standards of living for greater numbers of people will place increased demands upon limited raw material. Furthermore, the disposal of wastes from the non-consumptive single use of manufactured goods is among our most critical pollution problems. Emphasis must be placed upon seeking innovative solutions through technology, better management, and, if necessary, governmental regulation.

Section 101(c)

This subsection asserts congressional recognition that each person should enjoy a healthful environment. It is apparent that the guarantee of the continued enjoyment of any individual right is dependent upon individual health and safety. It is further apparent that deprivation of an individual's healthful environment will result in the deprivation of all of his rights.

The subsection also asserts congressional recognition of each individual's responsibility to contribute to the preservation and enhancement of the environment. The enjoyment of individual rights requires respect and protection of the rights of others. The cumulative influence of each individual upon the environment is of such great significance that every effort to preserve environmental quality must depend upon the strong support and participation of the public.

Section 102

The policies and goals set forth in section 101 can be implemented if they are incorporated into the ongoing activities of the Federal Government in carrying out its other responsibilities to the public. In some areas of Federal action there is no body of experience or precedent to assure substantial and consistent consideration of environmental factors in decisic nmaking. In some areas of Federal activity, existing legislation does not provide clear authority to assure consideration of environmental factors which conflict with other Federal objectives.

To remedy present shortcomings in the legislative foundation of existing programs, and to establish action-forcing procedures which will help to insure that the policies enunciated in section 101 are implemented, section 102 authorizes and directs that the existing body of Federal law, regulation, and policy be interpreted and administered to the "fullest extent possible" in accordance with the policies set forth in this act. It further establishes a number of operating procedures to be followed by all Federal agencies as follows:

(A) Wherever planning is done or decisions are made which may have an impact on the quality of man's environment, the responsible agency or agencies are directed to utilize a systematic, interdisciplinary, team approach. Such planning and decisions should draw upon the broadest possible range of social and natural scientific knowledge and design arts. Many of the environmental controversies of recent years have, in

large measure, been caused by the failure to consider all relevant points of view and all relevant values in the planning and conduct of Federal activities. Using an interdisciplinary approach that brings together the skills of landscape architect, the engineer, the ecologist, the economist, the sociologist and other relevant disciplines would result in better planning, better projects, and a better environment. Too often in the past planning has been the exclusive province of the engineer and cost analyst. And, as a consequence, too often the humanistic point of view, the relationship between man and his surroundings has been overlooked or purposely ignored.

(B) All agencies which undertake activities relating to environmental values, amenities, and aesthetic considerations, are authorized and directed, after consultation with the Council and other environmental control agencies, to make efforts to develop methods and procedures to incorporate those values in official planning and decisionmaking. In the past, environmental factors have frequently been ignored and omitted from consideration in the early stages of planning because of the difficulty of evaluating them in comparison with economic and technical factors. As a result, unless the results of planning are radically revised at the policy level—and this often means the Congress—environmental enhancement opportunities may be forgone and unnecessary degradation incurred. A vital requisite of environmental management is the development of adequate methodology for evaluating the full environmental impacts and the full costs—social, economic, and environmental—of Federal actions.

(C) After consultation with and obtaining the comments of Federal and State agencies which have jurisdiction by law with respect to any environment impact, each agency which proposes legislation and any other major Federal action shall make a detailed statement as to whether the proposal would have a significant effect upon the quality of the human environment. If the proposal is considered to have such a significant effect, then the recommendation or report on the proposal must include a detailed statement by the responsible official on:

(i) The environmental impact of the proposed action.

(ii) Any adverse impacts which cannot be avoided if the proposal is implemented.

(iii) The alternative ways of accomplishing the objectives of the proposed action and the results of not accomplishing the objectives.

(iv) The relationship between the local and short-term uses of environmental resources which are contemplated by the proposal and the general objective of maintaining and enhancing the long-term productivity of the environment.

(v) Any irreversible and irretreivable commitments of resources which would be involved in the proposal action should it be implemented.

This section further provides that any Federal, State or local agency comments on the required statement shall thereafter be made available to the President, the Council, and the public under the provisions of the Freedom of Information Act and shall accompany the proposal through the subsequent review process.

The committee does not intend that the requirements for comment by other agencies should unreasonably delay the processing of Federal proposals. The Committee anticipates that the President will promptly prepare and publish in the Federal Register a list of those appropriate agencies which have "jurisdiction by law" over various environmental matters and those appropriate agencies which he finds to have "special expertise" in various environmental matters.

With regard to State and local agencies, unless there is some more restrictive requirement of existing law or regulation, the opportunity for review may be restricted to those agencies which have established environmental jurisdiction within the geographical area which will or which may be affected by the proposed action. It is not the intention of the Committee to include those local agencies with only a remote interest and which are not primarily responsible for development and enforcement of environmental standards. The Committee believes that in some cases the requirement for State and local review may be satisfied by notice of proposed action in the Federal Register and by providing all necessary supplementary information to enable full public participation.

To prevent undue delay in the processing of Federal proposals, the Committee recommends that the President establish a time limitation for the receipt of comments (other than those comments required prior to making a detailed statement) from Federal, State, and local agencies similar to the 90-day review period presently established for comment upon Federal water resource development proposals.

(D) Wherever agencies of the Federal Government recommend courses of action which are known to involve unresolved conflicts over competing and incompatible uses of land, water, or air resources, it shall be the agency's responsibility to study, develop, and describe appropriate alternatives to the recommended course of action. The agency shall develop information and provide descriptions of the alternatives in adequate detail for subsequent reviewers and decisionmakers, both within the executive branch and in the Congress, to consider the alternatives along with the principal recommendation.

(E) In recognition of the fact that environmental problems are not confined by political boundaries, all agencies of the Federal Government which have international responsibilities are authorized and directed to lend support to appropriate international efforts to anticipate and prevent a decline in the quality of the worldwide environment. In doing so however, the agencies are constrained to act in a manner consistent with the foreign policy of the United States.

(F) All agencies of the Federal Government shall make such advice and information on environmental management as is available from their expertise and studies to State and local governments, non-governmental institutions, and individuals.

(G) All agencies of the Federal Government shall utilize ecological information in the planning and development of resource-oriented projects. Each agency which studies, proposes, constructs, or operates projects having resource management implications is authorized and directed to consider the effects upon ecological systems in connection with their activities and to study such effects as a part of its data collection.

(H) All agencies of the Federal Government shall, within their areas of expertise or responsibility, assist the Council on Environmental Quality established by this Act.

Section 103

All agencies of the Federal Government are directed to review their present statutory authority, administrative regulations, and current policies and procedures to determine whether existing law prohibits full compliance with the purposes of this act. The agencies will comply with the provisions of this act wherever possible. If, however, there are existing provisions of law, regulations, or policies which are beyond the authority of the particular agency to revise, and if these laws, regulations, or policies which prohibit the agency from acting in full compliance with the provisions of this Act, the agency is required by section 103 to recommend such measures as are necessary to make its authority consistent with this act. The agency must propose such measures to the President not later than July 1, 1971 and, if recommended, to the appropriate congressional committees.

Section 104

This section provides that nothing in sections 102 or 103 shall affect the specific statutory obligations of any Federal agency:

(1) To comply with environmental quality standards and criteria,

(2) To coordinate or consult with any other State or Federal agency, or

(3) To act or refrain from acting contingent upon the recommendations or certification of any other Federal or State agency.

There are existing statutes and there may in the future be new statutes which prescribe specific criteria or standards of quality for environmental indicators, or which prescribe certain procedures for coordination or consultation with State or other Federal agencies, or which require recommendations or certification of other Federal agencies as a prerequisite to certain actions. It is not the intent of sections 102 or 103 of this Act to substitute less specific requirements for those which are established concerning particular actions or agencies. It is the intention that where there is no more effective procedure already established, the procedure of this act will be followed. In any event, no agency may substitute the procedures outlined in this Act for more restrictive and specific procedures established by law governing its activities.

Where an agency has such specific instructions governing only one aspect of its coordination activities, or where environmental quality standards and criteria are established for only one aspect of an agency's proposed activity, the agency is not relieved of its obligations to conform with the provisions of sections 102 and 103 which are beyond the sphere of the existing instructions, standards, or criteria.

Section 105

This section provides that the policies and goals set forth in this Act are supplementary to but do not modify, those set forth in existing authorizations of Federal agencies.

TITLE II

Section 201

This section provides that the President shall transmit to the Congress an annual environmental quality report. The first such report shall be transmitted on or before July 1, 1970. Subsequent reports shall be transmitted on or before July 1, in succeeding years.

The report is to include, but not be limited to, a current evaluation of the status and condition of the major environmental classes of the Nation. To the greatest extent possible, this information should be based upon measurements of environmental indicators relating quality and supply of land, water, air, and depletable resources to other factors such as environmental health, population distribution, and demands upon the environment for amenities such as outdoor recreation and wilderness. Significant current and developing environmental problems should be highlighted. Current and foreseeable environmental trends and evaluations of the effects of those trends upon the Nation's future social, economic, physical, and other requirements should be discussed.

It is the committee's strong view that the President's annual report should provide a considered statement of national environmental objectives, trends and problems. The report should provide the best judg-

ment of the best people available on the Nation's environmental problems and the progress being made toward providing a quality environment for all Americans.

The report should summarize and bring together the major conclusions of the technical reports of other Federal agencies concerned with environmental management. Too often, these reports go unread and unevaluated. A succinct, readable summary and evaluation would be of great assistance to the Congress and the President.

It is anticipated that the annual report and the recommendations made by the President would be the vehicle for oversight hearings and hearings by the appropriate legislative committees of the Congress.

It is the clear intent of the Senate conferees that the annual report should be referred in the Senate to all Committees which have exercised jurisdiction over any part of the subject matter contained therein. Absent specific language on the reference of the report, the report would be referred pursuant to the Senate rules. It is the Committees' understanding that under the rules all relevant Committees may be referred copies of the annual report.

Section 202

This section creates in the Executive Office of the President a Council on Environmental Quality. The Council shall be composed of three members appointed by the President with the advice and consent of the Senate and who shall serve at the President's pleasure.

It is intended that the members of the Council shall be persons of broad experience and training with the competence and judgment to analyse and interpret trends and developing problems in the quality of the Nation's environment. The committee does not view the Council's functions as a purely scientific pursuit, but rather as one which rests upon scientific, economic, social, esthetic and cultural considerations. The members of the Council, therefore, should not necessarily be selected for depth of training or expertise in any specific discipline, but rather for the ability to grasp broad national issues, to render public service in the national interest, and to appreciate the significance of choosing among present alternatives in shaping the country's future environment.

The President shall designate one member of the Council as Chairman.

Section 203

This section provides the Council with general authority to employ staff and acquire the services of experts and consultants. This provision is designed to provide the Council with the necessary internal staff to assist members of the Council.

It is not intended that the Council will employ, pursuant to this section, a staff which would in any way conflict with the capabilities of the staff of the Office of Environmental Quality which would be created by Title II of the Water Quality Improvement Act of 1969. It is understood that when the Office of Environmental Quality is established, it will mesh with the Council as an integrated agency in the Office of the President—the Council operating on the policy level and Office of Environmental Quality on the staff level.

The professional staff of the Office will be available to the Council (as well as to the President) to assist in implementing existing environmental policy and the provisions of the legislation and to assist in forecasting future environmental problems, values and goals.

Section 204

This section sets forth the duties and functions of the Council as follows:

(1) The Council will assist and advise the President in the preparation of the annual environmental quality report required by section 201. The committee assumes that the Council would have the primary responsibility for the preparation of the President's annual report. It could, in large measure, be based upon the Council's report to the President required by section 204.

(2) The Council will carry on continuing studies and analyses related to the status of the environment. The Council will seek to establish or cause to be established within the operating agencies of the Federal Government an effective system for monitoring environmental indicators, collecting data, and analyzing trends. It will further seek to relate trends in environmental conditions to short- and long-term national goals and aspirations.

(3) The Council shall review and appraise Federal programs, projects, activities, and policies which affect the quality of the environment. Based upon its review, the Council shall make recommendations to the President.

The committee does not view this direction to the Council as implying a project-by-project review and commentary on Federal programs. Rather, it is intended that the Council will periodically examine the general direction and impact of Federal programs in relation to environmental trends and problems and recommend general changes in direction or supplementation of such programs when they appear to be appropriate.

It is not the committee's intent that the Council be involved in the day-to-day decisionmaking processes of the Federal Government or that it be involved in the resolution of particular conflicts between agencies and departments. These functions can best be performed by the Bureau of the Budget, the President's interagency Cabinet-level Council on the Environment or by the President himself. The committee does, however, strongly feel that the President needs impartial and objective advice which can provide him with an accurate overview of the Nation's environmental trends and problems and how these trends and problems affect the future material and social well-being of the American people.

The Council recommendations to the President are for his use alone, and his actions on their recommendations will depend on the confidence he places in the judgment of the persons he nominates to membership on the Council. Used properly, the Council review and appraisal of Federal activities which affect the quality of the environment can add a new dimension and provide the President with a new insight into the long-range needs and priorities of the country. In the past, the executive agencies' views of National needs, goals, and priorities in the field of environmental management appears to have been so thoroughly subjugated to budgetary and fiscal considerations that the nature of the fundamental values at stake has been obscured. It is the committee's view that the values which are at stake in the environmental management decisions which lie ahead need to be brought to the fore and made the subject of official decision at the highest levels of Governments.

(4) The Council shall provide advice and assistance to the President in the formulation of national policies designed to foster and promote the improvement of the quality of the environment. The President is, of course, free to utilize the services of the Council in any manner in which he desires. The committee hopes, however, that the President would rely on the Council's impartial and objective advice in the execution and formulation of national environmental policies.

(5) The Council shall conduct investigations, studies, surveys, research, and analyses relating to ecological systems and environmental quality.

(6) The Council shall document and define changes in the natural environment, including the plant and animal systems, and to accumulate necessary data and other information for a continuing analysis of these changes or trends and an interpretation of their underlying causes. The information made available by the Council will provide a reliable planning base for Federal agencies, a source of indications of emerging environmental problems, and a source of reliable public information on controversial claims regarding the state of the environment.

(7) The Council shall report at least once each year to the President on the state and condition of the environment. This report should represent the Council's considered and impartial judgment. The Council's report would be useful to the President in the preparation of the annual environmental quality report which the President is required to transmit to the Congress by section 201.

(8) The Council shall make and furnish such studies, reports thereon, and recommendations with respect to matters of policy and legislation as the President may request.

Section 205

This section provides that the Council, in exercising its powers, functions, and duties under this Act shall:

(1) consult with the Citizens' Advisory Committee on Environmental Quality, which has been established by Executive Order, and with representatives of such other non-Federal groups as the Council deems advisable.

(2) utilize to the fullest extent possible the services, facilities, and information relating to its functions which is already available from existing public and private organizations and individuals. It is the intent of this subsection to assure that duplication of effort and expense will be avoided and that the Council's activities will not conflict with similar activities authorized by law and being performed by other agencies. This section does not, however, preclude the Council from authorizing studies it deems necessary to ascertain the reliability of existing data. Neither does it preclude the Council from authorizing studies or collecting data in fields which are within the jurisdiction of other Federal agencies if the Council deems it necessary to validate or supplement such other agency's work.

Section 206

This subsection provides that the members of the Council shall serve full time. The compensation for the Chairman of the Council is set at level II of the Executive Schedule pay rates and at level IV for the other two members. These provisions parallel the compensation provisions established by law for the Chairman and the members of the Council of Economic Advisers.

Section 207

This section authorizes appropriations for the administrative expenses of the Council. The amounts of $300,000 for Fiscal Year 1970 and $700,000 for Fiscal Year 1971 are authorized to provide for the transition period in which the Council is organized. Thereafter an annual appropriation of $1 million is authorized. The committee chose the $1 million ceiling because it is comparable to the appropriations which have been required in recent years for the Council of Economic Advisers

Mr. ALLOTT. Mr. President, as a cosponsor of S. 1075 and as the ranking minority member of the Senate Interior and Insular Affairs Committee, I wish to associate myself generally with the remarks of our distinguished chairman, the Senator from Washington (Mr. JACKSON). I congratulate him for his inde-

fatigable efforts to achieve final congressional action on the National Environmental Policy Act of 1969. This is a measure of particular significance in this era of ever degrading environment.

Mr. President, at this point, perhaps it would be appropriate to point out that while the explanatory statements relative to the interpretation of the conference report language, as provided by the chairman, are useful, they have not been reviewed, agreed upon, and signed by the other Senate conferees. Only the conference report itself was signed by all the Senate conferees, and therefore, only it was agreed upon and is binding. Unlike the House procedure, Senate rules do not provide for a coordinated and signed statement on the part of the managers for the Senate. Therefore, while I may agree with the chairman in most instances with regard to his statement, I must reserve the right to disagree with any part of his statement which I believe to be beyond the scope of the discussions and agreement of the conferees during the conference. The vote to be taken here today will be upon the conference report alone. I presume other Senate Members of the conference committee will similarly reserve their rights. I, also, wish to make reference to my remarks of October 8, 1969, as they appear on page 29061 of the CONGRESSIONAL RECORD.

It has been accurately stated that by the enactment of this measure, the Congress is not giving the American people something, rather the Congress is responding to the demands of the American people. The observation that Congress is generally far behind the demands of the people is, for the most part, accurate; but, then, this is an observation that can be made of any representative democracy. The measure of any representative democracy is the lapse of time between the apparency of the will of the people and the positive action on the part of their government. In this case, government response cannot be too soon. We can only hope that it is not too late.

The concept of a high-level council on conservation, natural resources, and environment has had congressional expression for nearly a decade. It first found legislative support from a former chairman of the Senate Interior Committee, the late Senator Murray. In the 86th Congress, he introduced S. 2549, the Resources and Conservation Act, which would have established a high-level council of environmental advisers along with the first expression of a comprehensive environmental policy. While the bill was not enacted into law, the 4 days of hearings before the Senate Interior Committee still serve as a useful reference in this vital area. Bills of similar purpose were also introduced in the 89th and 90th Congresses.

A unique joint House-Senate colloquium was held on July 17, 1968, which was sponsored by the Senate Interior Committee and the House Science and Astronautics Committee. This colloquium provided a forum for Members of Congress and interested parties to meet and discuss these important issues.

During the 91st Congress, three bills were introduced and referred to the Senate Interior Committee. All three dealt with environmental policy and creation of new overview institutions. Hearings were held and additional consultation and coordination with the administration ensued. As a result, S. 1075 was reported by the committee and passed by the Senate in a form which would provide the President and the executive branch with effective machinery to help it provide the necessary leadership in reversing the deterioration of our environment. In addition, the bill will establish by statute a national environmental policy. I believe it is significant to point out that S. 1075 enjoys the sponsorship of every single member of the Senate Interior Committee.

The Senate Interior Committee has long had an interest in conservation and environmental matters. Recent examples include the establishment of many national parks and monuments, national seashores and lakeshores, national recreation areas, a national trails system, a wild and scenic rivers system, and a wilderness system. The Outdoors Recreation Resources Commission was a product of this committee. Much of this Nation's most precious heritage has been preserved and protected by legislation emanating from the Interior Committee. This committee has also passed upon legislation to establish the land and water conservation fund.

In the area of water resources, this committee has produced a myriad of legislation to provide for the conservation and wise use of it, including weather modification. The Water Resources Council, the National Water Commission, and the various river basin planning commissions all have their foundations in legislation acted upon by the Interior Committee. The reclamation program, which is under the jurisdiction of this committee, is an environmental program. One only needs to observe the "before" and the "after" with respect to a reclamation project to know this.

In 1964, we passed upon legislation to establish the Public Land Law Review Commission and its companion measure, the Multiple Use and Classification Act. This is truly landmark legislation since our public lands are an important feature of our environment and its quality.

In the field of mineral resources, this committee and the Senate approved a measure, which I have introduced in six successive Congresses, which would establish a national mining and minerals policy. The significance of this measure to environmental quality may not be apparent at first view, but the quality of our environment has a direct relationship to the availability of materials. In addition, during the hearings on this measure, there was a recognition of the need to better control mine waste products by all concerned. Also, technology and the discovery of new materials may lead to the solution of some of our most troublesome environmental problems. Implicit in a national mining and minerals policy is the development of improved methods to recycle both industrial and other wastes and scrap back into the materials stream.

I have taken the time to mention just a few of the legislative achievements of the Interior Committee to demonstrate its long-standing interest and endeavors in the matter of environmental quality. Other committees have also displayed interest in the environmental field, and I do not intend to in any way diminish their achievements.

The President has expressed his concern over the degradation of our environment. Senators will recall that President Nixon had committed himself in the 1968 campaign to a policy of improving the environment in his October 18, 1968, radio address entitled: "A Strategy of Quality: Conservation in the Seventies." In that address, Candidate Nixon characterized our environmental dilemma in these words:

> The battle for the quality of the American environment is a battle against neglect, mismanagement, poor planning and a piecemeal approach to problems of natural resources.

Acting upon that commitment, President Nixon established by Executive order the "Environmental Quality Council" in May of 1969. The Council is of the highest level. The President, himself, is Chairman, and its membership includes the Vice President and five cabinet members. The Council provides the action mechanism to implement environmental policy decisions.

S. 1075, as passed by the Senate and as reported from the conference is designed to complement the actions of the President and provide him with workable tools to get on with the task of repairing our damaged environment and preventing further detriment to it.

We can no longer afford to view the environmental problem on a basis of cleaning up our dirt. We must approach it from the stand-point of prevention. Prevention will require planning—long-range planning—and that planning must rest upon research and new technology. In the 89th and 90th Congresses, I introduced legislation which I believe would assist the Congress to participate in a meaningful way in determining the direction and emphasis of federally financed research. As Senators know, Federal expenditures for research and development approach an annual amount of $17 billion. The funds for this research and development effort are made available in 13 separate appropriations bills, and at no point does Congress have an opportunity to exercise an overview of our total research and development program. My proposal would provide for the establishment of a nonlegislative joint House and Senate committee to review and report to the Congress on the effectiveness of our overall research and development program, based upon an annual report from the President. Such a mechanism, had it come into existence, could have helped the Congress to have made the necessary decisions with regard to research to have dealt with the many serious problems now facing us in the environmental area. I still hold the belief that some mechanism similar to the one proposed in my bill S. 1305 of the 90th Congress would prove to be useful and helpful.

In summary, the environment is the

concern of us all. In some respect, nearly every department of the Government is or may be involved in decisions or actions which affect the environment. And, the jurisdiction of the various committees of Congress are similarly affected by environmental considerations. The environment is not the exclusive bailiwick of any committee of Congress nor department of Government. S. 1075 recognizes this fact, and therein lies its strength, appropriateness, and timeliness. This is truly landmark legislation in history of man and his efforts to protect and improve his environment, and I am proud to be associated with this measure.

Mr. JACKSON. Mr. President, I wish to express my appreciation at this point for the fine cooperation that we have had in trying to work out differences which occurred since the conferees met on S. 1075.

The junior Senator from Maine has been most cooperative. We would have had many unresolved problems had it not been for his cooperation.

Mr. MUSKIE. Mr. President, I wish to express appreciation to the junior Senator from Washington for his cooperation in working out points of difference which otherwise might have been very difficult and could have led to difficulties on the floor of the Senate, which all of us wanted to avoid.

The basic objective of S. 1075 is one to which I think all members of the Committee on Public Works, as well as all members of the Committee on Interior and Insular Affairs subscribed, and that is the concept of developing an overall and total environmental improvement policy. We recognize that in order to do that we will be concerned with the work of many agencies in the executive branch of Government as well as with the work of many committees in Congress.

What we have undertaken to do in our cooperative effort on this bill and in S. 7, which is in conference between the two Houses, is to begin the process of developing a comprehensive review of our environmental policies as well as a comprehensive policy which we hope will emerge out of the work of these disparate executive agencies and eight Senate committees.

I do not intend to prolong my discussion of the bill, but I think the discussions which I have been privileged to have with the distinguished Senator from Washington and other members of the committee, as well as with members of the Committee on Public Works and the two staffs have raised some points of emphasis to which I should refer in this discussion.

I know my colleagues on the Committee on Public Works, the chairman, the Senator from West Virginia (Mr. RANDOLPH), and the distinguished ranking Republican member (Mr. BOGGS), also might like to ask questions for points of emphasis.

One of the questions that primarily concerned us on the floor of the Senate on October 8, when we last had a discussion among those concerned, and one which concerned us in the discussion of the conference report, was the question of the relationship of this legislation to the established agencies of the executive branch. First of all, we were concerned with those which have an impact upon the environment, actual or potential, and second, we were concerned with those agencies which have responsibilities in the field of environmental improvement.

I would like to refer to some of the insertions in the RECORD made by the distinguished Senator from Washington. He has inserted three principal documents: First, his floor statement, as it is described, in the conference report; second, a section-by-section analysis of the report as amended in conference; and finally, a statement of major changes in S. 1075, as passed by the Senate and as changed by the conference report.

First, I should like to refer to page 4 of the major changes analysis. On page 4 he refers to that part of the discussion which is entitled "section 102 in general" and I should like to read it:

The conference substitute provides that the phrase "to the fullest extent possible" applies with respect to those actions which Congress authorizes and directs to be done under both clauses (1) and (2) of section 102 (in the Senate-passed bill, the phrase applied only to the directive in clause (1)).

Mr. President, what disturbed us about this language in the "major changes analysis" was the impact of the phrase "to the fullest extent possible" upon the executive agencies which have authority under other statutes with respect to the improvement of the quality of our environment, specifically such agencies as the Federal Water Pollution Control Administration and the National Air Pollution Control Administration. Both agencies are of special interest to the Senate Committee on Public Works. Each operates under basic legislation which has been written under the jurisdiction of the Senate Public Works Committee and which has become law. Legislation has been carefully developed over the past 7 or 8 years. We were concerned that S. 1075, through such language as that which I have just quoted, should not have the effect of changing the basic legislation governing the operation of the agencies such as those to which I have referred.

As a result of the discussions with the Senator from Washington and his staff, language was inserted on page 5 of the "major changes document" put into the RECORD by the Senator from Washington which clarifies this point.

That insertion reads:

Many existing agencies such as the National Park Service, the Federal Water Pollution Control Administration, and the National Air Pollution Control Administration already have important responsibilities in the area of environmental control. The provisions of section 102 (as well as 103) are not designed to result in any change in the manner in which they carry out their environmental protection authority.

It is clear then, and this is the clear understanding of the Senator from Washington and his colleagues, and of those of us who serve on the Public Works Committee, that the agencies having authority in the environmental improvement field will continue to operate under their legislative mandates as previously established, and that those legislative mandates are not changed in any way by section 102–5.

The second section of the conference report which is of concern to us is section 103, for the very same reasons that I have discussed already. I shall read this portion of the discussion in the major changes analysis placed in the RECORD by the Senator from Washington.

This portion reads:

This section is based upon a provision of the Senate passed bill [section 102(f)] not in the House amendment. This section, as agreed to by the conferees, provides that all agencies of the federal government shall review their "present statutory authority, administrative regulations, and current policies and procedures to determine whether there are any deficiencies and inconsistencies therein, which prohibit full compliance with the purpose of the provisions" of the bill. If an agency finds such deficiencies or inconsistencies, it is required under this section to propose to the President not later than July 1, 1971, such measures as may be necessary to bring its authority and policies into conformity with the purposes and procedures of the bill.

Now, Mr. President, in the discussion with the Senator from Washington and his staff, it developed that this language had different implications for different kinds of executive agencies, especially with respect to the agencies whose activities have an impact, potentially unfavorable, upon the environment. Obviously, it was the objective of this language to make such agencies environment conscious.

With respect to that objective, I was fully in accord with the Senator from Washington and his committee. However, the second set of executive agencies affected by that language are those agencies which have authority in the environmental improvement field; more specifically, insofar as the Public Works Committee is concerned, the Federal Water Pollution Control Administration and the National Air Pollution Control Administration.

We were concerned that the language which I have referred to should not have the effect of forcing the agencies over which we have jurisdiction to conform their basic legislative mandates to the provisions of S. 1075. This is made clear on page 7 of the major changes analysis, which was placed in the RECORD by the Senator from Washington.

I quote from it:

It is not the intent of the Senate conferees that the review required by section 103 would require existing environmental control agencies such as the Federal Water Pollution Control Administration and National Air Pollution Control Administration to review their statutory authority and regulatory policies which are related to maintaining and enhancing the quality of the environment. This section is aimed at those agencies which have little or no authority to consider environmental values.

This language in the "major changes analysis" document clarifies, with the full agreement of the Senator from Washington and his colleagues and myself, their understanding as to the implications of section 103 with respect to those executive agencies which have environmental improvement authority at

the present time under already existing legislation.

The third point to which I should like to refer, for the purpose of emphasis, is the question of committee jurisdiction with respect to the various areas of environmental concern which are now involved in the jurisdictions of several Senate standing committees.

It was our concern on October 8, when we discussed this matter in the Senate last, and it is our concern now, that S. 1075 shall not have the effect of altering existing committee jurisdictions in this respect. Understandably, the Senator from West Virginia (Mr. RANDOLPH), the Senator from Delaware (Mr. BOGGS), and I are especially concerned with the jurisdiction of the Public Works Committee of the Senate.

I think that in the "major changes analysis" document of the Senator from Washington this is again clarified in the following language, which I read from page 9:

It is the clear intent of the Senate conferees that the annual report would be referred in the Senate to all Committees which have exercised jurisdiction over any part of the subject matter contained therein. Absent specific language on the reference of the report, the report would be referred pursuant to the Senate rules. It is the committees' understanding that under the rules all relevant Committees may be referred copies of the annual report. This was the intent of the Senate when S. 1075 was passed. In the section-by-section analysis of Section 303 of S. 1075 at page 26 of the committee report No. 91-296, it is expressly stated that,

"It is anticipated that the annual report and the recommendations made by the President would be a vehicle for oversight hearings and hearings by the appropriate legislative committees of the Congress."

Mr. President, as I say, this was clearly understood on October 8 when we last discussed it on the Senate floor. It was never at issue as between the Senator from Washington and myself. It think it is clearly understood today.

The legislative language which was included in S. 1075 on October 8 was stricken from the conference report because, under House rules, it was considered to be new matter which was subject to a point of order. So I think it is appropriate that on the Senate floor today we reemphasize that it is the intent of the Senate, and of the representatives of both committees, that when the annual reports of the Council on Environmental Control and its legislative recommendations, as they are developed, reach the floor, they shall be referred to the committees which have had traditional jurisdiction with respect to the subjects of such report and such legislative recommendations.

I want to make one final point, and for this I would like to refer to a document inserted in the RECORD by the Senator from Washington (Mr. JACKSON) this afternoon, entitled "Section-by-Section Analysis." This point is important because, beginning on October 8, and a few days prior to that time, we undertook to do something new in legislative direction. We undertook to place in the Executive Office of the President an agency which was in part the product of S. 1075 and in part the product of S. 7, the Water Quality Improvement Act, which is still in conference between the House and the Senate and which is not likely to be acted on finally in this session of Congress, not because of the subject I am about to touch upon, but because of other matters in this bill which are not touched upon in S. 1075 at all.

The point I wish to raise with respect to the Council on Environmental Quality established by S. 1075 and the Office of Environmental Quality which would be established under title II of S. 7 is that on page 18 of the section-by-section analysis which was inserted in the RECORD by the Senator from Washington (Mr. JACKSON) is found a discussion that clarifies the relationship of these two bodies.

On page 20 of the section-by-section analysis, in a discussion of section 203, is found the following:

SECTION 203

This section provides the Council with general authority to employ staff and acquire the services of experts and consultants. This provision is designed to provide the Council with the necessary internal staff to assist members of the Council.

It is not intended that the Council will employ, pursuant to this section, a staff which would in any way conflict with the capabilities of the staff of the Office of Environmental Quality which would be created by Title II of the Water Quality Improvement Act of 1969. It is understood that when the Office of Environmental Quality is established, it will mesh with the Council as an integrated agency in the Office of the President—the Council operating on the policy level and Office of Environment Quality on the staff level.

The professional staff of the Office will be available to the Council (as well as to the President) to assist in implementing existing environmental policy and the provisions of the legislation and to assist in forecasting future environmental problems, values and goals.

In conclusion, and before yielding to my colleagues on the Senate Public Works Committee, I would like to say that I agree with the Senator from Washington (Mr. JACKSON) that S. 1075 can become landmark legislation in the field of environmental quality. Whether it does will depend upon the effectiveness and performance of the new Council on Environmental Quality which S. 1075 would create, the performance of the Office of Environmental Quality which would be established under S. 7, and the coordination and the cooperation of the various executive agencies which have an impact upon the environment and those other agencies which have at present the authority to improve the environment in one respect or another.

In addition to that, the landmark quality of S. 1075 will depend upon the continuing cooperation of the Senate committees—at least seven or eight of them—which have supervisory authority and jurisdiction with respect to executive agencies, such as the Committee on Interior and Insular Affairs, the Committee on Public Works, the Committee on Agriculture and Forestry, the Banking and Currency Committee and its Subcommittee on Housing, the Joint Committee on Atomic Energy, and so many others. And so, in order to really achieve the high-minded objectives of S. 1075 which are crucial, I think, to the future health and welfare of our country, we must move in the direction of coordinating the work of the Congress in this field.

S. 1075 undertakes to take important steps in the direction of coordinating the efforts of the executive agencies. We must now go beyond that in the Congress of the United States to coordinate the work of the senatorial and House committees. The Senator from Washington, other members of our two committees and I have discussed this objective as well.

There is pending, for example, in the Committee on Government Operations, Senate Resolution 78, which I first introduced two Congresses ago, to create a Senate Select Committee on Technology and the Human Environment, whose objective is this kind of coordination.

The Senator from Washington (Mr. JACKSON), in the course of our discussions, indicated his preference for the Senate and the House to coordinate their work more closely in the environmental field. I concur with him that it would be preferable to create a nonlegislative joint committee patterned on the basis of the select committee which I have proposed, and I am glad to join with him and interested Members on this side and in the House to undertake to create that kind of joint committee as early as possible in the next session of the Congress. We are agreed on that objective. We have in mind the kind of work which is envisaged in Senate Resolution 78.

So I would like to think that, notwithstanding the difficulties and the differences of opinion that the Senator from Washington (Mr. JACKSON) and I have had with respect to S. 1075 and S. 7, out of the labor pains of this creation we have begun a period of cooperation and coordination in the Senate's work in the field of the improvement of environmental quality which will result in a wiser, more effective policy in this field.

Mr. JACKSON. Mr. President, will the Senator yield?

Mr. MUSKIE. I yield.

Mr. JACKSON. I wish to express my concurrence in the comments made by the able Senator from Maine, with special reference to the need for a joint nonlegislative committee on the environment. I would hope that would be the first order of business next year. I think we can move expeditiously in the Senate. If we can have similar cooperation in the House, we can have it enacted into law in the next session.

Mr. BOGGS. Mr. President, will the Senator yield?

Mr. MUSKIE. I yield to the Senator from Delaware.

Mr. BOGGS. Mr. President, as a member of the Public Works Committee of the Senate, I have a couple of questions I would like to ask the distinguished Senator from Maine.

Is my understanding correct that all reports and legislative proposals as a result of S. 1075 will be referred to all committees with established jurisdiction in the field? For example, any report or legislative proposal involving water pol-

lution would be referred to the Committee on Public Works. Is that correct?

Mr. MUSKIE. Yes. That is the clear understanding of the Senator from Washington (Mr. JACKSON), myself, and the two staffs. There is no fuzziness or doubt on that point at all.

Mr. BOGGS. Am I correct that the thrust of the directions contained in S. 1075 deals with what we might call the environmental impact agencies rather than the environmental enhancement agencies, such as the Federal Water Pollution Control Administration or National Air Pollution Control Administration?

Mr. MUSKIE. Yes. Sections 102 and 103, and I think section 105, contain language designed by the Senate Committee on Interior and Insular Affairs to apply strong pressures on those agencies that have an impact on the environment—the Bureau of Public Roads, for example, the Atomic Energy Commission, and others. This strong language in that section is intended to bring pressure on those agencies to become environment conscious, to bring pressure upon them to respond to the needs of environmental quality, to bring pressure upon them to develop legislation to deal with those cases where their legislative authority does not enable them to respond to these values effectively, and to reorient them toward a consciousness of and sensitivity to the environment.

Of course this legislation does not impose a responsibility or an obligation on those environmental-impact agencies to make final decisions with respect to the nature and extent of the environmental impact of their activities. Rather than performing self-policing functions, I understand that the nature and extent of environmental impact will be determined by the environmental control agencies.

With regard to the environmental improvement agencies such as the Federal Water Improvement Administration and the Air Quality Administration, it is clearly understood that those agencies will operate on the basis of the legislative charter that has been created and is not modified in any way by S. 1075.

Mr. BOGGS. I thank the Senator. Can he tell me how the staff of the Environmental Policy Council will mesh with the staff of the Office of Environmental Quality when it is established?

Mr. MUSKIE. As I indicated from the language I read from the section-by-section analysis put in the RECORD by the Senator from Washington (Mr. JACKSON), the Office of Environmental Quality which would be created by title II of S. 7, would constitute the staff of the secretariat of the Council on Environmental Quality established by S. 1075, and the two would be meshed together in a way to produce a strong agency, strong at the board level and at the staff level, to begin the development of a coordinated Federal policy in the environmental field.

Mr. BOGGS. Mr. President, I thank the distinguished Senator from Maine for yielding, and for his answers to these questions. I take this opportunity to congratulate and commend him and the distinguished Senator from Washington (Mr. JACKSON) for the excellent and outstanding work both have done in this field, and for their cooperation in working together and bringing forth a sound agreement on the language in this bill, including its legislative history.

I think this language protects the jurisdiction of other committees that have exercised jurisdiction in the environmental field, while preserving the basic intent of S. 1075.

Mr. MUSKIE. I thank the Senator. I am happy to yield now to the distinguished chairman of the Committee on Public Works, the Senator from West Virginia (Mr. RANDOLPH). I appreciate the confidence he has shown in permitting me to conduct these negotiations with Senator JACKSON, and the confidence he has expressed in the results we have produced.

Mr. RANDOLPH. Mr. President, my knowledgeable colleagues, the Senator from Maine (Mr. MUSKIE), the Senator from Washington (Mr. JACKSON), the Senator from Colorado (Mr. ALLOTT), and the Senator from Delaware (Mr. BOGGS) have discussed this legislation which is of concern, not only because of congressional committee jurisdiction, but to Congress and the people of the United States. Today, approximately 203 million persons, live in an area that is becoming increasingly confined. Because of the problems of urban development, mobility of people, and the methods by which products are moved from one point to another our society and our environment are constantly changing.

I wish to stress—and do it very briefly, I hope—what I believe has come out of the discussion today and prior conferences that have been held by members of the Public Works Committee and the Committee on Interior and Insular Affairs. There may have been some elements of misunderstanding. If there were, they have been resolved. If there were some elements of controversy, they have been dissipated.

I think that we have, through these deliberations, come closer together. This is important if we are to deal with environmental quality effectively. It is only of recent years, Mr. President, though environmental quality means so much to every facet of our society, that the Congress has given specific attention to this subject.

I serve not only as the chairman of the Senate Public Works Committee, but of our Subcommittee on Roads. We recognize, as my able colleague from Maine and others in this body have recognized, that in America, as we put down a mile of highway, no matter what type of road it is, we are not only placing cement or asphalt on the earth, but we are enabling people to move from one point to another.

So in 1968, it was my purpose, and the Senate and Congress agreed, that we would write into the Federal Aid Highway Act that year the first approach to this matter of relocation, bringing people into the conferences before an actual decision was made as to where a road would go, either by the State or Federal Government, or by an agreement of both agencies. The Federal Aid Highway Act is an example of how we are making the people a part of policymaking, even though they, in a sense, are laymen rather than experts, that they would have a part in thinking these matters through.

The Senator from Maine (Mr. MUSKIE) and other Senators who have followed these matters know that it is important that we take people into our confidence before the fact rather than after the fact, in order to provide the opportunity for discussion of the many approaches which can bring a catalyst into being. And so, in the 1968 act, we dealt with matters such as relocation. As the Senator from Washington (Mr. JACKSON) knows, this is a matter of environmental quality for the people whose lives are affected by highways. We are facing up to our responsibility for the first time, to provide prompt compensation for those who are displaced in business and industry, or in their places of residence.

I use only this one legislative enactment of Congress to indicate that we are moving more broadly and more sufficiently to improve environmental quality. I could discuss, of course, the Corps of Engineers of the U.S. Army, and how now they are beginning to look at environmental matters as never before, because in the Congress of the United States, and the Committee on Public Works they have provided leadership and required them to consider environmental quality.

We find environmental quality interwoven with whatever we do. Whether it is building a road or constructing a bridge, whether it is in the impoundment of waters or constructing a building, we must realize that we are working not only with statistics and figures, but we are working with people. The lives of people are involved.

I think it is important for the RECORD to reflect that Senators have given their attention in recent weeks and days to this matter, have attempted to bring S. 1075 and S. 7 together to resolve jurisdictional problems and to lay down the ground rules that will guide us to doing a better job in the months and years ahead.

The stress has been here today on the coordination and the cooperation. I think this is a very real partnership among Senator JACKSON, Senator MUSKIE, Senator ALLOTT, and Senator BOGGS.

I think we are merging our efforts. We have arrived at an agreement. We must not fragment this effort. We must pool our efforts to assure for future generations an environment in which people can live and grow.

We must assure that consideration of legislation, which affects the environment in which people live, by people and committees who are dedicated to this very real task that lies before us. The resolution of differences between S. 1075 and S. 7, now H.R. 4148, provides this assurance.

As chairman of the Committee on Public Works, I congratulate all of those Senators who have carried on these negotiations. They were negotiations in the very best sense of the word. Although

all of the members of the Committee on Public Works did not engage in the various negotiations, they were kept completely informed of what the Senator from Maine (Mr. MUSKIE) was thinking and what his plans were. The Senator from Delaware (Mr. BOGGS), who well represents the viewpoint of the minority, although there is no minority within our committee, was present during most of those negotiations.

Mr. MUSKIE. Mr. President, I thank my distinguished chairman.

I have taken more time than I expected this afternon. However, this is an opportunity to make clear our understanding. The record is clear.

I express my appreciation to the Senator from Washington (Mr. JACKSON), the Senator from Colorado (Mr. ALLOTT), and my colleagues on the Senate Public Works Committee.

Mr. JACKSON. Mr. President, I express my appreciation to the able chairman of the Public Works Committee, the Senator from West Virginia (Mr. RANDOLPH), for the support and understanding we have received from all of our colleagues on both committees.

I express my appreciation also to the Senator from Maine (Mr. MUSKIE), with whom I have worked very closely, the Senator from Delaware (Mr. BOGGS), and the Senator from Colorado (Mr. ALLOTT), and for the fine cooperation of the staff.

Mr. President, I ask unanimous consent that the conference report on S. 1075 be printed at this point in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

CONFERENCE REPORT, REPT. NO. 91-765

[To accompany S. 1075]

The committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 1075), to establish a national policy for the environment; to authorize studies, surveys, and research relating to ecological systems, natural resources, and the quality of the human environment; and to establish a Board of Environmental Quality Advisers, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its disagreement to the amendment of the House to the text of the bill and agree to the same with an amendment as follows: In lieu of the matter proposed to be inserted by the House amendment insert the following: That this Act may be cited as the "National Environmental Policy Act of 1969".

PURPOSE

SEC. 2. The purposes of this Act are: To declare a national policy which will encourage productive and enjoyable harmony between man and his environment; to promote efforts which will prevent or eliminate damage to the environment and biosphere and stimulate the health and welfare of man; to enrich the understanding of the ecological systems and natural resources important to the Nation; and to establish a Council on Environmental Quality.

TITLE I

DECLARATION OF NATIONAL ENVIRONMENTAL POLICY

SEC. 101. (a) The Congress, recognizing the profound impact of man's activity on the interrelations of all components of the natural environment, particularly the profound influences of population growth, high-density urbanization, industrial expansion, resource exploitation, and new and expanding technological advances and recognizing further the critical importance of restoring and maintaining environmental quality to the overall welfare and development of man, declares that it is the continuing policy of the Federal Government, in cooperation with State and local governments, and other concerned public and private organizations, to use all practicable means and measures, including financial and technical assistance, in a manner calculated to foster and promote the general welfare, to create and maintain conditions under which man and nature can exist in productive harmony, and fulfill the social, economic, and other requirements of present and future generations of Americans.

(b) In order to carry out the policy set forth in this Act, it is the continuing responsibility of the Federal Government to use all practicable means, consistent with other essential considerations of national policy, to improve and coordinate Federal plans, functions, programs, and resources to the end that the Nation may—

(1) fulfill the responsibilities of each generation as trustee of the environment for succeeding generations;

(2) assure for all Americans safe, healthful, productive, and esthetically and culturally pleasing surroundings;

(3) attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences;

(4) preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity and variety of individual choice;

(5) achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities; and

(6) enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources.

c) The Congress recognizes that each person should enjoy a healthful environment and that each person has a responsibility to contribute to the preservation and enhancement of the environment.

SEC. 102. The Congress authorizes and directs that, to the fullest extent possible: (1) the policies, regulations, and public laws of the United States shall be interpreted and administered in accordance with the policies set forth in this Act, and (2) all agencies of the Federal Government shall—

(A) utilize a systematic, interdisciplinary approach which will insure the integrated use of the natural and social sciences and the environmental design arts in planning and in decisionmaking which may have an impact on man's environment;

(B) identify and develop methods and procedures, in consultation with the Council on Environmental Quality established by title II of this Act, which will insure that presently unquantified environmental amenities and values may be given appropriate consideration in decisionmaking along with economic and technical considerations;

(C) include in every recommendation or report on proposals for legislation and other major Federal actions significantly affecting the quality of the human environment, a detailed statement by the responsible official on—

(i) the environmental impact of the proposed action,

(ii) any adverse environmental effects which cannot be avoided should the proposal be implemented,

(iii) alternatives to the proposed action,

(iv) the relationship between local short-term uses of man's environment and the maintenance and enhancement of long-term productivity, and

(v) any irreversible and irretrievable commitments of resources which would be involved in the proposed action should it be implemented.

Prior to making any detailed statement, the responsible Federal official shall consult with and obtain the comments of any Federal agency which has jurisdiction by law or special expertise with respect to any environmental impact involved. Copies of such statement and the comments and views of the appropriate Federal, State, and local agencies, which are authorized to develop and enforce environmental standards, shall be made available to the President, the Council on Environmental Quality and to the public as provided by section 552 of title 5, United States Code, and shall accompany the proposal through the existing agency review processes;

(D) study, develop, and describe appropriate alternatives to recommended courses of action in any proposal which involves unresolved conflicts concerning alternative uses of available resources;

(E) recognize the worldwide and long-range character of environmental problems and, where consistent with the foreign policy of the United States, lend appropriate support to initiatives, resolutions, and programs designed to maximize international cooperation in anticipating and preventing a decline in the quality of mankind's world environment;

(F) make available to States, counties, municipalities, institutions, and individuals, advice and information useful in restoring, maintaining, and enhancing the quality of the environment;

(G) initiate and utilize ecological information in the planning and development of resource-oriented projects; and

(H) assist the Council on Environmental Quality established by title II of this Act.

SEC. 103. All agencies of the Federal Government shall review their present statutory authority, administrative regulations, and current policies and procedures for the purpose of determining whether there are any deficiencies or inconsistencies therein which prohibit full compliance with the purposes and provisions of this Act and shall propose to the President not later than July 1, 1971, such measures as may be necessary to bring their authority and policies into conformity with the intent, purposes, and procedures set forth in this Act.

SEC. 104. Nothing in Section 102 or 103 shall in any way affect the specific statutory obligations of any Federal agency (1) to comply with criteria or standards of environmental quality, (2) to coordinate or consult with any other Federal or State agency, or (3) to act, or refrain from acting contingent upon the recommendations or certification of any other Federal or State agency.

SEC. 105. The policies and goals set forth in this Act are supplementary to those set forth in existing authorizations of Federal agencies.

TITLE II

COUNCIL ON ENVIRONMENTAL QUALITY

SEC. 201. The President shall transmit to the Congress annually beginning July 1, 1970, an Environmental Quality Report (hereinafter referred to as the "report") which shall set forth (1) the status and condition of the major natural, manmade, or altered environmental classes of the Nation, including, but not limited to, the air, the aquatic, including marine, estuarine, and fresh water, and the terrestrial environment, including, but not limited to, the forest, dryland, wetland, range, urban, suburban, and rural environment; (2) current and foreseeable trends in the quality management and utilization of such environments and the effects of those trends on the social, eco-

nomic, and other requirements of the Nation; (3) the adequacy of available natural resources for fulfilling human and economic requirements of the Nation in the light of expected population pressures; (4) a review of the programs and activities (including regulatory activities) of the Federal Government, the State and local governments, and nongovernmental entities or individuals, with particular reference to their effect on the environment and on the conservation, development, and utilization of natural resources; and (5) a program for remedying the deficiencies of existing programs and activities, together with recommendations for legislation.

SEC. 202. There is created in the Executive Office of the President a Council on Environmental Quality (hereinafter referred to as the "Council"). The Council shall be composed of three members who shall be appointed by the President to serve at his pleasure, by and with the advice and consent of the Senate. The President shall designate one of the members of the Council to serve as Chairman. Each member shall be a person who, as a result of his training, experience, and attainments, is exceptionally well qualified to analyze and interpret environmental trends and information of all kinds; to appraise programs and activities of the Federal Government in the light of the policy set forth in title I of this Act; to be conscious of and responsive to the scientific, economic, social, esthetic, and cultural needs and interests of the Nation; and to formulate and recommend national policies to promote the improvement of the quality of the environment.

SEC. 203. The Council may employ such officers and employees as may be necessary to carry out its functions under this Act. In addition, the Council may employ and fix the compensation of such experts and consultants as may be necessary for the carrying out of its functions under this Act, in accordance with section 3109 of title 5, United States Code (but without regard to the last sentence thereof).

SEC. 204. It shall be the duty and function of the Council—

(1) to assist and advise the President in the preparation of the Environmental Quality Report required by section 201;

(2) to gather timely and authoritative information concerning the conditions and trends in the quality of the environment both current and prospective, to analyze and interpret such information for the purpose of determining whether such conditions and trends are interfering, or are likely to interfere, with the achievement of the policy set forth in title I of this Act, and to compile and submit to the President studies relating to such conditions and trends;

(3) to review and appraise the various programs and activities of the Federal Government in the light of the policy set forth in title I of this Act for the purpose of determining the extent to which such programs and activities are contributing to the achievement of such policy, and to make recommendations to the President with respect thereto;

(4) to develop and recommend to the President national policies to foster and promote the improvement of environmental quality to meet the conservation, social, economic, health, and other requirements and goals of the Nation;

(5) to conduct investigations, studies, surveys, research, and analyses relating to ecological systems and environmental quality;

(6) to document and define changes in the natural environment, including the plant and animal systems, and to accumulate necessary data and other information for a continuing analysis of these changes or trends and an interpretation of their underlying causes;

(7) to report at least once each year to the President on the state and condition of the environment; and

(8) to make and furnish such studies, reports thereon, and recommendations with respect to matters of policy and legislation as the President may request.

SEC. 205. In exercising its powers, functions and duties under this Act, the Council shall—

(1) consult with the Citizens' Advisory Committee on Environmental Quality established by Executive Order numbered 11472, dated May 29, 1969, and with such representatives of science, industry, agriculture, labor, conservation organizations, State and local governments, and other groups as it deems advisable; and

(2) utilize, to the fullest extent possible, the services, facilities, and information (including statistical information) of public and private agencies and organizations, and individuals, in order that duplication of effort and expense may be avoided, thus assuring that the Council's activities will not unnecessarily overlap or conflict with similar activities authorized by law and performed by established agencies.

SEC. 206. Members of the Council shall serve full time and the Chairman of the Council shall be compensated at the rate provided for Level II of the Executive Schedule Pay Rates (5 U.S.C. 5313). The other members of the Council shall be compensated at the rate provided for Level IV of the Executive Schedule Pay Rates (5 U.S.C. 5315).

SEC. 207. There are authorized to be appropriated to carry out the provisions of this Act not to exceed $300,000 for fiscal year 1970, $700,000 for fiscal year 1971, and $1,000,000 for each fiscal year thereafter.

And the House agree to the same.

That the Senate recede from its disagreement to the amendment of the House to the title of the bill, and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by the amendment of the House to the title of the bill, insert the following: "An Act to establish a national policy for the environment, to provide for the establishment of a Council on Environmental Quality, and for other purposes."

And the House agree to the same.

EDWARD A. GARMATZ,
JOHN D. DINGELL,
WAYNE N. ASPINALL,
W. S. MAILLIARD,
JOHN P. SAYLOR,
Managers on the Part of the House.

HENRY M. JACKSON,
FRANK CHURCH,
GAYLORD NELSON,
GORDON ALLOTT,
LEN B. JORDAN,
Managers on the Part of the Senate.

Mr. JACKSON. Mr. President, I move the adoption of the conference report.

The motion was agreed to.

PROGRAM

Mr. MANSFIELD. Mr. President, for the information of the Senate, we will shortly have the foreign aid appropriations bill conference report before us. Whether that bill can be finished today is highly doubtful.

Then on Monday, it is anticipated that we will have the supplemental appropriations bill and the tax reform bill, and somewhere along the line, perhaps, the Labor-HEW appropriations bill conference report. We have four altogether.

And for the information of the Senate, it can expect votes on the foreign aid appropriations bill conference report this afternoon or Monday or Tuesday or Wednesday or next month, whenever we get to the appropriate time.

RECESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent at this time that the Senate stand in recess until 4:30 p.m.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Thereupon (at 3 o'clock and 55 minutes p.m.), the Senate took a recess until 4:30 p.m.

The Senate reconvened at 4 o'clock and 30 minutes p.m. when called to order by the Presiding Officer (Mr. BYRD of West Virginia in the chair).

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 15149) making appropriations for foreign assistance and related programs for the fiscal year ending June 30, 1970, and for other purposes; that the House receded from its disagreement to the amendment of the Senate numbered 6 to the bill and concurred therein; and that the House receded from its disagreement to the amendments numbered 8 and 31 to the bill and concurred therein, each with an amendment, in which it requested the concurrence of the Senate.

ENROLLED BILLS SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bills, and they were signed by the Acting President pro tempore:

H.R. 9334. An act to amend title 38, United States Code, to promote the care and treatment of veterans in State veterans' homes; and

H.R. 14751. An act making appropriations for military construction for the Department of Defense for the fiscal year ending June 30, 1970, and for other purposes.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

CALL OF THE ROLL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that there be a quorum call, and to comply with the rule, before I make that suggestion, I want to announce that it will be a live quorum. I hope officials will notify Senators that it will be a live quorum.

The PRESIDING OFFICER (Mr. HUGHES in the chair). Is the Senator suggesting the absence of a quorum?

Mr. MANSFIELD. Oh, yes. It will be a live quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk called the roll, and the following Senators answered to their names:

[No. 270 Leg.]

Aiken	Fulbright	Miller
Allen	Goodell	Mondale
Allott	Gore	Montoya
Baker	Griffin	Moss
Bayh	Gurney	Muskie
Bellmon	Hansen	Nelson
Bennett	Harris	Packwood
Bible	Hart	Pell
Boggs	Hartke	Prouty
Burdick	Hatfield	Proxmire
Byrd, Va.	Holland	Randolph
Byrd, W. Va.	Hruska	Ribicoff
Cannon	Hughes	Saxbe
Church	Jackson	Schweiker
Cook	Javits	Scott
Cotton	Jordan, N.C.	Smith, Maine
Cranston	Jordan, Idaho	Sparkman
Curtis	Kennedy	Spong
Dodd	Magnuson	Stennis
Dole	Mansfield	Talmadge
Dominick	Mathias	Thurmond
Eagleton	McCarthy	Williams, N.J.
Ellender	McClellan	Yarborough
Ervin	McGee	Young, N. Dak.
Fannin	McGovern	
Fong	McIntyre	

The PRESIDING OFFICER. A quorum is present.

AN OPEN DOOR TO FUTURE VIETNAMS?

Mr. FULBRIGHT. Mr. President, I refer to the lead editorial in the Washington Post of today, December 20, 1969. It calls attention to the fact that the Nixon administration seems committed to the mistakes of the Johnson administration in Asia.

I hope that the comments on the Javits-Pell resolution calling for the repeal of the Tonkin resolution are nothing more than a routine, bureaucratic inadvertence; and that higher levels in the administration will examine in more depth and more perception the long-range implications of keeping the Tonkin resolution on the books even beyond Vietnam.

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN OPEN DOOR TO FUTURE VIETNAMS?

The administration's defense of the Tonkin Gulf resolution is a sharp disappointment to those who are seeking an end of executive war-making. In the public mind that resolution stands for the principle, if it can be so called, that the President has authority to use American armed forces abroad whenever he thinks such a course is in the national interest. It was merely an invitation to the President to use his own discretion about fighting a war in Vietnam. Considering how gravely that discretion was abused, the country appears to have turned its back on Tonkin. There are many indications that Congress would like to wipe out this standing evidence of its own abdication of authority. But the State Department and the President still cling to it.

We have noted on many occasions that the administration has a great opportunity to correct the blunder that this resolution embodies. It could do so by asking Congress to repeal Tonkin Gulf and to put in its place a congressional declaration in support of the withdrawal policy which the President is already carrying out. The result would be to strengthen the policy by giving it legislative backing. That could be done, of course, without imposing any fixed timetable or trying to prescribe any rigid formula for peace. But the administration wants to retain the Tonkin Gulf resolution even while backing away from the unfortunate policies that have been carried on under its amorphous terms.

Especially disturbing is the last paragraph of the letter in defense of Tonkin which Acting Assistant Secretary of State H. G. Torbert Jr. wrote to Chairman Fulbright of the Senate Foreign Relations Committee. " . . . the existence of the Tonkin Gulf resolution," he wrote, "has consequences for Southeast Asia which go beyond the war in Vietnam. The question of its termination must be considered carefully in terms of our other international obligations in the area, particularly the Southeast Asia Collective Defense Treaty which the Tonkin Gulf Resolution specifically cites."

Senator Fulbright has quite properly asked, "What obligations?"

Repeal of Tonkin would not, of course, undo the SEATO treaty. But this treaty very specifically provides that, in the event of aggression or threats to the peace in the area covered, each country would act "in accordance with its constitutional processes." This unquestionably means that if the crisis necessitates the use of American armed forces, for any purpose beyond repelling a sudden attack against U.S. personnel or territory, the President would go to Congress and ask for authority to employ them.

The bid to keep the Tonkin Gulf resolution on the books because the administration might want to use it as a cover for unauthorized operations in Laos, Thailand or other parts of Southeast Asia is essentially a repetition of the argument which led to its adoption in 1964. President Nixon has promised that there will be no more Vietnams. Yet the State Department asks that the door be kept open so that he could involve the country in other Vietnams if he might choose to do so.

We doubt that the President has candidly weighed these implications of the State Department letter. They fly into the face of the reasonable congressional demand to be informed about any new venture in the Far East and to pass judgment upon it. There is still time for the President to shake the opprobrium of Tonkin Gulf from his shoulders and to join in a forward-looking acceptance of the rightful role of Congress in the commitment of American armed might.

FOREIGN ASSISTANCE APPROPRIATION BILL, 1970—CONFERENCE REPORT

Mr. McGEE. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 15149) making appropriations for foreign assistance and related programs for the fiscal year ending June 30, 1969, and for other purposes. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER. The report will be read for the information of the Senate.

The bill clerk read the report.

(For conference report, see House proceedings of December 19, 1969, pp. 40262–40263, CONGRESSIONAL RECORD.)

The PRESIDING OFFICER. Is there objection to the present consideration of the report?

There being no objection, the Senate proceeded to consider the report.

Mr. McGEE. Mr. President, the statement I want to make in regard to the conference report on the foreign assistance bill is one that is fraught in a very deep sense with the difficulties that everyone in the Senate anticipated in advance.

The Senate took the House conferees economic assistance in title I of the bill, a figure $482 million higher than the House amount. Thus, there was that considerable spread between agreement in the two Houses.

In addition, we took to the House a military assistance, also, in title I of the bill, an amount that was $104.5 million below the House figure. A part of that difference in the military assistance sum was the $54.5 million that had been designated in the House for Taiwan.

In addition, in the old title II of the original bill, the House Appropriations Committee had in its bill $275 million additionally for foreign military credit sales.

With those areas in contention, I report that the Senate in conference with the House secured a restoration of $266 million in economic assistance above the House suggestion. This figure is almost 60 percent of the amount that had been cleared by the Senate.

In the military area, the House receded on the $275 million in military credit sales, thus deferring to the wishes of this body.

In the direct military assistance appropriations, the House receded $50 million from its allowance, but insisted on the $54.5 million for Taiwan. The Senate, on the basis of a package that we strove for many long hours to agree upon, accepted then, the $54.5 million, fully understanding that it was not the wish of this body, and not the wish of the committee.

The committee did not report that recommendation to the Senate. Nonetheless, it was also our feeling that in a bicameral system there has to be give and take. We believe that in the total agreement, the Senate conferees did the very best and the very most with the give and take of two sides that basic disagreements permitted.

It is my understanding that the responsibility of conferees is to strive to arrive at the best possible give and take. I wish it were possible to say that the wisdom of our body was unique and could prevail in all circumstances. But, in some curious way, others think otherwise, and in striving to allow for the differences among two coequal bodies, the Senate agreed upon the general package to which I have just referred.

In the process, we agreed to the House demand for the desalting plant in Israel, but at a reduced figure—$20 million below the amount authorized in the foreign aid authorization bill which just cleared the Congress, yesterday.

In title II of the bill that involves the Peace Corps and the requested appropriations for the Ryukyu Islands, Okinawa, the House receded totally in each instance, yielding to the Senate position.

Finally, on the adoption of what we had come to call the Fulbright amendment, the House was totally adamant on

principally one position in regard to this amendment, and that was that the net effect of the amendment from their point of view was to tell the House what to do about their internal legislative processes; and they argued that this was not within the province of the United States Senate. They had no quarrel with us in trying to do what we felt we had to do to establish some kind of orderly procedure as between authorization and appropriation in this body. They fully sympathized and understood the difficulty of that question for us. But they felt that if they acceded to this Senate amendment, they would have yielded to the Senate a defining of the procedures and processes of legislation in the House itself. For that reason, they were adamant. Only in that one aspect of the amendment did the Senate conferees conclude that, indeed, we did have to recede and defer to the House.

In doing that, we return to this body with a very strong and compelling sense of urgency about taking up the suggestion of the Senator from Arkansas (Mr. FULBRIGHT) and proceeding to a very positive and careful examination of this process in the Senate, and to do the very most we can in the way that our collective judgment would dictate to us.

In that context, I think it is important—I hesitate to say this, because I have not served in the House and many of those seated in this Chamber have—to understand that in their rules it is possible for the Appropriations Committee of the House to get a rule which in effect suspends the rule. They have a very rigid rule requiring authorization before appropriation, but they also have a process of getting a rule that enables them to suspend that rule when the House, in its collective judgment, deems it necessary; and this was what was done to put these military items in the bill. That is to say, according to the House rules, the suspension of the rule jointly authorized the measure for the House and legitimatized it for the appropriation bill as a special item.

In the light of that, I return to our body in behalf of the committee of conferees to request that this body approve this report, in order to reflect the very difficult and the very tortuous and the very detailed and careful consideration and hours of work that went into the examination of all aspects of this question. In our judgment, the Senate did the very best it could and the very most that the facts of life in the legislative process between two equal bodies permit and require on a measure of this type.

I would hope that the Members of this body would find it possible to stand in accord on the pending conference report.

Mr. YOUNG of North Dakota. Mr. President, will the Senator yield?

Mr. McGEE. I am glad to yield to the ranking minority member of the Appropriations Committee.

Mr. YOUNG of North Dakota. Mr. President, as one who has voted against foreign aid appropriations for approximately 20 years, and finally voted for this one, it is important to me to compare the amount we appropriated this year with the amount we appropriated last year. If no bill is passed, we have a continuing resolution, which will go into effect and we go back to last year's appropriation.

If my figures are correct, the conference committee report is $159,875,000 below the bill passed by the Senate, and it is $378,474,000 below the appropriation of last year. In order to get this into better focus, I might say that last year's appropriation, according to my figures, was $2,935,537,000.

Mr. McGEE. That is correct—on the total bill.

Mr. YOUNG of North Dakota. The House bill this year was $2,608,020,000.

Mr. McGEE. That is the correct figure.

Mr. YOUNG of North Dakota. The Senate bill this year was $2,716,938,000.

Mr. McGEE. That is the correct figure.

Mr. YOUNG of North Dakota. And the conference report figure is $2,557,063,000.

Mr. McGEE. The Senator is correct.

Mr. YOUNG of North Dakota. So we are actually going for $159,875,000 less than the bill passed by the Senate.

Mr. McGEE. The Senator is correct.

Mr. YOUNG of North Dakota. So I will vote for the conference report. It will mean a lower spending level than would occur if no bill is passed.

Mr. FONG. Mr. President, will the Senator yield?

Mr. McGEE. I am glad to yield to the distinguished Senator from Hawaii.

M. FONG. As a conferee, I rise to urge acceptance of the conference report, and I should like to associate myself with the remarks of the distinguished Senator from Wyoming.

We all know that the reason for a conference between the two Houses is to arrive at a position where the majority of the members of the Conference Committee on both sides can agree.

The only reason for a conference is to settle disputed items between the two bodies.

Generally, neither side prevails on all of its positions. Generally in a bill where there are many items in dispute a compromise is effected. Very rarely one side gets all it asks for. This is what happened here. The Senate was able to up the difference between the two positions by about 60 percent.

We generally succeeded in getting an increase over the House figures.

In fact, the agreement before the Senate represents an agreement on amounts which is much better than what we had anticipated.

Under the category of development loans, the House appropriated the sum of $265 million while the Senate appropriated $350 million. We settled for the compromised sum of $300 million.

In the field of supporting assistance, the House appropriated $300 million and the Senate $414.6 million. The compromise was $395 million.

For technical assistance, the House appropriated $318.8 million and the Senate $396.87 million. We agreed to the sum of $353.25 million.

For administrative expenses the House appropriated $53.5 million while we appropriated $54.8 million. The agreed to figure came out to $54.7 million.

In the area of military grants, the House sum was $454.5 million while ours was $350 million. The compromise amount came to $404.5 million.

Mr. President, in view that this is a compromise agreement, I do hope the Senate will consent to it.

Some Senators object to the inclusion of $54.5 million for part of a new attack jet fighter squadron for Taiwan.

Mr. President, although the Senate conferees objected to this item the House by a large majority insisted on it. Their reasons are not without merit. The Nixon administration has made it clear that it seeks to encourage our friends abroad to rely more and more on their own military resources. And it has been stated repeatedly that the most economical form of mutual security is obtained through friendly foreign military forces which are equipped with U.S. weapons systems. By providing more adequate weapons for Taiwan, we help to make this possible. The Taiwanese forces now are equipped with F–86 and F–100 aircraft. These are not a match, in any sense, for the modern Mig fighters with which the Red Chinese forces are equipped and which they also are manufacturing.

It should also be remembered that the people of the Republic of China are among our very best friends and allies, steadfast and dependable. We all know this small island must have help to maintain its military strength. To expect her to do it all alone is not realistic. By their strong and resolute stand for the Western alliance, they help to keep a brake on the Communists. And certainly their effectiveness as a deterrent to Communist aggression is dependent to a large degree upon the effectiveness of their fighting forces.

I hoped that this item for Taiwan would not come to us from the House of Representatives. Now that this sum for Taiwan has passed the House of Representatives and approved by the conference committee we cannot suggest to Taiwan that by eliminating this item we think less of her than of Korea, which has a $50 million specific appropriation in this bill. Canceling of this sum at this time of the legislative process would be regarded by Taiwan as a lessening of our friendship and trust for her.

I am confident that the $54.5 million will hearten our friends in the Republic of China who have stood strongly by us.

Mr. President, this need to assist Nationalist China will become ever more urgent once the Foreign Assistance Act of 1969 becomes law because after enactment of this bill, there will not be any funds available for military credit sales. I understand that Nationalist China was planning to supplement the $54.5 million military grant assistance with $50 million of her own funds to complete the formation of a new jet fighter squadron. As there will be no guarantee that payment will be made, no one will sell to her.

Mr. President, I am sure that I speak for the majority of the Senate conferees when I say that I am convinced that this is the best compromise we are able to get. I sincerely believe that sending the bill back to conference would avail us nothing as the House conferees are

adamant in their position on this item. They entered into a package agreement with the Senate conferees and after much discussion the package was accepted. Therefore, I urge my colleagues to support the conference report.

Mr. McGEE. I thank the Senator, who is a member of the subcommittee.

Mr. THURMOND. Mr. President, will the Senator yield to me so that I may ask a question of the Senator from Hawaii?

Mr. McGEE. I yield.

Mr. THURMOND. Is it not a fact that the two best friends that the United States has in that part of the world are Korea and Taiwan?

Mr. FONG. Undoubtedly, that is so. These two friends have been steadfast and reliable and have always come to our aid.

Mr. THURMOND. Is it not true that when we help them to keep prepared we are really promoting the national security of the United States and the free world?

Mr. FONG. This everyone understands. This is our security.

Mr. THURMOND. Are we not providing less jeopardy to the people of the United States and this country by helping those two stanch friends so they can carry the burden instead of our carrying the burden?

Mr. FONG. The Senator is correct.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. McGEE. I yield.

Mr. HOLLAND. Mr. President, I would like to speak briefly on two points. First, I served on this conference, not as a matter of choice. The distinguished Senator from Georgia, the chairman of the Committee on Appropriations, asked me to leave the subcommittee on which I served for many years most pleasantly under the Senator from Arkansas (Mr. McCLELLAN), having jurisdiction over State, Justice, Judiciary, and Commerce, to come to this committee. I did so at the request of the Senator from Georgia. I was glad to serve on the conference after I had been transferred to that committee, but I did not ask for the transfer.

Mr. President, I never saw a conference held with a greater showing of almost irreconcilable difference in the beginning between the Members representing this body and the Members representing the other body. That was evident from the beginning. There were two points of very grave difference. One point had to do with the amendment offered by the distinguished Senator from Arkansas (Mr. FULBRIGHT), and agreed to by the Senate on the floor. The matter was held to be of such great importance by the other body that the chairman of the Committee on Appropriations of that body, Mr. MAHON, who was not present for other phases of the conference, insisted on being present to handle that particular amendment and I am sure, as our chairman will recall, he made it clear that he thought the House was being asked to yield, in the first place, to a matter which pertained to the House, to its proceedings and to its activities and, in the second place, was being asked to yield on a matter where they are given the authority by the Constitution—as we are also given that authority—to make the rules to govern the conduct of that body. They felt very keenly about that. I am sure we would have had no conference report unless we had yielded on that point. I am as sure of that as I am of standing here. I think that every other member of the conference from the Senate side will verify that statement.

The second statement I make is that with reference to Taiwan. Our committee had not reported or recommended the appropriation for airplanes for Taiwan; but, in fact, had declined to do so and had, instead, recommended only part of what the House bill included in this field, and that was the part for South Korea.

We felt that with the South Koreans presently in South Vietnam, fighting shoulder to shoulder with our men, and many of them dying there—that we could even say they are dying in place of American men, without being far wrong—we had every right to prefer them because we felt that they were entitled to that preference.

Besides that, we knew that under the Brown letter, which was mentioned by my good friend from Arkansas (Mr. FULBRIGHT) in his argument the other day, we had committed ourselves to help them modernize the arms for the Korean Army that remained in Korea.

The appropriation which we placed in the bill in our committee was, in part, to fulfill that commitment to help give modern arms to those elements of the Korean Army standing by our men along the DMZ in Vietnam. Our men have modern weapons and they do not.

However, when we got to the conference, we found that the House was irreconcilable in its feeling that these two matters stood together. I should say that they had the feeling, which was expressed by my friend from Hawaii (Mr. FONG), that those two friends of ours were to be regarded as our sole friends willing to fight for us and with us over in that part of the world. They mentioned the fact that Taiwan had offered to send in troops to represent us, just as had Korea but, for good reason, that offer was not accepted by us. I think we would have had no conference report if we had not granted their contention that Korea and Taiwan should be treated alike in connection with the bill.

I think I should say, also, that I know, that Senators who are generally opposed to foreign aid legislation have already told me today that the two items in the bill which appealed to them most are the items to help arm these friendly nations of ours.

I want to say one more thing, and that is that we did not give in on the largest item that had to do with defense and arms. We had a letter from the distinguished Secretary of Defense, formerly a Member of the other body, asking us by all means to grant the aid of $275 million for the sale of arms to friendly allies who the Department of Defense might think were entitled to purchase arms. We did not accede to that, in spite of the fact that the House conferees were urgently in favor of that provision, which was in their bill. So, I think that this is a good conference report. I have served a good many times on conferences for the Appropriations Committee. In fact, I served on three in the past 3 days—Labor, HEW, the supplemental bill, and this particular bill.

Measured by any reasonable standard, this is a good conference report, recognizing the give and take of a conference. The Senate conferees, at least, got as much of the will of the Senate approved, as did the House conferees in connection with their standing up for the will of the House.

I think it unfair for this conference report to be shabbily treated by this body—I have heard that some want to lay it on the table and I have heard that some do not want it to come to a vote today because they think they will not be able to reject it. I do not think it is very good treatment when members of the Appropriations Committee on both sides of the aisle have worked so hard on the conference, as others have, to get the best conclusion in the way of a bill that we can get.

I want to commend the distinguished Senator from Wyoming (Mr. McGEE) for having done what I think is excellent work. I also want to commend other members of the conference, excluding, of course, the Senator from Florida, because I think they worked diligently. My friend from New Mexico (Mr. MONTOYA) over here was exceedingly diligent, and able to persuade in certain ways the House conferees to give in to us, as the Senator from Wyoming will recall.

There was great activity, and a joint position was taken by our conferees. I think the conference report is entitled to be received, passed, and adopted, so that we may get on to the other business which will confront us on Monday next.

I congratulate the Senator from Wyoming, and I hope that the Senate will approve the conference report.

Mr. McGEE. Mr. President, I want to thank my colleague from Florida. In spite of his modesty, he was a great stalwart in helping and guiding the chairman and others of the conferees to try to arrive at a meeting of the minds as best we could.

I would add this, Mr. President, as I conclude my comments here, that the real point today is that this is not something that suddenly happened in the Senate. The Senate, dozens and dozens of times before, has had to come to terms with measures that came from the House in excess of authorizations because of the House rules. This is being treated by some as though this is an invention of the moment. This has been going on since there has been a Senate and a House.

I think it is not the wisest procedure for this body to overturn or disrupt that process, in midstream, in the midst of an orderly process that was undergone and undertaken in the prescribed rules of the two bodies.

For that reason, I would think we would be much better advised, in those cases where it means the holding of our noses, to hold our noses and adopt the conference report as the best that can be brought out of a difficult situation.

Then we would bend to the task as our first order of business in the new session

to correct the process as far as we can correct it in this body.

Now, Mr. President, I think all that can be said on this whole measure has been said many times over. I believe that Senators understand all the issues at stake. We among the conferees, when we found that we had to take the Taiwan money, knew that this would be a difficult question to bring back to this floor. We knew that it might even defeat it.

My only petition is, let us vote on it, and I will abide by the vote. Let us vote it up or vote it down. That is all we ask.

I think that is not an unreasonable request to make.

I have no additional elements of the conference to suggest, and I would ask that we proceed to a vote.

Mr. SAXBE. Mr. President, I find it indeed ironical that on the same day President Nixon relaxed our embargo on trade with Communist China, the conferees on the foreign aid appropriations bill would add $54.5 million as a starter on a new attack jet fighter squadron for Nationalist China.

The seeming inconsistency in these related actions, coming only hours apart, is both confounding and confusing.

The administration's attempt to elicit a positive response from Peking at a time of increased Sino-Soviet tension should not be undermined by the sale of offensive weapons to a bitter enemy of Communist China, an enemy a scant 90 miles from her shores.

The money for the attack jets was neither requested by the administration nor included in the Senate appropriations bill. I cannot vote for this appropriations bill, which is counterproductive to President Nixon's bold new initiative in Southeast Asia.

Mr. GRIFFIN. Because there is a possibility that at some point a motion to table may be presented, I want to say, if it should be presented, that I shall vote no. I would hope that those on both sides of the aisle who generally oppose foreign aid, and who might be otherwise inclined to vote for such a motion to table, would carefully consider the points made by the ranking minority Member, the Senator from North Dakota (Mr. YOUNG). He pointed out that if we are forced to continue operating on the basis of a continuing resolution, in the absence of a new appropriation bill, we will continue to spend for foreign aid on the basis of the $2.9 billion appropriated last year.

On the other hand, if we adopt this conference report—and it may be necessary to vote down a motion to table in order to get to a vote on the merits—we would actually be appropriating only $2.5 billion for this fiscal year—which would be nearly $400 million less.

So, if such a motion to table should be presented and debate is thereby limited, I would hope that we would be united in voting down such a motion to table.

Mr. McGEE. I thank the Senator.

Mr. President, I yield the floor.

Mr. MANSFIELD. Mr. President, I have been interested in all the speeches which have been made so far, and it is true that they have been repetitive; but I am not talking about any country or any area. I am talking about a principle which affects every Member of this body. So it is the principle I want to address myself to, not the sums necessarily, nor the country.

Before I get started, I ask unanimous consent that, at the end of my remarks, there be printed in the RECORD a table and some remarks relative to the amounts authorized and appropriated for title I during fiscal year 1968–69 and 1969–70.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. MANSFIELD. Mr. President, the action of the conference committee on foreign aid is deeply disturbing. In the first place, the report represents an increase in this year's appropriation for title I foreign aid over last year's appropriations of $111 million. When the need, and indeed the urgent need, is for a reduction in unnecessary expenditures, this conference report goes in the other direction.

In the second place, the conference report casts aside certain limiting provisions which had been placed on categories of aid in the authorization bill of the legislative committees. In doing so, the appropriations conference also overruled the expressed intent of two-thirds of the membership of the Senate, which had stated, in effect, in the Senate version of the bill, that appropriations may reduce, but not increase, the specific figures contained in the authorization.

This action, Mr. President, builds the kind of precedent which tends to reduce to irrelevance the function of all legislative committees.

I would remind the Senate that 100 Senators are members of the legislative committees, but only 24 serve on the Appropriations Committee; and the disproportion is even more pronounced in the case of the House.

May I say that it is not my intention to criticize the distinguished Senator from Louisiana (Mr. ELLENDER), the acting chairman of the Appropriations Committee, nor the distinguished Senator from North Dakota, the ranking Republican member of that committee. But rather than criticize, I would say that, as far as both of these men are concerned, no two men work harder, have more integrity, or are more understanding. They are a distinct credit to the Senate, and I am proud to do both of them honor publicly. But I know this bill does not reflect the personal sentiments of these men on foreign aid. Their record on that score is clear and consistent.

If foreign aid is being turned into an overseas grab bag, it is not their doing. Yet what has happened this year as reflected in this report underscores an unhealthy trend of several years.

This program needs complete restudy, restriction, and redirection. The fact is that it has evolved into a kind of overseas grab bag, with less and less relationships to the realities of the Nation's economic situation, to the requirements of our foreign policy, and to the needs of world economic development and international peace.

I cannot be a party to the acceptance of this conference report in its present form, nor do I believe that the Senate should merely acquiesce in arbitrary insistences because we are under the gun of adjournment.

I have discussed this matter with the distinguished chairman of the Committee on Foreign Relations and with other members of the majority policy committee, and pursuant thereto, it is my intention to offer, at the proper time, a motion to table this conference report.

If that motion carries, foreign aid expenditures could be continued until January 30 at last year's rate, which is the rate allowed in the continuing resolution in the supplemental. The immediate effect of tabling will be to keep expenditures for foreign aid at least within those bounds. Until the Congress acts later, that in itself will mean the rate of expenditures for foreign aid will be reduced by more than $100 million, on an annual basis, below the figure of the conference report.

Mr. President, the Senate committee system must be protected; its responsibilities, integrity, and authority upheld. If they are not, then the committee system as such should be abolished.

A deep principle is involved in the question of committee responsibility, and may I repeat again, it affects every single Member of this body.

EXHIBIT 1

Foreign aid: Title 1, military and economic assistance

[In billions]

Fiscal year 1968–69:	
Authorization	$1.97
Appropriation	1.76
Fiscal year 1969–70:	
Authorization	1.97
Appropriation	1.87

As can be seen from the above, notwithstanding the fact that there was no change in the authorization, the Appropriations Committee Conference saw fit to propose an increase in the Appropriations of $111 million. The figure is, to be sure, still within the over-all authorization but it involves shifts in finds by categories which are not in line with the authorization maximums for the various categories.

Mr. McGEE. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. McGEE. Lest there appear to be a discrepancy between the majority leader's figure on foreign aid and what I have just said, I think I should mention that the majority leader's figures refer only to title I of the Foreign Assistance Act.

There are three titles in the act that were before the conferees, and the difference between the title I figure, as the majority leader suggested, and our figure was a higher figure than a year ago.

But in title II, which represented military credit sales, where there was a figure of $275 million, we struck that entirely from the bill. Last year's figure, incidentally, in that section on military sales, was $296 million. Even the House asking figure was under last year's, and with the House total, they receded on that figure.

In title III, the difference in military assistance was preponderantly in favor of the Senate's relative position.

So that the actual total figures on foreign assistance, in all titles to the bill,

last year as compared with fiscal 1970 are as follows:

Last year, the total was $2,935,537,000. The total this year, as brought out of the conference between the House and the Senate, is $2,557,063,000.

Thus, the total bill this year is actually $378 million plus less than a year ago.

This, I think, is a complete reflection of the differences between the two measures. I thank the majority leader for permitting me to make this additional statement.

Mr. MANSFIELD. Mr. President, I accept the correction, certainly, since it comes from the chairman of the committee, who should be the most expert in this area.

Before I yield to the distinguished Senator from Vermont, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 9 o'clock Monday morning next.

Mr. McGEE. Mr. President, I object.

Mr. MANSFIELD. Mr. President, I move, then, if the Senator is going to object, we are going to have to quit.

Mr. McGEE. Well, I object to unanimous consent for adjournment.

Mr. MANSFIELD. If we move for it, then there is no debate.

Mr. McGEE. The Senator means after we complete the discussion?

Mr. MANSFIELD. No.

Mr. McGEE. I object at this time.

Mr. MANSFIELD. Mr. President, I renew my unanimous-consent request that when the Senate completes its business today, it stand in adjournment until 9 o'clock Monday morning next.

Mr. McGEE. And I object, whenever it is relevant to object, to the unanimous-consent request.

Mr. MANSFIELD. I make the request now, to give the Senator a chance before I make my motion. But, Mr. President, if the Senator forces me to move, I shall make the motion.

Several Senators addressed the Chair.

Mr. MANSFIELD. Mr. President, while this matter is being straightened out, I yield to the Senator from Vermont.

Mr. AIKEN. Mr. President, the Senate approved on Thursday an amendment by a vote of 62 to 28 prohibiting the Appropriations Committee from appropriating an amount larger than the amounts which had been authorized by Congress for this year. My question is, Was there any discussion of that amendment in conference, and did the conferees discard it?

Mr. MANSFIELD. It must have been discarded, because, while I do not want to discuss dollars or cents, additional funds were allowed in areas which had not been presented to us by either the authorizations or appropriations committees of this body.

Mr. AIKEN. I ask the chairman of our conferees if that amendment was thrown out by the conferees.

Mr. McGEE. The Senate receded.

Mr. AIKEN. Then the conferees agreed to taking this step toward weakening our democratic form of government?

Mr. McGEE. The conferees made no such declaration and took no such step.

Mr. AIKEN. No, but in effect they did it. They sort of adopted the Moscow plan of legislative controls. The action of the Conference Committees would not only override the decision of the Congress but would actually weaken the authority of the Executive as well. We do not want that to happen here.

Mr. McGEE. The Senator knows better than that.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senate will be in order.

Mr. MANSFIELD. Mr. President, I again ask unanimous consent, that when the Senate completes its business today, it stand in adjournment until 9 o'clock Monday morning next.

Mr. HOLLAND. Mr. President, I object.

The PRESIDING OFFICER. Objection is heard from the Senator from Florida.

Mr. MANSFIELD. Mr. President, I move that when the Senate completes its business today, it stand in adjournment until 9 a.m. Monday morning next.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana.

Mr. SCOTT. Mr. President, will the Senator yield so that we may have a chance to clarify?

The PRESIDING OFFICER. The motion is not debatable.

Mr. HOLLAND. Mr. President, that is debatable.

The PRESIDING OFFICER. The motion is not debatable.

Several Senators addressed the Chair.

Mr. MANSFIELD. Mr. President, I refuse to yield further, in view of what has developed.

MOTION TO TABLE CONFERENCE REPORT

I now move to lay the conference report on the table.

Mr. GRIFFIN. Mr. President, a point of order. There is a motion before the Senate.

The PRESIDING OFFICER. Does the Senator desire that his first motion be put?

Mr. MANSFIELD. No, I have been foreclosed on both sides of this aisle, so I move to lay the conference report on the table.

Mr. HOLLAND. I ask for the yeas and nays.

The PRESIDING OFFICER. Does the Senator withdraw his first motion?

Mr. MANSFIELD. I withdraw it.

The yeas and nays were ordered.

Mr. GRIFFIN. Mr. President, a point of order.

The PRESIDING OFFICER. The question is on agreeing to the motion to lay the conference report on the table. A point of order has been raised. The Senator will state his point of order.

Mr. GRIFFIN. If the conference report should be tabled, would the Senate's action in tabling it kill the foreign aid bill?

Mr. FULBRIGHT. That is not a point of order, it is a parliamentary inquiry. I ask for the regular order.

The PRESIDING OFFICER. The Chair refrains from responding to that parliamentary inquiry until the situation arises.

Mr. FULBRIGHT. Regular order.

Mr. SCOTT and Mr. ALLOTT. Mr. President, what is the question?

The PRESIDING OFFICER. The motion is not debatable. The yeas and nays have been ordered, and the clerk will call the roll.

Mr. ALLOTT. Mr. President, I am attempting to propound a parliamentary inquiry as to what we are voting on.

The PRESIDING OFFICER. Does the Senator from Colorado propound a parliamentary inquiry pertaining to the question on which the Senate is voting?

Mr. ALLOTT. That is correct.

The PRESIDING OFFICER. The Senator will state his parliamentary inquiry.

Mr. ALLOTT. What are we voting on?

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana (Mr. MANSFIELD) to lay the conference report on the table. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. KENNEDY. I announce that the Senator from New Mexico (Mr. ANDERSON), the Senator from Virginia (Mr. BYRD), the Senator from Nevada (Mr. CANNON), the Senator from Mississippi (Mr. EASTLAND), the Senator from Alaska (Mr. GRAVEL), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Hawaii (Mr. INOUYE), the Senator from Louisiana (Mr. LONG), the Senator from Minnesota (Mr. MCCARTHY), the Senator from Montana (Mr. METCALF), the Senator from Rhode Island (Mr. PASTORE), the Senator from Georgia (Mr. RUSSELL), the Senator from Missouri (Mr. SYMINGTON), the Senator from Georgia (Mr. TALMADGE), the Senator from Maryland (Mr. TYDINGS), and the Senator from Ohio (Mr. YOUNG) are necessarily absent.

I further announce that, if present and voting, the Senator from Nevada (Mr. CANNON), and the Senator from Rhode Island (Mr. PASTORE) would each vote "nay."

Mr. GRIFFIN. I announce that the Senator from Tennessee (Mr. BAKER), the Senator from Delaware (Mr. BOGGS), the Senator from Massachusetts (Mr. BROOKE), the Senator from New Jersey (Mr. CASE), the Senator from Arizona (Mr. GOLDWATER), the Senator from California (Mr. MURPHY), the Senator from Kansas (Mr. PEARSON), the Senators from Illinois (Mr. PERCY and Mr. SMITH), the Senator from Alaska (Mr. STEVENS), the Senator from Texas (Mr. TOWER), and the Senator from Delaware (Mr. WILLIAMS) are necessarily absent.

The Senator from Kentucky (Mr. COOPER) is absent because of illness in his family.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The Senator from Utah (Mr. BENNETT) and the Senator from Idaho (Mr. JORDAN) are detained on official business.

If present and voting, the Senator from Illinois (Mr. PERCY), and the Senator from Texas (Mr. TOWER) would each vote "nay."

On this vote, the Senator from Massachusetts (Mr. BROOKE) is paired with the Senator from Illinois (Mr. SMITH). If

present and voting, the Senator from Massachusetts would vote "yea" and the Senator from Illinois would vote "nay."

The result was announced—yeas 39, nays 29, as follows:

[No. 271 Leg.]

So the motion to lay the conference report on the table was agreed to.

Mr. McGEE. Mr. President, I move that the Senate insist on its amendments and ask the House for a further conference.

The PRESIDING OFFICER. The question is on agreeing to the motion.

The motion was agreed to.

Mr. MANSFIELD and Mr. FULBRIGHT addressed the Chair.

The PRESIDING OFFICER. The Senator from Montana is recognized.

Mr. MANSFIELD. Mr. President, I move that the conferees be instructed to insist upon its amendments and particularly to insist that the level of appropriations not exceed those authorized by law for this fiscal year, and that no earmarking of funds for particular countries be specified for military assistance.

Mr. MILLER. Mr. President, a point of order.

The PRESIDING OFFICER. The Senator will state it.

Mr. MILLER. Did I correctly understand the Chair to say that the motion of the Senator from Wyoming had been agreed to?

The PRESIDING OFFICER. That is correct.

Mr. MILLER. That having happened, is the motion by the Senator from Montana in order?

The PRESIDING OFFICER. It is in order.

The question is on agreeing to the motion of the Senator from Montana.

Mr. FULBRIGHT. Mr. President, a parliamentary inquiry.

Mr. MANSFIELD. Vote.

The PRESIDING OFFICER. The question is on agreeing to the motion.

Several Senators called for the yeas and nays.

The PRESIDING OFFICER. The yeas and nays are requested.

Mr. MANSFIELD. Mr. President, before the yeas and nays are called, could the distinguished Senator from Wyoming be allowed to have the Chair appoint conferees?

Mr. McGEE. Mr. President, is it permissible to ask the Chair to be authorized to appoint conferees?

The PRESIDING OFFICER. That is correct, by unanimous consent.

Mr. McGEE. I so request.

Mr. CURTIS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. CURTIS. May we find out what we are voting on? Can the motion be read?

The PRESIDING OFFICER. The Senator from Wyoming has requested that the Chair be authorized to appoint conferees. The question is on that request.

Without objection, it is so ordered.

Now the question recurs on the motion of the Senator from Montana. The yeas and nays have been requested. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. CURTIS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. CURTIS. May we have it read?

Mr. MANSFIELD. May I read it?

The PRESIDING OFFICER. The Senator will read his motion.

Mr. MANSFIELD. I move that the conferees be instructed to insist upon its amendments and in particular to insist that the level of appropriations not exceed those authorized by law for this fiscal year, and that no earmarking of funds for particular countries be specified for military assistance.

That is the usual way in which this matter has been conducted. In the past, we have not named countries for very practical reasons. We have tried to avoid that because of what anyone could see would be the jealousies and competition that would be generated.

SEVERAL SENATORS. Vote! Vote!

The PRESIDING OFFICER. The question is now on the motion to instruct the conferees. The clerk will call the roll.

Mr. HOLLAND. Mr. President, I did not hear the conferees announced.

The PRESIDING OFFICER. The conferees have not been appointed, because it is too late to instruct after they have been appointed.

The clerk will call the roll.

The legislative clerk called the roll.

Mr. KENNEDY. I announce that the Senator from New Mexico (Mr. ANDERSON), the Senator from Virginia (Mr. BYRD), the Senator from Mississippi, (Mr. EASTLAND), the Senator from Alaska (Mr. GRAVEL), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Hawaii (Mr. INOUYE), the Senator from Louisiana (Mr. LONG), the Senator from Minnesota (Mr. MCCARTHY), the Senator from Rhode Island (Mr. PASTORE), the Senator from Georgia (Mr. RUSSELL), the Senator from Missouri (Mr. SYMINGTON), the Senator from Georgia (Mr. TALMADGE), the Senator from Maryland (Mr. TYDINGS), the Senator from Ohio (Mr. YOUNG) are necessarily absent.

I further announce that, if present and voting, the Senator from Rhode Island (Mr. PASTORE) would vote "yea."

Mr. GRIFFIN. I announce that the Senator from Tennessee (Mr. BAKER), the Senator from Delaware (Mr. BOGGS), the Senator from Massachusetts (Mr. BROOKE), the Senator from New Jersey (Mr. CASE), the Senator from Arizona (Mr. GOLDWATER), the Senator from California (Mr. MURPHY), the Senator from Kansas (Mr. PEARSON), the Senators from Illinois (Mr. PERCY and Mr. SMITH), the Senator from Alaska (Mr. STEVENS), the Senator from Texas (Mr. TOWER), and the Senator from Delaware (Mr. WILLIAMS) are necessarily absent.

The Senator from Kentucky (Mr. COOPER) is absent because of illness in his family.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

The Senator from Utah (Mr. BENNETT) and the Senator from Idaho (Mr. JORDAN) are detained on official business.

If present and voting, the Senators from Illinois (Mr. PERCY and Mr. SMITH) would each vote "yea."

On this vote, the Senator from Massachusetts (Mr. BROOKE) is paired with the Senator from Texas (Mr. TOWER). If present and voting, the Senator from Massachusetts would vote "yea," and the Senator from Texas would vote "nay."

The result was announced—yeas 48, nays 22, as follows:

[No. 272 Leg.]

YEAS—48

Aiken	Gore	Montoya
Allen	Harris	Moss
Bayh	Hart	Muskie
Bellmon	Hartke	Nelson

Brooke	Long	Symington
Byrd, Va.	McCarthy	Talmadge
Case	Mundt	Tower
Cooper	Murphy	Tydings
Eastland	Pastore	Williams, Del.
Goldwater	Pearson	Young, Ohio

So the motion was agreed to.

The PRESIDING OFFICER. Under the previous order the Chair appoints the following conferees: Mr. McGEE, Mr. EL-

LENDER, Mr. HOLLAND, Mr. MONTOYA, Mr. FONG, Mr. COTTON, and Mr. PEARSON.

Mr. COTTON. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. COTTON. Mr. President, is unanimous consent required for an appointed conferee to decline to serve?

The PRESIDING OFFICER. The Chair had an order.

Mr. COTTON. I beg the Chair's pardon?

The PRESIDING OFFICER. The Chair appointed those conferees pursuant to order.

Mr. COTTON. Mr. President, that was not my question. Can a conferee who has been appointed request to be released from that appointment without unanimous consent?

The PRESIDING OFFICER. He must have leave of the unanimous Senate to be relieved.

Mr. COTTON. Then, Mr. President, were I a conferee, I am thoroughly in accord with not exceeding the authorization. But for years we have had uncontrolled foreign aid and I am very reluctant. I do not wish to serve as a conferee under the instructions that I must hold out to the point that this Congress cannot designate where our foreign aid is going.

I ask unanimous consent to be permitted to decline to act as a conferee under these instructions.

The PRESIDING OFFICER. Is there objection?

Mr. DODD. I object.

The PRESIDING OFFICER. Objection is heard.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senator from Florida is recognized.

Mr. HOLLAND. Mr. President, I think this is a good time for all of us to start smiling and that is what I am going to try to do, instead of getting angry about this matter. I want the RECORD to show what I think we have just done. I say this with all respect to the majority leader who offered this motion to instruct the conferees.

The fact is the effect of this motion is to deny to the other body the right to make their own rules and the right to operate under their rules.

I do not know how many appropriation bills I have seen over here, where the other body, strictly in accordance with its rules, placed such items in its bills—and not just this bill that we are talking about.

Here we are talking about a principle, and under that principle, laid down by their rules, they have frequently placed items on appropriation bills which were not in the authorization, or in such amount as to make the amount exceed the authorized amount. We have, in effect, taken a position which says we deny to the other body the right which they are given by the Constitution to make their own rules and operate under them. What is a good deal worse, we have taken a position which will make the world think we did not do this same thing ourselves because frequently we have exercised, not just on this bill, but on many other appropriation bills in my own brief experience of nearly 24 years here, exactly this right and operating under our rules placed items in bills not within the authorization or caused the amount to exceed the total amount of the authorization.

I am not going to ask to be relieved from serving on the conference because I think sounder judgment will prevail before we get back here on January 19. But I do want the record to show that the thing we have done is exactly what I have stated. No one can deny it because that happens to be the truth. We follow this practice ourselves. The House follows this practice and it does so strictly within and under its rules.

When the time comes that we think we can say to the other body at the other end of the Capitol that we are going to determine what their rules permit them to do it will be a very sad day for our country. I do not have the faintest idea that the other body at the other end of the Capitol, and I respect them greatly, will ever accede to that kind of ruling.

I might say that in the conference yesterday the distinguished chairman of the Committee on Appropriations of the other body, Mr. MAHON, made a point of coming in just before the consideration of amendment 42, which was the amendment offered by the Senator from Arkansas (Mr. FULBRIGHT), and adopted by a large majority of the Senate, in order to voice his irreconcilable opposition to that amendment.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. HOLLAND. I will be glad to yield in a moment.

He said to the conference what was a fact, that we were trying to tell them what their rules should be and how they should operate under those rules. That is what we have done just now.

Mr. President, I want the record to show that and also that I shall not ask to be relieved as a conferee because I think sounder and saner judgment will develop in the Senate after we have had a little Christmas vacation and get a little different view of what is happening in the Chamber.

I yield to the Senator from Arkansas.

Mr. FULBRIGHT. Mr. President, first, I would join the Senator in saying this is not a matter to get angry about or to lose our temper over. I join him in saying we should smile about the differences being expressed. This is not a personal matter.

However, I cannot follow the Senator's argument that these are House rules and that, therefore, we are compelled to accept them. The House follows its rules but we cannot allow it to arrogate to itself the final decision in appropriation matters, and we have said the appropriated amount should not exceed the authorized amount. The vote in this body was an overwhelming expression of support for the principle that when we have established the authorization level, over which legislative committees have struggled for months, we have set as a limit not only our amount, but also have determined, in many cases, broad policy for the Government in the political field, so that this should have some influence upon the course of events.

What the Appropriations Committee of the House is doing is to ignore this, by saying that it does not matter what the authorization is, that they have a right under the Constitution, as the Senator says; but I do not believe I have ever read in any Constitution I have ever seen where it says that the House of Representatives in the ultimate enactment of laws, that their will shall be final and that the Senate cannot challenge it. I have never seen that in any Constitution. They write their own rules, but that does not mean that the Senate must accept their decisions.

Mr. HOLLAND. Why, of course not.

Mr. FULBRIGHT. What we have done tonight is to say that we do not agree with the conclusion of the House. Let me remind the Senate that the House of Representatives did not submit this provision to the Senate with regard to Taiwan. They did not have the courtesy to submit it even to the Committee on Foreign Relations. They just ignored that committee. Three principal members were sponsors of the Appropriations Committee when the authorization was on the floor and they brought it over. Without any hearings or any consideration, without it even being recommended by the administration, or without the Bureau of the Budget even having scanned it, they simply put in $54 million.

Now I ask, which one of my colleagues here can ever expect to come in and say, "My State would like to have $54 million. It is true that I have not submitted it to anyone. I have not had the Budget Bureau look at it. The President is not for it, but give me $54 million for my State." What consideration would such a Senator get? He would be laughed out of this Chamber, of course. But that is what Representative PASSMAN did.

Mr. President, I ask unanimous consent to have printed in the RECORD a number of articles on the subject of jets for Taiwan, which I am sure will be of interest to all Senators.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post, Nov. 30, 1969]

SURPRISE IN THE HOUSE: JETS FOR TAIWAN

(By Warren Unna)

Last week a surprise amendment to grant Chiang Kai-shek's Nationalist China $54.5 million for a squadron of F-4D jet fighter planes was offered during floor debate and passed as part of the House's foreign aid authorization bill.

Few congressmen knew anything about the amendment. They assumed the Nixon administration was behind the request. So a small House gathering first voted the amendment through by voice vote and then, after it was challenged and a quorum brought in for a roll call vote, the amendment passed, 176 to 169.

The Nationalist China jet squadron was not in the administration's bill, and it still is unwanted by the White House, the State Department, the Agency for International Development and at least the official heads of the Defense Department.

Its passage so angered the House's dwin-

dling coterie of foreign aid friends that the full aid bill nearly was scuttled in its entirety.

The final vote on the $2.2 billion bill was 176 to 163 and the close margin was attributed directly to the planes for Taiwan.

The bill still must be considered on the Senate side. The fate of the squadron for Taiwan will further hinge on foreign aid appropriations in the House and Senate. But the House action still was a considerable coup.

Rep. George Bush (R-Tex.) said later: "I wish I had known the administration was against it before I voted for it."

Pulling a rabbit out of the hat is not unknown in House floor maneuvering, but the Chiang Kai-shek squadron really started revving up just about a year ago.

Last November Rep. Otto E. Passman (D-La.), chairman of the House Foreign Aid Appropriations subcommittee, made his annual state visit to Taipei and was received by Generalissimo and Madam Chiang.

The United States had just granted South Korea an extra $100 million in military aid following increased activity by Communist North Korea that resulted in an assassination attempt against South Korean President Park, the capture of the U.S. spy ship Pueblo and stepped-up infiltration into South Korea. The $100 million included a new squadron of F-4 jet fighter planes.

Nationalist China's Chiang decided that with the improved Mig fighters Communist China was flying, he had as good reason as South Korea to get a new U.S. jet squadron.

"It was brought to my attention that they just felt that they should have a squadron and I'm a good listener," Passman said in an interview. "I think that whole part of the world is as hot as a firecracker. It was on that basis that I did some footwork."

Since the House Foreign Affairs Committee waited until this month to get the current fiscal year's foreign aid authorization bill on the House floor, Passman, understandably, had to do some running in place.

Meanwhile, another friend of the Chiangs, Rep. Robert L. F. Sikes (D-Fla.), a reserve major general and a key member of the House Defense Appropriations subcommittee, made his state visit to Taipei last August. Presumably Sikes also was told about the need for new jets.

MORGAN PERSUADED

A third friend of Nationalist China, Rep. L. Mendel Rivers (D-S.C.), chairman of the House Armed Services Committee, recently persuaded Rep. Thomas E. Morgan, chairman of the House Foreign Affairs Committee, to quietly insert a small observation in his committee's foreign aid report.

It read: "There is danger that the number and quality of aircraft in the Nationalist China inventory may not be adequate to cope with the new and sophisticated aircraft now appearing in increasing numbers, in the armed forces of Communist China."

Then Passman, Sikes and Rivers, with their Pentagon connections, urged some high-level Air Force telephone calls to House Minority Leader Gerald R. Ford (R-Mich.) to enlist his assistance.

"There must have been some help from the Pentagon because of Jerry Ford's role," Passman observed blandly. And then he warmed up: "I think the Congress must assume some responsibility. We're not supposed to be just rubber stamps on all the bureaucrats in Washington. When my country is at war, I'm going to support it. I think we should keep our muscle taut."

There still remained the matter of actually drafting the amendment. The day before the House's floor action, Rep. Sikes tried to have the staff of the House Foreign Affairs Committee do it. Rep. Clement E. Zablocki (D-Wis.), at that moment acting committee chairman, described Sikes' request as "a bit unusual since the matter never had come before the committee and Sikes wasn't even a committee member."

Rep. Passman then stepped in. Administration officials said he summoned some Pentagon officials to his office on the morning the bill was to be considered to help him draft the amendment which Sikes, later in the day, was to introduce.

"I asked them for some help if they believed in the amendment," Passman said later. "But not in the actual drafting. I knew all about that and just where to insert it in the bill."

Then, later in the afternoon debate, Rep. Sikes offered his amendment with these words: "If we have to give, let us give it to those we know are with us . . . In my opinion, Nationalist China is one of our best friends—if not our best friend—in that part of the world . . . This is just a drop in the bucket compared to the amounts of money that they require for even a minimum defense of the Republic of China."

THE "NEED" PARAGRAPH

In quick succession, Sikes was followed by Rivers and Passman and a platoon of their allies all "associating" themselves with the amendment. Rep. John J. Rooney (D-N.Y.) had the assignment of noting the "need" paragraph that Rep. Rivers had inserted in the House Foreign Affairs Committee report.

Rep. Passman, according to onlookers, then started whispering around the debating table: "If you want to save $200 million on the rest of the bill, you had better agree on this one."

Meanwhile, Minority Leader Ford also began lining up votes. Ford later said he had heard about the amendment only two days before—from Sikes—did some "independent checking of my own to very high-ranking responsible people in the administration" and became convinced that Chiang Kai-shek's jet squadron—which the administration hadn't sought—really was wanted.

Rep. H. R. Gross (R-Iowa), who ranks himself with Passman as the leading foreign aid opponent in the House, then jumped up.

"I believe the record ought to at least show that there were no hearings, no justification whatever—before the Foreign Affairs Committee . . . This is too much money to add to this bill without the slightest justification except the statements of the sponsors," Gross said.

Rep. Donald M. Fraser (D-Minn.), chairman of the Democratic Study Group, noted: "There is no credible evidence that the Communist Chinese have a capability of invading Taiwan. This free use of the taxpayers' money is the reason why our program gets into trouble."

After the vote in which the $54.5 million jet squadron authorization was approved—with no restrictive fixed-year for spending required—some of the Republican Congressmen in the Speaker's Lobby were advising a check with "the Watergate."

A Watergate Apartments penthouse is occupied by Anna Chan Chennault, widow of the Flying Tigers general and a Washington hostess who cultivates friends for Nationalist China.

"All I know was what I read in the papers," Mrs. Chennault said in a subsequent interview. "Congressman Passman was a very good friend of General Chennault's because they both come from Monroe, La., but I haven't seen him in many years. Our legislators develop their own judgment. I'm an American. Lots of people talk about Anna Chennault as a 'lobby for China.' I am the biggest lobby for America. I always try to bring about a better understanding."

For his part, Passman declared: "Mrs. Chennault? I didn't even know she was Vice President of Flying Tigers Airlines or living in Washington. She had no knowledge of this. Mrs. Chennault runs her business and I run mine."

The Senate reportedly will not go along with Chiang Kai-shek's jet aircraft amendment and, even if the matter should survive in conference with the House, the administration say it is determined to get around it.

But the implementing part of foreign aid is in the appropriations process, and this is where Rep. Passman for years has reigned supreme. He says the original administration request for $2.6 billion in economic and military aid should receive an actual appropriation of only around $1 billion. It is not clear whether his $200 million threat on the House floor meant adding or subtracting from his $1 billion target.

It is clear that the more that is added to military aid the less is available for economic aid.

Last year, Passman sent out word that the $30 million alloted to Nationalist China in military aid had better be raised by $6 million or the rest of the bill would be in jeopardy.

"We therefore did right by him and he did right by us in giving us the full appropriation on the military side", one government official disclosed.

This year, the Pentagon says it has no F4-D jet fighter squadron readily available, and doubts that $54.5 million would pay for one anyway.

But Passman said the Air Force's support "goes all the way to the top." The Louisiana congressman feels encouraged.

"I have the honor to chair a committee which gives me a little leverage," Passman said. "And even though I am a foe of foreign aid and voted against this overall bill as I always do, I'm going to do everything within my power for this little amendment."

[From the Washington Post, Nov. 27, 1969]

WHO SPEAKS TO CHIANG KAI-SHEK FROM WASHINGTON?

(By Stanley Karnow)

TAIPEI, November 26.—One of the key American problems here is the question of who speaks for the United States in its relations with President Chiang Kai-shek's Chinese Nationalist government.

This problem was underlined last week when the House of Representatives took the initiative of adding $54.5 million to the foreign aid bill to provide the Nationalists with a squadron of F-4D fighter aircraft.

It has also been dramatized over the past year or more by divergent approaches to the Chiang regime by State Department officials and U.S. military advisers stationed on this island bastion of Taiwan.

As a consequence, Chiang and his associates have been encouraged to manipulate splits within the U.S. establishment to their own advantage in two ways.

First, they have increased their lobbying among congressmen and other politicians sympathetic to their cause in an attempt to make their influence felt in Washington.

Moreover, they are apparently playing on rivalries within the U.S. mission here, which has been sharply divided between civilian and military factions, each voicing different American attitudes towards the Nationalists.

This situation transcends the narrow issue of the U.S. commitment to the Chiang government. For U.S. policy and practice here is intimately linked to the broader question of potential American relations with Communist China, which claims sovereignty over Taiwan.

As Secretary of State William Rogers and other administration spokesmen have emphasized, the United States is striving to break its diplomatic deadlock with Peking. Undoubtedly anxious to subvert that effort, the Nationalists would like to see a buildup of U.S. forces here.

There is no evidence that the administration intends to enlarge the American mili-

tary presence here, which currently comprises some 10,000 men, most of them in logistical jobs related to the Vietnam war.

Until now, in fact, American military assistance to the Nationalists has been steadily declining, and is scheduled to end in about three years.

But this trend is being opposed, presumably with Nationalist inspiration, by certain members of Congress as well as U.S. military officials here. It is conceivable that this opposition could thwart administration hopes of edging closer to Peking.

The amendment to the foreign aid bill, which was introduced by Rep. Robert Sikes (D-Fla.), illustrates the ability of the Nationalists to stake what one observer here described as an "end run" around the administration.

The Nationalists had repeatedly requested F-4's, an aircraft equipped with sophisticated radar bombing devices, contending that they deserved to have the same model airplane delivered to South Korea and Israel.

But the Pentagon consistently rejected the Nationalist requests, partly on the grounds that the aircraft is too expensive and partly because its offensive capabilities do not conform to the strictly defensive nature of the U.S. commitment here.

When Sikes visited Taiwan in August, the Nationalists carried their case to him, and reportedly followed up that tactic by intensive lobbying among congressmen in Washington.

As a result, the House of Representatives amendment to the foreign aid bill came as a complete surprise to U.S. officials here. It remains to be seen, however, whether the amendment will survive the Senate.

Here in Taipei, meanwhile, the most articulate American advocate for the Nationalists has been Maj. Gen. Richard G. Ciccolella, who has eclipsed Ambassador Walter P. McConaughy since Ciccolella's arrival here nearly three years ago.

The head of the U.S. Military Assistance Advisory Group, Ciccolella has made no secret of his hawkish opinions, even though they sometimes seem to contravene administration policy. He is now in Washington and slated to testify before the Senate Foreign Relations Committee.

In a speech to an American club here in late 1967, he described those who favor negotiations with Communists as "basically weak and cowardly men who lack the moral and physical courage to stand up to aggressors and bullies."

In a Rotary Club speech here last February, he urged that the Paris peace talks be paralleled by stronger military pressures against the Communists. In the struggle against communism, he said, "there is no place for weaklings or cowards or compromisers or traditional diplomats."

Ciccolella's major achievement here has been to persuade the Nationalists to reduce the size of their armed forces, which number some 600,000 men. American advisers had unsuccessfully urged this for 20 years.

But, while Washington has favored the reduction of the Nationalist army to make it a more economical defensive force, Ciccolella seemingly had different motives, as he told a reporter last July:

"What the Nationalists need is an elite, well-armed and very mobile strike force. They will never defeat the Communists by sheer numbers."

At the same time, though he publicly subscribes to the cutback in U.S. military assistance to the Nationalists, Ciccolella is reported to have put forth a contrary argument in his private communications with the Pentagon.

Among other things, he is said to have recommended modernization of the Nationalist navy, a force that successive Washington administrations have tried to keep small to discourage offensive operations against Mainland China.

In addition, Ciccolella has urged the Pentagon to relocate the U.S. air bases on Okinawa to Taiwan. Under an agreement between President Nixon and Japanese Premier Sato signed last week, the United States will not be able to keep nuclear warheads on Okinawa after 1972.

While they have not publicly invited the United States to move the Okinawa bases here—possibly out of fear of being rebuffed—the Nationalists have been improving their military facilities as an inducement to the Pentagon to make the transfer.

For instance, they are lengthening the runways at Hsin Chu, an airfield south of this city. They have also reportedly offered to construct a new base near Hula Lien, on the eastern side of Taiwan.

To what extent Ciccolella and his aides have encouraged the Nationalists to believe that a U.S. buildup here is possible is not known.

But, in the view of observers familiar with its workings, one of the difficulties within the U.S. mission is that civilian American diplomats do not always know what their military associates are telling the Nationalists and vice versa.

The result is that the Nationalists tend to confide in the U.S. officials whose leaning approximate their own most closely. Accordingly, a tough anti-Communist like Ciccolella apparently had a higher stature here than State Department Representatives.

Some sources suggest that this may change next year, when Ciccolella is due to be transferred to Vietnam. Others submit, however, that a hard-line general is an asset here in order to maintain close relations with the Nationalists.

[From the Washington Post, Dec. 9, 1969]

HOUSE, SENATE PANELS CUT AID FUNDS

(By Warren Unna)

The House and Senate, in tandem operation, yesterday made additional drastic cuts in the Nixon administration's foreign aid bill.

On the House side, the full Appropriations Committee approved all of its foreign aid subcommittee recommendations by cutting the administration's original request for $2.2 billion in economic aid authorization to an actual funding of only $1.2 billion, and the administration's request for $425 million in military grant aid authorization to an actual funding of $404.5 million.

The total House foreign aid appropriations bill of $1.6 billion in economic and military aid—a slash of little over $1 billion from the administration's original request—now is scheduled for final action on the House floor today.

On the Senate side yesterday, the Foreign Relations Committee approved an authorization of $1.6 billion in economic aid and $325 million in military grant aid, hitting far harder on the military requests.

The full House on Nov. 20, had approved authorizations of $1.7 billion in economic aid and $454.5 million in military grant aid.

Chairman J. W. Fulbright (D-Ark.) of the Senate Foreign Relations Committee said a committee majority outvoted him in his attempts to cut the military aid back even further—to $300 million—and eliminate the extra $50 million the administration seeks to compensate Spain for use of the U.S. military bases there.

On the House side, there was a similar defeat within the Appropriations Committee in an attempt to knock out $54.5 million to buy a new squadron of F4-D fighter planes for Nationalist China.

The planes were not requested by the administration in its foreign aid bill and White House, Pentagon, State Department and AID all are officially opposed to the grant.

However, yesterday it was learned that at least three high Pentagon officials have been secretly encouraging the grant.

Deputy Secretary of Defense David Packard, administration sources said, has twice tried to give the matter a boost and was sent an admonishing cable from Defense Secretary Melvin R. Laird, who was in Europe attending the NATO conference.

Lt. Gen. Robert H. Warren, Deputy Assistant Secretary of Defense in charge of military sales, reportedly submitted a top secret justification to the House foreign aid appropriations subcommittee headed by Rep. Otto E. Passman (D-La.). And Gen. John D. Ryan, Air Force Chief of Staff, also is reported to favor the Taiwan squadron despite contrary administration policy.

Here is how the Senate Foreign Relations Committee and House Appropriations Committee voted yesterday on the major foreign aid categories:

REQUESTED

[In millions]

		Senate	House
Development loans	$675.5	$350.0	$265.0
Supporting assistance	514.6	420.0	439.6
Technical assistance	463.1	371.1	313.8
Alliance for Progress	437.5	337.5	200.0
Administration expenses	54.2	50.0	53.5
Military grants	425.0	325.0	404.5

[From the Washington Post, Dec. 10, 1969]

AID BILL PASSED BY HOUSE—TAIWAN JETS APPROVED IN BITTER CLASH

(By Warren Unna)

The House last night voted a $1,650,000,000 foreign aid appropriation after adding $50 million in military help for South Korea and reaffirming a hotly contested $54.5 million jet fighter squadron to Nationalist China.

Opposition to the jet squadron was so bitter that the final vote on the over-all aid bill was a close 200 to 195.

The House also stipulated that U.S. economic aid should be cut off from any country trading with Communist China. Although the amendment's proponents said they didn't know which countries might be affected, there are several, including Pakistan and Tanzania.

"I suspect the China lobby is at work. This is what it reflects," said Rep. Jeffery Cohelan (D-Calif.), a member of the House Committee that prepared the bill.

The Nixon administration originally requested $2.2 billion in economic aid and $425 million in military aid. The House, in its funding action last night, approved a new low of $1.2 billion in economic aid, but $454.5 million in military aid—a $29.5 million increase over the administration request for fiscal 1970.

In Fiscal 1969, Congress appropriated $1.3 billion in economic aid and $375 million in military aid.

This year, there has been no Senate floor action. The foreign relations committee has approved $1.6 billion economic, $325 military aid.

Last night's House approval of the extra military aid for Nationalist China and South Korea came after a spirited debate that included use of "secret" and "top secret" Pentagon documents, all purporting to support the measures.

House Minority Leader Gerald Ford (R-Mich.) said that Defense Secretary Melvin R. Laird had secretly supported the Nationalist China jet squadron authorization on Nov. 20, when it first was introduced on the House floor.

Ford and House Majority Leader Carl Al-

bert (D–Okla.) both read last night from "secret" letters Laird had sent them supporting the extra $50 million to help South Korea modernize her counter-intelligence forces.

Rep. Otto E. Passman (D- La.), floor manager of the foreign aid appropriations bill, and Rep. John J. Rooney (D- N.Y.) already had brandished "top secret" Pentagon material which, according to Passman, indicated that Chiang Kai-shek's regime now was so threatened by Communist China it would need "almost $400 million immediately" in U.S. military aid.

The Passman-Rooney "top secret" material was written by Lt. Gen. Robert H. Warren, Deputy Assistant Secretary of Defense for military sales. According to Rep. Silvio Conte (R-Mass.), who was allowed to read the letters, they were addressed to Passman and began, "Per your telephone request . . ."

Neither the Nationalist China nor South Korea appropriations had been sought by the administration in its aid bill. Secretary of State William P. Rogers and AID Administrator John A. Hannah are known to feel the money is unnecessary and only reduces the amount of funds Congress might be prepared to make available for economic aid.

Rep. Edward P. Boland (D- Mass.) warned that the $54.5 million for the Nationalist China F4–D jet squadron was "only a down-payment" of what Congress eventually would have to approve since a squadron actually costs $108.1 million.

The Nationalist China-South Korea additions were sustained in three separate tallies, 113 to 77, 119 to 82 and, finally, 250 to 142.

In the final vote on the over-all aid bill, traditional foreign opponents joined the liberals in coming within five votes of defeating it.

The outcome represented a victory in leadership strategy. The $50 million in extra South Korean military aid originally had been proposed in the House Foreign Affairs Committee by Rep. William S. Broomfield (R-Mich.), passed as part of the foreign aid authorization last month, but then dropped by the House Appropriations Committee.

Unlike the South Korean measure, the Nationalist China money was approved by Passman's Appropriations subcommittee and therefore was included in yesterday's floor bill.

When Rep. Conte introduced an amendment to strike out the Nationalist China money, Bloomfield offered a "substitute amendment" reintroducing his South Korean money and locking the Nationalist China money in with it.

The threat of killing the whole foreign aid appropriations bill by angry opponents led Chairman George Mahon (D-Tex.) of the House Appropriations Committee to warn that any such action would block the flow of bills to the Senate and interfere with the House's hopes of not having to come back and work after Christmas.

Mr. HOLLAND. What the Senator has just said, has clearly borne out my statement, because he has questioned the ability of the House of Representatives to operate within its own rules. That is the point I am making. When we question that right, we are on very unsound ground.

Mr. FULBRIGHT. May I ask the Senator——

Mr. HOLLAND. Article I of the Constitution, section 5, paragraph 2 states—

Each House may determine the rules of its proceedings, . . .

And then it contains other words that do not have any relation to what we are discussing.

When the time comes that because we do not like their rules—I am not questioning what they have done has been under the rules—but when we say they have no right to operate under their rules, it will be a sad day. The Senator has not referred to the bill, although I had said, which is true, that we have repeatedly done the very same thing ourselves in connection with other appropriation bills. For one, the appropriation bill so ably handled by the distinguished Senator from Washington, the Labor-HEW bill. We have been perfectly willing to place items in that bill that went beyond the authorization. We have sinned. We have sinned as often as they have, if the Senator thinks this is sinning. But the point I am making in the first instance is that we are thoroughly off on our own rights in questioning the House in its operations under its own rules, and particularly when we do exactly the same thing ourselves.

Mr. HANSEN. Mr. President, will the Senator from Florida yield?

Mr. HOLLAND. I yield.

Mr. HANSEN. Mr. President, I believe that the Senate has just witnessed again our reasons for the great reluctance to see the absence of the very distinguished Senator from Florida from this Chamber when we are in session because the logic, and the good reasoning he presents to us reminds us anew of the extremely fine contribution he has made to this body, and how much we are the losers when he is not able to be here.

Mr. HOLLAND. I thank the Senator from Wyoming for his kind remarks. I wish I could merit the nice things he says.

Mr. McGEE. Mr. President, will the Senator form Florida yield?

Mr. HOLLAND. I yield.

Mr. McGEE. Since I have not been in this body for a great number of years—only 11— I should like to ask the distinguished Senator from Florida a question. During the countless years that he has served, would it be his judgment that on other occasions the Senate permitted this action when we favored a measure, but, if we opposed a measure, then we became sanctimonious about the principle involved. Would that be stating it correctly?

Mr. HOLLAND. Well, the word "sanctimonious" may overstate it a little bit—[laughter]—but on the issue of his statement, I agree completely with the Senator from Wyoming.

Mr. MANSFIELD. Mr. President, will the Senator from Florida yield?

Mr. HOLLAND. I yield.

Mr. MANSFIELD. Mr. President, may I say in extenuation, that I did not even know there was such a procedure. I hate to profess my ignorance, but until earlier this week——

Mr. HOLLAND. If the Senator had been active in his assignments on the Appropriations Committee, he would have found that out a long time ago. Of course, he has not been able to do that, and I do not criticize him for it. As majority leader, he could not attend the working meetings of the Appropriations Committee—[Laughter] or attend the conference committees because of his responsibilities as majority leader. But it has been long established practice in both Houses, under the rules, and there is no way that this can be denied.

Mr. MANSFIELD. Let me contiue and accept the rebuke——

Mr. HOLLAND. This is not a rebuke.

Mr. MANSFIELD. It is well deserved. But it does not do anyone any harm to profess ignorance when they are ignorant. I was ignorant of this particular aspect of the relationship of appropriation bills to legislative authorizations, until it came out in the open the other day. But that is no excuse.

May I say that this is no occasion for smiling. This is no occasion to become angry. This is no occasion to become personal.

No one has won a victory tonight. In my opinion the U.S. Senate and its committee system have.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senator from Florida has the floor. The Senate will please come to order.

Mr. HOLLAND. I am glad that the distinguished majority leader does derive satisfaction from our action. I wish I could join him in that concluding item——

Mr. MANSFIELD. I said the Senate, not myself.

Mr. HOLLAND. He has a right to his opinion—I am sorry he is leaving the Chamber——

Mr. MANSFIELD. I am not leaving. [Laughter.] If the distinguished Senator will yield to me further, I think that he has misinterpreted my remarks. I derive no personal pleasure or satisfaction out of what has happened. What I was saying was that this is in effect a great day for the Senate because we have reinforced that system under which this institution functions. Everyone should know how important that is to the Senator from Florida.

Mr. HOLLAND. I thank the Senator for his kind reference to me. [Laughter.]

Mr. MAGNUSON. Mr. President, will the Senator from Florida yield?

Mr. HOLLAND. I am glad to yield to the Senator from Washington.

Mr. MAGNUSON. I am not professing ignorance in this particular field but I am professing, maybe, a lack of memory.

Is it not true—I want to ask this question—that of course the Senate can appropriate money that it has authorized whether the House has come up to that figure or not. We often do that. The House can appropriate money that it has authorized, even though the two figures might be different in conference; but I do not know of any occasion—I do not recall any, and I have been on the Appropriations Committee a long time—where, when we appropriated money and there has been no authorization, final and complete authorization, we always put a proviso in that this money shall not be spent or appropriated until the authorization becomes law. I do not recall any occasion.

Mr. HOLLAND. I do not want to burden my memory except to say—and the Senator will recall this—we have fre-

quently, when he presided over the Independent Offices Subcommittee, put in items to staff the executive committees and boards appointed by 1600 Pennsylvania Avenue. There is one such item placed in the foreign aid bill, and no Senator raised any question about it at all.

With a little study, I could mention hundreds of items in the brief time I have been in the Senate which have been like that, because we have followed that practice repeatedly. To say we have to have authorizing legislation every time we put in an item which became necessary——

Mr. MAGNUSON. I would like to know——

Mr. HOLLAND. Just a minute. I have the floor. Just as soon as I get through with my statement, I shall be glad to yield.

Mr. MAGNUSON. I do not know of any time when money has been spent that has not been authorized.

SEVERAL SENATORS called for order.

The PRESIDING OFFICER. The Senate will be in order.

Mr. HOLLAND. Let me finish my statement. If we had to authorize everything that goes in these complex bills, we would have more authorization bills than we have private or public bills, because we have many items in the appropriation bills which are not authorized, and there is no necessity to authorize them, because they have to do with small matters, as a rule, and sometimes large matters. The Senator will not deny that we have had many such occasions.

Now I will yield to the most knowledgeable Senator.

The PRESIDING OFFICER. The Chair requests that we suspend until we get a message from the House of Representatives.

Mr. HOLLAND. I am glad to yield for that purpose.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the House had agreed to the concurrent resolution (S. Con. Res. 51) to authorize the Secretary of the Senate to make a technical correction in the enrollment of the bill (S. 3016) to provide for the continuation of programs authorized under the Economic Opportunity Act of 1964, to authorize advance funding of such programs, and for other purposes.

The message also announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 3016) to provide for the continuation of programs authorized under the Economic Opportunity Act of 1964, to authorize advance funding of such programs, and for other purposes.

The message further announced that the House had agreed to the amendment of the Senate to the amendment of the House to the joint resolution (S.J. Res. 154) to authorize and request the President to proclaim the month of January of each year as "National Blood Donor Month."

Mr. MAGNUSON. There is a good example. We waited for that authorization.

FOREIGN ASSISTANCE APPROPRIATIONS, 1970—CONFERENCE REPORT

The Senate continued with the consideration of the conference report.

The PRESIDING OFFICER. The Senator from Florida has the floor.

Mr. HOLLAND. Mr. President, the able chief clerk of the Appropriations Committee has just reminded me of an item I was about to forget. We appropriated $4 billion in 1951 for foreign assistance without having any authorization. It was included in the bill, and it became law. Most of it, or perhaps all of it, was spent.

We could find many such items. I think it is useless to pursue this, because anyone who has worked on the Appropriations Committee and really has done his work there would not question it. I see here Members who served in the House. They know what the rules of the House are. They know I have correctly stated what has gone on in the House during the life of the Republic. There is no use in the world for us to bark at the wind by saying we are not going to consider any matters not in an authorization bill, when we frequently include such items on our own initiative, and when we see such action every day at the initiative of the other body, operating under its rules.

Now I yield to the Senator from Louisiana.

Mr. ELLENDER. Mr. President, I want to say that I hesitated to vote against the majority leader on the last motion he made because I do not see how the conferees can carry out their instructions since most of the money that has not been authorized has been locked into the bill. In other words, the House provided $11.6 million to construct schools in Israel and other places. That is locked in the bill. It is not in conference. Particularly that is true of the $50 million for Korea. That came from the House. True, it is unauthorized, but we locked it in by voting for it. So how will the conferees who will be appointed, on the motion to table, carry out those instructions?

Mr. HOLLAND. I am glad the Senator raised those two points. The provision for Korea was voted on the Senate floor. It was not authorized by the Senate. The provisions for numerous schools, some of them were not authorized, but we voted for them in this bill, and they were locked into the bill.

I see my distiguished friend from New Mexico indicating that he remembers these items.

So it comes down to this: The real rule we are talking about here is that when the House, in following its rules, puts in something that has not been authorized that we like and appreciate, that is fine, that is legal, that is constitutional; but when they put in something which we do not like and was not authorized and we do not want it, then, our good friends say, "That is all wrong."

We have a right to say whether we like or do not like any item that is there, whether it is authorized or not; but it is beyond question that in this bill and in practically every bill in the area of appropriations, we are running upstream against the principle announced by the distinguished majority leader—which is not a principle at all, because we have not followed it and do not propose to. We have not followed it in our own practice, and we recognize the House's departure from it whenever its view happens to disagree with ours.

Mr. PELL. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. PELL. I commend the Senator for the statement that the rules of the other body are no concern of ours, but I am amongst the majority, I guess, in this body who thought the authorizing committees—and I am proud to serve on them—could always set a ceiling; perhaps not a floor, but a ceiling. When I was educated yesterday to the fact that that was not so, I was puzzled. I am sure Senators share the view that all committees are relatively equal; that, to use the analogy of the Senator from Vermont, there is no presidium committee that can go above the ceiling and go below the floor.

My question basically is, however, if there is one committee, like a presidium, above all other committees, the only way this can be straightened out or changed is by changing the rule. Is that correct?

Mr. HOLLAND. It certainly is not correct. The only way it can be straightened out is to have a majority of the Senate vote against any item it wants discarded, whether it comes from the committee, or the House, or is offered here on the floor. We have that right and we can, by majority, strike it out. But when anybody says we are not operating in the antithesis of the principle announced by the majority leader—and unfortunately approved by a majority vote of the Senate—they do not know what they are saying. We do it every day when we pass appropriation bills. I am sure the Senator knows I know what I am talking about.

Mr. PELL. True. The only thought I throw out is that perhaps, if the rules are not satisfactory, the leadership would consider the matter of proposing a change of rule to that effect.

Mr. HOLLAND. Does the Senator mean a rule to state that we are not going to recognize the rules of the House?

Mr. PELL. No.

Mr. HOLLAND. That is what it amounts to.

Mr. PELL. No; that the ceiling could not go above the amount set by the authorization committee.

Mr. HOLLAND. The House has equal jurisdiction with us. I would never be a party, by my voice or vote, that says anything that indicates the House does not have a constitutional right and duty to announce its rules and to operate under them. I would never question that. I do not believe thinking Senators, after they have gotten through the Christmas holidays and have gotten a little more

benevolent in their attitude toward life, will retain that attitude. I wanted this stated for the RECORD.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senate will be in order. The Senator from Florida still has the floor.

Mr. HART. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. HART. Has the military authorization bill become law?

Mr. HOLLAND. I think so. The military authorization bill does not begin to cover everything, by any manner or means, in the appropriation law, but it became the law. Does the Senator think the military authorization bill begins to cover everything in the $70 billion Defense appropriation bill?

Mr. HART. My question will indicate what my curiosity is.

Does the law, namely, the military authorization, fix a figure for military aid below the figure that the Senator now tells us, as a matter of principle, either House can ignore?

Mr. HOLLAND. That is something I could not answer.

Mr. HART. This is a question that bothers some of us. I would like an answer.

Mr. HOLLAND. I am not familiar with the authorization.

Mr. HART. Well, it is the law, and I am just wondering if we can assign, on the part of either House, the right to ignore it.

Mr. HOLLAND. As in any field, an authorization is prima facie evidence for every item in it to be included in the appropriation bill, but it by no means excludes either House from putting in other items within their rules. They do it, and we do it. I doubt if the Senator could find an appropriation bill passed in the last 25 years that does not diverge from the principle the Senate has just so piously announced.

Mr. HART. Perhaps we can get an answer to what effect passing a law that fixes a military aid ceiling has, if any.

Mr. HOLLAND. My dear friend probably thinks all the items in a military appropriation bill are included within the two authorization bills which we pass each year; that is, for construction and for procurement. The Senator from Mississippi, who knows much more about this field than I do, knows that we have numerous salaries that have to be paid; for example, included within the appropriation bill, that are not in the authorization bill, and that we have numerous other items that are included within the bill. I have never seen a military authorization bill which began to come up, in size, to the military appropriation bill.

I shall be happy to yield to my distinguished friend from Mississippi for any correction he wishes to make of the statement I have made, but I am sure that the total of our two authorization bills is not more than half of the full amount, or something like half of the full amount, of the appropriation bill.

I yield to the Senator from Michigan.

Mr. HART. I wonder if the Senator from Florida would include in that question the distinction between items which are enumerated, for which a ceiling is fixed, the generic group for which a ceiling is fixed, and one where there is simply a ceiling under which the pot and the kettle can be thrown in.

Mr. HOLLAND. No ceiling has ever been fixed at $70 billion for the Defense bill. Of course, our appropriation bill, to my recollection, is somewhere in the neighborhood of that figure. As I recollect, it went to the conferees a little over $70 billion, and came back a little under $70 billion. Am I correct in that?

Mr. STENNIS. The large appropriation bill passed the Senate, I think, at $69.6 billion.

Mr. HOLLAND. That is the conference bill.

Mr. STENNIS. Just a brief answer to the question of the Senator from Michigan.

Our authorization bill for our forces, the U.S. military forces, is only a part of the items which have to be authorized. But we do have a specific law that requires missiles, tanks, research and development, planes, submarines, and ships, to be authorized; and that was the bill that was under such long debate, and totaled about $20 billion, as Senators will remember, or a little over. But the appropriation bill ran close to $70 billion.

The difference is in operational matters, maintenance, salaries, and all the items of that kind. We do not require authorization of certain small arms and other matters. It is the major hardware, and research and development, for which authorization is required.

There is a separate authorization, as a separate military authorization bill, for military construction. There is still another military authorization bill now for foreign military aid. That goes to the Committee on Foreign Relations with the exception of one item: Southeast Asia funds are authorized in the first bill that I mentioned. That is, the hardware is. It was a relatively small amount. Also, the operation money is authorized there for that war. I mean the aid to South Korea.

But the main thing is the big authorization bill that we had the long debate over, and then the foreign relations bill.

Mr. HART. Mr. President, I thank the Senator from Florida. I think we have reached a point where we are including three or four bills in addition to the one I am trying to get clarification for myself on; namely, the bill that is before us, on the business of foreign aid.

As I gather, assuming the passage of a foreign aid authorization bill constitutes the enactment of a law, the rules of neither House can ignore the law. My question is: Have we ignored the law? Do we propose to ignore the law, if we now appropriate a sum in excess of the specific maximum sum provided for by the earlier enacted law?

As I understand it, in the case of military aid in the Foreign Aid authorization and appropriation bills, we have by law said it shall not exceed $350 million, in the authorization bill. We are now told that either House, by some rule, can say, "To heck with that, we are going to give them $405 million." What is the effect of the earlier enacted law? That is what I am trying to find out.

Mr. HOLLAND. Well, Mr. President, the earlier enacted law sets a ceiling on various individual items. It does not pretend to set a ceiling on the total amount, as a rule.

Mr. HART. Here is an item: American schools and hospitals.

Mr. HOLLAND. That is authorized.

Mr. HART. It authorizes a sum lower than the report of the conferees with respect to that specific sum. That is my question; how can you do it?

Mr. HOLLAND. The way you can do it is that you have two items for schools in there, one of which is authorized and the other is not authorized. There are a number of schools in there that are not authorized. The Senator will find them even in different places in the bill. He will find them not recited in the bill as to those that are authorized, but listed in the report; but he will find them listed in the bill itself, for those that are not authorized and for which the Senate gave its agreement, and locked them in, and for which the conference committee has locked them up as far as this conference report is concerned.

We had a mandate from the Senate, by its vote, to include them in the conference report if we were able to obtain consent of the House conferees.

This is not unusual. It happens in practically every appropriation bill. That is the point. I do not pretend to know, by a great deal, all about this appropriation field, but I do know that this has been happening in every appropriation bill of any size since I have been a member of this committee.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. FULBRIGHT. I wish to compliment the Senator from Florida. He has been very frank. If he has no other fine characteristic—and, of course, he has many—one of his stronger characteristics is to deal frankly, with no disposition whatever to conceal or distort the facts; and I think what he has said, not only today but also the other day when we discussed this matter, has been very enlightening.

The PRESIDING OFFICER. Will the Senator suspend until we have order? The Senate will be in order. The Senator from Arkansas is trying to propound a question.

Mr. FULBRIGHT. My question is—and I think the Senator has made it fairly clear—that while as a matter of fact, under our system, the Appropriations Committee, if the appropriating bill is enacted last—which it usually is, by tradition—takes precedence over any authorization bill enacted before that time, if I understood the response we received from the General Accounting Office, the bill enacted last controls.

In other words, if instead of our enacting the authorization bill first, we waited until the appropriation bill was enacted, and then we came along and set ceilings on these items that were lower than the appropriation, those ceilings would control. Is that not true? The Comptroller General has adopted the principle that he acts on what is enacted last as the controlling one in any par-

ticular field; does the Senator agree with that?

Mr. HOLLAND. No; what the Comptroller General meant was that in considering appropriation bills, the bill enacted last was what controls the appropriation amounts. He has jurisdiction over the expenditure of funds, and his duty is to see whether the funds are expended in accordance with the appropriations made. That is his duty.

Mr. FULBRIGHT. Then is the Senator saying that the authorization bill has no effect whatever in law, that it is a nullity?

Mr. HOLLAND. I certainly am not making any such statement.

Mr. FULBRIGHT. Then what is the net effect?

Mr. HOLLAND. Well, the Senator can put any interpretation on it he wishes, but in 99 cases out of 100, the Appropriations Committee and the group that makes up the budget stick by the authorization passed by Congress.

The Senator from Louisiana has already so clearly stated that we have items in the bill put in by the House which were not authorized, but were approved by the vote of the Senate.

I do not know how the Senator from Arkansas voted on it. However, it was done by a great majority of the Senate.

Mr. FULBRIGHT. I voted against the bill.

I think the Senator has rendered a fine service in enlightening the Senate. It was quite obvious from the other day that authorization bills did have some force of law. But now the Senator has made it clear that they do not. Is that a fair characterization?

Mr. HOLLAND. Certainly they are law. But they are not conclusive. And they are not final.

Congress does not have to approve any item in the committee report whether it is authorized or not. Frequently it knocks out authorized items.

Mr. President, I yield to the distinguished Senator from Maine.

The PRESIDING OFFICER. May we have order?

The Senator from Maine is recognized.

Mrs. SMITH of Maine. Mr. President, I thank my distinguished and able colleague, the Senator from Florida, for yielding to me.

Mr. President, early this year, and in years before, there has been serious encroachment by committees into the jurisdiction of other committees.

This is of growing concern.

Tonight this issue has reached a climax.

Mr. President, I shall introduce a resolution calling for an inquiry and study of this growing encroachment on committee jurisdiction.

Mr. HOLLAND. Mr. President, I appreciate the suggestion of the distinguished Senator from Maine. I hope that we can go ahead and carry out her suggestion.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. MILLER. Mr. President, I ask the Senator from Florida whether this may be helpful. The Senator from Michigan talked about the law. It is my understanding that we have been talking, not about the law, but about authorization bills that have been passed by one House or the other, or possibly by both.

I do not believe this has been signed into law yet. Perhaps that is one of the big questions concerning the Senator from Michigan.

Mr. HOLLAND. Mr. President, the Senator has a good point. The authorization bill was approved yesterday and has not been signed. But even if it had been signed, the fact is that there are items in the bill placed there by the House of Representatives under its rules and sent over here which we approved. There is not any doubt that that is the case.

It looks as if what we are saying is that as long as the House operates under its rules in such a way as to please us, we will accept that action and think it is a good operation. However, whenever it steps on our toes, we will not give to the House the right to operate under its rules.

Mr. McCLELLAN. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. McCLELLAN. Mr. President, there came over from the House in the bill certain items that were not authorized.

Mr. HOLLAND. The Senator is correct.

Mr. McCLELLAN. Some of those items were for schools.

Mr. HOLLAND. The Senator is correct.

Mr. McCLELLAN. The Senate, however, voted to approve them, did it not, when it passed the bill?

Mr. HOLLAND. The Senator is correct.

Mr. McCLELLAN. We have now a vote of the Senate to instruct the conferees to take that out, and it is not even in conference. Am I correct?

Mr. HOLLAND. The Senator is correct.

Mr. McCLELLAN. How are the conferees going to comply? I just ask that question. That is the mess we are in. We have the Senate voting to take that out. It is in the bill. It is not and never was in conference. It is in the bill. And because there is one item in disagreement that is in the same category and the Senate votes to instruct the conferees to take it all out.

Mr. HOLLAND. The Senator is correct. And by that action the Senate has claimed it never followed such a practice itself, when it did follow it with reference to some particular items in this bill.

Mr. MONTOYA. Mr. President, will the Senator yield on that point?

Mr. HOLLAND. I yield.

Mr. MONTOYA. Mr. President, I would like to read the rule with respect to the point the Senator from Arkansas has raised. It is rule 27.2. It reads as follows:

> Conferees shall not insert in their report matter not committed to them by either house, nor shall they strike from the bill matter agreed to by both houses.

Mr. HOLLAND. The Senator is correct. That is the rule. And, following that rule, we followed the House on some of those matters that were not authorized. Then the conferees proceeded to go ahead and approved, because the Senate had given the conferees that mandate, some items we put in the bill which were not authorized. And the House conferees accepted them.

Mr. McCLELLAN. Mr. President, how can the conferees comply now with the Senate rules and with the instructions that are in absolutely irreconcilable conflict? How can the conferees comply?

Mr. HOLLAND. We cannot. But, as I have already said, I hope that Christmas will have a brainwashing effect on us and that when we come back we will see things clearly and see the monstrosity that we have created.

Mr. McCLELLAN. Mr. President, I served as a member of the conferees. I did not know I was a conferee until just before notice was given of the meeting.

I went to the chairman and told him I was opposed to the program, that I had voted against it for the past 15 years and would rather not serve.

He asked me to serve.

Those conferees who were there will remember that I simply acquiesced by keeping silent, very much so. And I did not sign the report because I intended to vote against the conference report.

I am opposed to the whole program.

Mr. President, I conclude by saying that maybe one good thing will come out of this. Maybe we can kill the whole foolish program.

Mr. HOLLAND. Mr. President, there were differences of opinion among the conferees. The Senator from Florida has not been in favor of all items for foreign aid, not by any means.

Mr. DODD. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. DODD. Mr. President, I raise a question which, I suppose, is in the nature of a parliamentary inquiry, although I do not see that we can do anything on it now.

As I understand the situation, the Senator from New Mexico has pointed out that what we have done here is in violation of the rules of the Senate.

My question is, Why did not the Presiding Officer instruct the Senate that the motion pending was in violation of the rules of the Senate?

I would like someone to tell me the answer to that question. We are here. We cannot know everything about this. That is why we have astute Parliamentarians. We have tolerant and prudent Presiding Officers, such as the present occupant of the chair. And here is a great occurrence on the Saturday night before Christmas. And we go through a terrific debate and violate the rules of the Senate.

Mr. HOLLAND. Mr. President, I do not think that any Presiding Officer—and we certainly have a distinguished one now—or any Parliamentarian is going to volunteer to a Senator, particularly a leader in the Senate, who makes a motion that he is on unconstitutional grounds.

I have never heard of a Presiding Officer taking such a course.

And I would commend the Presiding

Officer for not taking such a position, but instead letting the Senate work its will, which it has done. I am not complaining about that. I am stating that I hope we will come back on the 19th of January in better humor and better able to see what we have done.

Mr. McCLELLAN. Mr. President, at the conclusion of my remarks, I intended to say that as a consequence of what we had done here, I immediately went to the chairman of the committee and asked him not to submit my name again to serve on the conference because I had refused to serve.

Mr. HOLLAND. Of course, each of us was tempted to do that. I did not do it because I think we are bound to have some knowledge about this whole complex situation that ought to be at the disposition of the Senate. So far as the Senator from Florida is concerned, if the chairman of the committee wants him to serve, he is going to make any contribution he can, and he understands completely the attitude of the Senator from Arkansas. But the Senator from Florida wants the RECORD to show that the Senator from Arkansas, while generally saying nothing, did make some very valuable comments and suggestions and gave some excellent advice during the conference.

I yield the floor.

Mr. FULBRIGHT and Mr. MAGNUSON addressed the Chair.

The PRESIDING OFFICER. The Senator from Arkansas is recognized.

Mr. FULBRIGHT. Mr. President, I want to make this point, a very brief one. I think it has been grossly overstated with regard to the instructions that we were given. Those instructions are based upon and apply only to those matters within the jurisdiction of the conference committee. Under the rules, those items which are not in conference are not in the jurisdiction of the conference committee.

It is perfectly clear that the instructions which the Senate voted are applicable only to those matters within the jurisdiction of the conference committee, which are the things in conference. Under no conditions are matters on which there is no disagreement ever within the jurisdiction of the committee. That is according to the rules of both houses. I do not think there is any disagreement about that.

The implication of the Senator from Florida—it is not only an implication but a statement—that we have committed a monstrosity is sheer nonsense, if I may be allowed to use that word in a most friendly manner; because the conferees are not seized, one might say, of those matters not in disagreement. The conference is appointed not to give approval or deal with those things about which there is no difference. The only items the conference has jurisdiction over are those about which there is a difference, and those items the Senator is talking about as being locked in are those about which there is no difference.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. FULBRIGHT. The instructions do not apply to those matters about which the conference committee is not concerned.

Mr. HOLLAND. The Senate sweeps under the rug the things that it has done which violate the principle that is announced here and leaves to the conferees only a fixed amount of things, and the Senator knows that there were things in this bill not authorized.

Mr. FULBRIGHT. Those items are not in conference.

Mr. HOLLAND. But they were approved by the Senate.

Mr. FULBRIGHT. That is not in conference, either. That is double talk. To say that the instructions are a monstrosity is not correct at all.

I do not wish to belabor the matter. The Senator from Florida has given the Senate a great deal of valuable information. It is the first time in my 25 years in this body that any member of the Appropriations Committee has been frank enough to get up and say that the work of the authorizing committees is of very little significance; that it is tentative at best; that it certainly is not the law, and that the Appropriations Committee can do as it pleases and how it pleases; that it can put in anything it likes, and that is the law, and there is nothing you can do about it. I applaud the Senator for his candor. This is very educational for the Members of the Senate as well as for the public.

Many of us who spend our time on so-called legislative matters ought to know this. This is an enlightening development—and I certainly do not criticize the Senator from Florida or any other Member.

Less than 100 years ago, we did not have this division between legislative and appropriation functions. The same committee did the examination of a matter and approved it. I suspect that as a result of what we have learned here today, there may be a move to go back, perhaps, to the wisdom of our fathers and to have those committees which spend long hours investigating, examining witnesses, and passing on policy matters—and we thought we had been making significant decisions—participate in the appropriating process, too.

Only one-quarter of our Members have all the power to determine matters of significance. I am not trying to challenge the committee at all. All I am saying is that I suspect the other 75 Members will be suppliant to the committee and ask to share in the responsible exercise of power that is now confined to 24 Members of the Senate.

What the Senator from Florida has done is to give us a liberal education on the facts of the matter as to where the influence really is in the Senate and in the House.

With respect to the House, of course, he puts it in a different way. He says "the rules of the House." We are not interested in the rules of the House. It is the results we are interested in. It is what finally happens. When everything is cleared away and the bill is passed, what is the result? I could not care less what their rules are.

They have a situation in which they can go to the Rules Committee, and they can get any rule they like. They get a rule that prohibits any Member of that body from even offering an amendment. They get a rule that says this bill, being of the greatest importance, involving perhaps $50 billion or $70 billion, must be passed in 2 hours and with no amendments. They get closed rules; they get any kind of rules they like. They get rules suspending the rules. They get a rule out of the Rules Committee that suspends the rules of the House, and there is nothing any Member of the House can do. They have created a situation in which the Rules Committee and the Appropriations Committee can do anything they like. It does not matter what any other committee does.

The House Committee on Foreign Affairs has only one bill with which to deal. If you abolish the foreign aid bill—and when I say "foreign aid," it is only title I of this bill. This bill has four titles, I believe. The one we are really concerned with—the only one I have been concerned with—is title I. The Foreign Affairs Committee has only that bill. If it did not have that, there would be no reason for the committee to exist. So, naturally, they make a business of it. They spend most of the year working on it. This year they had innumerable hearings. They reported it only about 6 weeks ago. They rewrote the whole bill which the Senate committee refused to accept. We simply dealt with the items in existing law. But, in any event, we now find out their efforts did not amount to a hill of beans, that the year's work of the Foreign Affairs Committee of the House went down the drain when the Appropriations Committee acted.

That is the sum and substance of what the distinguished Senator from Florida has told us. I do not deny it. I think he is a hundred percent correct. I think this is the basis for which, as the Senator from Maine has said, we must take a new look at the whole structure of the Senate.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. FULBRIGHT. I yield.

Mr. HOLLAND. I thank the Senator for all the kind things he said. And may I say that it would be impossible for me to picture the distinguished Senator from Arkansas as a suppliant coming anywhere, because he is too fine an advocate and too highly educated a man and too aggressive in stating what he believes in—and I want him always to be that way.

The committee can recommend——

Mr. FULBRIGHT. Which committee?

Mr. HOLLAND. The Appropriations Committee.

The 100 Members of the Senate can always refuse to follow the committee's recommendations, whether those recommendations are on matters that are authorized or on matters that are not authorized. The full membership of the Senate does that repeatedly, and the Senator from Arkansas is completely within his rights in seeking to have cut out of any appropriations bill any item, whether authorized or not, that is reported by the committee. So it is the Senate and not its Appropriations Commit-

tee, nor its legislative committee, that in the last instance has the say and does the speaking for the Senate.

I would not want to go unchallenged the statement of my distinguished friend that the 24-member committee has or arrogates to itself any great authority. It does not have it. All we can do is recommend, after studying, and that is what we do; and we recommend mostly authorized items; I said awhile ago over 90 percent of the time—I think it is nearer 99 percent—the amounts recommended have been included in authorization bills.

We do not always stick to the exact amount. Sometimes we go over and sometimes we go under.

Mr. FULBRIGHT. That is right.

Mr. HOLLAND. The Senator has voted literally hundreds of times in his able career in the Senate for appropriation bills which were over the authorization bill. I think we all understand each other in perfectly good humor. I hope we will be in better humor when we return in January.

If anyone wants to consider changing the rules of the Senate so that we change also the rules of the House, I would be glad to see how he goes about it.

Mr. MAGNUSON. Mr. President, I rise to clarify the record. The Senator from Florida stated that hundreds of times we appropriate money over the authorization. He mentioned that in the Labor-HEW bill we appropriated money that was not authorized. I do not know that we did that in the bill, but if the Senator can show me I would like to see it.

Mr. HOLLAND. I would be glad to.

Mr. MAGNUSON. The Senator from Florida has clarified his position a little. I think that legally he might be correct but I would not want anyone to think that the Committee on Appropriations willy-nilly ignores authorizations.

Mr. HOLLAND. It does not.

Mr. MAGNUSON. It does not. We always put in the proviso:

Provided that the appropriation shall be available only on the enactment of the law of * * *

Whatever the legislation is.

Mr. HOLLAND. Yes, and there is in this bill an item——

Mr. MAGNUSON. I have not yielded the floor.

Mr. HOLLAND. There are two or three items there that are not authorized.

Mr. MAGNUSON. What I am trying to say is that the Senator from Florida made it a little clearer when he said that 99 percent of the time we stick with the authorization.

Mr. HOLLAND. Of course, we do.

Mr. MAGNUSON. When we have a bill like independent offices or Labor-HEW where there are hundreds of items there might be something in there, some small amount, but any time it gets into four figures the Senator will find it is asked, "Is this authorized?" I am sure the Senator has heard that asked many times. I have been on the Committee on Appropriations for a long time, longer than the Senator from Florida. We have both been on the committee perhaps too long.

The expert is in the Chamber, also. He has been on the committee for a long time. I would not want any implication that in the Committee on Appropriations we willy-nilly appropriate money hundreds of times which has not been authorized. We put the same proviso in nearly every bill we have. The best example was tonight when the House message came over and stated that the House authorized OEO. Our appropriation in HEW is condition on authorization. I hope we will not run into any implication of that sort. That is why I voted for the amendment. Otherwise we would be saying, "What is the use of having authorizations?"

Mr. FULBRIGHT. That is right.

Mr. MAGNUSON. We might just as well forget about them.

Mr. DODD. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. DODD. What is the use, to perform the same function if you are going to have the appropriation? Why can it not all be done at once?

Mr. FULBRIGHT. It used to be that way.

Mr. MAGNUSON. When was it changed? It was not 100 years ago?

Mr. FULBRIGHT. The Parliamentarian, not the present Parliamentarian, said he thought it was about 1886 but he did not want to be held to that.

Mr. MAGNUSON. Maybe we could go back to that.

Mr. FULBRIGHT. I think it may be appropriate.

Mr. MAGNUSON. How many times have I heard in the Committee on Commerce what we see in this bill?

The Senator from Louisiana (Mr. ELLENDER) is an expert on these matters. I do not want the implication that the Committee on Appropriations goes around and says, "We do not care about authorizations; we are going to appropriate this or that."

I voted for this bill because I think it is time that it was determined whether we can legally do this. I think the Senator from Florida has a point. However, we had better adopt a policy. When the legislative committees work on something and decide on something that should be the ceiling.

I will say that 99 percent of the time what he said is true.

Mr. HART. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. HART. If the Commerce Committees of the two Houses in June pass a law and through the processes of Congress it becomes a law that there is authorized not to exceed $1 million for the operation of a department, and six or seven line items of functions, can the Committee on Appropriations in October come in and say, "We recommend x more dollars," and then somebody says, "Either House can go ahead on it." What effect would our action in June have? That is what I am trying to find out.

Mr. MAGNUSON. Legally if we appropriated more than that and the Senate approved of it, that is it.

Mr. HART. Is it repealed by implication of the June action? Is that what we are saying to ourselves?

Mr. MAGNUSON. That is it, but we do not do it. If we approve of it, that is it. I do not think the Senate will approve of it.

Mr. HART. I have gotten a feeling from the discussion that what we said in June should not bother us in December.

Mr. MAGNUSON. I do not think the Committee on Appropriations wants to do that and go hog wild. They do not do that. I do know how many billions of dollars we have appropriated in the last 15 years, but I guess there would not be one-tenth of 1 percent of that amount that was over the authorization.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. HOLLAND. I already mentioned the $4 billion that was appropriated and not authorized in the Foreign Assistance Act.

Mr. MAGNUSON. What was that?

Mr. HOLLAND. The Foreign Assistance Act in 1951.

Mr. MAGNUSON. But still I venture to say that it would not be more than one-tenth of 1 percent. But if both Houses approve, no one can sue us or put us in jail. The bill goes down to the Treasury and they say to pay it and it is paid.

I think this debate has brought out some very important matters. Maybe we should take a long look at this matter to see what we can do about it.

Mr. FULBRIGHT. The Senator has told us the facts of life.

Mr. MAGNUSON. According to the Magnuson plan we should have a fiscal year and only appropriate what is authorized.

Mr. ELLENDER. Mr. President, I am in agreement that the debate that was had here for the last 2 hours has been very educational. I am very hopeful that some rules and regulations can be worked out between the Senate and the House.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. ELLENDER. I yield.

Mr. BYRD of West Virginia. Mr. President, for the information of Senators, there will be no further rollcall votes tonight, no further votes, and no further business. But so that everyone will be sure, I make the following request.

ORDER FOR ADJOURNMENT TO MONDAY, DECEMBER 22, 1969

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senate completes its business tonight, it stand in adjournment until noon on Monday next.

The PRESIDING OFFICER. Without objection, it is so ordered.

APPROPRIATION BILLS, 91ST CONGRESS, FIRST SESSION

Mr. ELLENDER. Mr. President, I asked the clerk of the Appropriations Committee to make a summary of all of

the appropriation bills enacted by Congress, which would include those in conference. I did this in order to give an idea to the Senate of how much has been appropriated and a comparison of the amounts agreed to with the budget estimates for each bill.

Mr. President, I ask unanimous consent to have printed in the RECORD a tabulation of all appropriation bills handled during the first session of the 91st Congress.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

[SENATE APPROPRIATIONS COMMITTEE PRINT]

ACTIONS ON BUDGET ESTIMATES OF NEW BUDGET (OBLIGATIONAL) AUTHORITY IN APPROPRIATION BILLS, 91ST CONG., FIRST SESS., AS OF DEC. 20, 1969

[Does not include any "back-door" type budget authority; or any permanent (Federal or trust) authority, under earlier or "permanent" law,[1] without further or annual action by the Congress]

Bill and fiscal year	Budget requests considered by House	Approved by House	Budget requests considered by Senate	Approved by Senate	Amounts agreed to in conference	(+) or (—), conference amounts compared with budget requests to Senate
(1)	(2)	(3)	(4)	(5)	(6)	(7)
Bills for fiscal 1970:						
1. Treasury-Post Office (H.R. 11582) (net of estimated postal revenues appropriated)	$2,314,714,000	$2,272,332,000	$2,314,714,000	$2,280,195,000	$2,276,232,000	—$38,482,00
(Memoranda: Total, including authorizations out of postal funds)	(8,821,727,000)	(8,779,345,000)	(8,821,727,000)	(8,787,208,000)	(8,783,245,000)	(—38,482,000)
2. Agriculture (H.R. 11612)	6,967,562,050	6,806,655,000	7,237,562,050	7,642,797,650	7,488,903,150	+251,341,100
3. Independent offices-HUD (H.R. 12307) (including 1971 advance)	15,380,413,600	14,909,089,000	15,512,969,600	[2]14,985,449,000	15,111,870,500	—401,099,100
(Fiscal year 1970 amounts only)	(15,205,413,600)	(14,734,089,000)	(15,337,969,600)	[2](14,985,449,000)	(15,111,870,500)	(—226,099,100)

(Fiscal year 1970 amounts only)	(16,495,237,700)	(17,573,602,700)	(18,608,125,700)	(20,245,811,700)	(19,747,153,200)	[4](+1,139,027,500
7. Legislative (H.R. 13763)	311,374,273	284,524,057	372,152,949	342,310,817	344,326,817	—27,826,130
8. Public works (and AEC) (H.R. 14159)	4,203,978,000	4,505,446,500	4,203,978,000	4,993,428,500	4,756,007,500	+552,029,502
9. Military construction (H.R. 14751)	1,917,300,000	1,450,559,000	1,917,300,000	1,603,446,000	1,560,456,000	—356,844,000
10. Transportation (H.R. 14794) (including 1971 advances)	2,090,473,630	2,095,019,630	2,090,473,630	2,147,152,630	2,143,738,630	+53,265,000
(Fiscal year 1970 amounts only)	(1,840,473,630)	(1,875,019,630)	(1,840,473,630)	(1,947,152,630)	(1,929,738,630)	(+89,265,000)
11. District of Columbia (H.R. 14916) (Federal funds)	228,842,000	188,691,000	228,842,000	173,547,000	168,510,000	—60,332,000
(District of Columbia funds)	(751,575,300)	(683,106,300)	(752,944,300)	(657,064,600)	(650,249,600)	(—102,694,700)
12. Defense (H.R. 15090)	75,278,200,000	69,960,048,000	75,278,200,000	69,322,656,000	69,640,568,000	—5,637,632,000
13. Foreign assistance (H.R. 15149)	3,679,564,000	2,608,020,000	3,679,564,000	2,718,785,000	2,558,910,000	—1,120,654,000
14. Supplemental (H.R. 15209)	298,547,261	244,225,933	314,597,852	296,877,318	278,281,318	—36,316,534
Total, these bills—						
As to fiscal 1970	132,607,007,614	126,213,133,720	135,200,040,881	130,317,578,215	129,595,765,115	—5,604,275,766
As to fiscal 1971	425,000,000	395,000,000	1,651,000,000	1,317,580,000	214,000,000	—1,437,000,000
Total, 1970 bills including 1971 amounts	133,032,007,614	126,608,133,720	136,851,040,881	131,635,158,215	129,809,765,115	—7,041,275,766
Bills for fiscal 1969:						
1. Unemployment compensation (H.J. Res. 414)	$36,000,000	$36,000,000	$36,000,000	$36,000,000	$36,000,000	
2. Commodity Credit Corporation (H.J. Res. 584)	[3]1,000,000,000	[3]1,000,000,000	[3]1,000,000,000	[3]1,000,000,000	[3]1,000,000,000	
3. 2d supplemental (H.R. 11400)	4,364,006,956	3,783,212,766	4,814,305,334	4,459,669,644	4,352,357,644	—$461,947,690
Release of reserves (under Public Law 90-364)	(82,463,000)	(82,766,000)	(79,999,000)	(80,230,000)	(80,230,000)	(+231,000)
Total, 1969 bills	5,400,006,956	4,819,212,766	5,850,305,334	5,495,669,644	5,388,357,644	—461,947,699
Cumulative totals for the session	138,432,014,570	131,427,346,486	142,701,346,215	137,130,827,859	135,198,122,759	—7,503,223,456

[1] In round amounts, the revised (April) budget for fiscal 1970 tentatively estimated total new budget (obligational) authority for 1970 at $219,600,000,000 gross ($205,900,000,000 net of certain offsets made for budget summary purposes only), of which about $80,700,000,000 would become available, through so-called permanent authorizations, without further action by Congress, and about $138,900,000,000 would require "current" action by Congress (mostly in the appropriation bills). Also, the April review of the budget contemplates budget requests for advance fiscal 1971 funding in 4 items totaling $1,661,000,000.

[2] Reflects reduction of $175,000,000 for Appalachian highway program for 1970 and $175,000,000 for advance funding for 1971. Authorization act provided for contract authority in lieu of new obligational authority, with payments for liquidation to be appropriated later.

[3] Shifted from fiscal 1970 budget, a portion of which is technically classified in the budget as "liquidation of contract authorization" rather than as new budget (obligational) authority.

[4] Although a reduction in the budget estimate of $86,972,500 is reflected in the total column of the bill, it must be made clear that the budget estimate column to the Senate includes $1,226,000,000 advance funding for ESEA title I for 1971 whereas none of these funds were included in the conference agreement. Deducting the $1,226,000,000, from the budget estimate column gives a comparison for fiscal year 1970 only and reflects the conference agreement over the budget estimates in the amount of $1,139,027,500.

Mr. ELLENDER. Mr. President, among other things, the table shows new obligational authority totaling $135,198,122,759 made available during this session. The amount is $7,503,223,456 below the budget estimates submitted to the Senate. Included in this total reduction under the budget is an item of $1,226 million advance funding for fiscal year 1971 for Elementary and Secondary Education Act which was denied by the Congress.

The figures listed above include the conference agreement on the Labor-HEW bill. The President has informed the Congress that he intends to veto this bill. Following notification to the Congress of the President's intention of vetoing the bill, the Senate included in the Supplemental Appropriation bill a continuing resolution to permit the Departments and agencies, for which there are no appropriations enacted, to continue operations through January 30, 1970. Under these circumstances, the Congress has deferred action on the conference report on the Labor-HEW bill until Congress returns in January.

Mr. President, with respect to all these appropriations, the figures will not be changed very much, depending on what the conferees will do on the foreign aid bill, but the total amount will be under the budget by at least $7½ billion.

ADJOURNMENT UNTIL MONDAY, DECEMBER 22, 1969

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 12 o'clock noon on Monday next.

The motion was agreed to; and (at 7 o'clock and 23 minutes p.m.) the Senate adjourned, until Monday, December 22, 1969, at 12 o'clock meridian.

CONFIRMATIONS

Executive nominations confirmed by the Senate, December 20, 1969:

NATIONAL HIGHWAY SAFETY BUREAU

Douglas William Toms, of Washington, to be Director of the National Highway Safety Bureau.

DEPARTMENT OF DEFENSE

Gardiner Luttrell Tucker, of Virginia, to be an Assistant Secretary of Defense.

IN THE AIR FORCE

The following officer to be placed on the retired list, in the grade of lieutenant general, under the provisions of section 8962, title 10, of the United States Code:

Lt. Gen. James W. Wilson, [redacted] FR (major general, Regular Air Force), U.S. Air Force.

IN THE NAVY

Rear Adm. Eugene P. Wilkinson, U.S. Navy, having been designated for commands and other duties determined by the President to be within the contemplation of title 10, United States Code, section 5231, for appointment to the grade of vice admiral while so serving.

Vice Adm. Arnold F. Schade, U.S. Navy, for appointment as Navy senior member of the Military Staff Committee of the United Nations, pursuant to title 10, United States Code, section 711.

IN THE ARMY

The nominations beginning Arthur C. Harris, Jr., to be lieutenant colonel, and ending Juan G. Santiago Rijos, to be second lieutenant, which nominations were received by

the Senate and appeared in the CONGRESSIONAL RECORD on December 8, 1969.

DIPLOMATIC AND FOREIGN SERVICE

The nominations beginning Thomas D. McKiernan, to be a consular officer of the United States of America, and ending Mitchell Styma, to be consular officer of the United States of America, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on December 10, 1969.

U.S. ATTORNEY

James L. Browning, Jr., of California, to be U.S. attorney for the northern district of California for the term of 4 years.

U.S. MARSHALS

Lee R. Owen, of Arkansas, to be U.S. marshal for the western district of Arkansas for the term of 4 years.

Lynn A. Davis, of Arkansas, to be U.S. marshal for the eastern district of Arkansas for the term of 4 years.

HOUSE OF REPRESENTATIVES—*Saturday, December 20, 1969*

The House met at 12 o'clock noon.

Rev. Jack P. Lowndes, Memorial Baptist Church, Arlington, Va., offered the following prayer:

For unto you is born this day a Saviour, which is Christ the Lord.—Luke 2: 11.

As the Christmas season approaches, our hearts soften in the glow of the love and light that shines so brightly still from the manger of Bethlehem. Cause this blessed influence not only to soften our hearts but to cleanse them of sin and selfishness and to strengthen them for the tasks and duties of this all-important hour. Help Christ and His way of life and peace be in the center of our hearts and not crowded into a corner. Bowing now in the presence of our living Lord, give us reverence for Thee and the life entrusted to us. Help us to dedicate ourselves to honesty in speech and thought. Nourish in us the desire to seek and find the truth about our world, about ourselves, and above all about Thee. May there be no lowering of our highest Christmas standards as we celebrate the birth of Jesus, but rather an exalting of them during this holiday season.

Enable us to respond at this Christmas season with love for the loveless, hope for the hopeless, and the joy the world can neither give nor take away.

Now we pray especially for the Members of this 91st Congress as they approach the end of this session. After months of labor and struggle with most important matters, many are weary—give them rest. Some are anxious and troubled—give grace sufficient for every need. Some are tempted—give strength to resist and overcome.

Thou hast been our dwelling place in all generations and our sure defense today. Whether here or elsewhere, abide in us all and give us Thy peace. In the name of Christ we pray. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed without amendment a joint resolution and a concurrent resolution of the House of the following titles:

H.J. Res. 764. Joint resolution to authorize appropriations for expenses of the President's Council on Youth Opportunity.

H. Con. Res. 473. Concurrent resolution authorizing the Clerk of the House to make a correction in the enrollment of the bill (H.R. 14751).

The message also announced that the Senate had passed with amendments in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 14733. An act to amend the Public Health Service Act to extend the program of assistance for health services for domestic migrant agricultural workers and for other purposes.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 14580) entitled "An act to promote the foreign policy, security, and general welfare of the United States by assisting peoples of the world to achieve economic development within a framework of democratic economic, social, and political institutions, and for other purposes."

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 14751) entitled "An act making appropriations for military construction for the Department of Defense for the fiscal year ending June 30, 1970, and for other purposes."

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 14794) entitled "An act making appropriations for the Department of Transportation and related agencies for the fiscal year ending June 30, 1970, and for other purposes."

The message also announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 1933. An act to provide for Federal railroad safety, hazardous materials control and for other purposes.

The message also announced that the Senate agrees to the amendments of the House with an amendment of a joint resolution, of the Senate, of the following title:

S.J. Res. 154. Joint resolution to authorize and request the President to proclaim the month of January of each year as National Blood Donor Month.

The message also announced that the Secretary be directed to return to the House of Representatives its message informing the Senate that the House had agreed to the amendments of the Senate to the bill (H.R. 9634) entitled "An act to amend title 38 of the United States Code in order to improve and make more effective the Veterans' Administration program of sharing specialized medical resources," in compliance with a request of the House for the return thereof.

CALL OF THE HOUSE

Mr. DORN. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 344]

Abbitt	Edwards, Calif.	May
Adams	Esch	Miller, Calif.
Alexander	Evins, Tenn.	Montgomery
Andrews, Ala.	Fallon	Morse
Ashbrook	Findley	Moss
Ashley	Fish	O'Neal, Ga.
Baring	Fisher	Ottinger
Bell, Calif.	Fulton, Tenn.	Pepper
Berry	Gallagher	Poage
Bevill	Goldwater	Powell
Blanton	Gray	Purcell
Bolling	Green, Oreg.	Quillen
Brasco	Griffiths	Rees
Brock	Hall	Reifel
Cahill	Halpern	Rostenkowski
Carey	Harrington	St Germain
Celler	Hastings	Sandman
Chisholm	Hays	Scheuer
Clancy	Hébert	Sisk
Clark	Jarman	Snyder
Clay	Jonas	Steiger, Ariz.
Collier	Kirwan	Stephens
Collins	Kleppe	Stokes
Conyers	Kluczynski	Sullivan
Corman	Landgrebe	Tunney
Cowger	Latta	Watkins
Cunningham	Lipscomb	Widnall
Dawson	Long, La.	Williams
Dent	Lowenstein	Wilson, Bob
Derwinski	Lukens	Wright
Diggs	McClory	Wydler
Eckhardt	Martin	Zion

The SPEAKER. On this rollcall 337 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

PERSONAL EXPLANATION

(Mr. NICHOLS asked and was given permission to address the House for 1 minute.)

Mr. NICHOLS. Mr. Speaker, on Monday, December 15, when the House unanimously passed H.R. 15095, I was unavoidably absent from the Chamber attending a meeting between a delegation from my district and an official of one of our Federal agencies. Had I been present, I would have joined my colleagues in voting for this bill. I would like

the RECORD to show how I would have voted on this legislation.

PERSONAL ANNOUNCEMENT

(Mr. FULTON of Pennsylvania asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. FULTON of Pennsylvania. Mr. Speaker, on Wednesday, December 3, 1969, the leadership on both sides of the House indicated there would be no legislative business before the House on Thursday, December 4, 1969. This was due to the withdrawal of legislation from the Education and Labor Committee.

Consequently, I scheduled conferences at my Pittsburgh office for Thursday, December 4, 1969, and arranged for consultations with citizens and groups about their problems—legislation, appointments, and so forth.

This arrangement saved these people from having to come to Washington, D.C., to see me, and gave them the opportunity for a personal interview. I like to take care of the needs, and follow the recommendations of my constituents where I can.

Several Members who did not return to serve their districts, but remained in Washington, called two quorums. Therefore, I missed two quorums, rollcalls No. 302 and No. 303 because of my official duties at my Pittsburgh office. These quorums were unexpected even by the leadership.

POOR LIGHTING IN THE OLD SUPREME COURT CHAMBER

(Mr. MINSHALL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MINSHALL. Mr. Speaker, it has been my privilege to serve on the House Appropriations Committee for 11 years and have participated in numerous House-Senate conferences in the Old Supreme Court Chamber. The lighting in this antiquated chamber leaves much to be desired and was highlighted several days ago that because of the lack of illumination a Member of the other body complained that he could not read the dollar figures in a bill under consideration. Accordingly, I am calling to the attention of my colleagues a letter that I have just delivered to the Speaker's office:

WASHINGTON, D.C.,
December 20, 1969.

HON. JOHN W. MCCORMACK,
Speaker of the House of Representatives, The Capitol.

DEAR MR. SPEAKER: As we approach the closing days of this first session of the 91st Congress, it has been my privilege to serve on two Appropriations Committee conferences, held in the Old Supreme Court Chamber. The fate of many billions of dollars is being decided in those historic surroundings, but I would hazard the guess that we are doing our work by considerably less candlepower than illuminated it during the 19th century. It is essential that we be able to read the small print—especially the smaller dollar figures—and, with the present inadequate lighting system this poses an eye-straining problem.

Accordingly, I respectfully request that you have the Architect of the Capitol make arrangements for an adequate lighting system for the benefit of the many conferences which are held in this chamber. I recognize and respect the desire to preserve the room for its historic significance, but I am certain temporary fixtures could easily be installed for conference purposes and would cost a mere pittance and perhaps save the taxpayers billions.

At this point, I feel something like the man in Lincoln's anecdote who prayed, "Oh, Lord, give us a little more light and a little less noise."

With warmest personal regards.

Sincerely yours,

WILLIAM E. MINSHALL,
Member of Congress.

RINGING OF TWO BELLS ON VOTES AND THREE BELLS ON STRAIGHT QUORUM CALLS

(Mr. HUTCHINSON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HUTCHINSON. Mr. Speaker, I have a suggestion to make. Since Members are no longer required to "qualify" to vote on record rollcalls, there appears to be no further need to differentiate between "two-bell" and "three-bell" votes.

I therefore suggest, Mr. Speaker, that the signal system be changed and that two bells be used for every vote and three bells signal only straight quorum calls.

TAKE PRIDE IN AMERICA

(Mr. MILLER of Ohio asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MILLER of Ohio. Mr. Speaker, in 1967 the United States produced 17,098,000 short tons of meat, more than any other country. This amounted to 21.6 percent of the world's total production.

CONFERENCE REPORT ON H.R. 15149, FOREIGN ASSISTANCE APPROPRIATIONS, 1970

Mr. PASSMAN. Mr. Speaker, I call up the conference report on the bill (H.R. 15149) making appropriations for foreign assistance and related programs for the fiscal year ending June 30, 1970, and for other purposes, and ask unanimous consent that the statement of the managers on the part of the House be read in lieu of the report.

Mr. YATES. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman from Illinois will state his parliamentary inquiry.

Mr. YATES. At what point is it in order to make a point of order against the conference report?

The SPEAKER. The Chair will state in response to the parliamentary inquiry of the gentleman from Illinois that such a point of order would be in order after the reading of the report or the gentleman can reserve a point of order now before the reading of the statement accompanying the report.

Mr. YATES. Mr. Speaker, I reserve a point of order on the conference report.

The SPEAKER. The gentleman from Illinois reserves a point of order on the conference report.

Is there objection to the request of the gentleman from Louisiana?

Mr. FRASER. Mr. Speaker, reserving the right to object with reference to the unanimous-consent request that the statement of the managers on the part of the House be read in lieu of the report, I would like to ask the chairman of the Subcommittee on Appropriations, the gentleman from Louisiana (Mr. PASSMAN), if in the event the point of order against the conference report is not sustained, I would like to have some assurance from the gentleman that we would have an opportunity to talk about some of the problems contained in the report—problems which many of us find with this conference report. We had but very little opportunity to discuss these matters at the time the original bill was considered. I assume the subcommittee chairman will indulge us in that respect?

Mr. PASSMAN. Mr. Speaker, if the gentleman will yield, under the rules on the conference report the gentleman managing the bill is given 1 hour, and members of the subcommittee usually have priority on that time.

I shall, in explaining the bill, try to answer brief questions with brief answers. I hope after I have explained the conference report that there will be no need for the gentleman to ask any questions. In other words, I am not going to cross any bridges until I get to them.

Mr. FRASER. Mr. Speaker, I object to the unanimous-consent request.

The SPEAKER. The Clerk will read the conference report.

The Clerk read the conference report.

(For conference report and statement, see proceedings of the House of December 19, 1969.)

Mr. YATES. Mr. Speaker, I make a point of order against that portion of the conference report which provides funds for the purchase of planes for the Republic of China on the ground that it is an appropriation that is not authorized by law.

I read from the conference report on the authorization bill which appears in the CONGRESSIONAL RECORD of December 18 on page 39841 relating to the military assistance, section 504 of the act.

The House bill authorized a total of $454,500,000 for military assistance of which $350,000,00 was for worldwide allocation; $50,000,000 for Korea; $54,500,000 for the Republic of China.

The Senate amendment authorized a total of $325,000,000 without any allocation to specified countries.

The managers on the part of the House agreed to the authorization of $350,000,000 without specifying any country allocation. They found it impossible to obtain agreement to a larger total for military assistance and believe that any specific additional allocation for Korea or for the Republic of China would result in a drastic curtailment of the worldwide

authorization which would be detrimental to our national security.

So in the basic law, in the authorization law there is no allocation specifically of funds for any country and I suggest that the appropriation of funds in a specific amount for military assistance to a particular country is without authorization of law.

The SPEAKER. Does the gentleman from Louisiana (Mr. PASSMAN) desire to be heard on the point of order?

Mr. PASSMAN. I do, Mr. Speaker.

Mr. Speaker, first of all there is nothing in the military assistance paragraph directing the purchasing of any type of equipment. There is language appropriating a specific amount of funds for China, but there is no language anywhere in the bill stating the type of military equipment that will be provided to any nation.

Furthermore, the military assistance appropriation language is within the jurisdiction of the conference committee because the language was in the bill as it passed the House.

As a matter of fact, everything in title I is not yet authorized.

Mr. YATES. Mr. Speaker, may I be heard further?

The SPEAKER. The Chair will hear the gentleman further.

Mr. YATES. Mr. Speaker, the statement of the gentleman from Louisiana that there is no specific allocation of funds in the bill to a particular country apparently is at odds with the statement in the conference report.

It is stated on page 7 of the conference report with respect to amendments Nos. 23, 24, 25, and 26, under the heading "Military Assistance":

> Insert appropriate section numbers; appropriate $404,500,000 instead of $454,500,000 as proposed by the House and $350,000,000 as proposed by the Senate;—

Then there is this language, Mr. Speaker:

> and restore language deleted by the Senate earmarking $54,500,000 for the Republic of China.

Mr. Speaker, if that is not a specific allocation, I do not know what it is.

Mr. PASSMAN. Mr. Speaker, may I be heard further?

The SPEAKER. The Chair will hear the gentleman.

Mr. PASSMAN. Mr. Speaker, I am going to repeat what I said previously, and that is there is no language in this bill designating the type of rifles, planes, tanks, or any other type of equipment that will be furnished to any nation.

We did, of course, earmark funds for China and Korea but all appropriation bills earmark funds for specific purposes in one form or another, and it is within the prerogative of the committee to indicate, if we really wanted to, where the funds are to go and to what nation for every appropriation paragraph in the bill.

I want to have it understood that there is nothing in the bill anywhere that indicates the type of equipment that will be purchased or delivered to any nation. That decision, of course, is made by the Department of Defense. In addition, we went to conference with the language in the bill that had been approved by the House and we were operating within the rules and procedures of the House when we did so. I do not believe that a point of order is valid.

Mr. YATES. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state his parliamentary inquiry.

Mr. YATES. Is it in order for me to ask the chairman of the committee, who just made the argument, for a clarification of his statement and representation that there is no specific allocation of funds in this bill for any country? Does that mean that the President does not have to provide these funds, but can consider this fund entirely a general fund and allocate moneys as he wishes to without any reference to the Republic of China?

The SPEAKER. The Chair will state that that is a matter for discussion between the gentleman from Illinois and the gentleman from Louisiana, and is not a proper parliamentary inquiry.

Mr. YATES. Mr. Speaker, the reason I ask that question is that the gentleman has represented to the House that this is a general fund and that there is no specific allocation of funds. If that is true, then I have no point of order. But if, in fact, as I read this point of order, namely, that there is proposed to be an allocation of funds for the Republic of China, then I shall persist in my point of order.

The SPEAKER. The Chair feels that that is a matter about which the gentleman may make an inquiry of the gentleman from Louisiana, and it is a matter of the gentleman from Louisiana to respond if he so desires.

The Chair will hear the gentleman from Illinois further on his point of order.

Mr. YATES. First, I therefore ask the gentleman from Louisiana, in view of his statement that this is an allocation of general funds without a specific allocation to any nation, does that mean, therefore, that there is no specific allocation of funds to the Republic of China?

Mr. PASSMAN. I shall respond again as I have previously. The gentleman understands the legislation. He understands it as well as I do. The entire foreign aid program is handled on an illustrative basis, and when the Congress authorizes funds, it does not spell out in the authorizing legislation for what purpose the money is to be spent. You may be trying to make legislative history, but I would assume that we are going to move on the basis of the language of the bill and not on what the gentleman from Illinois would like to have me say. The President of the United States can impound all of the funds. The President of the United States could allocate all funds, as far as I know, to one nation. He could allocate all the funds for tanks. He could allocate all the funds for planes.

This program is on an illustrative basis. The gentleman understands I would not let him put words in my mouth in order to make his case for some subsequent motion. I rest my case on the language in the bill. I respectfully ask the gentleman to read the bill, and that is my understanding as what we are going to legislate.

Mr. YATES. Mr. Speaker, I should like to make a further inquiry of the gentleman. The conference report uses this language—"and restore language deleted by the Senate earmarking $54,500,000 for the Republic of China."

Mr. PASSMAN. That is correct.

Mr. YATES. Do I correctly understand that the gentleman is now telling the House that that is purely illustrative and is not a specific allocation of funds for the Republic of China?

Mr. PASSMAN. You have been talking about planes. You have not been talking about a specific sum of money. Certainly there is a specific appropriation for military assistance, and then the language also states that not less than $54,500,000 shall be available for the Republic of China.

Mr. YATES. So that that is not illustrative but is a specific allocation.

Mr. PASSMAN. As the amount of money is concerned; not so far as the type of equipment is concerned.

Mr. YATES. Mr. Speaker, I renew my point of order.

Mr. ZABLOCKI. Mr. Speaker, may I be heard on the point of order?

The SPEAKER. The Chair recognizes the gentleman from Wisconsin.

Mr. ZABLOCKI. Mr. Speaker, I rise in support of the point of order and to express my strong opposition to the conference report on foreign aid appropriations.

This report contains a line item for foreign military assistance of $404.5 million. That amount is $54.5 million more than the amount which the House authorized yesterday by approving the conference report on the foreign aid authorization bill.

For that reason, I believe that this conference report is completely and flagrantly out of order. Let me cite to this body rule XXI, part 2, of the Rules of the House of Representatives. It states:

> No appropriation shall be reported in any general appropriations bill, or be in order as an amendment thereto, for any expenditure not previously authorized by law.

Let me also cite the interpretation which has been given to this rule, an interpretation which may be found in paragraph 835 of the rules:

> In the administration of the rule it is the practice that those upholding the item of appropriation should have the burden of showing the law authorizing it.

I would be pleased to know where the House conferees find anything in the law which would authorize an additional $54.5 million in military assistance.

Mr. Speaker, it is abundantly clear that this conference report stands in violation of the rules of this body.

Let me call to the attention of my colleagues the debate in the other body on Thursday in which the Members of that body only belatedly discovered that the Comptroller General will approve the expenditure of funds from the Treasury which have been appropriated but not

authorized by the Congress without previous authorization.

Many of us in this body of the Congress have been aware of that situation for some time.

It is, nonetheless, a violation of both the spirit and the letter of the Rules of the House for the Appropriations Committee to appropriate funds which have not been authorized—just as it is a violation for authorizing committees to attempt to appropriate funds.

If the Appropriations Committee can appropriate funds in complete disregard of what has been authorized—as it does in the conference report now before us—then why have authorizing committees?

Those of us who serve on authorizing committees might just as well stay home. The hours and days we spend in committee hearings and markup sessions are simply an exercise, when our actions can be honored, ignored, or abrogated at the whim of an Appropriations subcommittee.

Mr. Speaker, the issue before the House today goes beyond the $54.5 million which exceeds the authorization for military assistance. It goes beyond the issue of whether the United States should be providing a down payment on jet planes for the Republic of China.

Mr. Speaker, I therefore urge that this conference report be defeated in order that the appropriation conference conform to the authority approved yesterday by the House.

Mr. PASSMAN. Mr. Speaker, may I be heard further on the point of order?

Mr. Speaker, it is my understanding that the lateness of the so-called authorization bill, which does not exist in fact, as yet, and the very fact that the majority leader of the other body said there would be no authorization bill, and the chairman of the Foreign Relations Committee said there would be no authorization bill, made it necessary for us to move this bill through the Appropriations Committee, the Rules Committee, and the Rules Committee gave us a rule waiving points of order. We have moved the bill, as I understand it, according to the rules of the House, and this appropriation bill became an authorization bill also, in the absence of any authorization act. Even at this late hour we still do not have an authorization bill because the conference report on the authorization bill was only adopted yesterday by both Houses and has not yet reached the President for his signature.

Mr. GERALD R. FORD. Mr. Speaker, if we follow the argument made by the distinguished gentleman from Wisconsin (Mr. ZABLOCKI) that the particular part to which he objects was subject to a point of order on that basis that it was not authorized by law, then we would have to take the position that no part of this appropriation in the foreign aid program should be on the floor at all today. The whole bill would be subject to a point of order. We cannot pick and choose. We then have to make the argument the whole bill is subject to a point of order, if we are going to argue that a certain part of it is subject to a point of order.

Mr. Speaker, we do as a matter of practice appropriate money from time to time that is not specifically authorized as a matter of law. Furthermore, in this particular case when the foreign aid appropriation bill came to the floor of the House, a specific rule was granted waiving points or order.

It would be my argument that the benefit of that rule would still be applicable in the consideration of the conference report.

Mr. ZABLOCKI. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The Chair will hear the gentleman further.

Mr. ZABLOCKI. Mr. Speaker, does the rule waiving points of order under which the House appropriation bill was considered by the Committee of the Whole House on the State of the Union continue through conference report consideration? Would not the rule apply only for consideration of the appropriation bill waiving points of order during the time it was considered by the Committee of the Whole? Certainly the rule should not carry over to the conference report? If it does the Members of the House abrogate their legislative prerogatives. If this is the case, the gentleman from Wisconsin for one shall never vote for a rule waiving points of order in the future.

It has been cited that the appropriation bill came to this House under a rule waiving points of order and therefore this conference report would be in order. The gentleman from Louisiana claims this appropriation conference report carries its own authorization under the rule waiving points of order granted in earlier consideration.

My parliamentary inquiry, Mr. Speaker, is: Does the rule under which the appropriation bill came to the House carry over and continue into the conference report?

The SPEAKER. The Chair will state that will have a bearing on the point of order that is raised at the present time.

Mr. FRASER. Mr. Speaker, may I be heard in support of the point of order?

The SPEAKER. The Chair will hear the gentleman from Minnesota.

Mr. FRASER. Mr. Speaker, let me make clear again what I believe both the gentleman from Illinois and the gentleman from Wisconsin have made clear.

There was a bill which was agreed upon by both the House and the Senate, which set a limit of $350 million for military assistance. This appropriation measure seeks to appropriate $404.5 million, earmarking $54.5 million for the Republic of China. This appropriation measure seeks to appropriate $54.5 million more than the $350 million agreed upon by both the House and the Senate, after the bill had been agreed upon in conference.

Mr. PASSMAN. Mr. Speaker, will the gentleman yield?

Mr. FRASER. I am glad to yield.

Mr. PASSMAN. Would the gentleman please refer to the public law he is talking about and give us the number of it so that we will know what the gentleman refers to? If he is referring to the conference authorization bill that passed the Senate and the House yesterday, he is making reference to a bill that the President may not even sign. As of today, it has not been signed into law.

If the gentleman is citing some other law, we would like to know its number also. I do not believe the gentleman wants to argue that we should ignore the fact that we have a precedent for moving appropriation bills under a rule. We have moved this bill from the very beginning—to the floor of the House under a rule adopted by this House.

Mr. FRASER. Mr. Speaker, I did not say that the bill had been signed by the President. I said both the House and the Senate acted upon and agreed upon a figure of $350 million. Now the appropriation conferees bring back a figure of $404.5 million, with the excess to be given to the Republic of China. I regard this as an affront to our whole procedure.

Mr. PASSMAN. Mr. Speaker, will the gentleman yield?

Mr. FRASER. I yield.

Mr. PASSMAN. We are bringing this conference bill back with an appropriation $50 million below what the House previously recommended; not over, under.

Mr. FRASER. If I may say, in response to the gentleman——

Mr. ARENDS. Mr. Speaker, I demand the regular order.

Mr. YATES. This is the regular order.

Mr. FRASER. In support of this point of order, Mr. Speaker, it is true there is now only one earmarking left which is the excess over $350 million, apparently due to the conference committee dropping the allocation for Korea in favor of the allocation for the Republic of China. That does not undercut the point of order. It emphasizes why the point of order should be sustained.

PARLIAMENTARY INQUIRY

Mr. YATES. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state his parliamentary inquiry.

Mr. YATES. In stating a point of order is it not in order for the person stating it to make a point of order to a part of a bill rather than to the entire bill? Is it not perfectly proper to make a limited point of order, rather than to the entire bill?

The SPEAKER. The Chair can only rule upon the point of order which is made, and the Chair is prepared to rule.

The gentleman from Illinois has raised a point of order against the conference report on the bill H.R. 15149.

The Chair is aware of the fact pointed out by the gentleman from Illinois—that the authorization bill for fiscal 1970, while passed by both Houses, has not yet become law. As pointed out in the debate on this point of order, the conference report now before the House does carry an amount for military assistance that is $54,500,000 above the figure which would be authorized by H.R. 14580, the Foreign Assistance Act of 1969.

However, the Chair recalls that when this appropriation bill passed the House, it was considered under a rule waiving points of order. The House agreed to a total figure for military assistance of $454,500,000. The Senate reduced this figure to $350 million. The conferees have reached an agreement between these

two amounts, as they had the authority to do.

The Chair holds that the conferees have not exceeded their authority and overrules the point of order.

The gentleman from Louisiana is recognized for 1 hour.

Mr. GROSS. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. Does the gentleman from Louisiana yield for a parliamentary inquiry?

Mr. PASSMAN. Mr. Speaker, I yield for a parliamentary inquiry.

Mr. GROSS. Mr. Speaker, I desire to make a point of order against consideration of the bill.

Mr. PASSMAN. Mr. Speaker, I yielded to the gentleman for a parliamentary inquiry, not for a motion.

Mr. GROSS. Mr. Speaker, I make a point of order against consideration of the conference report in toto.

The SPEAKER. The gentleman will state his point of order.

Mr. GROSS. Mr. Speaker, I make a point of order against consideration of the conference report on the basis that none of the appropriations contained in the bill H.R. 15149 have been authorized by law.

Mr. PASSMAN. May I be heard on that, Mr. Speaker?

The SPEAKER. Of course, the Chair will hear the gentleman.

Mr. PASSMAN. It is my understanding that the Chair just ruled on that specific point a moment ago. I ask for a ruling, Mr. Speaker.

The SPEAKER. The Chair will state that it overrules the point of order made by the gentleman from Iowa (Mr. GROSS), on the ground that the special rule waived points of order against the provisions of the House bill.

The gentleman from Louisiana is recognized for 1 hour.

Mr. PASSMAN. Mr. Speaker, I yield to the gentleman from Texas, the chairman of the Committee on Appropriations, whatever time he may consume.

(Mr. MAHON asked and was given permission to revise and extend his remarks.)

THE APPROPRIATIONS BUSINESS FOR FISCAL 1970

Mr. MAHON. Mr. Speaker, with the approaching conclusion of the session I think it appropriate that we take a quick look at the approximate results of our actions on the money bills of the year in relation to the revised budget requests from the new administration.

With respect to the current fiscal year 1970, in the appropriation bills—and at this time I refer only to the appropriation bills—and I include the conference reports on three bills not yet cleared by Congress; namely, Labor-HEW, foreign assistance, and the final supplemental.

First. Congress has cut the revised requests by about $5,604,000,000.

Second. This, we roughly calculate, will translate into an expenditure cut of approximately $2,900,000,000.

Third. In Defense appropriation requests, we cut—in the two defense bills—$5,994,000,000.

Fourth. This, we roughly calculate, will translate into an expenditure cut of approximately $3,200,000,000.

Fifth. In respect to nondefense appropriations, and this includes the Labor-HEW, foreign assistance, and final supplemental conference reports, Congress has made a net increase of $390,000,000.

This consists of foreign assistance, a reduction of $1,120,000,000; Labor-HEW, a net increase of $1,139,000,000; and on the 10 other bills, a net increase of $371,000,000.

Sixth. The big chunks of nondefense appropriation increases over the revised budget are these: Education—elementary, secondary, impacted aid, higher education, vocational education—an increase of $1,093,000,000; clean water, an increase of $586,000,000; Federal Aviation Administration—equipment and airport aid—an increase of $140,000,000; and the agricultural conservation program and special milk program, $279,000,000.

Mr. Speaker, the figures I have given are for fiscal year 1970. There were a handful of items for fiscal 1971 advance funding, notably an item of $1,226,000,000 for elementary and secondary education, which we disallowed in the Labor-HEW conference report. That item can come in the early education appropriation bill next session.

The advance funding totals for fiscal 1971 are as follows:

Budget requests	$1,651,000,000
Approved (mass transit)	214,000,000
Reduction	−1,437,000,000

Mr. Speaker, in legislative bills, there are certain prospective actions and inactions importantly bearing on the budget. I have confined my remarks to the appropriation bills only.

Next week, we will undertake to supply more detail.

Mr. EDMONDSON. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Oklahoma.

Mr. EDMONDSON. I thank the gentleman foi yielding and I want to commend the chairman of the Appropriations Committee and to express my deep personal appreciation to the gentleman for bringing these figures to the attention of the House and I hope to the attention of the gentlemen of the press who occupy the gallery immediately behind the gentleman in the well.

It occurs to me that there have been big headlines when the President of the United States has accused this Congress of inflationary pressures by its appropriations while there have been very few headlines and all too little responsible and careful reporting when the facts have been made known on this subject.

The chairman of the Committee on Appropriations has brought very clearly to the attention of this House and to the attention of the Nation what the record actually is at this point. The record is that this Congress has cut very, very substantially the budget submitted by President Nixon last April. The figures that have been presented indicate that the cut is in excess of $4 billion on the bills that have been completed and on which we have completed action. Also, when we complete action along the lines that the conference committees have recommended action, if I have correctly understood the chairman, those cuts will be in excess of $5,700 million; is that correct?

Mr. MAHON. If you include all the appropriation bills for fiscal 1970, dealing with fiscal 1970 amounts, the cut is $5.6 billion in appropriations, which we roughly estimate to translate into expenditure reductions of approximately $2.9 billion. That, as I indicated, includes the three conference reports on which action is not yet finalized.

Mr. EDMONDSON. Mr. Speaker, if the gentleman will yield further, either on the basis of expenditure budgets or on the basis of actual appropriations that have been discussed by the chairman—the cut is very substantially below the budget and there is no validity to the administration charge that the Congress is exerting inflationary pressures in the appropriations procedure. On the contrary, and on the record, the Nixon budget recommendations have clearly been more inflationary in the overall than the appropriations finalized by this Congress.

Mr. BOW. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Ohio.

Mr. BOW. The gentleman from Texas has made a very important statement here.

I would like to ask my distinguished chairman, since he has referred to the Labor-HEW conference having been completed, I should like to inquire of the gentleman when he expects to call up the Labor-HEW conference report.

Mr. MAHON. I would like to see us call up the Labor-HEW conference report and pass it in the House and send it to the other body, if an arrangement can be worked out whereby this can be done. There has been some talk to the effect that the Labor-HEW bill will not be sent to the President before adjournment because the President has indicated that it will be vetoed, and that it is desirable that the veto message come to Congress after we return in January, at which time Congress can take whatever action it desires in the matter.

Mr. BOW. Mr. Speaker, if the gentleman will yield further, would the gentleman agree with me that the Labor-HEW appropriation bill is an important one, and since we have completed the conference on it, it should be sent to the President and that, perhaps, we should not adjourn until we have completed action on all of the appropriation bills?

Mr. MAHON. From the standpoint of the House, if we pass the three remaining conference reports, we will have completed our appropriation work. The matter of a decision on a veto message, if it is to come, could be postponed until January. I understand this is more or less implicit in the letter which the President addressed to the leaders of Congress a couple of days ago.

Mr. BOW. Mr. Speaker, do I understand from what the gentleman has said, that the Labor-HEW conference report referred to will be called up in the House before we adjourn?

Mr. MAHON. I do not know at this

moment. I do not know what may develop. That is a decision not to be made by the gentleman from Texas, but this is a question which is to be determined. I would hope so.

Mr. ARENDS. Mr. Speaker, if the gentleman will yield, as I read the remarks made yesterday in the other body I think the argument made by the gentleman from Oklahoma falls apart in that we have better than a $3 billion increase in appropriations over what we appropriated last year.

Mr. MAHON. The gentleman is talking in terms of comparing this year with last year?

Mr. ARENDS. That is right.

Mr. MAHON. I do not have that figure before me but as of this date, in appropriations, I think we are definitely below last fiscal year. I will provide a full statement for the RECORD next week.

Mr. ARENDS. It is somewhere over $3 billion, regardless of the $5 billion we took out of defense.

Mr. PATTEN. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from New Jersey.

Mr. PATTEN. Mr. Speaker, what job does the President have now in the light of the bill that we passed at the beginning of the year, along with the matter of cutting 6 percent? Have we given the President a formidable task in the way we have done this, or is he all right—can he cut that 6 percent we voted earlier?

Mr. MAHON. Of course, it is up to the President to determine what funds he will expend and what funds he will not expend.

Mr. Speaker, I do not desire to consume further time.

Under leave granted, I include two tabulations of figures on the appropriation bills—again including three conference reports not yet finalized:

Appropriation bills for fiscal year 1970—Changes from the revised budget (As to fiscal year 1970 amounts) [1]

NONDEFENSE	
Treasury-Post Office	—$38,482,000
Agriculture (principally Agricultural Conservation Program and special milk programs)	+251,341,000
Independent Offices—HUD	—226,099,000
Interior	—10,481,000
State-Justice-Commerce-Judiciary	—121,272,000
Legislative	—27,826,000
Public Works-AEC (principally clean water program)	+552,029,000
Transportation (principally FAA facilities, equipment and aids to airports)	+89,265,000
District of Columbia	—60,332,000
Supplemental (conference report)	—36,316,000
Subtotal, these 10 bills	+371,827,000
Labor-HEW (conference report), principally educational items	+1,139,027,000
Subtotal, these 11 bills	+1,510,854,000
DEFENSE BILLS	
Military construction	—356,844,000
Defense	—5,637,632,000
FOREIGN AID	
Foreign assistance (conference report), including $275,000,000 cut in military credit sales	—1,120,654,000
Totals for 1970 in the 14 bills for 1970	—5,604,276,000

[1] Change from the budget (New budget authority).

CAPSULE SUMMARY ON APROPRIATION BILLS OF THE SESSION

[In millions new budget authority]

	Revised budget estimates	Approved	Change
1. The House:			
Fiscal year 1969	$5,400	$4,819	—$581
Fiscal year 1970 [1]	132,607	126,213	[1] —6,394
Fiscal year 1971	425	395	—30
Total	138,432	131,427	—7,005
2. The Senate:			
Fiscal year 1969	5,850	5,496	—354
Fiscal year 1970	135,200	130,318	—4,882
Fiscal year 1971	1,651	1,318	—333
Total	142,701	137,132	—5,569
3. Enacted: [2]			
Fiscal year 1969	5,850	5,388	—462
Fiscal year 1970	135,200	[2] 129,596	[2] —5,604
Fiscal year 1971	1,651	[2] 214	[2] —1,437
Total	142,701	[2] 135,198	[2] —7,503

[1] Translates into approximately $3,000,000,000 expenditures reduction.

[2] Those figures include amounts in the conference reports on foreign assistance, Labor-HEW, and the final supplemental bills, on which congressional action has not been finalized.

Mr. PASSMAN. Mr. Speaker, may I inquire how much time I have left?

The SPEAKER. The gentleman from Louisiana has consumed 10 minutes.

Mr. PASSMAN. Mr. Speaker, I yield myself such time as I may require.

Mr. Speaker, this is one of the few times in my lifetime that I find myself somewhat frightened because I feel that I have not been able to impart to my colleagues the facts of life.

Mr. Speaker, a member of the clergy called me last night about 10:30, and he said, "Mr. PASSMAN, place the security of your country above everything else." He said, "I recall when the Congress refused to fortify Guam, and if we had, we would not have had Pearl Harbor."

Then he said, "I recall when those who were opposing our military posture almost refused to extend the draft, and finally by one vote the draft was extended. Just a few months later we had Pearl Harbor."

Then I call to your attention the development of the A-bomb and the H-bomb, and numerous other incidents. I say that for the benefit of those people who know very little about the need for military assistance to those countries who are willing to go all out to assist us in our efforts to prevent a third world war, which could well be the last one.

So it is a question as to which side you are on. My mother taught me that there are three sides to every question: Your side, my side, and the right side.

Mr. Speaker, it has been a great privilege for me to chair this committee for the past 15 years, and to make many recommendations contrary to my own personal views so as to try to present a bill that would be acceptable to all.

I was in hope that we had found the right side; that this would be one bill that every Member of this House who loves his country—as I do, and I know you all do—would support as it deals with the security of America.

In all probability I am as conservative a Member of the House as anyone here—maybe more so. I have been handling this bill for 15 years and I have always strived for a low figure, and generally at the expense of irritating many people.

I say when my country is at war, I will support it. I yield, without exception, to the judgment of the executive branch and the military to protect the security of America. For the past 5 years, without exception, I have voted for every penny that the President and our military leaders felt we needed. I am going to pursue this policy until we have achieved peace around the world.

Mr. Speaker, let us discuss this bill. There are going to be some surprises. I want to discuss it fairly and based upon the facts as they apply to this bill compared to last year's bill.

The bill before you, if you include all titles, is $378,474,000 less than we appropriated last year.

It is $1,112,501,000 less than the fiscal year 1970 budget estimates.

It is $49,110,000 less than the House appropriation bill and, of course, $159,875,000 less than the Senate appropriation bill.

If you look at economic aid only, which is in title I of the bill, this year the budget estimate is $2,285,020,000.

The House bill recommended $2,194,180,000.

The Senate bill recommended $1,676,905,000.

The conference bill recommends $1,462,530,000.

The conference bill is $267,650,000 above the House bill and $214,375,000,000 below what the Senate appropriated, and we are $822,490,000 below the budget estimate for economic aid.

I might add that this bill is $181,220,000 below the authorization bill that this House voted for yesterday.

Mr. Speaker, I want to take time now to thank my distinguished and very able friend, Dr. MORGAN, the chairman of the great Committee on Foreign Affairs. He called me to his table last evening after we had left the conference and congratulated me upon this bill and upon the fair manner in which I handled it. He said that he would be on the floor of the House today and speak for the bill. I am very grateful that this distinguished gentleman recognizes the importance of this bill and extended me his congratulations and his pledge of support.

Mr. Speaker, I think it is necessary to go into some of the items in the bill because we have Members on this floor who, looking at the authorizing legislation yesterday, think I am a miracle man and could walk into the conference room

where you have 22 people—Members of the House and Senate—and order those people to keep their mouths shut, listen to me, and do everything I urged. Certainly, I would have been willing to bring the bill back with less money in it, because I am not a foreign aid enthusiast.

But, nevertheless, we do have a compromise bill and this is the very best compromise that we could work out. If you will look at the bill itself, you will see that there is very, very little, even in title I, above what we appropriated last year.

Let us go into some of the individual items in the report.

First, supporting assistance. As you know, the House appropriated $365 million in 1969. This year we are recommending $395 million, simply because the President, and those people administering the program, feel that they need more supporting assistance funds for our aid program in South Vietnam.

However, the one thing that makes this bill higher is that we have a lot of "strangers in the deck." Some of you people know what "the deck" means and know what I am talking about. We have several new items in the bill. For example, there is the item for the Overseas Private Investment Corporation. The Senate bill recommended $75 million. We compromised and allowed $37,500,000. So we have to take that into account—a brandnew program.

Then we have the prototype desalting plant—a brandnew program. The Foreign Affairs Committee authorized $40 million. Your committee recommended $20 million. The Senate bill deleted the $20 million and in this conference bill we came back with the same figure approved by the House—$20 million.

If we move to the Alliance for Progress and development loans; for Alliance loans we recommend the identical amount we recommended last year; and the same thing is true for Development Loans. On AID administrative expense the same amount as last year is provided.

If we move into the military assistance program, the recommended appropriation is $29,500,000 above last year. But we have some people who will tell you that the most important ally we have anywhere in the Pacific is China. If you read the record, you will know they are our greatest ally, and are extending us more privileges, and they will go further to support the United States than any other ally that we could find in that part of the world.

We have many Members on this floor who know very well that the Republic of China is extremely important to us at this time for the reason that we have now agreed to permit Okinawa to revert back to Japan. We do not know what is going to happen after that reversion. But we think we know what will happen. We will not be permitted to operate as freely in those islands in the future as we have in the past, and on account of the concessions made to us by the Republic of China, past presidents have recognized the importance of Nationalist China, and therefore they have been given a total of $2.5 billion in military assistance over the years, and at this time I will repeat what I have said previously. The actual amount needed is in the neighborhood of $400 million, and I mean now, not 3 years from now.

I am of the opinion that next year you will see the Secretary of Defense and the present administration request an amount in the neighborhood of $600 million for military assistance.

With respect to the language earmarking funds for China, let me give you the sequences: First, as you well know, language was put in the authorizing bill by an amendment adopted by the House earmarking $54,500,000 for China. The authorizing bill had $50 million earmarked for Korea. Then on the appropriations bill, in our subcommittee a motion was made to strike out the funds earmarked for the Republic of China. That motion was defeated 8 to 4. Then a motion was made to strike out the funds earmarked for Korea. That was adopted by a vote of 8 to 4. I was one of the four who voted to leave it in.

The bill then went to the full Committee on Appropriations. An amendment was proposed to strike out the money for China. That amendment was defeated in the full Committee on Appropriations by a vote just about 2 to 1. Then the bill came before the House, and a motion was made in the House to strike out the money provided for China. Then a substitute motion was offered to put back the money in the bill and to do the same for Korea. On that vote the House said, 250 to 142, "This money for China and Korea stays in."

Then we moved on to the conference. In the conference the vote on the House side was 9 to 3 to keep this money in for China.

My friends, when we passed this proposal through four important stations—the authorization bill, the subcommittee bill, the full committee bill, and the conference bill—and the Members spoke at every station affirmatively that we have to have this money in the bill for China, and I am surprised, disillusioned, and disappointed to think that there is even one Member on this floor who would attempt to take it out, even after all the affirmative votes I have just mentioned.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. PASSMAN. I will yield to the gentleman from Iowa for a question.

Mr. GROSS. Mr. Speaker, did the conference committee take out $275 million for foreign military credit sales?

Mr. PASSMAN. The answer to that question is, "Yes," and I am glad the gentleman asked that question. This further complicates the bill. The Republic of China is one of our fine cash customers, extremely dedicated to the policies of the United States. This year the Republic of China has made arrangements to buy $50 million worth of military equipment out of their own strained resources.

The $275 million is to be used to guarantee credits for nations unable to buy military equipment for cash. China is eligible for a $50 million loan with which to buy equipment, and they plan to do so. But striking out that title of the bill—the $275 million—now means there will be no way we could handle the potential sale. That is another reason why we should not consider taking out this money for China.

May I say this about the military sales program. I have no right to criticize the great Committee on Foreign Affairs but I do not know why they have not brought out an authorization bill for $275 million, or for whatever amount they felt was necessary. I do not know why their counterpart in the Senate did not act.

Do Members realize that these military credit sales have an average term of 7 years?

Whoever borrows the money pays the prevailing interest rate. If the prevailing rate is 7 percent, they pay 7 percent. Of course, under the arrangement, the producer makes a profit. I do not believe the U.S. Government should be selling military equipment for a profit, but inasmuch as it is part of our overall foreign policy, I believe in the program because if we do not sell military equipment to them, some other country will. The manufacturers pay income taxes to the Federal Government and to the State governments. In addition to that, if a commercial bank makes the loan, it makes a profit.

Of course, I am disappointed that I cannot please all the Members of this House. I wish they would take the time and go into the library and read the history of the vote on the fortification of Guam, then read about the debate on the draft bill which was extended by one vote just before Pearl Harbor.

At this particular time, our leaders say they can prove beyond any reasonable doubt whatsoever that we need to furnish military equipment to some of our allies, and I cannot understand why there would be any opposition whatsoever to that proposition.

Why should I not be disappointed? I have spent hundreds of hours trying to bring in a bill that would please as many Members as possible, including the hawks, the doves, the hummingbirds, and anybody else who wants to soar on birds' wings.

I have done the very best I can. I do not understand how some of my very good friends seem to believe I am a miracle man—that I can go into a conference and tell the Senators, "Listen to me. I know everything."

I cannot deal with these people on that basis. We have to compromise. Every piece of legislation is a matter of compromise.

I repeat, if I may. If you take the "strangers out of the deck"—that is, these new programs, the many schools for Israel, which the sponsors say are badly needed—it is a different picture.

Others said, "We need a desalting plant." I said, "If you make your case, I will support you."

Others on this committee felt that we should have $75 million for this Overseas Private Investment Corporation. I have never known of any proposal which I thought was so unnecessary, but we had able members on this committee, like my distinguished colleague from Kansas, who said, "I believe it is right." I said to him, "If you think it is right and if you

think it is needed I am going to vote for it." So I defended it and fought to put $37.5 million in the bill for this new proposal.

I want the Members to know, I want to be fair, and I will be fair. If the time should ever come when I cannot be fair and yield to the other Members and accept their judgment in place of mine on things they know more about, I should leave the Congress.

Mr. SIKES. Mr. Speaker, will the gentleman yield?

Mr. PASSMAN. I yield to the gentleman from Florida.

Mr. SIKES. I hesitate to interrupt my distinguished friend, who is making a most forceful and eloquent statement, but will the gentleman please clarify this for the benefit of the House.

Do I correctly understand that a vote against the conference report, an effort to reject the conference report, will be a vote against the desalinization plant for Israel, against the schools for Israel, and against other important items for Israel, all of which are needed, and which are contained in this bill?

Mr. PASSMAN. The distinguished gentleman is absolutely correct. We move this as a package.

If you defeat this conference report, you defeat funds for every school for Israel in this bill. You defeat the desalting plant. You defeat supporting assistance, which the President says is needed.

You defeat the Alliance for Progress. Every item in this bill will go down to defeat. It is all tied together.

If we go back into conference, we open up the entire bill, and I do not know what kind of a bill you are going to get then.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. PASSMAN. I yield to the gentleman from Iowa for a question.

Mr. GROSS. Are there no funds for the Arab and other countries in the Middle East under this bill?

Mr. PASSMAN. Yes. I am pleased the gentleman asked that question.

Yes. There is money in this bill for projects in other countries, such as Morocco and Biafra. And, of course, that would go out, too, if this conference report is rejected.

I want to say, in a joking manner to my very dear colleague, I am not against everything; I am for anything, if you can make a case for it.

Mr. CONTE. Mr. Speaker, will the gentleman yield?

Mr. PASSMAN. I yield to the gentleman from Massachusetts.

Mr. CONTE. I should like to ask the gentleman a question.

Mr. PASSMAN. Surely.

Mr. CONTE. Could I have 3 or 4 minutes when the gentleman is through, to discuss something?

Mr. PASSMAN. I would rather yield 4 minutes now.

I yield 4 minutes to the gentleman from Massachusetts.

Mr. CONTE. I thank the gentleman.

Mr. PASSMAN. Then I will finish my remarks on the conference bill.

PARLIAMENTARY INQUIRY

Mr. WAGGONNER. Mr. Speaker, a parliamentary inquiry.

The SPEAKER pro tempore (Mr. Boggs). The gentleman will state his parliamentary inquiry.

Mr. WAGGONNER. Under the rules of the House, while the gentleman is on his feet can he yield a stated time? Can he specify the amount of time he will yield?

The SPEAKER pro tempore. The answer to the parliamentary inquiry is that the gentleman from Louisiana, as chairman of the subcommittee, controls the time. He can yield while he is on his feet.

Mr. PASSMAN. Mr. Speaker, I yield the gentleman 4 minutes.

Mr. CONTE. I thank the gentleman.

Mr. Speaker, I am more than pleased with the conference recommendations on economic assistance, more than I was when this body earlier considered this bill.

I think we are in pretty good shape here, although I am disappointed that we did not leave the United Nations program in at $122 million.

I want to thank the distinguished and able chairman of the Subcommittee on Foreign Operations for his very strong support for these increases in economic assistance. This action reflected a genuine concern for the needs of the less developed nations of the world.

Turning now to the recommendation of $54.5 million for jets to China, I am very sad and unhappy about that. This money was knocked out in the authorization conference. Why? For the same reasons that we should have knocked it out earlier, and we must knock it out today. This money was never requested by anyone—neither the President, the Secretary of State, the Secretary of Defense, or the Administrator of the AID program. I say this in spite of those fancy yellow-covered top secret documents that we saw on the floor when the bill was debated earlier. To me the whole matter is just plain fishy. The top secret documents said that the jets should be requested in a supplemental bill. Of course, that is the way we should proceed, and the authors of that document recognize it. Why not wait for the supplemental hearings or the hearings on the 1971 fiscal year bill? What is the hurry?

Mr. Speaker, there has been no justification whatsoever for these planes, and I for one am not going to deceive the American people by saying that there has been. For all of these reasons I plan at the appropriate time to get a vote on the earmarking of these funds for China.

Now, I want this completely understood by everyone. If I offer a motion to recommit this bill back to conference, it will have recommendations in there to knock out the earmarking, but I want it completely understood that I am not lowering one penny of military assistance. Therefore, if the Secretary of Defense should care to spend this money for Taiwan, he may do so, or if he cares to spend it for Vietnam or some other country, he may do so. The only thing it will knock out will be the money for Taiwan.

Mr. Speaker, I want it completely understood that I am not cutting and I am not proposing to cut any money from the military assistance program.

I have witnessed several other events this year when we in this body have been prevented from voting on the real issue. I hope this will not happen today, because if it does happen today, then I have but one alternative, and I urge all of my colleagues to do so, namely, to vote down the conference report. This bill passed by five votes last time. I think with only a little bit more work and a little better attendance than we had last time, we could knock down the conference report.

There are a lot of bad things in this bill, but overall again I want to commend the gentleman from Louisiana, because I think he did an outstanding job in putting money back in here for economic assistance.

Mr. COHELAN. Mr. Speaker, will the gentleman yield?

Mr. CONTE. I am glad to yield to the gentleman.

Mr. COHELAN. Mr. Speaker, I congratulate the gentleman on his statement. I hope our distinguished subcommittee chairman, who has done a rather remarkable job in improving development loans and general economic assistance—and, of course, some Taiwan items of military assistance—will yield me some time so that I will be able to discuss the matter in more detail.

I wish to associate myself with the remarks of the gentleman from Massachusetts, because I feel precisely as he does.

Mr. PASSMAN. Mr. Speaker, I yield 5 minutes to the gentleman from Kansas (Mr. SHRIVER).

Mr. SHRIVER. Mr. Speaker, I thank the gentleman for yielding me this time.

As the ranking minority member of this subcommittee, I want to commend all of the conferees on the part of the House and from this subcommittee who have worked so hard for so long to bring forth a bill that is full of compromise, but that is what is expected when we go into conference, to have a certain amount of give and take and to stay as close as we can to the House figures and the House desires.

The minority of this conference certainly does not agree with all of the items contained in the appropriation bill, but as a compromise it is satisfactory and that is as much as we can say about most of these conferences.

Mr. Speaker, I agree with the distinguished gentleman from Massachusetts (Mr. CONTE) who just said that he was for what was good and beneficial to the country. I, personally, think it is a mistake not to provide for foreign military credit sales and to wait for a supplemental which will be coming up before very long. It is an important part of this bill but has been carried before as title II under the act.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. SHRIVER. Very briefly.

Mr. GROSS. That means, then, that you are taking $275 million out of this bill and inviting the Pentagon to come to Congress early next year to get the same amount of money in a supplemental for the military credit sales? This kind of procedure is not a reduction in spending for foreign aid.

Mr. SHRIVER. Let me say to the gentleman from Iowa that we tried to pre-

vail insofar as the position of the House was concerned. We had a vote on this issue and it was on your side. I went with you in maintaining the position of the House, but we did not prevail.

Mr. GROSS. Mr. Speaker, if the gentleman will yield further, for one quick question, this bill is at least $100 million more than the actual foreign aid appropriation last year; is that not correct?

Mr. SHRIVER. I will come to that in a moment if the gentleman will just wait a minute.

Mr. Speaker, I was pleased also that the conferees agreed to increase the supporting assistance program. You will recall that I contended earlier when the appropriation was before the House that the supporting assistance program was less than it should be and that we were not properly supporting the President in Vietnamizing the war.

Mr. Speaker, this supporting assistance is primarily to be used in Vietnam and to further the President's plan to place greater responsibility for the war in Vietnam upon the people of that country and that Government. The need this year is greater to do more in supporting assistance than I can recall at any time in the past.

The supporting assistance is now in the amount of $95 million higher than provided in the House version of the bill. We have a total in supporting assistance of $395 million and most of it—I would say more than 90 percent of it—will be used in connection with Vietnamizing the war, in carrying on the pacification program and in supporting the economy of South Vietnam as well as the refugees of which there are thousands who need this supporting assistance.

Mr. Speaker, I say let us bring the boys back in the manner in which the President has announced it will be done and in withdrawing our troops it is extremely important that we have these funds for Vietnamization. A great portion of this bill has to do with needed spending in Southeast Asia, not only in connection with supporting assistance but also in connection with technical assistance which is in the amount of $16,750,000 over the House version.

Let me remind you that this is $181,220,000 less than the authorization bill. It is approximately $265 million over the House bill, but it is about halfway between the House and the Senate versions. Therefore, we had to give and take as I mentioned a moment ago. It is a true compromise representing approximately the same amount of give and take on the part of the conferees of the two bodies.

Mr. Speaker, the bill is $378 million below 1969, $181 million below the authorization, and $1,222 million below the 1970 estimates.

Mr. Speaker, the bill is important toward settling and Vietnamizing the war in Vietnam. It continues funds for the Overseas Private Investment Corporation to the extent of $37.5 million. This was a request of President Nixon.

The grand total of this bill is $378 million less than the 1969 appropriation.

Mr. Speaker, I support the conference report and urge all Members to support the report.

Mr. FRELINGHUYSEN. Mr. Speaker, will the gentleman yield?

Mr. SHRIVER. I yield to the gentleman from New Jersey.

Mr. FRELINGHUYSEN. Mr. Speaker, I thank the gentleman for yielding.

Mr. Speaker, I want to commend the gentleman from Massachusetts (Mr. CONTE) for his statement. I shall support his motion to recommit this report. As a House conferee on the authorization for foreign aid I feel strongly that we should increase our military assistance, but keep it untied, in view of unsettled world circumstances.

Mr. Speaker, I have listened with interest to the discussion of this conference report. As one who is anxious to see foreign aid continue, with sufficient funds to provide for adequate programs, I have been disheartened by what has occurred, true, it looks now as if an aid program may be approved. But even now there is no assurance on this point. And it shocks me that Congress, seems to take pride in slashing so deeply into the President's request. Economic assistance is badly needed, and needed now, but we are obviously not responding to that need.

I have been disheartened also by the difficulty this year of going through the necessary legislative processes. I am well aware, for example, that the foreign aid authorization conference report passed this body only yesterday. That this was the case does not, however, excuse us from refusing to take that report into consideration today.

The authorization bill conference report provided for no earmarking of funds for military assistance. In view of earlier House action with respect to military aid to both Korea and Taiwan, the House conferees, naturally, would have preferred to see some reference to at least one or both of these countries in the authorizing legislation. The Senate conferees felt strongly on this point, however, and the House conferees recognized that because of the substantial reduction in the military assistance funds requested, a case could be made against specific earmarking of funds.

It is primarily for that reason, Mr. Speaker, that I find the proposal of the gentleman from Massachusetts persuasive. He advocates that the full $40,500,000 for military assistance be made available, but with the spending of that money not earmarked but left up to the President.

The contention has been made here again today that there is an immediate need for hundreds of millions more dollars in military assistance than will be provided in this conference report. If that is so, Mr. Speaker, I hope the President makes a prompt request for the funds needed. I assume that such a request—if it is forthcoming—will be submitted to the appropriate committees and not to an individual Member.

It strikes me as irregular and unfortunate that the Appropriations Committee should attempt—as it has this year—to arrogate to itself the responsibility of responding to needs of this type. If China or Korea, or any other friend of ours, is in need I am confident that Congress will respond appropriately. It is important, however, that Congress be given a full opportunity to evaluate the need for funds through the normal legislative process.

The legislative history of the foreign aid program this year is not a happy one, Mr. Speaker. As a member of one of the committees involved, I can only hope this history will serve as a lesson so that at least some pitfalls can be avoided next year. These close votes on foreign aid—and I have no doubt that another close vote is imminent—are not simply a reflection of Members' disillusionment, or hostility, to the programs themselves. The individual Member this year may be justifiably voting against the parliamentary tangle in which these foreign aid bills have been enmeshed. This tangle, which finds friends of the programs voting for foreign aid, is both undesirable and unnecessary.

Mr. GERALD R. FORD. Mr. Speaker, will the gentleman yield?

Mr. PASSMAN. I yield to the gentleman from Michigan.

Mr. GERALD R. FORD. Mr. Speaker, as I have said at the time when we were considering the appropriation bill for the foreign aid program that the Secretary of Defense called me prior to the consideration of the foreign aid authorization bill, indicating the support of the Department of Defense for the particular program, the military assistance, for the Republic of China. I said that then, and I reiterate it now. I have been told that the Secretary of Defense has repeated that statement to one or more Members of this body on this side of the aisle. I would not want to speak for them, but they have told me that the Secretary has reiterated his request.

In addition, let me say this: The overall funding for this program in this conference report, I believe, is very satisfactory. Additional money has been made available in the supporting assistance account, which is a very important part of our overall foreign aid program.

Also other items have been increased to more nearly coincide with the recommendations of the President. I think those additional amounts are highly significant, and very badly needed.

I am very fearful, as a practical matter, that if this is returned to conference, those additional sums in economic aid could easily go down the drain.

Now, Mr. Speaker, I am not threatening anybody. However, I think I know a little bit about the conferences on foreign aid appropriation bills, having served in that capacity for 12 years. Those conferences, I know from personal experience, are very difficult conferences.

To achieve a compromise in this instance of substantial increases for economic aid I think is a great victory for a constructive foreign aid program. So, as I say, I would hate to have those particular economic aid programs ending up slashed by sending this bill back to conference. I believe it would be a very serious mistake for those who believe in foreign aid.

Mr. FRASER. Mr. Speaker, will the gentleman yield?

Mr. GERALD R. FORD. I yield to the gentleman from Minnesota

Mr. FRASER. Mr. Speaker, would the gentleman agree that the proposed motion of the gentleman from Massachusetts would only remove the earmarking of the funds, and would not reduce the total fund made for this program, so that the way that that $404.5 million could be spent would then be left to the sole discretion of the executive branch instead of being restricted as it is now? Would that not be more nearly in accord with the desires of the administration?

Mr. GERALD R. FORD. Assume that that is the case—once this bill, however, goes back to conference its fate overall and its fate in reference to these economic aid programs could be in serious jeopardy.

The gentleman may be right on the point that he makes, but I have to look at it from an overall viewpoint of getting as nearly as we can an appropriation bill for the foreign aid program that coincides to the recommendations of the President.

I firmly believe that if the motion to recommit prevails, even though it is less objectionable than it might have been, I am very concerned that the overall appropriation bill could be in jeopardy.

Mr. CONTE. Mr. Speaker, will the gentleman yield?

Mr. GERALD R. FORD. I yield to the gentleman from Massachusetts.

Mr. CONTE. I just want to say to my leader who has been very fair about this thing, of course, we have eliminated the argument that this is cutting military assistance, all I am doing is eliminating language to earmark money for Taiwan.

But let me point out two things in the conference and may be happening over in the other body right now. One of the Senators said that they anticipated great trouble in the Senate—Senator FULBRIGHT was going to insist on this earmarking for Taiwan being taken out of the bill—and they may be attempting to do this now in the other body—so it may go back to conference as a result of what is going to happen over there.

Second. I do not see anything being endangered in this bill. As you know, I have been a champion of all these causes for the past 12 years, and I do not see anything being endangered because the recommendation is only limited to striking out the money being earmarked for Taiwan which the Senate wants to do. So we go over there and in 3 minutes knock it out.

Mr. GERALD R. FORD. May I respond to that point?

The gentleman from Arizona and I were discussing this precise point just a minute ago, and it certainly is not a formal ruling, but the information I have is once it goes back to conference even with the limited focus in this motion to recommit, the whole conference is open, it is open as to every item and, every decision within the conference can be reconsidered.

I think the add-ons, that are desirable in my judgment in some of these economic programs, could be really in jeopardy if the motion to recommit prevails.

I do not want to foreclose what might happen. But I know a little bit how these conferences work. The gentleman from Massachusetts and I served on those conferences for a good many years—and I do not want the House to take that gamble. I think it would be a serious step and put in jeopardy these good programs in the economic field that are highly significant and badly wanted by the administration.

May I just close with this comment. I am not going to be intimidated and I hope that this House is not going to be intimidated by the threat of the Senator that the gentleman from Massachusetts named. He is not running this body and I am not going to let him have any influence on it, if I can help it.

Mr. WAGGONNER. Mr. Speaker, will the gentleman yield?

Mr. GERALD R. FORD. I yield to the gentleman.

Mr. WAGGONNER. I want to comment on the statement the gentleman just made at the conclusion of his remarks by saying that what the Senator to whom the gentleman from Massachusetts (Mr. CONTE) referred, is attempting to do in the Senate is exactly the same thing that Mr. CONTE is attempting to do here in the House.

Let the Senate go their way and we will do exactly what we want to do. I do not think we should be intimidated by them.

Mr. CONTE. Mr. Speaker, will the gentleman yield?

Mr. GERALD R. FORD. I yield to the gentleman from Massachusetts, if he will save at least 30 seconds of my time.

Mr. CONTE. Certainly, these are two different things. The gentleman from Arkansas is trying to strike money, $54,500,000 from the bill. I am not trying to do that. I am just trying to strike the earmarking. I say that this thing stinks—it stinks—there is some terrible smell about it and I am not going to stand for it and it is that pure and simple.

I am willing to give military assistance all the money it needs, but I am not going to buy this when nobody from the administration has asked for it.

Mr. GERALD R. FORD. Mr. Speaker, let me conclude with this final observation.

The Secretary of Defense has spoken to me and others officially indicating that they want the money.

Second, if this is recommitted even with this limited focus, it opens up the whole conference and the gains that have been made in the economic aid field will be in jeopardy.

Mr. WYMAN. Mr. Speaker, will the gentleman yield?

Mr. PASSMAN. I yield to the gentleman.

Mr. WYMAN. Mr. Speaker, I want to ask the gentleman from Massachusetts a question or two about his motion to recommit.

As I understand it, the gentleman from Massachusetts' motion proposes to take out the earmarking for the Republic of China, and I would like to ask the gentleman—can you give us any assurance that if the earmarking of this money for Taiwan is removed from the bill, that Taiwan will actually receive any of these funds for the purposes for which the House voted the other day?

Mr. CONTE. If Mr. Laird, the Secretary of Defense, is behind it, it will go to them. He is the boss. He will be the boss in handling this money.

Mr. WYMAN. He may be boss but a lot of other people have something to say about the implementation of the foreign aid program; do they not?

Mr. CONTE. General Warren is head of the military assistance program, and he is under Mel Laird.

Mr. WYMAN. But not all these men or others administering aid programs are sympathetic toward Nationalist China; are they?

Mr. CONTE. I could not tell you. I happen to be a friend of Nationalist China and have been for 12 years. I just do not like the procedure that has occurred here. Ten years ago I voiced exactly the same objection when they tried to earmark $25 million for Spain.

Mr. WYMAN. I am merely trying to make the point that in that part of the world, the Far East, Nationalist China is one of our strongest allies. The House has voted the money for military assistance to Taiwan. What sense does it make to withdraw the earmarking? Earmarking merely reflects the will of this body. Some in this body are opposed, of course, but we made that determination by majority vote of this body the other day. I reject the gentleman's suggestion that there is something fishy or that something stinks about this. I fear that the gentleman is attempting to confuse the issue. The issue is whether our strongest ally in the Far East is going to have this money for the stated purpose by direction of this Congress.

The majority opinion of the House is that they ought to have the money for that purpose that it is needed and justified, and I hope the gentleman's motion to recommit is defeated.

Mr. PASSMAN. Mr. Speaker, may I reiterate for clarification the points that I explained earlier. I shall not do or say anything that would offend any individual in this House, but it would appear to me that just about the same rule is being practiced in both bodies. Some gentleman in the other body is determined that he shall have his way, even if there is a chance he may risk the security of this country. I do not mean as it would apply to our own security. I am talking about security as it would apply to our concessions, interests, and base rights in the Far East.

Let me say this if I may. On this bill the authorizing committee of the House put this money into the bill. At a subsequent date the Committee of Appropriations and the subcommittee sustained that amount by a vote of 8 to 4. Later we moved into the full committee, and the full committee by a vote of 2 to 1 defeated the amendment to take this item out.

Then when the bill came to the floor, as you well know, on a motion, by a vote of 250 to 142, the language was retained to keep this money in the bill for Korea.

Subsequently the House also approved the language and approved the amount.

The bill moved into conference. The conference likewise by a vote of 9 to 3 approved this package that we agreed upon. At five different important stations along the way in our process of legislating the Members have spoken their minds on the subject. They have set forth rightly that this amount should be in the bill. I cannot understand at this late date why there are a few Members of the House and a few Members of the Senate who may want to change something that has been said several times, "This is the thing to do."

Mr. COHELAN. Mr. Speaker, will the gentleman yield?

Mr. PASSMAN. I yield to the gentleman from California for a question.

Mr. COHELAN. I thank the gentleman for yielding.

Mr. PASSMAN. I yield 1 minute to the gentleman.

Mr. COHELAN. As a member of the subcommittee, I would like to express myself on the conference report.

Mr. PASSMAN. I wish you would.

Mr. COHELAN. I would like to vote for this bill. I want to vote for the bill. But I shall not vote for it if we have the Taiwan reference in the bill.

As I understand, this is what is going to happen.

The gentleman from Massachusetts (Mr. CONTE) will introduce a motion to recommit. The gentleman from Massachusetts has very generously drafted it in such a way that if the State Department, which, by the way, nobody has referred to in this entire discussion—not one word have we heard from the State Department indicating that this language was warranted or justified.

However, on the motion to recommit, the gentleman has left it so that the money is not affected. If the powers that be in the administration, including the Secretary of State, as well as the Secretary of Defense—who incidentally, I suggest, is not running the foreign policy of this Government—determine that something should be done in military assistance, it could be done.

I will support the motion to recommit after striking the language that the gentleman referred to, and if I get that opportunity, I intend to vote for the bill.

However, if we do not, I intend to vote against the bill. I do not think a vote against the bill will be jeopardizing anything. I suggest to Members what will probably happen. We will be back here so fast it will make our heads swim. But we shall have dealt a blow to a very offensive procedure.

The issue of the Taiwan jets needs very little explanation. We have been over this terrain before. First, there was no testimony before the authorizing committee—the Committee on Foreign Affairs. There was no testimony before the Appropriations Subcommittee on Foreign Operations—the Committee on Foreign Operations on which I serve. The only data that have been submitted by the administration is a letter from a faceless bureaucrat in the DOD in response to Mr PASSMAN's question. This answer, I submit, does not represent the position of the administration. I, for example, could ask if we should increase $54 million to Timbuktu and I am sure I would get the same type of general answer that was circulated to justify the Taiwan jets.

Most important, the questionable justification for these jets is the foreign policy implication of these jets. The President has indicated lately, in his steps to begin lifting trade restrictions with mainland China, a new flexible approach to the Far East. The Sato-Nixon agreement, and movements to Vietnamize the war, are further indications of what I consider to be a constructive step in the Far East. Now this House is asked to accept a $54 million item for Taiwan jets that could have foreign policy implications far in excess of the dollar figure.

There is another issue here. This House yesterday passed an authorization bill that did not include this item. Thus, there is no authority for earmarking this money for Taiwan jets.

Mr. Speaker, in conclusion, I feel that the foreign policy implications of accepting this amendment are so overwhelming that this bill should be returned to conference and have this item deleted. Unless this is done, I may be forced to vote against this foreign assistance appropriation.

Mr. PASSMAN. Mr. Speaker, that is according to the gentleman's interpretation and not according to the votes of the majority committees, the House, and the conferees of both bodies. These votes speak for themselves.

PARLIAMENTARY INQUIRY

Mr. GERALD R. FORD. Mr. Speaker, will the gentleman yield for a parliamentary inquiry?

Mr. PASSMAN. Mr. Speaker, I yield 1 minute to the gentleman from Michigan.

Mr. GERALD R. FORD. Mr. Speaker, a parliamentary inquiry. If the motion to recommit reads as follows, will it limit the conference to the consideration of this particular issue, or will the conference as a whole be open for the consideration of all issues in the conference? Let me read the motion to recommit, Mr. Speaker, that will be as follows:

> I move to recommit the conference report on the bill H.R. 15149 with instructions to the managers on the part of the House to agree with the amendment of the Senate No. 25.

Mr. Speaker, if that is offered and does prevail, is the conference as a whole free to discuss and decide issues involving the whole bill or all issues within both the House and Senate versions?

The SPEAKER. In response to the parliamentary inquiry, if the motion to recommit with instructions on one item should prevail, then all items in disagreement are open for further consideration by the conference committee.

Mr. GERALD R. FORD. I thank the distinguished Speaker.

Mr. PASSMAN. Mr. Speaker, I yield the remainder of my time to the distinguished gentleman from Florida (Mr. SIKES).

Mr. SIKES. Mr. Speaker, this foreign aid appropriation bill is nearly $200 million below the authorization which has been approved but has not been signed into law. I think this will be an important consideration for many of those, including myself, who feel foreign aid has been excessive.

I hope and I believe the House will give overwhelming endorsement to the constructive labor of those members of the conference committee whose dedication is producing direction for America's foreign aid program. It allows the Congress to speak. It has been a long time since that could be said.

By placing aid specifically in the hands of our friends, by helping those who help us, we make our aid meaningful, and we make it productive. For too long a period, we have handed out foreign aid to everybody who came along, and often as not, they showed the measure of their appreciation by giving their support to the Communists. Here we have an opportunity to say that we do not approve of that kind of policy and we do not approve of policies which get us nowhere. We want a meaningful aid program and it would be heartening to the American people if we specified that we reject the use of the American taxpayers' money where it is not going to do America any good. It is time to help our friends, and time to begin to specify what we are doing. Here we do that by helping Israel, by helping Korea, and by helping Taiwan.

I believe, Mr. Chairman, that to reject what is proposed by the conferees here would be one of the worst defeats for a strong American diplomatic policy this House has ever voted. I am confident that is not what the House is about to do.

Mr. MORGAN. Mr. Speaker, the conference report on the foreign aid appropriation clearly violates the intent of the rules of this House. It specifically appropriates $54,500,000 for the Republic of China although this was stricken from the authorization bill which has passed both the Senate and the House and is now on its way to the President for enactment into law. The authorization ceiling for military assistance is $350 million. This conference report calls for an appropriation of $404,500,000. I can only regard this as a deliberate flouting of the authorizing process in which advantage is taken of parliamentary technicalities to circumvent the authorization ceiling. While I will reluctantly vote for the conference report because of the urgency of the time element, I am constrained to voice my concern over the danger which is posed to the whole legislative process and the work of the legislative committees. If it had been possible for the authorizing bill to have already been signed by the President, I believe the rules would have made this conference report subject to a point of order. It is a violation of the rules which cannot be enforced because of the present circumstances. I am gravely concerned over what I can only regard as an usurpation of the legislative function by a nonlegislative committee.

Mr. RYAN. Mr. Speaker, this conference report making appropriations for foreign assistance for fiscal year 1970

includes $54,500,000 for the Republic of China which has not been authorized in the Foreign Assistance Act of 1969, H.R. 14580.

Yesterday we adopted the conference report on the Foreign Assistance Act of 1969, and funds for jet fighter planes for Taiwan were not included although previously the House had adopted the Sikes amendment, against which I voted, both on the teller vote and on the separate rollcall vote, when it was before the House on November 20. When the foreign assistance appropriation bill, H.R. 15149, was before the House on December 9, I supported the Conte amendment to strike the $54,500,000 earmarked for the Republic of China. I also voted both on the teller vote and on the separate rollcall vote against the Broomfield substitute which not only included the $54.5 million for the Republic of China, but added $50 million for the Republic of Korea.

Having made my position clear on the authorization and appropriation bills, I voted to send each bill to conference, so that the foreign aid program could move forward and in the hope that the Senate conferees would not agree to the additional $104.5 million. And the conferees on the authorization bill did reject it. Now we have before us the conference report on the appropriation bill, H.R. 15149, and the conferees have agreed to amend Senate amendment No. 24 by inserting the sum of $404,500,000 and to amend Senate amendment No. 25 by restoring the language deleted by the Senate earmarking $54,500,000 for the Republic of China. In other words, the conference report now earmarks $54.5 million for the Republic of China. I support the motion to recommit to be offered by the gentleman from Massachusetts (Mr. CONTE) to strike out the language earmarking funds for the Republic of China.

According to Mr. SIKES, who offered the original amendment, the $54.5 million was authorized, "for the purpose of providing a squadron of F–4D aircraft to the Republic of China in Taiwan." Not only was there no budget request for funds for sophisticated military aircraft for Taiwan, but absolutely no justification was made before the Foreign Affairs Committee; it was never considered in hearings before the Foreign Affairs Committee. It was a surprise amendment adopted on the floor of the House after some very fancy footwork. This is a totally unacceptable way to legislate. Despite the fact that no agency of the Federal Government has recommended funds for sophisticated military aircraft for Taiwan, the House, without reflection upon the serious foreign policy implications, proceeded to approve this unjustified expenditure of the taxpayers' money. This is another example of the distortion of our national priorities which the Congress has tolerated for too long. Blind approval of funds for military assistance is one of the principal reasons why U.S. foreign policy produced the tragic war in Vietnam with its dire consequences both at home and abroad.

I am a strong supporter of foreign economic assistance to help developing nations and support the economic programs recommended in the conference report. Many of them are urgently needed and are in the national interest. It is regrettable that the conference report has been tainted by the inclusion of a squadron of jet fighter planes for Chiang Kai-shek.

If the motion to recommit fails, then the only way to obtain a vote on this issue would be upon the defeat of the conference report. If the conference report were voted down, then the House would have the opportunity to vote separately on each of the 42 Senate amendments. I support Senate amendment No. 24 which eliminates $54.5 million for a squadron of jet fighter planes for Taiwan, and also Senate amendment No. 25 which strikes the language earmarking those funds for the Republic of China. Under the circumstances, in view of the parliamentary situation, unless the motion to recommit succeeds, the only way to obtain a separate vote on those two amendments is to defeat the conference report—a procedure which will make it possible for us to vote for the important economic programs in title I without having to accept the entire military assistance package.

Mr. PASSMAN. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

MOTION TO RECOMMIT OFFERED BY MR. CONTE

Mr. CONTE. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the conference report?

Mr. CONTE. I am, Mr. Speaker.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. CONTE moves to recommit the conference report on the bill H.R. 15149 with instructions to the managers on the part of the House to agree with the amendment of the Senate numbered 25.

Mr. PASSMAN. Mr. Speaker, I move the previous question on the motion to recommit.

The previous question was ordered.

The SPEAKER. The question is on the motion to recommit.

The question was taken; and the Speaker announced that the noes appeared to have it.

Mr. CONTE. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 136, nays 220, not voting 77, as follows:

[Roll No. 345]

So the motion to recommit was rejected.

The Clerk announced the following pairs:

Mr. Miller of California with Mr. Lipscomb.
Mr. Hays with Mr. Widnall.
Mr. Hébert with Mr. Hall.
Mr. Dent with Mr. Watkins.
Mr. Fisher with Mr. Burton of Utah.
Mr. Clark with Mr. Cunningham.
Mr. Gallagher with Mr. Sandman.
Mr. Fulton of Tennessee with Mr. Quillen.
Mr. Eckhardt with Mr. Reifel.
Mr. Morgan with Mr. Morse.
Mr. Fallon with Mr. Martin.
Mr. Casey with Mr. Wydler.
Mr. Wright with Mr. Zion.
Mr. Rostenkowski with Mr. Michel.
Mr. Celler with Mr. McEwen.
Mr. Pepper with Mr. Lukens.
Mrs. Sullivan with Mr. Latta.
Mr. Brasco with Mr. Hastings.
Mr. Corman with Mr. Kleppe.
Mrs. Green of Oregon with Mr. Ashbrook.
Mr. Stephens with Mr. Berry.
Mr. Montgomery with Mr. Snyder.
Mr. Sisk with Mr. Cowger.
Mrs. Griffiths with Mr. Derwinski.
Mr. St Germain with Mr. Cahill.
Mr. Moss with Mr. Clancey.
Mr. Kluczynski with Mr. Collier.
Mr. Rees with Mr. Goldwater.
Mr. Harrington with Mr. Findley.
Mr. Evins of Tennessee with Mr. Brock.
Mr. O'Neal of Georgia with Mr. Collins.
Mr. Tunney with Mr. Stokes.
Mr. Edwards of California with Mr. Diggs.
Mr. Kirwan with Mr. Conyers.
Mr. Bevill with Mr. Clay.
Mr. Abbott with Mr. Andrews of Alabama.
Mrs. Chisholm with Mr. Powell.

Mr. HALEY, Mr. FLOOD, and Mr. MOLLOHAN changed their votes from "yea" to "nay."

Mr. BIESTER changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

The doors were opened.

The SPEAKER. The question is on the conference report.

Mr. GROSS. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 181, nays 174, not voting 78, as follows:

[Roll No. 346]

Mr. Gallagher for, with Mr. Reifel against.
Mr. Sisk for, with Mr. Hall against.
Mrs. Sullivan for, with Mr. Abbitt against.
Mr. Miller of California for, with Mr. Stephens against.

Until further notice:

Mr. St Germain with Mr. Evins of Tennessee.
Mr. Wydler with Mr. Collier.
Mr. Kirwan with Mrs. Chisholm.
Mr. Dent with Mr. Dawson.
Mr. Diggs with Mr. Edwards of California.
Mrs. Griffiths with Mr. Pepper.
Mr. Fisher with Mr. Wright.
Mr. Eckhardt with Mr. Fulton of Tennessee.
Mr. Tunney with Mr. Powell.

Mr. DAVIS of Georgia, Mr. BOW, Mrs. REID of Illinois, Mr. MINSHALL, and Mr. KUYKENDALL changed their votes from "nay" to "yea."

Mr. McCARTHY, Mr. SCHEUER, Mr. CULVER, and Mr. TIERNAN changed their votes from "yea" to "nay."

Mr. SCHEUER changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

AMENDMENTS IN DISAGREEMENT

The SPEAKER. The Clerk will report the first amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 6: Page 2, line 20 insert: ", except projects or activities relating to the reduction of population growth: *Provided further,*".

MOTION OFFERED BY MR. PASSMAN

Mr. PASSMAN. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. PASSMAN moves that the House recede from its disagreement to the amendment of the Senate numbered 6 and concur therein.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 8: On page 3, line 7, strike "$24,050,000" and insert "$24,550,000".

MOTION OFFERED BY MR. PASSMAN

Mr. PASSMAN. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. PASSMAN moves that the House recede from its disagreement to the amendment of the Senate numbered 8 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$26,050,000".

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 31: On page 16, strike out:

"SEC. 121. None of the funds contained in title I of this act may be used to carry out the provisions of section 401(a)(2) of the Foreign Assistance Act of 1969."

MOTION OFFERED BY MR. PASSMAN

Mr. PASSMAN. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. PASSMAN moves that the House recede from its disagreement to the amendment of the Senate numbered 31 and concur therein with an amendment, as follows: Restore the matter stricken, amended to read as follows:

"SEC. 121. None of the funds contained in title I of this act may be used to carry out the provisions of section 401(a)(2) of the Foreign Assistance Act of 1969.

"Sections of this title which refer to authorizing legislation are hereby amended to conform to the appropriate sections of the Foreign Assistance Act of 1969."

The motion was agreed to.

A motion to reconsider the votes by which action was taken on the conference report and on the several motions was laid on the table.

GENERAL LEAVE

Mr. PASSMAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks in the RECORD on the conference report just agreed to.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

CORRECTION OF THE RECORD

Mr. PASSMAN. Mr. Speaker, I ask unanimous consent that the permanent RECORD be corrected in two instances where erroneous figures appear in the temporary RECORD at page 40262. In the lefthand column, under amendment No. 16, the figure of "$255,000,000" should be "$12,500,000"; and under amendment No. 17, the figure of "$255,500,000" should be "$255,000,000".

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

Mr. GROSS. Mr. Speaker, reserving the right to object, it has been virtually impossible to obtain any time or even ask a question in consideration of this conference report. Practically all of the discussion connected with the bill was on the subject of planes for Taiwan. We learned almost nothing about the other provisions of the conference report.

After that exhibition in the well of the House, where at least one Member changed his vote at least three times, I wonder if we ought to give unanimous consent to anything at this stage of the game in connection with this legislation.

Mr. PASSMAN. Mr. Speaker, will the gentleman yield?

Mr. GROSS. No, I do not yield at this time.

I call the attention of the House to the fact that during consideration of the foreign aid appropriation bill in the House a few weeks ago, I offered an amendment to include Communist China in the provision of the bill which prohibited economic assistance by the United States to any country which sells, furnishes, or permits any ships under its registry to carry items of economic assistance to Cuba or North Vietnam.

My amendment to include Communist China was adopted without any contest whatever, but in the conference between the House and Senate it was dropped from the bill with the greatest of ease. Why?

Communist China is the principal supplier of arms and ammunition to the North Vietnamese. Why should we give a dime's worth of aid to any country that helps Communist China maintain its supply line to the North Vietnamese whose principal business is the killing of Americans and South Vietnamese?

Why penalize those who traffic with Cuba and not Communist China? Who was responsible for the elimination of this amendment? There has been no time to discuss it and therefore the record is silent. Who in the conference committee had such an affinity for the Communist Chinese that they threw out the amendment?

The conferees say that the planes for Nationalist China are necessary because of the threat from Communist China, but through some sort of mental gymnastics they have refused to put pressure on those who are helping the economy of the Red Chinese. This is unbelievable.

This conference report, Members of the House, will provide at least $100 million more for foreign economic and military assistance than was appropriated last year. It is more nearly $400 million because $275 million for foreign military credit sales was dropped from this bill, but with the open invitation to the Pentagon to request in the first supplemental bill next year the replacement of the $275 million.

This is the kind of skulduggery that has been practiced in this bill and I, for one, refuse to be hoodwinked.

Mr. Speaker, I withdraw my reservation.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

WORDS OF ADVICE FOR AND MERRY CHRISTMAS TO MR. GROSS OF IOWA

(Mr. PASSMAN asked and was given permission to address the House for 1 minute.)

Mr. PASSMAN. Mr. Speaker, I am very fond of the distinguished gentleman from Iowa.

I want to say to this fine American that he should do a better job on the committee on which he has the privilege of serving; namely, the Committee on Foreign Affairs, and do his work there, rather than to try to "cut me up" when I try to do a creditable job. If he did then I am sure we would get an authorization bill earlier, and we would not have this annual hassle over who precedes whom.

I recommend to this distinguished American, this distinguished Member of Congress, that he have a close look at the operations of his own committee. Then we would not get into these parliamentary involvements almost on Christmas Eve.

However, I do wish this fine American a Merry Christmas.

AUTHORIZING PRESIDENT TO PROCLAIM JANUARY 1970 AS "NATIONAL BLOOD DONOR MONTH"

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent to take from the Speaker's Desk the Senate joint resolution (S.J. Res. 154) entitled "Joint resolution to authorize and request the President to proclaim the month of January of each year as 'Na-

tional Blood Donor Month'," with a Senate amendment to the House amendments thereto, and concur in the Senate amendment to the House amendments.

The Clerk read the title of the Senate joint resolution.

The Clerk read the Senate amendment to the House amendments, as follows:

Page 1, after line 7 of the Senate engrossed resolution, insert:

"SEC. 2. Notwithstanding any other provision of law, the citizenship or nationality of Erneido A. Oliva shall not prohibit the Secretary of the Senate from paying compensation, for a period not to exceed six months, to the said Erneido A. Oliva while serving as an employee of the Senate."

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

Mr. WIGGINS. Mr. Speaker, reserving the right to object, I take this reservation only for the purpose of asking my colleague from Colorado to explain the nature of the Senate amendment.

Mr. ROGERS of Colorado. The nature of the Senate amendment is to straighten out their own bookkeeping in connection with an employee who is employed by the Secretary of the Senate, to pay compensation for a period of 6 months.

Mr. WIGGINS. I thank the gentleman.

Mr. Speaker, I withdraw my reservation.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

The Senate amendment to the House amendments was concurred in.

A motion to reconsider was laid on the table.

RECOMMENDATIONS OF THE CABINET TASK FORCE ON OIL IMPORT CONTROL

(Mr. MAHON asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. MAHON. Mr. Speaker, I have been very distressed by recent reports as to recommendations that apparently are being advanced by the President's Cabinet Task Force on Oil Import Control.

Apparently the plan is to force a reduction in the price of crude oil by increasing the level of imports.

Mr. Speaker, our country is already dependent on foreign sources for a sizable portion of our total oil requirements. Our national oil policy has recognized that a healthy and growing domestic oil industry is essential to national defense and to our national interests generally. Any action to make us further dependent on foreign sources threatens grave consequences.

The present import program has served the Nation well but even so discovery of new domestic reserves has not kept pace with increases in consumption. It is more important now than ever before that we have conditions which will promote exploration and development of the domestic oil industry.

The implementation of what appears to be the recommendations of the task force increasing imports and sharply reducing prices will hit hardest at the smaller independent producers. And, it should be kept clearly in mind that the independents are the most active in the field of oil exploration and have been responsible for the discovery of 85 percent of new reserves.

Mr. Speaker, irrecoverable losses would accrue to large segments of the domestic oil industry should the recommendations developed by the staff of the task force be implemented. Further, it seems to me that the underlying economic assumptions upon which the recommendations are apparently based are thoroughly unsound.

Mr. Speaker, I wish to document the views which I have expressed by placing in the RECORD a letter which was sent to President Nixon a short time ago by some 90 Members, including myself, on the subject of oil imports. I hope the letter will have the favorable attention of the President.

The letter follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., December 4, 1969.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: The undersigned wish to take this means of expressing to you our deep concern about the persistent reports indicating that the Cabinet Task Force on Oil Import Control may propose radical changes in the oil import program. Most disturbing are reports that the present level of imports will be increased and that this action is to be taken for the purpose of forcing a reduction in the price of crude oil.

It is our firm conviction that an increase in the present level of imports would seriously jeopardize our national security and constitute a disservice to the consumers of both oil and natural gas. In this regard, the following considerations appear to us to be conclusively persuasive.

1. Imports of crude oil and refined products now equal more than one third of total U.S. crude oil production. This already is a dangerous dependency, and under no circumstances should it be increased. For example, during the Middle East crisis of 1967, we were barely able to meet the emergency requirements for domestic oil, even for a short duration. Since that time, our petroleum reserve position has deteriorated. Last year, for the first time in our history, crude oil producing capacity declined. In contrast, authoritative forecasts show that our requirements by 1980 will be some 30 percent greater than at present.

2. The Eastern States, including Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, Pennsylvania, New Jersey, Delaware, West Virginia, Virginia, Maryland, North Carolina, South Carolina, Georgia, and Florida, are now dependent on foreign source petroleum for 40 percent of their requirements. Any further dependence of this important industrial area on uncertain foreign sources, which experience has indicated would be cut off in time of emergency, could result in critical shortages because domestic supplies and transportation facilities would no longer be available.

3. We already face a most critical natural gas supply problem. The Federal Power Commission and also officials in the Department of the Interior recently have publicly recognized the seriousness of the natural gas supply problem and have called for immediate remedial actions. Increased imports of oil would discourage and further depress the search for new gas fields and new oil fields—an inseparable activity.

4. All forms of energy are essential to national security. Increased oil imports adversely affect not only domestic supplies of oil and natural gas but also of coal and synthetics such as shale oil.

5. The use of low-cost imported oil appears at first glance to be attractive, and it might very well be so for the short term. But, to do so would put the Nation in a very vulnerable position for the long term. During the 1967 Middle East Crisis, we were the victims of an embargo. It is obvious from previous experience that foreign oil will be cheap only so long as we are not dependent upon it for our needs and security.

6. There have been claims made that the present Mandatory Oil Import Program costs consumers billions of dollars annually. These claims are totally misleading because they are based upon the fallacious assumption that Middle East oil will remain cheap even after we are dependent upon it. Furthermore, these claims disregard the losses to our economy that would result from dismantling the domestic industry which generates billions of dollars annually in revenues to the economy and tax revenues throughout more than half our States which produce oil and gas.

7. Oil imports now constitute the largest commodity deficit item in our balance of trade, totalling $2.6 billion annually. If the import level is increased, the serious balance of payments problem will be further aggravated.

8. The petroleum industry now markets more Btu's in the form of natural gas than in the form of liquid petroleum. The combined wellhead price of these two products on a crude oil equivalent basis, is less than $1.90 per barrel. This is lower than the cost of imported oil or natural gas from any source of the world.

9. In 1957–59, the combined weighted wholesale price of the four principal petroleum products was $3.99 a barrel. In the latest month, September, 1969, these weighted product prices averaged $3.90. Prices of petroleum are therefore lower today than in the 1957–59 price, while the wholesale price level for all commodities is up almost 14 percent. If price behaviour of all other industries had been as favorable as the oil industry, there would be no problem of inflation today.

10. Recent discoveries in Alaska have been cited by some as providing security of supplies for the future. We think prudence requires caution as to (1) these preliminary but optimistic estimates of reserves and (2) the cost to consumers in the other 49 states. Furthermore, it should be kept in mind that our requirements are growing at a rapid rate; for exampde, during the past 10 years we found about 35 billion barrels of oil whereas during the next decade if we are to remain secure we must find about 60 billion barrels.

We are also very much concerned about the impact increased imports would have upon the economy of the oil producing states. The cost to the total U.S. economy would aggregate billions of dollars annually through reductions in state and local tax revenues; lower bonuses and rentals from Federal and state lands; losses in employment; and decreases in purchases of equipment, supplies and services from allied industries.

We wish to urge with all the persuasion and force at our command that in our opinion the Nation's security will be dangerously impaired if the level of imports is increased. We direct your attention particularly to the uncertain conditions in Libya and the Middle East which serve to remind us of the folly of becoming dependent upon these sources. In addition, we are firmly convinced that increased imports would bring about serious economic problems, including what we be-

lieve would be a crippling impact upon the already serious balance of payments problem.

Respectfully,

——— ———.

LEGISLATIVE PROGRAM FOR THE BALANCE OF THE DAY

(Mr. ALBERT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ALBERT. Mr. Speaker, we hope to take up the conference report next on the OEO bill which I understand has just been voted on by the Senate but has not been messaged over here. Pending receipt of it, I ask unanimous consent that the Speaker may declare a recess at any time this afternoon subject to the call of the Chair and that the bells may be rung 15 minutes prior to our reconvening.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

Mr. WAGGONNER. Mr. Speaker, reserving the right to object, and I will not object, may I ask is it the intention of the leadership not to call up any other conference report today except the OEO authorization bill?

Mr. ALBERT. None of the rest of them are ready. May I answer the gentleman in that way?

Mr. WAGGONNER. Mr. Speaker, I withdraw my reservation of objection.

Mr. GROSS. Mr. Speaker, reserving the right to object, that is hardly an answer to the gentleman's question. Is it proposed to run into tonight?

Mr. ALBERT. No.

Mr. GROSS. Then, the other conference reports that are not ready will not be called up today? Is that correct?

Mr. ALBERT. Would the gentleman be satisfied with the answer that none of them are ready now and we do not anticipate that any of them might be ready this afternoon? But if they are, we would like the indulgence of the House to call them up.

Mr. GROSS. Mr. Speaker, I withdraw my reservation of objection.

Mr. GERALD R. FORD. Mr. Speaker, further reserving the right to object, there is one in which I have a particular interest. I have spoken to the distinguished chairman of the Committee on Appropriations concerning the supplemental appropriation bill which I understand has not yet been filed although permission has been granted to file it tonight. I would want some assurance that unanimous consent would not be asked for consideration of that conference report today.

Mr. ALBERT. I can assure the distinguished minority leader that no effort to bring up the supplemental appropriation bill will be made today.

Mr. GERALD R. FORD. I withdraw my reservation of objection, Mr. Speaker.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

RECESS

The SPEAKER. Accordingly the Chair declares the House in recess subject to the call of the Chair.

Accordingly (at 3 o'clock and 32 minutes p.m.), the House stood in recess subject to the call of the Chair.

AFTER RECESS

The recess having expired, the House was called to order by the Speaker at 4 o'clock and 21 minutes p.m.

FURTHER MESSAGE FROM THE SENATE

A further message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 3016) entitled "An act to provide for the continuation of programs authorized under the Economic Opportunity Act of 1964, to authorize advance funding of such programs and for other purposes."

The message also announced that the Senate agrees to the amendments of the House to bills of the Senate of the following titles:

S. 65. An act to direct the Secretary of Agriculture to convey sand, gravel, stone, clay, and similar materials in certain lands to Emogene Tilmon of Logan County, Ark.;

S. 80. An act to direct the Secretary of Agriculture to convey sand, gravel, stone, clay, and similar materials in certain lands to Enoch A. Lowder of Logan County, Ark.;

S. 81. An act to direct the Secretary of Agriculture to convey sand, gravel, stone, clay, and similar materials in certain lands to J. B. Smith and Sula E. Smith, of Magazine, Ark.;

S. 82. An act to direct the Secretary of Agriculture to convey sand, gravel, stone, clay and similar materials in certain lands to Wayne Tilmon and Emogene Tilmon of Logan County, Ark.; and

S. 2325. An act to amend title 5, United States Code, to provide for additional positions in grades GS–16, GS–17, and GS–18.

CONFERENCE REPORT ON H.R. 15209, SUPPLEMENTAL APPROPRIATIONS, 1970

Mr. MAHON submitted the following conference report and statement on the bill (H.R. 15209) making supplemental appropriations for the fiscal year ending June 30, 1970, and for other purposes.

CONFERENCE REPORT (H. REPT. No. 91–780)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 15209) "making supplemental appropriations for the fiscal year ending June 30, 1970, and for other purposes," having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 2, 5, 7, 14, 22, and 25.

That the House recede from its disagreement to the amendments of the Senate numbered 11, 15, 17, 20, 21, 23, 30, and 31, and agree to the same.

Amendment numbered 1: That the House recede from its disagreement to the amendment of the Senate numbered 1, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$300,000"; and the Senate agree to the same.

Amendment numbered 3: That the House recede from its disagreement to the amendment of the Senate numbered 3, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$700,000"; and the Senate agree to the same.

Amendment numbered 6: That the House recede from its disagreement to the amendment of the Senate numbered 6, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$1,250,000"; and the Senate agree to the same.

Amendment numbered 9: That the House recede from its disagreement to the amendment of the Senate numbered 9, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$310,000"; and the Senate agree to the same.

Amendment numbered 10: That the House recede from its disagreement to the amendment of the Senate numbered 10, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$2,300,000"; and the Senate agree to the same.

Amendment numbered 12: That the House recede from its disagreement to the amendment of the Senate numbered 12, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert: "$50,000"; and the Senate agree to the same.

Amendment numbered 16: That the House recede from its disagreement to the amendment of the Senate numbered 16, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert: "$2,048,000"; and the Senate agree to the same.

Amendment numbered 18: That the House recede from its disagreement to the amendment of the Senate numbered 18, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert: "$1,000,000"; and the Senate agree to the same.

Amendment numbered 24: That the House recede from its disagreement to the amendment of the Senate numbered 24, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$1,040,000"; and the Senate agree to the same.

Amendment numbered 26: That the House recede from its disagreement to the amendment of the Senate numbered 26, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert: "$50,000"; and the Senate agree to the same.

Amendment numbered 28: That the House recede from its disagreement to the amendment of the Senate numbered 28, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert: "$1,000,000"; and the Senate agree to the same.

The committee of conference report in disagreement amendments numbered 4, 8, 13, 19, 27, 29, 32, and 33.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 15209) making supplemental appropriations for the fiscal year ending June 30, 1970, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon and recommended in the accompanying conference report as to each of such amendments, namely:

CHAPTER II—INDEPENDENT OFFICES

Amendment No. 1: Appropriates $300,000 for Federal Labor Relations Council, salaries and expenses instead of $250,000 as proposed by the House and $400,000 as proposed by the Senate.

Amendment No. 2: Authorizes compensation of mediators at the rate of not to exceed $100 per day as proposed by the House instead of $150 as proposed by the Senate.

Amendment No. 3: Appropriates $700,000 for Commission on Government Procurement, salaries and expenses, instead of $500,000 as proposed by the House and $2,500,000 as proposed by the Senate.

Amendment No. 4: Reported in technical disagreement.

Amendment No. 5: Deletes $1,443,000 for Commission on Population Growth and the American Future proposed by the Senate.

CHAPTER III—DEPARTMENT OF THE INTERIOR

Amendment No. 6: Appropriates $1,250,000 for Bureau of Land Management, management of lands and resources instead of $1,000,000 as proposed by the House and $1,500,000 as proposed by the Senate.

Amendment No. 7: Appropriates $7,500,000 for Office of the Territories, Trust Territory of the Pacific Islands as proposed by the House instead of $8,380,000 as proposed by the Senate.

Amendment No. 8: Reported in technical disagreement.

Amendment No. 9: Appropriates $310,000 for Bureau of Sport Fisheries and Wildlife, management and investigations of resources, including $105,000 for preservation of the steamboat *Bertrand* and its cargo, instead of $205,000 as proposed by the House and $414,000 as proposed by the Senate.

Amendment No. 10: Appropriates $2,300,000 for Bureau of Sport Fisheries and Wildlife, construction, instead of $2,200,000 as proposed by the House and $2,600,000 as proposed by the Senate.

Amendment No. 11: Inserts heading.

Amendment No. 12: Appropriates $50,000 for National Park Service, management and protection, instead of $220,000 as proposed by the Senate.

Amendment No. 13: Reported in technical disagreement.

Amendment No. 14: Deletes appropriation of $190,000 for National Park Service, construction, proposed by the Senate.

Amendment No. 15: Inserts heading.

Amendment No. 16: Appropriates $2,048,000 for Indian Health Services instead of $3,000,000 as proposed by the Senate.

Amendment No. 17: Appropriates $1,952,000 for Construction of Indian Health Facilities as proposed by the Senate.

CHAPTER IV—DEPARTMENTS OF LABOR, AND HEALTH, EDUCATION, AND WELFARE

Amendment No. 18: Inserts chapter number and appropriates $1,000,000 for Wage and Labor Standards Administration instead of $2,000,000 as proposed by the Senate.

Amendment No. 19: Reported in technical disagreement.

Amendment No. 20: Deletes appropriation of $75,000 for salaries and expenses and $239,000 for construction at Gallaudet College as proposed by the Senate.

CHAPTER V—LEGISLATIVE BRANCH

Amendment No. 21: Appropriates $24,966 for the Office of the Vice President as proposed by the Senate.

CHAPTER VI—DEPARTMENTS OF STATE, JUSTICE, AND COMMERCE, AND RELATED AGENCIES

Amendment No. 22: Deletes $310,000 for Department of State, salaries and expenses proposed by the Senate for the Passport Office.

Amendemnt No. 23: Appropriates $618,000 for Department of Commerce, Environmental Science Services Administration, salaries and expenses, as proposed by the Senate instead of $418,000 as proposed by the House.

Amendment No. 24: Appropriates $1,040,000 for Department of Commerce, Environmental Science Services Administration, facilities, equipment and construction instead of $440,000 as proposed by the House and $3,582,000 as proposed by the Senate.

Amendment No. 25: Deletes $5,000,000 for Department of Commerce, Office of State Technical Services, grants and expenses proposed by the Senate.

Amendment No. 26: Appropriates $50,000 for Department of Commerce, Maritime Administration, State Marine Schools instead of $130,000 as proposed by the Senate.

Amendment No. 27: Reported in technical disagreement.

CHAPTER VII—DEPARTMENT OF TRANSPORTATION

Amendment No. 28: Appropriates $1,000,000 for United States Coast Guard, operating expenses instead of $1,200,000 as proposed by the Senate.

CHAPTER VIII—TREASURY DEPARTMENT

Amendment No. 29: Reported in technical disagreement.

CHAPTER IX—CLAIMS AND JUDGMENTS

Amendments Nos. 30 and 31: Appropriate $25,021,852 for claims and judgments as proposed by the Senate instead of $24,491,433 as proposed by the House.

CHAPTER X—GENERAL PROVISIONS

Amendment No. 32: Reported in technical disagreement.

Amendment No. 33: Reported in technical disagreement.

JOHN J. RHODES
(except amendment 32),
Managers on the Part of the House.

CONFERENCE REPORT ON S. 3016, ECONOMIC OPPORTUNITY AMENDMENTS OF 1969

Mr. PERKINS. Mr. Speaker, I call up the conference report on the bill (S. 3016) to provide for the continuation of programs authorized under the Economic Opportunity Act of 1964, to authorize advance funding of such programs, and for other purposes, and ask unanimous consent that the statement of the managers on the part of the House be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of December 19, 1969.)

The SPEAKER. The gentleman from Kentucky (Mr. PERKINS) is recognized for 1 hour.

HAPPY BIRTHDAY, MR. SPEAKER

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. PERKINS. I am happy to yield to the distinguished majority leader.

Mr. ALBERT. I appreciate the gentleman yielding. I take this time to advise the House that this is the eve of the birthday of the world's greatest living legislator, our distinguished and respected Speaker. I join all Members of the House in wishing that tomorrow may be the happiest birthday in the life of our great Speaker, and that he may have many more of them as well as many more years of service in this House and to the people of this great country. Happy birthday, Mr. Speaker.

Mr. GERALD R. FORD. Mr. Speaker, will the distinguished gentleman from Kentucky yield?

Mr. PERKINS. I am happy to yield to the distinguished minority leader.

Mr. GERALD R. FORD. I can only echo, reiterate, and magnify the words spoken by the distinguished majority leader. It has been a great privilege to serve with the Speaker this year, and I wish him happiness for many more years in the future.

Mr. PERKINS. Mr. Speaker, I likewise echo what has been said by both the majority leader and the minority leader. All of us wish you well for many, many more happy birthdays. You have served this House so ably and well for a long period of time. We all appreciate it.

Mr. Speaker, I call up the conference report on the bill S. 3016 to provide for the continuation of programs authorized under the Economic Opportunity Act of 1964, to authorize funding for those programs, and for other purposes.

I am happy to tell the Members that the bill we have brought back from conference is in substance the same bill passed by the House 8 days ago.

There were some slight modifications in which both sides gave ground. This is as it should be, and as it has to be in good faith negotiations between the two bodies of this Congress. The essential thing to remember as far as the House is concerned is that we did not give away anything.

The bill agreed to in conference authorizes the appropriation of $2,195,500,000 for the fiscal year 1970 to carry out the programs established under the act. This is a down-the-middle split between the lesser amount authorized by the Senate bill and the greater amount contained in the House version.

For fiscal year 1971, the House bill had authorized the appropriation of such sums as were necessary. The Senate bill set a specific figure of $2,148,000,000, plus $240,000,000 for Project Headstart; $14,000,000 for special impact programs under part D of title I; $32,000,000 for legal services; $80,000,000 for comprehensive health services; $150,000,000 for emergency food and medical services; $3,200,000 for senior opportunities and services programs; $15,000,000 for assistance for migrant and seasonal farm workers programs under part B of title III; and $50,000,000 for day-care projects, part B of title V.

The bill we brought back from conference authorizes $2,295,000,000 for the fiscal year beginning next July 1, plus

the amounts authorized by the Senate bill, with these three exceptions:

First, an additional $15,000,000 for family planning programs;

Second, the additional amount for Headstart would be $180,000,000; and

Third, the additional amount for emergency food and medical services would be $112,500,000.

Among other items, the Senate receded from its so-called Murphy amendment. That amendment would have permitted a Governor to veto any legal services contract, agreement, grant, loan, or other assistance, and permitted only a nondelegable override authority to the President.

This feature did not occur in the House bill, and it aroused the stringent objections of the American Bar Association, an organization that has been in the forefront of the fight to bring legal representation within reach of the very poor.

The Senate also gave ground on the Legal Services amendment by the House, which limited the types of "counseling, education, and other appropriate services" which could be provided under legal services programs to "legal counseling, education in legal matters, and other appropriate legal services." The House amendment remains in the bill.

Mr. Speaker, one of the most difficult issues we had to resolve with the Senate concerned section 616 of the act, providing for the transferability of funds from one program to another.

This section presently authorizes and permits 10 percent of the amount appropriated for carrying out any program under the act to be transferred to any other program under the act. But this transfer may not result in increasing the amount otherwise available to the beneficiary program by more than 10 percent.

The Senate bill would have permitted 15 percent to be transferred during the first fiscal year of the new authorization, and 20 percent during the second. It took the ceiling off the amount by which the beneficiary program could be increased.

The House was content to let present law stand. Nothing to disturb those percentages was included in the House bill.

In the negotiations of Wednesday and Thursday, however, we were obliged to recede somewhat, and accept some of the Senate demands.

The conference bill leaves the 10-percent transferability figure intact for fiscal year 1970, but increases it to 15 percent for fiscal 1971. With respect to the limitation on the amount a beneficiary program can receive from such transfer, we agreed that in the case of a program for which $10,000,000 or less is available, a maximum of 100 percent may be added. For any program with more than $10,000,000 available, no more than 35 percent may be added.

Now, Mr. Speaker, the House bill did not provide allocations for specific programs of the amounts appropriated, except for a few instances involving special work and career development programs, Headstart and Headstart Follow Through programs, and the intensive programs to eliminate hunger and malnutrition.

The Senate bill provided special allocations for a number of programs carried out under the act. Briefly, these included:

First, $890,300,000 for work and training programs;

Second, $46,000,000 for special impact programs;

Third, $1,012,700,000 for community action programs including $338 million for Headstart, $60 million for Headstart Follow Through, $58 million for legal services, $80 million for comprehensive health, $25 million for emergency food and medical, $15 million for family planning, and $8.8 million for Senior Opportunities.

Fourth, $12,000,000 for rural loans;

Fifth, $34,000,000 for migrant and seasonal farm workers;

Sixth, $16,000,000 for administration and coordination under title VI; and

Seventh, $37,000,000 for VISTA.

The conference bill adopts the plan of the Senate bill, with a major change. As adopted by the conferees, $328,900,000 must be reserved and made available for each of the 2 fiscal years involved for local initiative programs carried out under section 221 of the act. Only the remainder of the appropriations for each fiscal year would be allocated in the prescribed manner. The amounts so reserved are not subject to transfer under section 616 of the act.

Mr. Speaker, for the better understanding of the Members of the earmarking features of the House bill, the Senate bill, and the conference bill, I include these tables:

FISCAL 1971

The earmarks in fiscal year 1971 are identical to those in fiscal year 1970. However, several new authorizations are provided as additions to those already contained in the bill. These are as follows:

	Senate bill	Conference report
Unearmarked money	$100,000,000	$100,000,000
Special impact	14,000,000	14,000,000
New careers and mainstream		34,700,000
Headstart	240,000,000	180,000,000
Legal services	32,000,000	32,000,000
Comprehensive health	80,000,000	80,000,000
Emergency food and medical	150,000,000	112,500,000
Family planning		15,000,000
Senior opportunities	3,200,000	3,200,000
Migrants	15,000,000	15,000,000
Day care	50,000,000	50,000,000

The fiscal year 1971 authorization in the Senate bill was 2,732,200,000. The House bill was open-ended. The conference report total for fiscal year 1971 is 2,831,900,000:

FISCAL 1970

	House bill	Senate bill	Conference report
Grand total	$2,343,000,000	$2,048,000,000	$2,195,500,000
Title I		890,300,000	890,300,000
Operation Mainstream and New Careers	110,000,000		20,000,000
Special impact		46,000,000	46,000,000
Total, title I		936,000,000	956,000,000
Title II:			
Headstart	458,000,000	338,000,000	398,000,000
Follow Through	120,000,000	60,000,000	90,000,000
Legal services		58,000,000	58,000,000
Comprehensive health		80,000,000	80,000,000
Emergency food and medical	100,000,000	25,000,000	62,500,000
Family planning		15,000,000	15,000,000
Senior opportunities		8,800,000	8,800,000
Alcoholic recovery		10,000,000	10,000,000
Drug rehabilitation		5,000,000	5,000,000
Other—title II		426,400,000	[1] 434,400,000
Total, title II		1,012,700,000	1,140,200,000
Title III:			
Rural loans		$12,000,000	$12,000,000
Migrants		34,000,000	34,000,000
Title VI, Administration		16,000,000	16,000,000
Title VIII, VISTA		37,000,000	37,000,000

[1] $328,900,000 is for local initiative.

Mr. Speaker, I personally feel that the most important feature of the conference bill is the implicit endorsement of the principle of community action.

Title II of the 1964 act began:

The purpose of this part is to provide stimulation and incentive for urban and rural communities to mobilize their resources to combat poverty through community action programs.

I submit that this bill, like the House bill, is a ringing restatement of our belief in that purpose.

Efforts have been made, in and out of the Congress, to divert us from our course; to turn our backs on the local communities; and to give major responsibility to the State governments for operation of the antipoverty programs.

That issue was fought out on the floor of this House last week. The House acted decisively to head off the drive toward a State takeover.

The House said—clearly enough to be heard all over this land—that the focus of our antipoverty efforts must be where poverty is, and that is in the local communities.

It said that the local people, the local elected officials and community social service agencies, the local poor people themselves, should have the lead in developing and carrying out their programs.

There can be no misunderstanding about that.

I know there may be some disappointment in some of the State OEO offices in State capitals around the country. Some of them were gearing up for the seizure last week.

I am told that on Thursday evening, December 11, some fellow from the office of the Governor of my State held a meeting with the CAP directors and outlined to them the plans that were ready to go into effect.

Generally, I do not like to discommode a fellow who has his heart set on something as strongly as that. But, Mr. Speaker, he jumped the gun. He was halfway around the track before the House blew the whistle on him last Friday night, December 12, and said: "Look here, boy, you are going in the wrong direction."

We told him in no uncertain terms that it was not going to be his responsibility to take over and run this or that CAP agency; that he was not going to get to say which agency gets closed down and which is allowed to operate. We told him that those matters are going to be left up to the local communities, acting within the guidelines of the Economic Opportunity Act, as amended in 1967.

This House and the Congress specially declined to amend the act in 1969 in this report. The preference for local designation and local running of community action programs remains the law of the land. The law expresses an intention that this preference not be tampered with.

The conference bill underlines that resolve in two particularly clear instances. These were the elimination of the Murphy amendment relating to the Governor's veto over legal services programs; and by providing a special reservation of funds for local initiative programs.

Those actions spell out the intention of the conferees and the Congress itself that the community action programs are and are intended to be locally designated and locally administered.

It was explicitly brought up during the conference by Representative BRADEMAS that the report should make clear that nothing in this legislation is intended to expand the role of the States in planning, designing, or administering the antipoverty programs. There was no objection raised on either side of the conference table.

On behalf of the people of the local communities, we are saying to the Governors and to the State governments, "We welcome your cooperation and your help."

And we are saying to Director Rumsfeld that we encourage exploration of ways to improve the coordination of State and Federal with local poverty efforts. But we do not intend that you should reverse the decision so forcefully made by this House on December 12 that the preference for local power and local decisionmaking in the poverty area is to remain.

The defeat of those who would have taken local power and local control and replaced it with State control and State power to run poverty programs is a clear expression of the will of this Congress. Any retreat in the direction of surrendering power to the States will be a clear violation of congressional intent.

The degree to which Governors and State economic opportunity agencies should be permitted to expand their efforts in the poverty area must depend upon the degree to which they are willing to cease interference with the local decisionmaking process; the degree to which they cooperate with the Federal poverty program and with the policy that the Congress is enunciated; and to the degree to which they are willing to supplement Federal and local resources with meaningful financial assistance from the States.

The past record of a number of Governors and State agency personnel is replete with attempts to use these programs for political purposes; with efforts to override or interfere with local decision as to the hiring of staff and with local decision with respect to the nature of programs. This sort of interference must cease.

Mr. Speaker, I submit that the bill we have returned from conference is a good bill and a constructive bill. It is substantially what the President said he wanted, and what Director Rumsfeld said he wanted.

It will, I believe, give the Director the tools he needs to carry out the great program begun with the 1964 act.

Mr. Speaker, I would be remiss if I did not at this point recognize the hard work and the dedication of the participating House conferees throughout the 2 days of sessions we held with the Senate.

I appreciate their good work, and their diligence in upholding the position of the House.

We had not really anticipated a lengthy conference, since the issues outstanding between the two bills were not major. But it was prolonged over 2 days, and Senator NELSON of Wisconsin, the conference chairman, was eminently fair and took pains to see that everyone had an opportunity to speak his piece.

Again I thank all of the conferees for their patience and their tremendously valuable contributions in perfecting the economic opportunity legislation.

Mr. PUCINSKI. Mr. Speaker, will the gentleman yield?

Mr. PERKINS. I yield to the gentleman from Illinois.

Mr. PUCINSKI. Mr. Speaker, I congratulate the distinguished gentleman from Kentucky for the manner in which he handled this conference and the manner in which he preserved so excellently the position of the House in this.

Particularly am I impressed by the statement the gentleman made just now that we have through this action sustained and retained the complete autonomy and authority and emphasis of the urban areas and the rural areas in trying to resolve the problems where they are the greatest. I think as time goes on and we see the various programs which the communities are developing within their own resources and their own communities, we will see the wisdom of the Congress in remaining with this principle.

I would certainly like to congratulate the chairman. I remind him of the letter I read here on the floor of the House at the time of the debate, from my own mayor, Mayor Daley, in which he pointed out many of these poverty programs are a continuation of the local community programs to deal with the problems and that we should preserve that principle.

I thank the gentleman and congratulate him for indeed preserving that principle in this bill.

Mr. PERKINS. That was the issue before the House, and the vote preserved that principle, to make sure that the local initiative and the local programs were not destroyed.

Mr. STEIGER of Wisconsin. Mr. Speaker, will the gentleman yield?

Mr. PERKINS. I am going to yield to you right away.

Mr. STEIGER of Wisconsin. On this point?

Mr. PERKINS. All right. On this point.

Mr. STEIGER of Wisconsin. I simply want to make the record clear on your statement that—

> Nothing in this legislation is intended to expand the role of the States in planning, designing or administering the antipoverty program—

Reading language that was deleted from the conference report, and I simply cannot let this time go by without objecting to the language used by the gentleman from Kentucky in the statement he has just made about any agreement that may or may not have been reached in the conference on the question of increasing the State role. The gentleman from Kentucky is well aware that the conference report to which I affixed my signature on the basis of a language change that was made, which was not, I must say, as much as I would have preferred, says this:

> The managers on the part of the House encourage the Director of OEO to explore, along the lines previously mentioned in the House committee report, the opportunities for increased State involvement in poverty programs. It must be quite clear, however, that State domination over program planning, conception, or administration is not intended. Any changes in policy or regulation that would establish a preference for State rather than local determination and local control of community action programs will be inconsistent with the intention of the Congress.

I will say to my friend from Kentucky that this is the intent of the conference. That is the intent of the managers on the part of the House and I do not wish the RECORD to show you or I or any other Members of the Congress have decided to go beyond that. That is the language to which we have agreed. Beyond that we have not gone.

Mr. PERKINS. Let me say to my distinguished colleague that I do not think there is much difference in our viewpoints. I agree to the language that you just read: That the States should not dominate and overrun a local CAP agency, and that is the part you put your signature to and agreed to, and there is nothing in here that is inconsistent with that.

Nowhere in this bill do we increase the authority of the States anywhere, and we do not diminish that authority, either. We simply state where a State tries to dominate a local community action agency that a preference goes to the local community action agency and the State cannot interfere.

Mr. STEIGER of Wisconsin. Will the gentleman yield further?

Mr. PERKINS. I yield further.

Mr. STEIGER of Wisconsin. For one further statement on this matter?

Mr. PERKINS. Yes.

Mr. STEIGER of Wisconsin. I value and appreciate the statement of the gentleman from Kentucky. We have not increased nor have we diminished that which is presently in the act insofar as the authority and the direction for operation in cooperation with the States, if he so desires, so long as this is consistent with the Economic Opportunity Act of 1964 as amended previously and as amended by this conference report. I will say further, Mr. Speaker, that I support this conference report and trust it will be adopted by the House.

I am pleased that the provisions adopted by the other body relating to legal services were dropped. I regret that the House provisions regarding providing funds on an unearmarked basis were not maintained and that less flexibility was given the Director than provided in the Senate-passed bill.

I appreciate the cooperation of the chairman of the full committee in enabling me to serve as a member of the conference.

Lastly, Mr. Speaker, adoption of this report grants to OEO and its Director, Don Rumsfeld, the charter they have for so long been denied. Approval does not indicate agreement with the way this agency has operated in the past. Change is needed but I am confident Mr. Rumsfeld will now be able to get about the business of administering the agency and fulfilling the important role given to it by President Nixon.

Mr. BRADEMAS. Mr. Speaker, will the gentleman yield?

Mr. PERKINS. I yield to the distinguished gentleman from Indiana (Mr. BRADEMAS).

Mr. BRADEMAS. Because the chairman of our committee made reference to my own remarks during the conference, I want simply to affirm that I did go to some pains to express my own feelings and I felt it was concurred in certainly by those of us on the majority side that nothing in the language of the report should be permitted to be interpreted as providing authority to the Director of the Office of Economic Opportunity to be delegating authority for programs to the State governments.

The reason why I offered that observation was twofold: In the first place, the House of Representatives had, on the Friday before our conference made abundantly clear, a rollcall vote, the margin of which was 68 votes, that we rejected the effort that was made by a number of our colleagues in the House to take the programs of the Office of Economic Opportunity and substantially turn them over to the State governments. It was very clear, therefore, that when I made the observation I did that I was able to point to the strongly expressed attitude of the House of Representatives on that particular point. That is what the fight was all about a few days ago.

And the second reason that I offer my observation with respect to this particular point is that I felt it should be made affirmatively clear in the report so there would be no misunderstanding that the Director of OEO is not going to be able to come up with some contrived justification whereby he might say, "Oh, well, I do have authority over there or over here in this part of the bill to give some authority or other over to the control of the States." This statement on my part in no way diminishes my agreement with the language of the report that it is appropriate for the Director of OEO to explore along the lines as previously mentioned throughout the House committee report, avenues for greater State involvement in the proverty program.

I thank the chairman for yielding and I hope this helps clarify the subject of our discussion.

Mr. QUIE. Mr. Speaker, will the gentleman yield?

Mr. PERKINS. I am glad to yield to the gentleman from Minnesota.

Mr. QUIE. I thank the chairman for yielding.

I would say to the gentleman from Indiana (Mr. BRADEMAS) when he said he went to great pains, that I did go through some pain—I felt the pain when he made clear in the conference that the substitute concept did not prevail. I recognize—although I did not say anything about it in conference—that the House refused to take the action which would have required the Director to enter into agreements with the States. However, I heard no agreement on the part of the conferees of the Senate nor any agreement on the part of the members of the House conferees on the Republican side of the aisle to what he said. I noticed that, they too, had a few pained looks.

What I would like to have clear is that the words that were stated in the report of the House on H.R. 12321 were to the effect that the Governors of the several States would be quite satisfied with the effective implementation of the 1967 amendment, and the chairman has no desire, I ask, or the conference report to remove any of the opportunity the Director has to involve the States as was written into the 1967 amendment?

Mr. PERKINS. I think it has been the intent of the Congress all the way along to maintain State involvement where they have good technical assistance programs like they have in some of the States and where there is splendid cooperation. There is room under the legislation for constructive involvement on the part of the States. But on the other hand where the States are not competent and refuse to cooperate and coordinate poverty programs with the local agencies and just want to dominate the local communities—we, by our vote last week and by this conference report certainly, say to those States that want to go beyond the existing authority and dominate local programs, that you do not have any such authority to dominate and overrun and overpower the local CAP agencies, local municipalities, and counties involved in the local effort where there is a dispute. We are saying that the decision should be made in favor of the local agency.

Mr. QUIE. Mr. Speaker, if the gentleman will yield further, the gentleman did not answer the question which I asked.

The 1967 amendments were not reversed in any way by the language in the conference report. Am I correct?

Mr. PERKINS. The 1967 amendments are not reversed. But in those cases where the States are not competent and where they are interfering with the local CAP agencies, then it is the clear intent of this conference report to put the Director on notice that the decisionmaking role belongs to the local CAP agencies.

But on the other hand, when there is perfect cooperation we do not undertake to diminish any authority that existed in the 1967 limitation.

Mr. QUIE. If the gentleman will yield further, let me ask the gentleman specifically, because the same sentiments that the chairman is now indicating were the same sentiments that I made on the floor about the substitute: That it does not permit the State to dominate, or if the State could not put together a developmental and coordination program acceptable to the Director of OEO, he would not approve it. However, the Director has the power to initiate the purposes of the substitute offered by Mr. AYRES. Let me read the language in section 231(c). It says:

> In order to promote coordination in the use of funds under this Act and funds provided or granted by State agencies, the Director may enter into agreements with States or State agencies pursuant to which they will act as agents of the United States for purposes of providing financial assistance to community action agencies or other local agencies in connection with specific projects or programs involving the common or joint use of State funds and funds under this title.

This is in the present act.

What I ask the gentleman from Kentucky is this: Has section 231(c) been repealed at all by the intent of the conference report?

Mr. PERKINS. My answer to the question asked by the gentleman from Minnesota is that we do not diminish the authority of the States——

Mr. QUIE. No, I was referring to section 231(c).

Mr. PUCINSKI. Mr. Speaker, will the gentleman yield?

Mr. PERKINS. I yield to the distinguished gentleman from Illinois.

Mr. PUCINSKI. Mr. Speaker, I thank the gentleman for yielding, and I would ask the gentleman that the answer, would the gentleman not agree, to the question posed by the gentleman from Minnesota is a clear and categorical "no." We leave the present law as we find it in this conference report. A State may under the 1967 amendments become a community action agency. It may, if it so elects. But under the Hawkins amendment to the 1967 amendment offered by the gentlewoman from Oregon, a local community, be it a city, a county, a township, or a local community, may opt out, and it then retains its full control, full autonomy over the management of its programs subject only to the agreement and arrangements with the Director of OEO. Is that not correct?

Mr. PERKINS. That is correct.

Mr. Speaker, I want to refer the distinguished gentleman from Minnesota to page 18 of the conference report, and I think we should read this language at this point:

It should be noted that in at least two respects the agreement of the conferees underscores the overwhelming determination by the House of Representatives on Friday, December 12, that title II and the programs authorized thereunder are and must remain community action programs. The elimination of the Murphy amendment relating to the Governor's veto power over legal services programs and the provision of a special reservation of funds for local initiative programs underscore the intention of the conferees that the community action program was, and is intended to be, a program locally designed and locally administered. The managers on the part of the House encourage the Director of OEO to explore, along the lines previously mentioned in the House committee report, the opportunities for increased State involvement in poverty programs. It must be quite clear, however, that State domination over program planning, conception, or administration is not intended. Any changes in policy or regulation that would establish a preference for State rather than local determination and local control of community action programs will be inconsistent with the intention of the Congress.

I think that answers the gentleman's question. We do not want to diminish the authority where there is cooperation between the local Community Action agencies and the States, and no authority is diminished. But where there is domination and they are trying to overrun local control, the conference report makes it clear that the preference must be in behalf of the local agency.

Mr. QUIE. I thank the chairman for his answer which was an affirmative answer to the gentleman from Illinois.

Let me just ask one last question in this regard, and that is in regard to changes presently proposed for increasing the State involvement and participation by the Director of the OEO—and I am talking specifically of the proposals spelled out by his assistant, Frank Carlucci. Can the Director make the changes for increased State involvement which he has proposed?

Mr. PERKINS. It is not the intention of the conference report to inhibit State involvement where there is complete cooperation and coordination between the State offices and the local CAP agencies and local municipalities. But where there is a disagreement and a State undertakes to dominate or overrun a community and we have conflict between a State and a local CAP agency, the regulations should not contravene the principle of giving priority to the local communities. If they do, then to that extent there would be a conflict with our intent and the regulations would have to be modified.

Mr. QUIE. Mr. Speaker, will the gentleman yield?

Mr. PERKINS. I yield to the gentleman.

Mr. QUIE. In the gentleman's estimation, then, the State can assist but not dominate. As the gentleman knows, I strongly favored earmarking the local initiative funds in the conference report, as indicating also my strong desire that the local communities be able to have the final say in anything in their local community.

Mr. PERKINS. Yes. You and I agree. The local community should have the final say.

Mr. QUIE. That is correct.

Mr. PERKINS. That is what this conference report says.

Mr. QUIE. Mr. Speaker, I did not sign the conference report on the Economic Opportunity Act authorizing legislation for a number of reasons.

No. 1, the President stated earlier this year that OEO was to become a research and innovative agency, and operating programs would be spun-off to traditional agencies. So far, Legal Services, an operating program remains with OEO. I know there are no plans at present to transfer or delegate Legal Services, nor is there an existing agency which would easily assume the administration. However, we should be aware that at present, this program is beginning to fragment in OEO, since VISTA has now gotten into the act and a substantial number of attorneys are assigned to VISTA. Model Cities in HUD has Legal Service attorneys. If the administration should want to consolidate Legal Service programs outside of OEO, the provision in the conference report accepted from the Senate bill would prohibit any delegating of legal services.

Another feature of which I did not agree was the change in section 616 of the Economic Opportunity Act. The present law provides that the Director can shift up to 10 percent of the funds away from any program over which he has authority and may also add 10 percent to any program over which he has authority. I always felt that this was too great a latitude to give the previous Director of the OEO, and therefore feel that a liberalization of this proposal would not be wise at present. If the present Director wants to make a substantial change in programs with shifts in funds from that of which he has already indicated he would expend in his budget presentation to the Appropriations Committee, he should come to the Congress and explain those changes. The Senate amendment to section 616 would have changed the section so funds could be shifted away from any program in the amount of 15 percent in fiscal year 1970 and 20 percent thereafter. No limit was placed on the amount that could have been added to any program. As you see, the conference report changed the above 15 percent back to 10 percent for fiscal 1970 and it permits the shifting of 15 percent away from any program after this fiscal year. The conference agreement, with which I do not agree, also permits a transfer resulting in increases up to 100 percent for a program which is funded at $10 million or less and an increase of 35 percent if a program is funded at $10 million or more.

I am not in disagreement, however, with all changes in the House bill where the House conferees accepted Senate amendments. The program on alcoholism is well advised and I do hope the Director will fund it as best he can, since alcoholism is undoubtedly one of the major causes of poverty, malnutrition and family suffering.

Another change which was well advised is the amendment to Headstart which will permit commingling of Headstart funds for poor children with other funds for nonpoor children in order that Headstart programs may be integrated. While I strongly support integration on the basis of race, I also believe strongly in integration of people of different economic levels. I believe that it can be as debilitating to segregate people who are poor as it is to segregate people who are of a minority race group.

The conference agreed to a change in the Senate language which I proposed, which wil require rather than permit the payment of cost of Headstart for the nonpoor either from the family or from other local sources and in the case of the children of the near-poor who need some Headstart experience, a partial payment would be all that was required. I hope in the case of partial payment, the OEO Headstart costs will never be any greater than the present costs for the 10 percent of each class whose parents exceed the poverty level.

I do want to reiterate, however, the words of the conference report that "participation by persons who are not of low income makes a positive contribution to the programs." Persons who are not of low income refers here not only the near poor, but the will to do as well.

Lastly, while I said above there should be no State domination and my efforts for the substitute indicated that it would not have provided for State domination, I also oppose Federal domination. I believe there should be Federal, State and local partnership. The only way that can occur is for State to have an opportunity to coordinate programs to help the poor. I am still convinced that our efforts in the House to substitute were right though unsuccessful. Unless the Director comes to that conclusion, the programs will continue to be dominated by Washington.

Mr. DELLENBACK. Mr. Speaker, will the gentleman yield?

Mr. PERKINS. I yield.

Mr. DELLENBACK. I do not want to replow the ground that has been discussed for the last 15 or 20 minutes, but I just want to be absolutely certain, if I may direct an inquiry to the gentleman in the well, that the statement of the managers on this measure, as signed by 13 members of the chairman's party and as signed by 5 members of our party, is, as I understand it, a statement to which we all have agreed on this point which has been under discussion.

Mr. PERKINS. The statement of the managers has been given to you along with the signatures of those who agree with it. As the gentleman knows the conference report is controlling and its language is explicit and clear. I do not think it can be misunderstood. It continues the Director's authority to seek the cooperation of the States. But where there are politics being played and the State tries to dominate the local communities, at that point we give preference to the local communities to make the determinations.

Mr. DELLENBACK. I want to pin this point down because there seems to be some difficulty in staying on the specific point involved.

Things that are stated in conference are interesting but not binding, and things that are said here on the floor——

Mr. PERKINS. I do not agree. Things that we say in conference may not be binding, but what we say in the conference report is binding.

Mr. DELLENBACK. Exactly.

Mr. PERKINS. That is correct.

Mr. DELLENBACK. Any references that are made by any of us, including the gentleman in the well, to discussions that may have taken place in the conference committee, but are not reflected in the conference report, are not to be interpreted as binding upon any of us.

Earlier reference was made by the gentleman to a statement allegedly made by the gentleman from Indiana with which some of us do not agree. We did not agree at the time. The statement to which we do not agree is that which is spelled out in the conference report. I do not think the language is ambiguous. State operation not being intended is very clear. But I think also the statement that, "The managers on the part of the House encourage the Director of OEO to explore opportunities for increased State involvement," in accordance with the law, is also equally clear.

Mr. PERKINS. Let me say to my distinguished colleague from Oregon, on behalf of the people of the local communities, we are saying in the conference report to the State Governors, "We welcome your cooperation and your help." We are saying to Director Rumsfeld, "We encourage exploration of ways to improve local, State, and Federal coordination. But we do not intend that you should reverse the decision so forcefully made by this House on December 12 that the preference for local power and local decisionmaking in the poverty area is to remain."

That is what we are saying, and that is my answer to the gentleman. The degree to which Governors and State economic opportunities agencies should be permitted to expand their efforts in the poverty area must depend upon the degree to which they are willing to cease interference with the local decisionmaking process, the degree to which they cooperate with the Federal poverty program and with the policy that the Congress has enunciated, and the degree to which they are willing to supplement the Federal and local resources with meaningful financial assistance from the States. That is what we state in the conference report.

Mr. DELLENBACK. I appreciate the statement of the chairman that it is the language of the conference report that is binding upon the House.

Mr. PERKINS. The language of the conference report is binding.

Mr. RIVERS. Mr. Speaker, will the gentleman yield?

Mr. PERKINS. I yield to the distinguished gentleman from South Carolina.

Mr. RIVERS. Mr. Speaker, included in the conference agreement is language which, among other things, amends existing law allegedly giving to members of the Armed Forces and their immediate families certain legal assistance if they come within the poverty laws. This is existing law. It is section 222(a)(3) of 43 U.S.C. 2809, and these people are covered now. Should they come within the poverty laws? This seemed to me to be so unnecessary that I called on the Secretary of Defense to see whether or not we had people living in poverty and what his opinion was of this, which seemed to me an unnecessary, almost ridiculous amendment. If military people are living in poverty, they come under the Poverty Act, but because they are, after all, citizens as well as anybody else.

If every time they get help the Department of Defense has to go and transfer money, this seems to me just doubly ridiculous—the transferring of money for services people are entitled to also within the military. We have our Judge Advocates General of the three services located throughout the country. Wherever anybody needs help within the military they always get it. Here is my question. It seemed to me highly unnecessary. We do not need it.

The Secretary of Defense has said this is unwarranted and unneeded. I ask unanimous consent that I may include in the RECORD at this point a letter from the Secretary of Defense on the subject.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

The letter is as follows:

THE SECRETARY OF DEFENSE,
Washington, D.C., December 20, 1969.

Hon. L. MENDEL RIVERS,
Chairman, Committee on Armed Services, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: This is in response to your request for comments on a proposed amendment to Section 222(a)(3) of the Economic Opportunity Act of 1964, as amended.

The proposed amendment provides as follows:

"Members of the armed forces, and members of their immediate families, shall be eligible to obtain legal services under such programs in cases where extreme hardship (determined in accordance with regulations of the director issued after consultation with the Secretary of Defense): *Provided*, That nothing in this sentence shall be so construed as to require the director to expand or enlarge existing programs or to initiate new programs in order to cary out the provisions of this sentence unless and until the Secretary of Defense assumes the costs of such services and has reached agreement with the director on reimbursement for all such additional costs as may be incurred in carrying out the provisions of this sentence."

This amendment is unnecesary in view of the specific language in the present law which provides that legal services may be provided for persons living in poverty. Military personnel who are deemed to be "persons living in poverty" are presently covered in the law.

Since the amendment is unecessary, its net effect is to transfer appropriated funds from the Department of Defense to reimburse the Office of Economic Opportunity for any services provided for members of the armed forces and their immediate families, a clearly inefficient arrangement.

As you know many types of legal services are provided to our military personnel by legal assistance offices established in the headquarters and field offices of the Judge Advocates General of the three military departments.

If the intent of the amendment is to assure more complete legal services for extreme hardship cases of military members, it is our view that such services could be more efficiently administered by the Department of Defense.

I understand that members of our respective staffs have met on this matter. At that time we furnished your staff a detailed analysis and supporting data.

Sincerely,

MEL LAIRD.

I would like to ask the distinguished gentleman what his opinion is of this amendment.

Mr. PERKINS. Mr. Speaker, I personally believe that the Secretary of Defense controls this amendment altogether. I personally feel that the amendment is meaningless for all intents and purposes, because a close reading of the amendment with respect to legal programs in the conference report will show the gentleman the last sentence states:

Provided, That nothing in this sentence shall be so construed as to require the Director to expand or enlarge existing programs or to initiate new programs in order to carry out the provisions of this sentence unless and until the Secretary of Defense assumes the cost of such services and has reached agreement with the Director on reimbursement for all such additional costs as may be incurred in carrying out the provisions of this sentence.

In other words, there must be a meeting of the minds between the Secretary of Defense and the Director of the Office of Economic Opportunity. If the Secretary of Defense takes a notion not to sit down with the Director of the Office of Economic Opportunity and agree on something, the amendment is perfectly harmless and does not carry any import I can see.

Mr. RIVERS. Mr. Speaker, this is my construction. I thank the gentleman.

Mr. AYRES. Mr. Speaker, will the gentleman yield?

Mr. PERKINS. I yield to the distinguished gentleman from Ohio (Mr. AYRES).

(Mr. AYRES asked and was given permission to extend his remarks at this point in the RECORD, and to include a letter from the assistant director of the National Governors' Conference to Mr. AYRES, and a copy of the assistant director's letter to OEO.)

Mr. AYRES. Mr. Speaker, under permission granted, I include the following letters:

NATIONAL GOVERNORS' CONFERENCE,
Washington, D.C., December 15, 1969.

Hon. WILLIAM H. AYRES,
Washington, D.C.

DEAR MR. AYRES: Thank you for your personal leadership to make OEO programs more responsive to the needs of the poor through a closer coordination with related programs at the state level.

I am convinced that the substitute bill would have made it possible in many states to shift from token oriented, project by project grants to a fully coordinated, statewide effort to eliminate the causes of poverty.

Enclosed is a copy of my letter to Director Rumsfeld in which we pledge our continued

cooperation. Perhaps, through a more aggressive implementation of OEO guidelines we can achieve some of the objectives of the substitute bill.

Please call upon me or this office whenever we may be of assistance to you. Kindest regards for the holidays and the new year.

Most sincerely,

JAMES L. MARTIN,
Assistant Director.

NATIONAL GOVERNORS' CONFERENCE,
Washington, D.C., December 15, 1969.

Mr. DONALD RUMSFELD,
Director, Office of Economic Opportunity, Washington, D.C.

DEAR MR. RUMSFELD: Congratulations on your hard-won victory to extend OEO authorization for two years without amendments. However, I must agree with Congressman Ayres that the substitute amendments would have made services for the benefit of the poor more effective through a new partnership with the states.

If you can continue your efforts to redraft and strengthen the guidelines for state participation in OEO programs, I am confident that we can not only avoid future confrontations but work together for the strengthening of OEO and its programs.

We stand ready, as in the past, to assist you and your staff whenever possible.

Most sincerely,

JAMES L. MARTIN,
Assistant Director.

Mr. PUCINSKI. Mr. Speaker, will the gentleman yield?

Mr. PERKINS. I yield to the gentleman from Illinois.

(Mr. PUCINSKI asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PUCINSKI. Mr. Speaker, I will insert in the RECORD an article from the Chicago Tribune from this morning, calling attention to some of the practices of the OEO attorneys in Chicago.

I was happy to join my distinguished chairman in voting against the Murphy amendment because I had great confidence in our former colleague, Mr. Rumsfeld, and his ability to bring some order to this agency.

I hope the gentleman discussed in this article will be one of those to be severed from this agency for his foolishness as reported in the article this morning.

Mr. Speaker, I include at this point the clipping from the Chicago Tribune:

PATRIOTISM A BAD WORD TO OEO

(By Willard Edwards)

WASHINGTON, December 19.—The principal of the Church Rock, N. M., elementary school was staggered last Nov. 12 to receive a threatening letter from the government. It warned him that he was polluting the youthful minds entrusted to his care and might be the subject of legal action if he persisted in his "offensive" tactics.

The letter was signed by Stephen B. Elrick, an attorney employed at taxpayers' expense in the legal services section of the office of economic opportunity. He is one of 1,850 lawyers now on the federal payroll who provide "legal assistance" to poor people.

Claude Hinman, principal of the school, which has an enrollment of 99 per cent Indian children, learned that he had been guilty of the crime of stimulating patriotism in his charges. He had approved a program to give them "an awareness of the greatness of their country."

"They ought to have an awareness of the faults and errors of their country, as well," wrote Elrick. "It is especially appalling that Indian children are being forced to participate in this program, when it is their people who have been treated most shabbily of all by the United States."

Elrick expressed his horror at a statement by a Mrs. Stafford, a Negro teacher in the school, who had said: "We should indoctrinate every child with the idea of being loyal to his country."

That was a "sorry philosophy," Elrick declared, for a public school "which should be dedicated to the concept of . . . the presentation of all sides of disputed issues." He continued:

"I find it particularly offensive that you are apparently associating 'patriotism' with support of the war in Viet Nam, which is unquestionably the most controversial war of our time and, in the opinion of many, the most brutal and unjustified."

Elrick then turned his attention to the school bulletin board on which some child had printed "God Bless America."

"It is deplorable," he wrote, "for you to stimulate the expression of what is, in effect, a prayer in violation of the Supreme court's ruling that public schools are to refrain from such activities.

"There is simply no need to offend the sensibilities of some persons by indirectly stimulating the establishment of the Christian (or Jewish) faith among a people who have traditionally held conflicting religious beliefs."

The letter concluded with an ultimatum. If "balance" was not restored to the school programs, "I shall take whatever steps I can to investigate the matter myself and, if necessary, institute legal proceedings."

Principal Hinman referred the letter to School Supt. W. B. Fitzsimmons, who appealed to Sen. Paul J. Fannin (R., Ariz.).

"This is both incredible and awesome," remarked Fannin. "Here we have an OEO staff member who apparently thinks that loyalty to one's country is a 'disputed issue.'"

He fired off a letter Dec. 8 to Donald Rumsfeld, OEO director, suggesting that he inquire into "the continued usefulness of Mr. Elrick in this or any other program in which he is paid by tax money."

Such incidents, he noted, had caused the Senate to approve an amendment to the OEO authorization bill, sponsored by Sen. George Murphy (R., Cal.), giving governors of states control over legal programs for the poor. The House balked and the amendment died in conference.

Rumsfeld, who has been very busy fighting for the life of his agency, hasn't yet replied, but Fannin is confident that the former Illinois congressman will join him in agreement that the teaching of loyalty to the United States is not taboo in American schools.

Mr. SCHERLE. Will the gentleman yield?

Mr. PERKINS. I yield to the gentleman from Iowa.

Mr. SCHERLE. Mr. Speaker, I appreciate the gentleman from Kentucky yielding.

Mr. Speaker, I want to make this statement before we proceed. Historically speaking, this OEO program has no respect whatsoever for any existing Government agency. They have shown a determination to usurp practically all the powers and rights and functions of these other offices. They are involved in almost everything and nothing is sacred. It is an ineffective, bureaucratic, bumbling, corrupt, scandal-ridden organization to the core and does more to bring alienation against all phases of government than all other departments combined.

Mr. Speaker, our office is going to keep a daily running account of the OEO just to prove that this leopard cannot change its spots.

Mr. PERKINS. Mr. Speaker, I strongly support the activities of CLEO, the Council on Legal Education Opportunity, which was established for the purpose of expanding and enhancing the opportunities to study and to practice law for members of culturally and economically disadvantaged groups. I am advised that during its 2 years of existence, the council has worked toward bringing about a significant increase in the number of law students from these groups, assisting them financially and otherwise while in law school, and increasing career opportunities for them in the legal profession. I am also advised that of the 377 students who have successfully completed the CLEO prelaw summer institutes and thereby become eligible for admission to law school, a large proportion will go on to productive roles in our society within the important profession of law.

I commend the public spirited attitude of the American Bar Association, the National Bar Association, the Association of American Law Schools, and the Law School Admission Test Council, which have cooperated in sponsoring CLEO's activities. And I congratulate the Office of Legal Services of the Office of Economic Opportunity for its role in developing and supporting this worthwhile project. A large part of the council's program—including recruitment, administration, and the summer prelaw institutes—is supported by an annual grant from that Office. In addition, financial assistance to law students has been made possible by grants from the Ford Foundation, the Rockefeller Bros. Fund, the American Bar Endowment, and several other private sources. The law schools have also entered into this significant team effort through providing tuition and fees by scholarships or loan.

CLEO deserves the praise it has received and our continued support. This program can serve as a model for other examples of public-private cooperation to improve the economic and cultural opportunities available to the disadvantaged of our country.

I have no further requests for time, and I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the conference report.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. SCHERLE. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 243, nays 94, not voting 96, as follows:

[Roll No. 347]

Derwinski		

So the conference report was agreed to.

The Clerk announced the following pairs:

On this vote:

Mr. Moss for, with Mr. Hébert against.

Mr. Boland for, with Mr. Andrews of Alabama against.

Mr. Addabbo for, with Mr. Bevill against.

Mr. Farbstein for, with Mr. Montgomery against.

Mr. Kluczynski for, with Mr. O'Neal of Georgia against.

Mr. Rostenkowski for, with Mr. Collier against.

Mr. Brasco for, with Mr. Sikes against.

Mr. Widnall for, with Mr. Baring against.

Mr. Saylor for, with Mr. Ashbrook against.

Mr. Sandman for, with Mr. Berry against.

Mr. Morse for, with Mr. Bray against.

Mr. Burton of Utah for, with Mr. Zion against.

Mr. Cahill for, with Mr. Watson against.

Mr. Cowger for, with Mr. Hall against.

Mrs. Heckler of Massachusetts for, with Mr. Snyder against.

Mr. Wydler for, with Mr. Smith of California against.

Mr. Cunningham for, with Mr. Lipscomb against.

Mr. Findley for, with Mr. Latta against.

Mr. Minshall for, with Mr. Martin against.

Mr. Watkins for, with Mr. Michel against.

Mr. Lukens for, with Mr. Quillen against.

Mr. Fallon for, with Mr. Clancy against.

Mr. Hastings for, with Mr. Collins against.

Mr. Evins of Tennessee for, with Mr. Derwinski against.

Mr. Celler for, with Mr. Goldwater against.

Mr. Hays for, with Mr. Kleppe against.

Mr. Harrington for, with Mr. Reifel against.

Mr. Dent for, with Mr. Brock against.

Mr. William D. Ford for, with Mr. Byrnes of Wisconsin against.

Until further notice:

Mr. Abbitt with Mr. Hull.

Mr. Bingham with Mr. Clay.

Mr. Blatnik with Mr. Carey.

Mr. Pepper with Mr. Stephens.

Mr. Clark with Mr. Daniels of New Jersey.

Mr. Edwards of California with Mrs. Chisholm.

Mr. Stokes with Mr. Corman.

Mr. Downing with Mr. Fascell.

Mr. Vanik with Mr. Conyers.

Mr. Feighan with Mr. Miller of California.

Mr. Diggs with Mr. Rees.

Mrs. Green of Oregon with Mr. Fisher.

Mrs. Griffiths with Mr. Purcell.

Mr. Sisk with Mr. St Germain.

Mr. Kirwan with Mr. Powell.

Mr. Gallagher with Mr. Fulton of Tennessee.

Mr. Tunney with Mr. Dawson.

Mrs. Sullivan with Mr. Eckhardt.

Mr. LUJAN changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

FURTHER MESSAGE FROM THE SENATE

A further message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 1075) entitled "An act to establish a national policy for the environment; to authorize studies, surveys, and research relating to ecological systems, natural resources, and the quality of the human environment; and to establish a Board of Environmental Quality Advisers."

The message also announced that the Senate had passed a concurrent resolution of the following title, in which the concurrence of the House is requested:

S. Con. Res. 51. Concurrent resolution to authorize the Secretary of the Senate to make a technical correction in the enrollment of the bill (S. 3016) to provide for the continuation of programs authorized under the Economic Opportunity Act of 1964, to authorize advance funding of such programs, and for other purposes.

PERSONAL ANNOUNCEMENT

Mr. WINN. Mr. Speaker, on rollcall No. 320, I was necessarily absent and not recorded.

I ask unanimous consent that the RECORD show that had I been present and voting I would have voted "nay."

The SPEAKER. Is there objection to the request of the gentleman from Kansas?

There was no objection.

ENROLLMENT OF S. 3016, ECONOMIC OPPORTUNITY AMENDMENTS OF 1969

Mr. PERKINS. Mr. Speaker, I ask unanimous consent for the immediate consideration of the Senate concurrent resolution (S. Con. Res. 51).

The Clerk read the Senate concurrent resolution, as follows:

S. CON. RES. 51

Resolved by the Senate (the House of Representatives concurring), That the Secretary of the Senate, in the enrollment of the bill (S. 3016) to provide for the continuation of programs authorized under the Economic Opportunity Act of 1964, to authorize ad-

vance funding of such programs, and for other purposes, is hereby authorized and directed to make the following correction:

In section 114 strike out "section 620(d)" and insert "section 602(d)".

SEC. 2. That the Senate recede and concur in the House amendment to the title of S. 3016.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

Mr. QUIE. Mr. Speaker, reserving the right to object, I would like to ask the gentleman from Kentucky if he would explain the change that he has discussed.

Mr. PERKINS. Mr. Speaker, as I understand it, the concurrent resolution is to correct certain typographical errors, and also a decision is made as to which title is to be used, whether the Senate title or the House title is to be used. That is all the concurrent resolutior. consists of.

Mr. QUIE. Mr. Speaker, I withdraw my reservation of objection.

(Mr. QUIE asked and was given permission to revise and extend his remarks at this point in the RECORD.)

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

The Senate concurrent resolution was concurred in.

A motion to reconsider was laid on the table.

PERSONAL EXPLANATION

Mr. FEIGHAN. Mr. Speaker, I would like the RECORD to show that I was called to the telephone, but had I been present, I would have voted "yea" on the last vote, on the OEO conference report.

GENERAL LEAVE

Mr. PERKINS. Mr. Speaker, I ask unanimous consent that all Members may have 2 legislative days in which to revise and extend their remarks on the OEO conference report.

The SPEAKER. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

HOUR OF MEETING ON MONDAY, DECEMBER 22

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that when the House adjourns today, it adjourn to meet at 10:30 o'clock a.m. on Monday next, December 22.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

ANNOUNCEMENT OF ORDER OF BUSINESS

(Mr. ALBERT asked and was given permission to address the House for 1 minute.)

Mr. ALBERT. Mr. Speaker, we still have undisposed of some five conference reports. Under the present plans, we will take up the Labor-HEW report first on Monday, and the gentleman from Arkansas (Mr. MILLS) has advised me he will call up the conference report on the tax bill not later than 2 o'clock on Monday afternoon.

Mr. Speaker, I submit that for the information of the Members of the House.

DEAN RUSK AS PROFESSOR OF INTERNATIONAL LAW

(Mr. PUCINSKI asked and was given permission to address the House for 1 minute.)

Mr. PUCINSKI. Mr. Speaker, I was deeply concerned to read earlier today an AP dispatch from Atlanta, Ga., that the appointment of Dean Rusk as a professor of international law at the University of Georgia may run into a conflict with the Georgia Board of Regents.

Mr. Rusk has been offered a position as professor of international law at this school, and apparently some of the regents are questioning the appointment.

AP says a split could be expected when the formal vote is asked some time in January.

Mr. Speaker, Dean Rusk is one of the truly great statesmen of our time. I cannot imagine that anyone, anywhere, would oppose his appointment as a member of a university faculty.

Dean Rusk is one of the truly great international minds of our time. When the final chapter of freedom's triumph over communism is written, Mr. Rusk's name will be emblazoned in glorious letters as one of the chief architects of that victory. He is one man who over the years understood the full depth and menace of international communism.

Time and again as U.S. Secretary of State, Dean Rusk has shown courage beyond description, simply because he believed in a cause.

There were many times when he could have compromised with principle.

I would hope that a highly respected institution like the University of Georgia could certainly set aside any prejudices as to his personal political views, or of those who think perhaps he is too liberal in one respect or another, and welcome him to that impressive university as one of the great statesmen of our time.

I would think that every university of this country would give its eye teeth to add this distinguished American and great patriot to its faculty.

For that reason, I hope the board of regents would unanimously welcome this great son of Georgia to the university. He would be an impressive addition to any faculty, whether in Georgia or anywhere else in the world.

We as Americans can thank the Lord that we had a man of Dean Rusk's stature, wisdom, knowledge, perseverance, integrity, intellectual honesty, patriotism, and dedication as Secretary of State during one of the most turbulent periods of our history. I would think Georgia University ought to lock up the contract with no delay before some other great institution of learning steals him away.

SCANDAL AT SBA—XI

The SPEAKER. Under a previous order of the House, the gentleman from Texas (Mr. GONZALEZ) is recognized for 10 minutes.

Mr. GONZALEZ. Mr. Speaker, last April 28 I had the duty to report to this House a scandal at the Small Business Administration. I had evidence that the special assistant to the Administrator of the SBA had participated or attempted to participate in shakedowns of prospective applicants for SBA loans. At the time I asked the Administrator to undertake an immediate investigation and to suspend his special assistant, Mr. Albert Fuentes, pending the outcome of the investigation.

Administrator Sandoval, for reasons best known to himself, merely replied that he was asking the Department of Justice to investigate, but in the meanwhile Fuentes would remain on the job. As evidence continued to mount in the case, the Administrator continued to refuse to suspend the special assistant, whether out of some personal loyalty, or partisan myopia I cannot tell. Finally, after a series of events that can only be called tragicomedy, Administrator Sandovial dismissed the man, and a few days later, Fuentes was indicted on charges of conspiracy.

Albert Fuentes has now been convicted of conspiracy, and along with a confederate, one Eddie Montez, sentenced to 2-5-year terms in prison. It is the end of a sorry tale.

I did not make my charges lightly, for I do not take lightly my responsibilities as a legislator. I did not expect the matter to receive the cavalier treatment that it did from Administrator Sandoval.

Even though the case of Albert Fuentes is closed, the scandal at SBA is not over. There are questions that remain to be answered.

For example, it is a serious reflection on Administrator Sandoval that he accepted uncritically the claims of Albert Fuentes that he, Fuentes, was a vastly successful businessman when in fact Fuentes' financial statement was filled with deceit and perjury. It is a mystery to me how the Administrator allowed himself to be conned and gulled by a man so unskilled that he could not fool or intimidate a very poor, very small businessman. Yet it is a fact that this man Fuentes, who was unmasked by the most humble of men, moved about freely and had the full confidence of a man responsible for the operation of a large and very sensitive agency. Surely Mr. Sandoval must have known Fuentes well, or he would have never made the man his special assistant. Or did he? Either way Mr. Sandoval has much to answer for. The silence from his office has been deafening.

In the course of the Fuentes trial statements were made in press accounts that lead me to believe that there may still be serious deficiencies, and possible malpractices in the SBA in the San Antonio region. I am accordingly obtaining a copy of the trial transcript for further study, and will make such further investigations as may be necessary.

I intend to see what can be done to get SBA to function as it ought to. An agency that a year ago was filled with promise is now going forward on blind inertia, and that is shameful. Programs that were beginning to show real promise now

lie crippled and useless. An agency that formerly had good leadership and excellent ideas is now freighted with political appointees of dubious quality and little merit.

Political payoffs may belong to the victor, but it is the responsibility of the President to govern. I pray that what I have seen at SBA is not an example of that government.

THE THREAT TO OUR ENVIRONMENT

The SPEAKER. Under a previous order of the House, the gentleman from Indiana (Mr. HAMILTON) is recognized for 60 minutes.

Mr. HAMILTON. Mr. Speaker, surely one of the most crucial and complex issues facing the American people today is how we can restrain the headlong destruction and fouling of our environment.

The Department of the Interior has a pamphlet entitled, "Man: An Endangered Species?" It pictures man standing at a fork on his environmental road. One signpost reads, "Man, Master of Himself," and the other signpost reads, "Man—An Extinct Species."

The direction man chooses now will move him rapidly along the path toward one or the other destination.

No graver mistake could be made than to think that man, because of his own wit and wisdom, is immune from taking the path toward extinction. A formidable case can be built showing that he is rushing headlong in that direction—corrupting and destroying his lands, rivers, forests, and the atmosphere itself.

The other path open to man we know to be expensive and demanding, but its promise is clear rivers, tall forests, and clean air.

AWAKENING CONCERN FOR ENVIRONMENT

One of the heartening signs of American life today is the really fantastic acceleration in the awareness in this country of the dangers to the quality of our environment.

We have in recent years produced a cascade of legislation, and, as a nation, we have made a legal commitment to clean up our water and air. We have added millions of acres to our national park system, expanded our wildlife refuge system, and established scenic rivers and trails.

I believe that the American people are ahead of the politicians on this issue of pollution. Those of us in public life have not adequately, or accurately, assessed their mood. They understand better than we the pace at which pollution is advancing and they are not disturbed greatly by the philosophical niceties of political debate concerning whose responsibility—Federal, State, or local—it is to clean it up. They want us to get on with the job quickly and effectively. They are willing to foot the bill for the costs of it.

Rising concern about the environmental crisis is sweeping the Nation's campuses; the "green power movement" is vying with Vietnam as the student's primary consideration.

We all know the increased activity by State and local governments in pollution control. The private sector, as well, is acting; many industries are spending large sums of money to assure us that they are good, cooperative citizens.

Members of the Congress are finding that an increasing amount of their time is given to the environment of their districts and the problems of pollution control throughout the Nation.

The evidence is clearly mounting that this Nation is stirring itself about pollution control. We are beginning to understand that America's resources are not limitless and that they have to be wisely used. Men like George Perkins Marsh and Carl Shurz, who were among the first to sound the alarm to conserve, are becoming national heroes.

Our appreciation is growing for President Theodore Roosevelt with his great interest in the outdoors and his concern to preserve the grandeur of the West.

He said:

> To skin and exhaust the land, instead of using it as to increase its usefulness, will result in undermining, in the days of our children, the very prosperity which we ought by right to hand down to them amplified and developed.

The American people are beginning to see what can happen to a big country when unplanned growth and exploitation go on. We remember the decade of the 1930's when, in the Great Plains States, thousands of acres of soil which had been stripped of natural grass simply dried up and blew away when the drought came. Soil blew all the way to Washington, D.C., as the dust buried farms in the plains.

We remember the Mississippi fish kill, the death dealing smog in Donora, Pa., in the 1940's, and we are seeing clearly the current byproducts of affluence and technological progress like congestion, pollution, water shortage and all the rest.

Chilling estimates of the threat to our environment shake us out of inertia and complacency. U Thant, the United Nations Secretary General, estimates, for example, that the world has 10 years in which to avoid destruction by improving the environment.

We are beginning to see that man is indeed an endangered species. There is greater awareness that our ecological system is a closed one with all of its elements—land, water, and air—interrelated. The ruination of the land is not an isolated incident. It affects the water we drink and the air we breathe. It upsets the delicate chemical and climatic balances upon which we depend.

SOME FRIGHTENING STATISTICS THE URGENCY OF THE CRISIS

The evidence is conclusive that this awakening concern for the environment comes none too soon.

Consider some of the general statistics:

First, water: Today every river system in America suffers from some degree of pollution. Industrial discharges, both treated and untreated, into our rivers and streams equal the raw sewage from almost 170 million people. The sources of usable water are running out.

The Interior Department reports that more than 15 million fish were killed last year by municipal and industrial wastes, which totaled over 18 billion gallons. By 1975, a growing population and increasing urbanization rate will require from $30 to $50 billion for municipal sewerage systems, industrial waste treatment facilities, separation of combined storm and sanitary sewers, and for research and development of pollution control methods.

Rivers and lakes receive great quantities of industrial chemicals, debris, pollutants, and oil and these things kill fish and pose hazards to human and animal life.

In the Great Lakes, many recreation and swimming areas have been closed because the water is unsafe for human beings. Lake Erie is practically a dead body of water—its oxygen content is approaching zero. Over 3 million tons of debris and filth pour into it every day. Some of our best fresh water fish have almost become extinct.

The sign, "Polluted Water, No Swimming," has become all too familiar on the beaches and rivers of this Nation. One recent study indicated that about 30 percent of the Nation's public drinking and water systems may fall below Federal standards. Sometimes there is too much water, sometimes too little, sometimes it is too dirty to use. But the basic problem is that we do not manage properly the water resources we have.

Second, air: Air pollution thickens our skies, offends our senses, obscures our visibility, costs us money, destroys plants and property, sickens and kills people—and it is getting worse.

Industrial chimneys in the United States belch 37 million tons of sulfur dioxide every year. Over 90 million autos add 66 million tons of carbon monoxide. Electrical incinerators produce another 5 million tons to help foul the air. These gases kill or stunt plants, affect human nerves—causing irritation and decreased normal brain function, damage buildings and personal property, and leave a depressing, sometimes even fatal, pall over the urban landscape.

Since 1860, the carbon dioxide content of the atmosphere has increased 14 percent, thus reducing oxygen regeneration and adversely affecting the process of photosynthesis whereby all plants require oxygen and sunlight to grow. A recent analysis shows that simply by walking the streets of the New York City for a day, a person would breathe in the toxic equivalent of close to two packs of cigarettes.

According to John Gardner, former Secretary of Health, Education, and Welfare:

> There is not a major metropolitan area in the United States without an air pollution problem today, and the problem is getting worse. By 1980, this nation's urban population will increase by a third, the number of motor vehicles by 40 percent, and our demands for energy by 50 percent.

Third, solid wastes: we are surrounded by junk, and we do not know what to do with it.

This Nation produces and discards each day millions of tons of garbage, rubbish, automobile hulks, abandoned refrigerators, slaughterhouse refuse. Each year this waste is enough to fill the Panama Canal four times over. It mars

the landscape, breeds disease-carrying insects and rodents, and much of it finds its way into our air and water.

In my hometown, the city of Columbus, Ind.—a town of only 28,000 people—it is estimated that 130 tons of solid wastes have to be disposed of each day.

The U.S. consumer actually consumes very little. He merely uses things and he never really disposes of them. They survive in some form. A good example is the nearly indestructible aluminum can, produced in the United States at an annual rate of 48 billion. The rate for bottles and jars is 28 billion per year.

By the year 2000, 270 million Americans will live in urban environments. As it is, 70 percent of the population lives on 2 percent of the land. When coupled with the fact that the average American's annual output of 1,800 pounds of solid waste—5 pounds a day—is rising 4 percent a year, the outlook for waste is bleak. Disposal already costs us $4.5 billion a year.

It is no wonder then that we stand at a critical juncture in the fight against pollution. The crisis is upon us. As Representative MORRIS UDALL says:

> In the pursuit of progress man has put strontium ninety in his bones, iodine 131 in his thyroid, DDT in his fat, and asbestos in his lungs. That kind of progress can kill us.

So we come to a new year and find ponds and lakes polluted, air filled with dirt, and solid waste piled high.

They are part of the wreckage and debris of the march of "progress." This should not be the legacy of our great technology.

The Environmental Pollution Panel of the President's Science Advisory Commission wrote in 1965:

> Pollution touches us all; we are at the same time polluters and sufferers from pollution. Today pollution adversely affects the quality of our lives. In the future, it may affect their duration.

THE CAUSES OF POLLUTION

Why have these things come about? Why do we now find ourselves with our health threatened and our lives at stake?

Pollution of the environment is a complex phenomenon and, as might be expected, the causes are many. They are rooted in the attitudes of the American people.

We have had a country richly blessed and we saw no need to conserve it. The vastness of our resources and the open spaces in this land made planning unnecessary, or so it seemed.

Although there have been prophetic voices of warning—for instance, Washington and Jefferson warned against soil erosion—to most of us the land seemed unlimited.

The farmers who were ruined by soil damage could abandon their gullies, and move inland. There was always more land available.

When the saws ripped through the giant trees, there was not much concern because there was an abundance of these giants in the forests.

When we stripped the land, devastating beautiful forests, it did not really matter because there were acres of beautiful land left.

When the cities sprawled scores of miles into the surrounding countryside, it did not alarm us—there was lots of open space left.

And when the factories belched clouds of black smoke into the air, that did not bother us either, because the big sky could absorb it.

We pride ourselves on individualism—but individualism can make planning and cooperation more difficult, because the private interest is raised above the public welfare.

Sheer carelessness causes much pollution. A 10-year-old boy throws a tinfoil chewing gum wrapper or tin can into a stream, and it seems such a natural and innocent act. Everybody thinks that his little bit of waste in this vast country just will not create any problems. But in a country with a population of 200 million, one man's small disregard for the health of our environment is multiplied a millionfold.

We must realize that we are all polluters, and an effort to find someone else to blame only delays a solution. The average American simply does not recognize his own culpability as he continues to treat air and water as something to be used, abused, and wasted.

The affluent technology means increased waste. We have always thought that pollution was the price of progress, but now, as many of the experts point out, the opposite is true and unless we stop pollution, it will stop our progress.

For too long we have worshipped economic growth without qualification. But it is not enough to grow. As Senator AIKEN of Vermont says, "We must grow right."

So it is not very hard to understand why we are in trouble in pollution control. It is no great compliment to us as a people but at least it is understandable. And the important thing is that there is the time and the opportunity to do something about it.

A CLOSER LOOK

To grasp the magnitude of the challenge before us, a closer look is in order at the sources and effects of the pollution, the efforts to limit it, the problems encountered, the solutions proposed, and the outlook.

I. AIR POLLUTION

A. SOURCES

The sources of air pollution are essentially two: automobiles and industry. More than half of the contamination in the air over the United States consists of carbon monoxide, most of it issuing from cars, trucks, and buses. More than a tenth of air polution is hydrocarbons, most of which emanate from auto exhausts as partially burned gaseous compounds.

The second most plentiful gas pollutant is composed of oxides of sulfur, produced by home and factory combustion of sulfur-containing coal and oil.

In 1967, these and other sources hurled 133 million tons of contaminates into the atmosphere. In 1969, the annual rate is 142 million tons—more than our annual production of steel. The increase comes from more people, more autos, more industry, more refuse disposal and largely inadequate control activities. A single four-engine jet expels 88 pounds of pollutants during each takeoff.

This pollution is the direct result of affluence.

We are proud of the 90 million automobiles on the roads of America. We do not think about these cars adding 66 million tons of carbon monoxide, 1 million tons of sulfuroxide, 6 million tons of nitrogenoxide, 12 million tons of hydrocarbons and 1 million tons of particulates annually to the air we breathe.

We are proud of our capacity to produce great amounts of electricity to power this Nation. To do so we annually put into the air more than a million tons of carbon monoxide, 12 million tons of sulfurdioxide, 3 million tons of nitrogenoxide, over 1 ton of hydrocarbons, and 3 million tons of particulate matter due to incomplete combustion.

We are proud of our disposable packaging—metal, paper, glass, plastics. So each of us throws away 1,800 pounds of trash annually which in turn is burned in municipal incinerators, adding a million or more tons each of carbon monoxide, sulfuroxide, nitrogenoxide, hydrocarbons, and particulate matter to the air.

We are proud of the productivity of the American economy and of the major industries like pulp and paper mills, iron and steel complexes, petroleum refineries, smelters, inorganic and organic chemical manufacturers. But each year these plants release into the atmosphere 2 million tons of carbon monoxide, 9 million tons of sulfuroxide, 2 million tons of nitrogenoxide, 4 million tons of hydrocarbons, and 6 million tons of particulates.

We are also proud of individual homeownership in America, but family home construction results in the installation of millions of small furnaces and incinerators that are designed without any thought of air pollution control.

B. EFFECTS

> Tomorrow morning when you get up, take a nice deep breath. It'll make you feel rotten—

Thus read a recent New York City newspaper ad. Although it may strike us as humorous, the ad was in deadly earnest.

We are not merely dealing with a suffocating haze that offends our senses, soils our laundry, damages our buildings and crops, and corrodes metal.

We are dealing with a killer. People become sick and die from breathing dirty air.

Some complain that pollution soils the paint on their homes and interferes with their ornamental shrubbery.

Some complain that they are tired of brushing soot off the sill every time they open the window for a breath of fresh air.

Some want to end pollution because their citrus groves will not flourish or their cattle will not develop properly in a contaminated atmosphere.

Some—the city planners, airline pilots, farmers, manufacturers—want to end pollution because it interferes with the proper performance of their profession.

Many want to end pollution just because they do not like the smell of it and because the esthetic pleasures of the mountains and the forests cannot be enjoyed.

All of these people have good reason for wanting to stop air pollution, but the

primary reason for controlling it is because it threatens human health.

For example, there have been dramatic instances when air pollution has overtaken both large and small communities.

In December 1930, the thick and stagnant fog enveloped the Meuse Valley in Belgium. Many persons developed throat irritations, coughs, breathlessness, some became nauseated; some died.

In October 1948 a similar fog blanketed the small industrial town of Donora, Pa. Before the afternoon rain cleared the fog away 4 days later, 6,000 persons of the town's 14,000 had come down with an assortment of ills, coughs, sore throats, chest constrictions, headaches, burning sensations, nasal discharge, and vomiting. Twenty persons died.

In December 1952 the city of London had a similar experience causing 4,000 deaths during a 7-day period. Similar episodes occurred again in London in 1962 and in New York City in 1953 and again in 1962.

The occasional air pollution disasters are alarming enough, but to those who live in polluted air, and that includes most of us, the long-term effects of air pollution are more serious.

These include the ills and diseases of the broncial tree from the common cold to lung cancer. Emphysema is the fastest growing cause of death, and studies have demonstrated that emphysema patients improve sharply when they are protected from air pollution.

In Great Britain the mortality rate from chronic bronchitis varies directly with the amount of air pollution. Chronic constrictive ventilatory disease is aggravated by pollution; so is bronchial asthma.

Air pollution is even connected to the common cold. Study after study has shown that the levels of air polution correlate directly with increased frequency of acute infections of the upper respiratory tract.

Deaths from lung cancer have been increasing rapidly in recent years and, while many factors are involved, the striking difference between the urban and rural mortality rate for lung cancer points sharply to one of them—air pollution, the levels of which are directly proportional to city size.

But threat to human health is not the only effect of pollution:

First. Air pollution obscures visibility. It is a definite hazard to air, land, and water transportation.

Second. Air pollution attacks materials, and they tarnish, corrode, crack, weaken and discolor.

Women in more than one U.S. city experience the sulfur pollution problem when they develop runs in their nylons while out to walk for lunch.

Sulfur pollution attacks stone statuary and buildings. Cleopatra's needle has deteriorated more since its arrival in New York City in 1881 than it did during the more than 3,000 years it spent in Egypt.

Third. Electrical equipment manufacturers are forced sometimes to use gold for electrical contacts because other metals such as silver corrode in sulfur atmospheres, and the corroded metal resists the passage of electrical current.

Fourth. Air pollution injures and kills plants. Orchids cannot be raised in the metropolitan areas of California, and the growers have had to relocate. In the Garden State, New Jersey, pollution injures the vegetation and damage has been reported to at least 13 commercial crops, including spinach, beets, and others.

The most dramatic destruction of vegetation by air pollution takes place in the vicinity of smelters which discharge large amounts of sulfur pollution in the atmosphere and devastate the countryside.

Fifth. Air pollution hits us squarely in the pocketbook.

We usually are unaware of the money losses chargeable to air pollution and the enormous waste of fuel and sacrifices of efficiency associated with it. Whenever we see that dense black smoke coming from the exhaust pipe of a motor vehicle it is evidence of incomplete combustion and waste.

The annual cost to the Nation in wasted fuel runs into the billions of dollars. Agricultural losses probably exceed $500 million a year. Exact data are not available on the total cost of air pollution in damage to property, but various estimates have been made. The one most frequently cited is $65 per capita per year, or an annual cost to the Nation of over $12 billion. In New York City air pollution adds about $600 per year in washing, cleaning, repairing, repainting bills to the budget of a family of four.

C. GOVERNMENT ACTIVITIES

The Department of Health, Education, and Welfare first authorized an air pollution control program in 1955. The legislation in that year called on the States and local governments to assume the basic responsibility for preventing air pollution. It authorized the Department to conduct research and to provide technical support.

Between 1955 and 1963 it was obvious that the efforts being made to deal with the problem were obsolete and inadequate. This led to the Clean Air Act of 1963 which reaffirmed the policy of State and local responsibility, while authorizing HEW to undertake many new activities in support of State and local efforts. Federal grants resulted in an unprecedented 65-percent expansion in 33 State-controlled programs. Federal abatement actions were initiated, and expanded research efforts got underway.

There were stirrings on other fronts, too, as industry began to think seriously about the problem. As a result, air pollution received more scientific attention.

The amendments to the act in 1965 authorized national standards for the control of motor vehicle pollution in the 1968 model year. The 1966 amendments authorized increased grants to State and local units to maintain air pollution control programs.

In 1967 the Air Quality Act provided a blueprint for a systematic effort to deal with air pollution problems on a regional basis. It calls for coordinated action at all levels of government, with the Federal Government assuming an advisory role in the establishment and publication of strict air quality criteria.

Under the provisions of this act, HEW defines the broad atmospheric areas of the Nation and designates specific air quality control regions. There are currently 57 air quality control regions in operation, including one in Indianapolis, under the supervision of the National Air Pollution Control Administration—NAPCA—at HEW. The Department also develops and publishes air pollution criteria, indicating the extent to which air pollution is harmful to health and damaging to property, and provides detailed cost-effectiveness information on the techniques for preventing and controlling this pollution.

As soon as the criteria and information are available, the States are expected to develop air quality standards and implementation plans, which are coordinated on a regional basis.

If the Secretary of Health, Education, and Welfare finds that the air quality standards and implementation plans are consistent with the provisions of the Air Quality Act, then these standards and plans will take effect. If the States fail to establish the standards, or if they are not consistent with the act, the Secretary can initiate actions to insure that appropriate actions are set.

In brief, the Air Quality Act of 1967 does these things:

First, it expands and improves research programs;

Second, it provides for planning and control programs on a regional basis;

Third, it requires the establishment of standards and enforcement plans by the States;

Fourth, it establishes a Presidential Air Quality Advisory Board;

Fifth, it requires registration of fuel additives; and

Sixth, it provides for a study of national emission standards for jet aircraft.

According to NAPCA, the total amount of funds budgeted from all sources for fiscal year 1970 to finance the 200 relevant regional, State, and local air pollution control agencies is $47 million. It was only $12 million prior to the Clean Air Act of 1963. Some $20.5 million of this total, however, are Federal funds—indicating a definite lack of adequate local concern and support. Private industry has spent, to date, an estimated $900 million on control techniques, but this is a small figure considering the need.

D. SOLUTIONS

Although we must be alert to the need for additional legislation, the Department of Health, Education, and Welfare feels that the present legislation is sufficient to achieve the degree of air quality sought, provided it is fully funded and the States cooperate. The primary concern now is to encourage the States to provide funds to finance control activities and to take other necessary restrictive steps. Perhaps the President's revenue-sharing plan—which is to provide States with Federal income tax revenues to use at their own discretion—would be of assistance to State and local control agencies. At the local funding level, of the 7,300 communities—as of 1966—with air pollution, less than 20 came close to the per capita expenditure rate of only 35 cents considered a minimum for effective abatemnet and control.

Funding at higher levels is not going to solve the whole problem, however.

As has been indicated, future legislation is tied to the state of the art of pollution control and to the willingness of the States to carry their essential part of the burden. There are many areas of the law where procrastination by the States could delay effective action for years. Some latitude and freedom is necessary to give the States time to actn o their own, with Federal encouragement and support. However, their past record of performance is not encouraging—although it has become more encouraging in recent months—and it is possible that stiffer legislation may be necessary, especially in policing interstate pollution.

Air pollution abatement is going to require a search for alternatives as well. Controlling it might require community decision to invest in mass transportation facilities rather than new highways or a decision to call for the dispersal of factories and plants which spill contaminates into the air, or the use of new types of fuel and new sources of power. Modern civilization would collapse if we were to stop all the activities that contribute to air pollution, but with every advance more attention must be given to its impact on pollution levels.

We need to develop pollution-free alternative sources of power. This means that we look at the electric car, the turbine car and other means of propulsion, as well as other ways of moving large numbers of people around. The convenience of the private automobile may have to be sacrificed in order to insure our future survival.

We have to move rapidly forward in research. There is much we just do not know. Of the three most important aspects of the national air pollution problem—motor vehicle pollution, sulfur oxide pollution from fuel combustion, and nitrogen oxide pollution—only motor vehicle pollution is subject to widely applicable control techniques now available.

As important as it is to expand research and to improve our pollution control efforts, it is even more important to put to work now the techniques and practices we have already developed. As we do, we will find better and cheaper ways to curb pollution.

A stronger Federal-State-local partnership is also obviously needed. In this there are many questions that need to be asked and answered, including: the appropriate responsibility of each partner, how adjoining States and communities can iron out intricate political and social problems to attack a common problem, and the proper place and limitations of Federal incentives to develop air pollution programs.

Above all else, effective pollution control will not occur until there is developed a widespread public attitude on the necessity for aggressive action to clean the air.

E. PROGNOSIS

The prognosis allows us no optimism. As Gladwin Hill said recently in a New York Times article:

> As America's air becomes steadily more contaminated, activities across the nation to cope with smog appear to be lagging further behind actual needs.

There are some heartening signs of concern on the part of enlightened business leaders, who are responsive to the problems of air pollution control, and people in all sections of the country are more aware than ever before of air pollution. But there is also an abundance of public inertia and outright obstruction. States and localities have penalties for air pollution that are little more than wrist slaps—with fines as low as $10.

Some say we are actually losing ground in the fight against pollution. Smog grows dense even as we talk about it.

Some scientists say that if we reach the point at which the rate of combustion exceeds the rate of photosynthesis—oxygen production—we shall start running out of oxygen. Then, it will be too late. We will have made our choice. There is clearly no room for complacency.

II. WATER POLLUTION

A. SOURCES

The principal sources of water pollution are:

First, municipal sewage: One third of the 19,200 communities with municipal water systems fail to meet existing Public Health Service standards, which generally are not stringent enough and, in some cases, meaningless from the standpoint of pollution control. More than 1,300 communities discharge their wastes into the waters without any treatment; an equal number use only primary treatment, which removes only 30 to 40 percent of the pollutants. Secondary treatment removes 85 to 95 percent of the pollutants.

Second. Industrial pollution is twice as big a problem as municipal sewage. The treated and untreated industrial wastes discharged into our waters are equal to the untreated sewage of 165 million people. Industrial effluents are not now effectively regulated, and industry itself has not responded adequately to the needs of pollution control. A major steel manufacturing complex, supposedly a showcase for control efforts, still contributes 10 percent of the total wastes flowing into Lake Erie.

Third. Septic tanks overflow into natural watercourses, leak bacteria into wells, and seep into lakes, causing algae and other nutrients to pollute the water.

Fourth, ships and marine terminals: The discharge of toilet wastes, oil, garbage, and rubbish from ships and marine installations is a major problem, and one which is as yet largely unregulated.

Fifth, pesticides: In 1966, 700 million pounds of pesticides and agricultural chemicals were used, including 45,000 different varieties. Much of it eventually finds its way into the Nation's streams and lakes. The 1966 volume is expected to increase tenfold by 1986. The recently announced Federal ban on all but essential uses of the pesticide DDT within the next few years is a necessary step in the right direction.

Sixth. Silt washes into waters from land erosion and runoff. Agricultural soil erosion by wind and water costs us $1 billion annually. The results of erosion are sometimes gradual, sometimes quite swift. In either case they are usually devastating and even irreparable. In areas undergoing urbanization, unregulated construction work can cause erosion to increase at a hundred times the normal rate.

Seventh. Detergents and fertilizers often pass through even secondary waste treatment, and are a major source of phosphate pollution. Phosphate fertilizes vegetation in the water, leading to increased eutrophication. This is reflected in a deficiency of oxygen in the water and eventually an end to animal and plant life.

Eighth, atomic reactors: Their siting, construction, and operation can have immensely detrimental environmental effects, regardless of their beneficial quality in terms of energy generation. Damage and destruction of marine plant and wildlife caused by their discharges—atomic wastes thought harmless and the "hot" water used to cool the reactor—are feared to be extensive. Thermal pollution is a new and alarming form of pollution. Much further research needs to be done in this area before reactor construction is allowed to proceed.

The effects of these and other pollutants on our water resources are enormous and far reaching. As Congressman CHET HOLIFIELD has said:

> The environmental shadow on the wall is no larger than a man's hand. It can grow to catastrophic size.

B. EFFECTS

Water pollution affects human health, bringing disease and death. It can interrupt and upset the delicate and dynamic processess of nature—for example, changing the reproductive rates of birds and fish—and can impair water and soil resources. These effects of water pollution are complicated and seldom well understood.

Polluted water, like polluted air, is becoming a pervasive and perverse symbol of 20th-century progress. Water pollution can be seen in practically every body of water; it can be smelled; it can be tasted when it comes from your own taps. Lakes are becoming semisolid trash heaps; rivers, like the Cuyahoga in Cleveland, are fire hazards because of floating oil.

It is ironic that man has learned to cope with most of his natural enemies but when it comes to water, he cannot cope with himself. Water is his most abused natural resource. He has polluted every major river system in the United States, and that pollution load has increased sixfold in 60 years.

The Mississippi River turns up millions of dead fish every year. The Merrimack has turned filthy brown and bubbles like soda pop. Scavenger eels in the Hudson cling to wastes and even attack sanitary engineers taking water samples. The Missouri sometimes runs red with blood from slaughterhouses, and carries gobs of animal waste as big as footballs.

From a health standpoint, by one HEW estimate, about 8 million people are drinking from municipal water systems that contain more bacteria than is regarded as "safe" under Federal standards. In one State, 30 percent of the water systems are contaminated by bacteria.

In addition to the bacteriological danger, there is the pesticidal one. It is now known that the concentration of pesticides builds up geometrically as they

progress through the food chain—water to seaweed to fish to birds to mammals and man. Residues of DDT have been discovered in Antarctic penguins, Alaskan polar bears, and in fish in the remote expanses of the Pacific. One part DDT in 1 billion parts water will kill blue crabs in 8 days.

Water pollution also produces a great excess of nutrients, primarily phosphates and nitrates, which deplete the oxygen supply available to waterplants and fish. The excess nutrients also produce growths of algae that clog waterways, smell foul, and destroy the recreational value of any affected body of water. It is estimated that, because of the rapid buildup of excess nutrients, Lake Erie has aged, biologically, 15,000 years since 1920.

The process of aging, or "eutrophication" in scientific terms, was recently described by Peter Schrag in the Saturday Review:

> All lakes grow old as they collect runoff and materials from the surrounding shores. Over thousands of years they eventually accumulate enough silt from erosion and organic materials to turn them into marshes and, finally, into dry land . . . man has accelerated that process with his wastes and sewage.

C. CURRENT GOVERNMENT ACTIVITIES

John T. Barnhill, Deputy Commissioner of the Federal Water Pollution Control Administration—FWPCA—at the Department of the Interior, has outlined a five-way sharing of responsibilities in this area, based on cooperative Federal-State-local programs.

First. The State has the primary responsibility for water pollution control. It sets quality standards and applies its laws and regulations, including enforcement. It also ascertains waste treatment requirements and provides technical assistance to local governments and industries. Certain of the States provide financial assistance in the construction of municipal treatment plants.

Second. Local governments construct, operate, and maintain their municipal treatment works, and enforce their regulations and ordinances. They may also provide technical assistance to industries.

Third. Industries are obligated to handle their own pollution. They can institute in-plant waste reductions, and must operate their own treatment works when separate from municipal works. They can also reduce pollution output through changes in the manufacturing process.

Fourth. Universities conduct research, provide consultative services, and train the manpower needed by the other sectors in the national cooperative program.

Fifth. The Federal Government plays a leadership role in control efforts, and supplements State and local programs. Among other activities, it develops comprehensive pollution control programs and coordinates these with the States and with the programs of other agencies. It carries out Federal enforcement responsibilities. And, most importantly, it makes grants to the States to strengthen and improve the programs for which they have primary responsibility, to municipalities to assist in construction costs of treatment plants, and to universities for research.

The Federal Water Pollution Control Act of 1956 established the basic Federal responsibilities in this area. The act was strengthened in the amendments of 1961, 1965—the Water Quality Act—and 1966—the Clean Water Restoration Act. Under the Water Quality Act, quality standards are to be set by each State, and if they do not, then by the Federal Government, for all of the U.S. interstate waters. The Clean Water Restoration Act provides the means with which to meet the standards, with emphasis on increased Federal participation in the construction costs of treatment works. The 1965 act provides the tools, the 1966 act the muscle, to accomplish the pollution control task.

On the three main Federal programs—setting of standards, grant programs, and research and development efforts—the grant program is the most important. Under the allocation formula of the Clean Water Restoration Act, the local share of project costs is 70 percent and the Federal share 30 percent, when the States do not contribute. But if the States provide 25 percent of the cost, the Federal share can be as much as 55 percent and the local share as low as 20 percent. Currently, only 14 States, including Indiana, have established matching fund programs which fully qualify for Federal assistance. Under the Indiana program, local project costs are divided in this manner: Federal Government, 30 percent; State government, 25 percent; and local government, 45 percent.

Since 1957, various Federal grant programs have provided more than 9,500 grants to assist in the construction of treatment works. The total cost has been about $6 billion, including Federal outlays of $1.36 billion. So each Federal dollar spent has spurred 3.5 local and State dollars to be spent. These efforts have resulted in the upgrading of waste treatment facilities for 75 million persons, and in improved waters in about 74,000 miles of waterways.

Despite these efforts, however, an extensive water pollution problem still exists, in part due to lack of Federal funds, but also due to the recalcitrance of some of the States, which have refused to establish stringent enough quality standards. Evidence of waning Federal patience on this matter is revealed by a recent action of Secretary of the Interior Hickel. For the first time, he has acted, under the authority of the Water Quality Act, to supersede the States and has required Iowa to provide secondary treatment for sewage dumped into the Mississippi and Missouri Rivers by December 31, 1973. Until this action, some States had not complied with Interior Department insistence that secondary treatment be required.

Recently the General Accounting Office reported that the Federal Government's water pollution control program had not accomplished what could have been achieved with the funds thus far used, and recommended substantial policy and procedural revisions.

D. SOLUTIONS

The General Accounting Office's report said:

> These projects have contributed to abating water pollution because the problem would have been worse if the projects had not been constructed.
>
> The benefits have not been as great as they could have been because many waste treatment facilities have been constructed on waterways where industrial or municipal polluters continued to discharge untreated or inadequately treated wastes into these waterways.
>
> The program has been administered for the most part using a shotgun approach—awarding construction grants on a first-come-first served or readiness-to-proceed basis. Little consideration has been given to the immediate benefits to be attained by the construction of individual treatment plants.
>
> This approach can no longer be justified. Grants should be awarded on a more systematic basis, giving consideration to benefits to be attained from the construction of individual treatment facilities.
>
> More consideration could be given to planning and implementing water pollution control programs on a river basin basis.
>
> The present level of Federal funding will not be sufficient to enable a significant increase in the effectiveness of the program.
>
> In view of the magnitude of the problem, and on the basis of the present level of Federal funding, it will be many years before the construction grant program is completed.
>
> The Federal Water Pollution Control Act provides that priorities for construction grants be established on the basis of financial and water pollution control needs. GAO believes that priorities should be established on the basis of benefits to be obtained and that a coordinated effort is required on the part of all polluters of a waterway to attain the maximum benefits from the construction grant program.

As with air pollution, the single most urgent need is higher funding levels for Federal programs. At least $30 to $50 billion needs to be spent in the next 5 years for new municipal treatment works, separation of combined storm, and sanitary sewers, industrial water treatment facilities, and for research and development. The response to the obvious need has been entirely inadequate. Presidents Johnson and Nixon have only requested a paltry $214 million for fiscal year 1970. Fortunately, the Congress appropriated $800 million.

The Clean Water Restoration Act authorized $3.6 billion in grants for fiscal years 1967–71 for waste treatment plant construction. Despite a $586 million increase in the fiscal year 1970 appropriation for this program—from $214 million to $800 million—however, there is still a $900 million funding gap between authorizations and appropriations.

Even with the funding increase for fiscal year 1970, the backlog of cities awaiting funds is growing constantly. Indiana currently has a backlog of some $28 million in requests for Federal assistance; the figure for the counties of the Ninth Congressional District is $2 million. Although Federal funds have increased, Indiana only appropriated State funds on the basis of the original Federal figure of $214 million, so there will be a shortfall unless an emergency appropriation is passed.

The increase in funding levels will have a twofold impact. First, it will mean the initiation of a number of heretofore postponed projects, and the concomitant elimination of the excuse used locally for not adhering to the cease and desist pollution orders issued by the State health department. It will also mean that localities will be in an improved position to meet the timetables for making necessary improvements in existing facilities, which in several instances are not operating at maximum efficiency.

If the increased funds are not allocated properly and more systematically, however, they will not be as beneficial as they could be. A systems approach that considers the benefits as well as the costs of the projects, and which takes into account actions that industrial polluters could take, would be a much more productive approach. As it is, Federal grants on a first-come-first-served basis do not consider regional needs or a national plan, and can be easily negated by other sources of pollution.

A total systems approach means a national commitment to stop, not merely impede, water pollution. A professed commitment to protect an environment that ends with a squabble over sewer taxes is no commitment at all.

If such a national commitment does not develop in an adequate and rapid fashion, it may have to be prodded a bit. Such prodding could come from two sources: effluent charges and a pay-as-you-go financing plan for treatment plants.

The rationale and system for imposing effluent charges on industry is discussed at further length in the recommendations that follow. The principle is simply this: he who pollutes must pay the cost of purification. This principle has been used to a high degree of success in the Ruhr Valley of Germany, where a ruhrverband—a cooperation society of 250 municipalities and 2,200 industries along the river—assesses fines on the polluters. The larger the amount of pollution, the higher the fine. These assessments, carefully calculated, have enabled the Verband to build 102 purification plants since 1948, and have encouraged members to follow Voltaire's advice and clean up their own backyard.

It may be that the effluent charges will be passed on to consumers in the form of higher prices. As a recent New York Times editorial pointed cut, however:

> Americans may have to resign themselves to paying a little more for the fruits of industry if they are to enjoy them in an environment still tolerable enough to let them enjoy anything at all.

The pay-as-you-go plan is designed to make long-range programs less dependent on undependable annual congressional appropriations. As described by Secretary Hickel, it is a $15 billion, 20-year plan for Federal-State-local cooperation to attack water pollution. Under it, the Federal Government would guarantee the principal costs and the local governments would guarantee the interest costs on the bonds necessary to finance municipal treatment plants. The pay-as-you-go feature amortizes the huge cost—estimated at $10 billion on sanitary sewers and $5 billion on storm sewers, an equally bad source of pollutants—making it possible to launch the program without large initial expenditures. The Federal Government would provide guidance and the capital investment, while the local communities provided the work.

A plan like this one is necessary because, in the absence of self-regulation, it may be necessary to impose regulations from above, while at the same time providing a program with which the regulations can be met.

Another solution depends upon a grassroots environment protection effort and calls for increased activity of citizen pressure groups, groups that can influence the pollution-control decisions of elected offiicials through concerted action. The recently created Long Island Environmental Council is an example of this type of effort of building a constituency for conservation.

It is not sufficient, of course, just to clean up our waters after they have been polluted. Effort must be made to find and eliminate the source of pollution. One congressional committee is now holding hearings to determine why the soap and detergent industry continues to use phosphate as a leading ingredient of household detergents.

E. PROGNOSIS

Whether or not we can control pollution is still in doubt. The metaphor still is valid: Man stands at the crossroads. He must choose now to move decisively in the direction of control of his environment.

By the year 2020, the Ohio River Valley will be withdrawing 70 percent of the estimated water supply for use; in other areas the figure is higher. This suggests the magnitude of pollution control problems. The House Appropriations Committee stated recently that projected capital outlays required for waste treatment, sanitary sewers, and water cooling needs are estimated at $20 billion for the 5-year period 1969–73.

Signs of hope are coming from several sources:

Indications of a long overdue "get-tough" policy on the part of the Federal Government are finally appearing. The Interior Department announced in October 1969, that Federal construction grants for sewage plants will henceforth be available only to municipalities that agree to provide secondary treatment for sewage. Also, the House and Senate have passed the Water Quality Improvement Act of 1969, which places an absolute monetary liability on oil firms for pollution damage from offshore drilling rigs operating beyond the 3-mile limit, and which otherwise regulates liquid and solid discharges from marine facilities, whether floating or land based.

The President's Panel on Oil Spills has also recommended the adoption of an escrow concept, whereby our offshore mineral resources are held in reserve until that future time when the skills and techniques of oil production have become safe.

Finally, conservationists and citizens in general are rejecting the use of waterways to any detectable degree as channels for carrying away fluid wastes, which there is ample technology for handling in other ways.

The most hopeful sign of all is the mounting public concern with pollution, and the demand for action. A Gallup poll early in 1969 revealed that 86 percent of the population is either "deeply" or "somewhat" concerned about pollution. The hope is that this public concern will soon translate into fiscal and organizational efforts to meet the problems.

III. SOLID WASTE DISPOSAL

A. SOURCES

Our land is about to be engulfed by solid wastes. The monuments of our civilization may become heaps of automobile hulks, glass bottles, tin and aluminum cans, used packaging, discarded rubber tires, and other debris.

Since 1950, the Nation's population has risen 30 percent, but the solid waste load has increased 60 percent, and should increase another 50 percent in the next decade. Currently, some 200 million tons of solid wastes are accumulated annually. On a per capita basis, the average daily generation of wastes is 5.3 pounds; it will rise to an estimated 8 pounds by 1980.

The increase in wastes comes from, first, more people; second, greater consumption of commodities; and third, affluence—which has caused the regular discard of items that were once saved The level of discard is awesome—Americans, in a year's time, throw away 48 billion cans, 26 billion bottles, 30 million tons of paper, 4 million tons of plastics, and 100 million rubber tires weighing a million tons in the aggregate. Also, by 1980, we will be discarding an estimated 10 million motor vehicles a year.

These wastes are not always placed in the proper receptacles or junkyards, either. Evidence of our slovenly attitude with regard to waste disposal comes from a spot check of a 1-mile stretch of Kansas highway, where, among other things, 770 paper cups, 730 empty cigarette packs, 590 beer cans, and 130 soft drink bottles were found on the shoulder. This is hardly convincing evidence of a desire to clean up the environment.

Waste disposal problems have sources that are also organizational and administrative in nature, in addition to the basic human, attitudinal problem. Historically, solid waste management has been characterized by minimum attention, minimum funding, and minium application of technology. Since the bulk of solid wastes are deposited on one spot of unmovable local land, the disposal problem is a local one; with air and water pollution, the flowing air currents and rivers make the problem more regional and national oriented. But there is considerable reluctance on the part of the local authorities to attack the problems of waste disposal aggressively, making use of the available technology, management techniques, and disposal systems. With responsibility for solid waste management fragmented and diffuse, small local political jurisdictions with insufficient resources, techniques, and motivation often cannot handle the job.

B. EFFECTS

Waste disposal problems may soon approach the existing crises in air and water pollution. Refuse storage, collec-

tion, transportation, and processing currently directly and indirectly affect some 80 percent of the population, and employ 337,000 people in handling urban wastes alone.

The specter of inadequate waste disposal has arisen because of three main factors:

First, there is a diminishing amount of disposal space. A year's rubbish from 10,000 persons covers an acre of ground 7 feet deep. The Panel on Social Indicators, established by former HEW Secretary John Gardner, has noted that:

> We start with the fact that the total weight of materials taken into the economy must ultimately equal the total weight of the wastes discharged, plus any materials recycled . . . Since Malthus' time, the possibility of resource scarcity has held the attention of economists and laymen alike. Available evidence today suggests, however, that resource scarcity has not posed a threat to American economic growth over the last 60 years, nor is it likely to over the next 50 years.
>
> The same cannot be said of the new type of scarcity: man's limited capacity to absorb wastes. The present levels of pollution are serious enough. But unless we develop new technologies of recycling, they could become much worse.

The spatial problem is most acute in urban areas, which are the origins of most refuse—because that is where most of the population lives. Close-in urban land is too expensive for municipal purchase and use as a dump, and other sites are too far away because of prohibitive transportation charges.

Second, costs of refuse collection and disposal are rapidly rising. The present annual national costs are in excess of $4.5 billion, and this figure does not include storage and handling costs to householders, losses in property values due to refuse, the value of reusable materials, and individual health costs due to pollution-caused diseases. New York City alone spends $150 million annually. The average community outlay for collection and disposal, according to a 1968 survey by the Public Health Service, is almost $7 per person a year.

Third, facilities are becoming inadequate. That traditional community eyesore—the town dump—operates in most communities haphazardly and inefficiently. Most community leaders have more or less ignored it. Today, the press of the problems of solid waste disposal have caused them to give it priority consideration.

Seventy-five percent of the Nation's trash still goes to open dumps, but the Public Health Service estimates that 94 percent of the dumps and 75 percent of the incinerators now used are inadequate with respect to sanitation and pollution. Only 5 percent of refuse is disposed of by the sanitary landfill method, in which each day's deposit is covered with about 6 inches of dirt, making it rodent-proof and odorless.

The scope of the problem is immense. According to one former Federal official half the communities with more than 2,500 people are not doing even a "minimally acceptable" job of collection and disposal.

Even Thor Heyerdahl on his recent oceanic voyage in a reed boat noted large amounts of floating wastes, including plastic bottles and containers, hundreds of miles from land. Apparently, there is no place to hide from man's mounting piles of trash.

C. CURRENT GOVERNMENT ACTIVITIES

The Federal Government has only recently begun to cope with the problems of solid waste disposal. For many years it was considered exclusively within the domain of local government.

The Solid Waste Disposal Act, passed in October of 1965, was the first substantial Federal effort in this field. It created the forerunner of the present Bureau of Solid Waste Management at HEW, and made that agency responsible for the implementation of the act. The Bureau is a part of the Environmental Control Administration and is charged with the achievement of environmental goals through the management of solid waste to minimize pollution and improved reuse and recycle techniques for discarded materials.

Under the 1965 act, the Federal Government is given primary responsibility for a program of research and for technical assistance and matching grants to States and localities to help in the development of disposal processes. Federal funds were not available simply to help communities finance disposal of waste. The thrust of the legislation was to help finance new and promising techniques of waste disposal with the hope of developing widely usable procedures.

Most of the States have availed themselves of these grants, their average size being about $50,000, but total appropriations for the solid waste program have remained far below authorization levels. During fiscal years 1966–70, total authorizations for this program were $44.6 million, but total appropriations were only $12.7 million, a funding gap of 70 percent, or $31.9 million. This is hardly a wholehearted effort to solve the problem. A restructuring of the Federal Government's efforts is imminent.

The President's Environmental Quality Council has recently set up a committee under the chairmanship of HUD Secretary George Romney to examine the appropriate role of the Government in solid waste management.

Senator MUSKIE introduced in April 1969, the Resource Recovery Act which would extend the Solid Waste Disposal Act for 4 years. It authorizes $733 million for 5 years to carry out HEW activities under the act and provides for studies on economical means of recovering useful materials from solid wastes, for demonstration projects to test recovery techniques, for construction grants for the building of disposal facilities, and for the establishment of Federal standards for solid waste disposal and collection systems. At the end of the first session of the 91st Congress, only Senate hearings had been held on the bill.

D. SOLUTIONS

Richard Vaughan, Director of the Bureau of Solid Waste Management, says that we need to spend $2 million a day, or $835 million a year, for 5 years just to "upgrade existing collection and disposal practices to a satisfactory level." This funding amount is far above current expenditures. Some increase is obviously needed if the Bureau is to help the States and localities with their critical disposal problems. A sweeping revision of the Nation's attitude toward waste disposal is also needed. For too long now, we have simply tried to make the problem go away by ignoring it. But the discards from our affluent society no longer permit us to do that.

Public concern for this problem is now manifesting itself. State budgets are starting to show specific items for waste disposal programs and communities across the Nation are beginning to tackle the difficult problem of disposal. Public and private concern must continue to press for acceptable solutions, and demand that debris and trash be removed and reduced to the maximum extent feasible in every community.

From the standpoint of techniques, there have been numerous stopgap suggestions to handle the disposal problem; for example, trash compaction into blocks, pneumatic tube disposal systems, railroading rubbish to distant abandoned mine pits, and more easily destructible packaging.

These approaches will help, but not solve, the problems. In the long run, only a radical change in people's patterns of consumption and disposal will work. The traditional solution with trash is to "burn it or bury it." In time this approach must be discarded and a new closed system adopted of "use and salvage, reprocess and reuse." Refuse should be reclaimed and broken down into its constituent parts for reuse. Reprocessing automobile bodies is a case in point. The U.S. Bureau of Mines, which is involved in research in resource recovery, estimates that if all solid waste were properly incinerated, it would yield salvageable metals worth more than $1 billion each year. A ton of recycled wastepaper alone can provide an amount of wood pulp equivalent to 17 pulped trees. Tax and other incentives could be instituted to spur industries and municipalities to develop new and more efficient methods of solid waste disposal and reuse. Clearly, it is time for more extensive investigation of this closed system approach, because we will soon reach a point when the cost of getting rid of used material is so high, in economic and environmental terms, that the cost of renovating it would represent a saving.

Changes in funding levels, attitudes, and disposal techniques will do little good, however, if their benefits cannot be applied at the critical local and State levels. To assist in their application, the ad hoc Committee on Solid Waste Management of the National Academy of Sciences- National Academy of Engineering has recommended in a recent report that three crucial steps be taken on the Federal level:

1. That there be established a solid waste management information center to accumulate, evaluate, and disseminate all applicable information . . . with the general objective of increasing the rate of application of present and future technology and implementing improved waste management at all levels.

2. That research, development, and large-or-full-scale demonstrations of solid waste systems and components be carried out with demonstrations in metropolitan areas where solid waste problems derive from several sectors of the community—these activities to

include the technological, operational, and economic factors for the newest and best approaches to storage, separation, collection, transportation, salvage, processing, preparation of recycle, and deposit.

3. That there be substantial effort to improve system business management, planning, and manpower training including coordination with other federal, state, regional, and local government groups and with private operators.

Efforts such as these should help local operating agencies to better apply existing technology, technology that is not now applied because of inadequate acceptance of the problem and insufficient information on available disposal techniques.

E. PROGNOSIS

Experts foresee the day when the accumulation of rubbish and gases from its incineration will be as troublesome over the face of the earth as are the wastes in a spacecraft. We can hope that we still have time to act. According to environmental expert Frank Stead, it will take 16 years to bring about basic changes in solid waste management, 2 years to convince the public that new concepts will be successful, 4 years to put through the necessary legislation and 10 more years to put the changes into effect.

The ad hoc committee at the National Academy of Sciences foresees no dramatic breakthrough in this area, but rather step-by-step efforts to reduce or solve one problem at a time. In the aggregate, the committee says, a number of small improvements systematically applied can bring substantial progress.

IV. WHAT MUST BE DONE

A. THE INDIVIDUAL

We must begin with ourselves. Individual attitudes toward the quality of our environment are the basis for a new national attitude toward our environment.

There are several requirements to the new approach to the environment. In the words of President Johnson:

> Our conservation must not be just the classic conservation of protection and development but a creative conservation of restoration and innovation.
>
> Its concern is not with nature alone but with the total relation between man and the world around him. It's object is not just man's welfare but the dignity of man's spirit.

Such an approach requires us to become discriminating critics, asking hard questions about local public works projects, including road and dam building, real estate development, and even fishing, hunting, and camping sites. The questions are:

What is desirable? Does it bring serenity, beauty, quiet, or does it bring noise, clutter, pollution, congestion?

It requires us to weigh alternatives. Before a swamp is filled, a stream dammed, a road built, an airport sited, or a powerplant constructed, all the options must be weighed. In this view, technology is our tool for better and worse; it can be our blessing and our brain; it can be a social benefactor and a social calamity.

This total approach requires us to look not only at isolated local fragments, like the Santa Barbara oil spill or effluence from Gary, Ind., steel mills, but to attack our problems in their ecological entirety, seeking a balance between technology and a clean environment.

The new, total approach to the environment is marked by a realization that pollution control is necessary not for man's enjoyment alone, but also for his survival. It recognizes that in our independent system, the plants help to renew the air, the air helps purify the water, and the water irrigates the plants. Damage to one facet of the system throws everything off balance.

The purpose of the total approach is to enhance the quality of life for all those living today and for generations to come, and to make environmental concern a preoccupation rather than a mere passing fancy. We must avoid a continuation of the situation described by former Secretary of the Interior Stewart Udall, who said:

> We have developed a whole new generation of sedentary, city-bound citizens, whetted by spectatorship in the air-conditioned advantages of glassed-in living into acquiescing to the diminution of the spaciousness, the freshness, the green splendor of the American earth.

There is much that individuals, with the right attitude toward their environment, can do to promote its quality.

Recently, a group of my colleagues in the House called for the 1970's as "the environmental decade." They urged all Americans to make a New Year's resolution for the next decade, as follows:

> I pledge that I shall work to identify and overcome all that degrades our earth, our skies, our water and the living things therein, so that the end of the Environmental Decade of the 1970's may see our environment immeasurably better than at the beginning.

The adoption of such an attitude toward our environment is essential to our survival. A genuine grassroots campaign is needed to develop a fundamental, broadly based movement, involving all the people and encouraging them to act together to improve the quality of the world in which they live.

Each person should keep in mind the rights and duties of all citizens as proposed by President Johnson:

> The right to clean water—and the duty not to pollute it.
>
> The right to clean air—and the duty not to defoul it.
>
> The right to surroundings reasonably free of manmade ugliness—and the duty not to blight them.
>
> The right of easy access to places of beauty and tranquility where every family can find recreation and refreshment and the duty to preserve such places clean and unspoiled.
>
> The right to enjoy plants and animals in their natural habitats—and the duty not to eliminate them from the face of the earth.

There is much work that individuals can do, including work for community-wide planning; good zoning ordinances strongly enforced; effective conservation agencies; modern methods of solid waste disposal; adequate open space for playgrounds and recreational areas; downtown malls and areas; protection of water courses and wildlife; a trail system for walking, hiking, and jogging; conservation education in our local schools; underground utility lines; and proper maintenance of public places and a personal code of conservation ethics for everyone.

In addition he can join groups that work for a better environment, urge organizations to undertake a conservation project, encourage youth groups toward conservation goals, beautify our own homes and neighborhoods, urge the news media to work on behalf of conservation, urge service clubs and schools to support good conservation projects, organize conferences on beautification and conservation in local communities, clean up our communities, support the city council and the county commissioners in their efforts to achieve better utilization of natural resources, speak to our elected representatives and let them know of support for sound conservation practices, and even support bond issues and tax increase where necessary to improve the communities environment.

Such work may not make the headlines but it will make a better environment.

One goal of the new approach to the environment is to make conservation prevalent in the legislative halls of city, county, State, and Federal Governments; in the mass communication media; at public meetings; in the service clubs; in the women's organizations; and in the Nation's schoolrooms.

Young people especially, should be encouraged to develop a sense of national stewardship, a feeling that man is part of, not a part from, nature.

B. THE PRIVATE SECTOR

The private sector of the Nation must become aggressively involved in pollution control. There are many encouraging examples that suggest a dramatic change is taking place in the business community's attitude toward pollution.

Examples of voluntary private sector action to control it own pollution come from Bethlehem Steel and Ford Motor Co. These are only two of many firms that are now trying to catch up with public expectations with respect to pollution.

At Bethlehem Steel, 6.5 percent of the company's entire capital investment for the past 5 years has gone to water and air pollution abatement. In the next 5 years, the figure will rise to 11 percent. Their Burns Harbor, Ind., plant includes a $43 million water treatment facility that is holding the plant's pollution of Lake Michigan well within State regulated margins.

Ford Motor Co. is now spending $500 million annually on air pollution control and automotive safety. Since 1957, hydrocarbon emissions from their cars have been reduced by more than 80 percent, and carbon monoxide emissions have been cut by two-thirds. Henry Ford II has realistically noted:

> Before too may years have gone by, the only market left for motor vehicles will be the market for vehicles that are virtually emission free.

These are not easy decisions for American business, and some of the expenditures might raise an eyebrow or two among stockholders. But without the active involvement of business, the chances

of success against pollution are not encouraging. The private sector simply must become concerned about the quality of the environment and act to meet the challenges if pollution control is to be achieved.

I agree with former HEW Secretary John Gardner, who said recently:

> Industry should commit itself to end pollution. Again, some farsighted business leaders have already done so, but the record of industry as a whole has been deplorable. It has lied to the public and to itself about the seriousness of the problem. We are just beginning to grasp the immense complexity—and danger—of environmental pollution. It is not wholly an industrial problem, but industry has a crucial role in it and could contribute enormously to its solution—if only by foreswearing its practice of emasculating pollution control legislation as it moves through Congress. Public anger over pollution is rising, and the time for effective action has come.

C. GOVERNMENT

Without doubt, Government will have to bear the major burden in the efforts to control pollution. All levels of government must place it high on their agendas for action. Several specific steps should be taken, including:

First. National commission and joint congressional committee: To help insure the prominence pollution control deserves, a National Commission for Environmental Quality should be established. Creation of these bodies will produce expertise and research material, provide a national platform for environmental experts to educate the American public and the Congress, help generate changes in national attitudes, and produce action on systematic oversight of our environment.

I have recently introduced a bill which authorizes their creation.

The Commission would be composed of non-Federal, independent environmental experts and would submit an annual report to the President and to the Congress concerning the status and condition of the Nation's environment, and its judgment concerning present and foreseeable trends affecting that environment.

The joint committee would be responsible for, first, conducting a comprehensive study and investigation of appropriate matters contained in any environmental quality report transmitted to the Congress, and second, making an annual report on environmental quality to the Congress and to the appropriate committees of Congress.

Second. Education: We must multiply our efforts to promote environmental education.

Elvis J. Stahr, Jr., former president of Indiana University and now head of the National Audubon Society, has noted that our schools and colleges "have done a demonstrably miserable job of educating about the fundamentals of man's relation to nature and the balance of nature. Somehow, more environmental awareness must be fed into curriculums all along the line."

To help insure the development of this awareness, I have cosponsored the Environmental Quality Education Act. It provides for environmental curriculum development by colleges and universities, teacher training, pilot projects, and support for environmental courses in schools and local communities.

The Executive Office of Science and Technology has recently published a report entitled, "The Universities and Environmental Quality," which recognizes the need for improved educational facilities in this area. The report recommends that the Federal Government support the formation of schools of the human environment at colleges and universities, just as it now supports schools of agriculture and public health. These schools would have a commitment to solve the environmental problems that now exist, and would enable concerned students to educate themselves in this vital area.

Third. Level of funding: The most important step needed to save our environment is the enactment of higher funding levels for pollution control. The basic legislation to combat pollution has already largely been passed; it is now necessary to provide adequate financial resources to insure that the performance matches the promise. More generous funding would allow us to expand our parks, playgrounds, wild rivers, scenic trails, seashores, fish, and wildlife areas.

The economic cost of environmental protection is so high that a commitment of the citizenry similar to that required by war is necessary if this problem is to be successfully resolved. Environmental protection is an expense that only wealthy nations can afford, but it has become an expense we avoid at our peril.

That we are avoiding this expense is apparent from this table, compiled by the Citizens Advisory Committee on Environmental Quality in August of 1969:

FUNDING OF FEDERAL ENVIRONMENTAL CONTROL PROGRAMS

[By fiscal years, in millions of dollars]

Program	1965	1966	1967	1968	1969	1979
Solid Waste Disposal Act:						
Department of the Interior:						
Authorization		3.0	6.0	10.8	12.5	12.3
Appropriation		1.4	4.3	3.4	1.9	[1] 1.7
Gap		1.6	1.7	7.4	10.6	10.6
Department of Health, Education, and Welfare:						
Authorization		7.0	14.0	19.2	20.0	19.8
Appropriation		4.3	12.3	15.4	13.3	[1] 14.9
Gap		2.7	1.7	3.8	4.7	4.9
Air pollution control:						
Authorization	25.5	30.5	46.0	109.0	185.0	134.3
Appropriation	21.0	26.6	40.1	64.2	88.7	[1] 95.8
Gap	4.5	3.9	5.9	44.8	96.3	38.5

Program	1965	1966	1967	1968	1969	1970
Land and water conservation fund:						
Authorization [2]					260.0	200.0
Appropriation		122.1	95.0	113.1	164.5	[3] 124.0
Gap					95.5	76.0
Highway Beautification Act:						
Authorization		160.0	160.0	([4])	26.1	31.3
Appropriation		70.8	81.5	([4])	0	([5])
Gap		89.2	78.5		26.1	
Treatment plant grants:						
Authorization		150	150	450	700	1,000
Appropriation		141	[6] 173	203	214	[1] 214
Gap		9		247	486	786
Water and sewer grants:						
Authorization		200	200	200	420	605
Appropriation			100	165	165	[1] 135
Gap		200	100	35	255	470

[1] Estimated.
[2] In fiscal years 1966–68 program level was determined by actual receipts to the fund plus receipts in excess of appropriations for prior years. Amendments to the act in fiscal year 1969 guaranteed an annual income to the fund of $200,000,000 for 5 years.
[3] House committee allowance July 10, 1969.
[4] Amendments to the 1965 act changed funding from straight authorization to contract authorization. No new funds appropriated in fiscal year 1968.
[5] Not available.
[6] Appropriation higher than authorization shown because of open-end authorizing provision then in law.

The Congress has appropriated $800 million, rather than the absurdly low $214 million recommended by the President, for treatment plant grants for fiscal year 1970, but that is the only substantial change in these figures. The table reveals a total appropriation gap for pollution-control programs in fiscal year 1969 of $534.2 million.

Arnold Reitze, Jr., greenpower activist, noted accurately that when public concern "grows to the point where it manifests itself in a willingness to approve expenditures commensurate with the task before us, then, and only then, will there be a chance for reversing the deterioration of our environment."

Funding of State and local pollution control efforts must also be increased. They are as bad, if not worse, than the Federal Government in this regard. State budgets are minuscule. In Ohio, the Water Pollution Control Board operates with a budget of $500,000 and air pollution control operates with $150,000. In Indiana, the State water pollution control agency has $481,000 in State funds and the air pollution control agency operates on $88,000 in State funds for fiscal year 1970.

Expenditures of this magnitude predetermine the result. State grants to local governments for pollution control

are not available, and this, in turn, denies local governments Federal matching funds.

Fourth, new legislation: Although the major pollution control legislation is on the books, the search for more effective laws must continue. One new proposal should be given the most careful consideration.

It would impose a Federal effluent charge on industrial firms that discharge waste into water, levied on a per pound basis. The charges would vary according to the toxicity and quantity of the pollutants, thus providing an incentive for industry to reduce the amount of its effluent discharges. This tax incentive would be an environmental appreciation allowance and would make industry pay for its own mess, rather than make those pay who suffer from costs of pollution clean-ups. To encourage consideration of this approach, I have introduced legislation in the House establishing an effluent tax system, and requested committee hearings.

This approach to pollution control is supported by the findings of a recent General Accounting Office report, which indicated that industry, not municipalities, is the primary villain in water pollution. The report, in one instance, described a stretch of the Mississippi River where $7.7 million spent on municipal disposal sewage plants since 1957 had reduced pollution in the river by 3 percent—while industrial waste discharges had increased 350 percent in the same period.

Obviously, such a proposal prompts differing views. Dr. Lee Du Bridge, the President's science adviser, has suggested that—

> The taxpayer and consumer, not industry, must pay for environmental improvements . . . companies couldn't pay dividends if profits were low.

Congressional hearings would afford an opportunity to expose these differing viewpoints for public discussion and examination.

New tax legislation should also be considered to put the cost of developing new methods of solid waste disposal on the manufacturer and user of bottles, cans, automobile hulks, and the like, so as to encourage the development of disposable containers.

Fifth, State and local action: Executive action by the Federal Government simply will not solve the problems of pollution. The burdens of control are too many, too costly, too complex to be handled exclusively by any one level of government.

Cooperation is the key—among Federal and State Governments, and among States and localities. It is essential if pollution is to be controlled.

Regional interstate cooperation must be expanded. Rivers and streams do not always follow State boundaries.

The primary State responsibility in combating pollution under present laws is for enforcement of Federal standards created by congressional action like the Air and Water Quality Acts. Since State governments, fearing loss of industry, may be loath to rigidly enforce standards and levy effluence charges, however, the necessity of increased regional cooperation, such as interstate river basin authorities, is apparent. An example is the Ohio River Valley Water Sanitation Commission, which persuaded 3,000 industries and cities to spend $1 billion diverting 99 percent of their effluence to sewage plants. Other examples are the 57 Air Quality Control Regions established under the Air Quality Act of 1967.

Such partnership efforts are urgently needed. The problems here are complex, but they must be met. Among them are: the appropriate responsibility of each partner in regional programs, the development of quality standards and how they are applied equitably, the proper role of the Federal Government, the use of Federal taxing power for incentives, and the best ways to get adjoining States to join together in common cause.

Each State, alone, must also do a better job in planning, organizing and administering pollution control programs. There has been insufficient overall environmental planning in State and local agencies. Multiyear comprehensive environmental health plans should be required from State and local governments receiving funds to combat pollution.

Within many State bureaucracies there is a profusion of conflicting State agencies dealing with pollution control. To be effective and efficient, responsibility must be centralized and cohensive, rather than fragmented as it often is now. Management specialists should be brought in to restructure State pollution control offices.

States can take the initiative in the formation of environmental trusts, like the one Maryland has already formed. The Maryland trust was formed by the State legislature as a quasi-public agency in 1967. The bylaws state that the trust is dedicated to "conserving, improving, stimulating and perpetuating the environment." The trust has, in turn, created 23 countywide committees which survey the local area and recommend county needs to the trust's board.

At the local level, national resource problems are frequently obscured and fragmented, and given only secondary consideration. This need not be the case, however. Local elected officials will respond to aggressive public opinion for environmental quality, as evidenced by 581 municipalities in seven northeastern States which have started "conservation commissions" that are rapidly becoming a most effective new arm of local government. Consisting of five to nine local citizens they are charged with managing natural resources in their area. They try to accommodate competing needs, such as developing industry and saving wetlands, and have succeeded in striking a balance between development and preservation.

Sixth, research: We must move rapidly forward in research.

Much research is needed; for example, in the recycling or "looping the system" aspect to the total environmental approach, discussed earlier. How do we get continuous reuse and regeneration of the water, fuel, and chemicals that we now waste because we consider them garbage? Man should instead strive to parallel natural decay by recycling the wastes.

Resalvaging already keeps 80 percent of all mined copper in circulation. But U.S. incinerators now destroy about 3 million metric tons of other valuable metals a year; magnetic extraction could save the metal and reduce incineration by 10 percent. Another help would be packaging materials that, following use, rot rapidly when discarded. Intensive research is needed in this area, too.

This research must also seek alternatives. The internal combustion engine is the single worst polluter. The electric car and the turbine car must be looked at. A pollution-free engine must be developed and put to use. Industrial and powerplants must be shown clean burning fuels and production methods which do not ravish the environment.

But, just as important as research, is the application of the know-how we now have. Improvements in pollution control will come forth, but we cannot wait.

CONCLUSION

The threat to our environment is apparent. We stand at the crossroads with a clear choice. We can, if we will, choose the direction of preserving and improving the quality of our environment. It is not an easy choice, and it promises no quick, easy solution. But, in time, it does promise clean air, clean water, and tall forests.

It is easier and less expensive to go in the other direction. But its promise is also apparent; dirty air, polluted water, ravished land, and, in time, extinction.

If the greatest thing since creation—the Apollo 11 moon landing—was worth $25 billion, how much is the creation worth?

THE FIRST SESSION OF THE 91ST

The SPEAKER. Under a previous order of the House, the gentleman from West Virginia (Mr. STAGGERS) is recognized for 25 minutes.

Mr. STAGGERS. Mr. Speaker, "The thing now is people power," said an unidentified observer. "You don't cram things down peoples' throats any more."

As evidence, Congress has been hearing from the people this year. In truth, the song they sing does not carry an orchestral harmony. But to those who listen, there is an underlying consonance which cannot be mistaken. It is gradually drowning out the raucous calls for the impossible. The keynote is, "Beware." This country is not about to plunge into the chaos of revolution.

The whirling wheel of change which has distracted our attention for some years brings with it an unprecedented technological progress rather than the lure of a new social order. That progress has furnished us with more reasons than ever for sticking to the old paths of work and integrity and human compassion. It is about at the point of lifting the whole race of men out of the muck of want and suffering into the high ground of a satisfied plenty. We would be deplorably foolish if we should assume that the unrest which has troubled us is indeed a search for a new philosophy of economics and of social order. For 200 years we have been building a great na-

tion on a solid foundation. Today we have no intention of wiping out all our achievement in response to the siren call of the incapable and the discontented.

A business forecast—and it bears every mark of responsible reasonableness—sees a new decade, the seventies, in which "economic growth will continue at a brisk clip, carrying the United States to levels of output and income never seen before and not even imagined two decades ago. Rising population and rising incomes will open new markets, and advancing technology will provide new ways to serve these markets."

Continuing, the forecast suggests that conceivably the 1970's could contain "a real start on the problems that have tormented the United States for the last generation." Many of those problems grow out of the difficulty of adjusting to rapid change, producing some elements in society who have not kept up with progress.

The forecast suggests:

> For a real solution to its problems, the United States must seek to improve the lot of the losers without stripping the winners of what they have honestly come by. * * * It is a problem in social engineering and technological engineering greater than this or any other country has ever dealt with. But the United States has a long record of successful problem solving.

This is not the ominous rumbling of impending disintegration in the social and political structure. On the contrary, it is the voice of impatience with the unwarranted distractions which puzzle as well as perturb us. It is the voice of some 72 million Americans pursuing their appointed tasks day after day in confident assurance that their labor is not in vain.

As a prop for this position, we may remind ourselves that only two modern nations on the face of the globe have survived the changes of the centuries with government structure unimpaired. Two forces are highly disruptive of social stability: wild fluctuations in the economic order; and bitter and savage wars. England and the United States have been subjected to the strain of both these forces almost without interruption through the centuries. England has been described as a democracy within an empire. It possesses a constitution supposedly unwritten, yet rigid enough to withstand all pressures hitherto brought to bear on it. The United States has a constitution supposedly written, yet flexible enough to make allowances for change. It is a democracy within a republic.

Within the year, in addition to all the other changes, the United States has been subjected to important political changes. Elsewhere, it might have meant confusion and disruption on a continental scale. Here, but for the fervid coverage of the news media, a new President or a new Governor might be inducted into office with scarcely a ripple on the even flow of events outside government offices.

In fact, in the advanced democracies represented by England and the United States, government has become depersonalized. It is an elemental force, controlled by the invisible and unworded agreement of a highly complex social organization. It does not depend on individual government officers, or even on political parties. The only time a politician is his own man, speaking his own piece, is while he is still a candidate. Once in office, he is caught up in the irresistible movement of social advance, a captive to forces outside his control. That is why a party platform must be accepted as a sort of canvas of public opinion, rather than as a blueprint of proposed performance.

Enough has been said to make plain the conviction that the Government of this country, though a representative government in form, is indeed a true democracy. The will of the people prevails. Their agents in Washington would do well to pay deference to their collective wisdom. And the fruit of the deliberations of the first session of the 91st Congress is proof of the earnest endeavor of legislators to give heed to the signs of the times.

This has been a thinking Congress. Strong pressures from many angles have not been sufficient to provoke hasty action. From the first days of January to the present hour there has been appraisal and reappraisal of the various problems needing solution. A decision, once made, represents the best judgment of the Members as to the popular will.

It would be a waste of space to go through this list of measures and to try to point out just what each would do. In general, it may be said that as a whole the new laws represent no radical break with the past. We have recognized and honored our commitments to the rest of world, and at the same time have endeavored to relinquish some of our responsibilities where they can be taken over by others.

On the domestic front, the emphasis has been on the grave national problems of the age. We have tried to find a remedy for the social and moral sickness of society, represented by crime and violence. Other laws are intended to strengthen the consumer-oriented legislation initiated in previous Congresses. These include laws dealing with hazardous materials and articles in the home as well as in industry, with usurious interest rates, with pollutants in the air, in water, and in the soil. Medical research and development has been given strong encouragement, and a further help for our veteran dependents has been a major concern.

Quite a number of our proposals have received overwhelming support when they finally reached the floor of the House. We are satisfied that they had the approval of the people in equally strong measure. Other proposals won or lost by slim majorities. These represent the burning issues of the day. As a nation, we have yet to make up our minds about them.

It is a matter of real satisfaction to me that I have had the privilege of working in a congressional committee which is truly people-oriented. The bills developed by that committee have been uniformly well received by the Congress. And I want to thank the members of that commitee, from both sides of the aisle, who have worked so diligently and so faithfully in the public interest through long hours of testimony and discussion.

The work of the 91st is, of course, not finished with the close of the year. We will resume in January, where we leave off in December. During the days remaining this calendar year, it is my ardent hope that we will be able to strengthen social security benefits. My aim is, and has been, a full 15-percent increase. Another aim was a restoration of the old and original $1,200 exemption allowance on income tax returns. It seems probable that part of this desirable reform in the income tax law will be made this year, the other parts will have to be done later.

This Congress will adjourn within a few days, and carry with it into the Christmas season the satisfaction of a job well done. In my opinion, we have met our responsibility to the Nation, and to our own particular constituents, in a competent manner. This is not a perfect world, and we are not perfect individuals. But we have followed the light, as we could see it.

The old clock of time ticks on, as someone has said, and it does not help to throw stones at it. We must hope for a world that grows better and better, and strive on with all our might to make it so. And so I would say to myself and to all my colleagues:

> By thine own soul's law learn to live,
> Sing thou thy song, and do thy deed,
> Hope thou thy hope, and pray thy prayer.
> Be not afraid to pray; to pray is right,
> Pray, if thou canst, with hope, but ever pray,
> Though hope be weak, or sick with long delay,
> Pray in the darkness if there be no light.

ON HANDLING STUDENT DISORDERS

(Mr. SCHWENGEL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SCHWENGEL. Mr. Speaker, this session of the Congress has brought forth a good deal of controversy with respect to the procedures for handling campus disorders. I fear that more often than not we have managed to generate a good deal of more heat than light. All manner of solutions have been offered, including imposition of penalties on the students and instructors involved through Federal legislation.

I have taken the position that if we are to preserve our present concept of higher education and academic freedom, responsibility for controlling student disorders must clearly rest with the academic officials directly in charge of these institutions working with local civil authorities when necessary. It seems clear to me that the academic community must "control its own house" if academic freedom is to be maintained. And, of course, it goes without saying that disruptive student demonstrations cannot be tolerated. Peaceful and orderly demonstrations are acceptable until they reach the point of disrupting the principal function of the institution, that of educating students.

Mr. Speaker, I think the University of Iowa at Iowa City, Iowa, has done an excellent job of utilizing this approach. Earlier this fall officials there took great pains to advise students not only of their rights, but their responsibilities as well.

It is quite clear from the information provided to the students that disruptive conduct will not be tolerated.

The university recently experienced its first disruption since the rules were issued. Several students attempted to forceably eject a representative of the Department of Labor from the university placement office. Several of those involved were alleged to have been members of the Students for a Democratic Society—SDS. Several nonstudents were involved as well.

The university through its vice president, Philip G. Hubbard, has announced prompt action against all involved, student and nonstudent alike. This is commendable, and Dr. Hubbard and the other officials of the university deserve our full support in their efforts.

For the benefit of my colleagues, I would like to insert in the RECORD at this point the information published by the university on student rights and responsibilities, together with Dr. Hubbard's statement on the current disorder:

[From the University of Iowa Student Guide, 1969–70]

POLICIES RELATED TO STUDENT RIGHTS AND RESPONSIBILITIES

Because the aims and interests of individuals generally differ and sometimes conflict, the structure of any community necessarily reflects compromise. This is especially true of a public university, whose philosophy and policies must satisfy the very diverse aims and interests of students, scholars, and citizens at large.

Presumably you came to The University of Iowa realizing that neither this nor any other institution would exactly suit your aims and interests. Presumably. You chose Iowa because, among the institutions you considered, Iowa offers the "climate of learning" you believe suits you best.

It is a major university, not primarily in size—it is, after all, the second smallest of the Big Ten schools, and far smaller than the nation's largest—but in the breadth and quality of its programs.

It is a liberal university, in its regard for essential rights and freedoms, including freedom of speech and lawful assembly . . . freedom to teach, to learn, and to pursue truth wherever its paths may lead . . . and the rights to a uniform application of rules and equal access to facilities and services.

Many of the values and standards of behavior in an academic community—such as personal character, dignity, and integrity—are best transmitted by example, persuasion and mutual respect. Such an unwritten code is most appropriate to the philosophy of this institution.

That some formal regulation does exist here, however, is hardly out of tune with the concept of compromise applying to community life everywhere. Just as the aims and interests of individuals differ and conflict in all communities, so all comunities must adopt whatever regulations their members require to insure "the greatest good for the greatest number." Acceptance of and adherence to these fundamentals of freedom and order are necessary for continued membership in the community.

When members of this community consider what matters may require regulation by written code, these guidelines apply:

1. All the University's resources must be fully employed in the intellectual and personal development of its students.

2. Institutional regulations should be adopted only when necessary to the achievement of the University's academic goals, the safety and freedom of individuals, or the orderly operation of the University.

3. Students should be encouraged to participate, through orderly procedures, in the establishment and revision of regulations governing their conduct.

4. Regulations should be clearly stated, and made conveniently available to every student.

5. Disciplinary action for violation of regulations should be corrective, rather than punitive.

6. Disciplinary procedures should be consistent with the principle of due process, channels of appeal should be clearly defined, and information relating to appeals should be readily accessible to all students.

Institutional regulations cannot provide specifically for every question of conduct under every set of circumstances which might arise; they are intended to define the practices ordinarily necessary to maintain working order in a complex system, and to protect the essential freedoms of everyone in the community.

The initiation and review of University policies and regulations rest with general University committees, which submit their recommendations to the University President.

Committees dealing with the extracurricular activities of students are composed of faculty members and students. Representatives of the appropriate administrative offices serve as consultants or ex-officio committee members.

All student members of committees are appointed by the University President, from nominations submitted by the Student Senate.

Student and faculty members are equally empowered to introduce topics for the agenda, to debate proposals, and to vote on all actions. Student members contribute most effectively to the work of the committees by maintaining regular lines of two-way communication with the Student Senate and with other groups and individuals interested in their committees' particular areas of concern.

As members of the larger community of which the University is a part, students are entitled to all the rights and protections enjoyed by other members of that community. By the same token, students are also subject to all civil laws, whose enforcement is the responsibility of duly-constituted civil authorities.

It should be emphasized that when a student's violation of civil law also adversely affects the orderly operation of the University, the University must enforce its own regulations regardless of any civil proceedings or dispositions.

Responsibility for judicial action on violations of University regulations is assigned to the Dean of Students and the Committee on Student Conduct. Final authority in all cases rests with the University President and the State Board of Regents.

The following are the primary statements of University policies on rights and responsibilities of students. It is to your advantage to give them a careful reading, and to keep your copy at hand for reference.

Interim changes in extracurricular regulations are published in the student-edited newspaper, The Daily Iowan. A complete set of current general University regulations is always available in the Office of Student Affairs. For information on curricular matters, consult the University's General Catalogue.

CODE OF STUDENT LIFE, 1969–70

(NOTE.—Although the 1969–70 Code has received final approval from the President and is therefore effective for the 1969–70 academic year unless and until amended by approval of the President, no part of the Code is ever "final" in the sense of not being subject to further review and revision. It is anticipated that certain provisions of the Code will be reconsidered again this year by the Committee on Student Life and recommendations for further revision submitted to the President. After his approval, amendments are effective upon publication in The Daily Iowan.)

General conduct regulations

Academic institutions exist for the advancement of knowledge, the pursuit of truth, the development of students, and the general well-being of society. Free inquiry and free expression are indispensable to the attainment of these goals. As members of the academic community, students are encouraged to develop a capacity for critical judgment and to engage in a sustained and independent search for truth.

Freedom to teach and freedom to learn are inseparable facets of academic freedom. The freedom to learn depends upon appropriate opportunities and conditions in the classroom, on the campus, and in the larger community. Students are expected to exercise their freedom to learn with responsibility and to respect the general conditions conducive to such freedom. Accordingly, the University has developed the following general regulations pertaining to student conduct which provide and safeguard the right of every individual student to exercise fully his freedom to learn without undue interference by others.

Any student who commits any of the following acts of misconduct shall be subject to disciplinary action by the University. These regulations shall apply only where a student's misconduct has adversely affected some University process or function or some other distinct and clear interest of the University as an academic community. These regulations shall be construed so as not to abridge any student's constitutional rights of free expression of thought or opinion, peaceable assembly, or the petition of authorities.

1. Academic dishonesty, including the acquisition of honors, awards, certification or professional endorsements, degrees, academic credits, or grades by means of cheating, plagiarism, or falsification with respect to any examination, paper, project, application, recommendation, transcript, or test, or by any other dishonest means whatsoever, or aiding or abetting another student to do so. Violation of this section will normally be handled within the college or department concerned, with provision for appeal.

2. Willful misrepresentation of any material fact to any member of the faculty or staff of the University or to any office, department, or committee thereof (including the Committee on Student Conduct), or willful misrepresentation to anyone, within or without the University community, of his status with the University or of the support, sponsorship, or approval by the University of the services or activities of any person, group, or organization.

3. Willful failure to comply with a proper order or summons of any properly identified [1] member of the faculty or other University official acting within the scope of his authority, or willful failure of a student to identify himself by stating his name to such faculty member or official.

4. Forgery, alteration, or misuse of any University record, document, or student identification card.

5.[2] (a) Intentionally disrupting the orderly processes of the University or

(b) intentionally obstructing or denying access to services or facilities by those entitled to use such services or facilities or

(c) intentionally interfering with the lawful rights of other persons on the campus or

(d) inciting others to do acts proscribed by paragraphs (a), (b), or (c) of this section.

6. Willful demonstrations within the interior of any University building or structure, except as specifically authorized and subject to reasonable conditions imposed to protect the rights and safety of other persons and to prevent damage to property.

---

[1] By stating his name and title if requested by a student.

[2] This regulation was adopted by the State Board of Regents February 9, 1968, and is applicable to all Regents institutions.

7. Unauthorized entry into or occupation of any University room, building, or area of the campus, including such entry or occupation at any unauthorized time, or any unauthorized or improper use of any University property, equipment, or facilities.

8. Intentional setting of fire in any University building or on the campus without proper authority, or intentional sounding of a false fire alarm in any University building or on the campus.

9. Theft or wrongful appropriation, or willful destruction, damage, defacing, or mutilation of any property belonging to or in the possession or custody of another member of the University community or of the University.

10. Assaulting, threatening, physically abusing, unduly harassing, or endangering in any other manner the health or safety of any person on the campus or at any University sponsored or supervised function or event.

11. Use or possession of serviceable firearms, ammunition, explosives, fireworks, or other dangerous articles within any University building or University approved housing, on the campus, or at any University sponsored or supervised function or event, except in authorized facilities.

12. Possession or consumption of any alcoholic or other intoxicating beverage within any University building or University approved housing (except married housing), on the campus, or at any University sponsored or supervised function or event, except as expressly permitted under Social Regulations, Section 2, of the Code of Student Life.

13. The manufacture, processing, or sale of any narcotic drug, marijuana, or other addictive, dangerous, or hallucinogenic substance or the administering thereof to any other person without his knowledge and consent.

14. Violation of any other regulation contained in the Code of Student Life or any other rule, regulation, or policy which may be promulgated by the President of the University or his authorized representative, by any college, department, dormitory, office, or other facility within the scope of its authority, or by the State Board of Regents, provided such rules, regulations, or policies were published, posted, or otherwise adequately publicized or the student had actual knowledge thereof. All provisions contained in University residence halls contracts which pertain to personal conduct shall be deemed rules subject to this regulation with respect to all dormitory residents.

15. Any other conduct or action in which the University can demonstrate a clear and distinct interest as an academic institution and which seriously threatens—

(a) any educational process or other legitimate function of the University or

(b) the health or safety of any member of the academic community.

Social regulations

1. Social Functions: When a student organization recognized by the University sponsors a social function, it is the responsibility of the sponsoring organization to provide adequate supervision and to ensure compliance with civil law and with the Code of Student Life. Sponsorship is determined by an organization's planning, promoting, and financing of the function rather than by the number of members attending the event.

2. Drinking: Alcoholic beverages may not be served on campus or in approved housing. If alcoholic beverages are served at a social function (not held on the campus or in approved housing), it is the duty and responsibility of the sponsoring organization to provide adequate supervision and to ensure full compliance with all applicable civil laws pertaining to the consumption of alcoholic beverages.

3. Open Houses and Visitations: An open house is a social function during which rooms in an approved housing unit are open to the public. A visitation is a social function during which the residents of an approved housing unit may invite guests, including guests of the opposite sex, into their own rooms.

A reasonable policy governing open houses and visitation shall be adopted by each fraternity and sorority chapter; by the general council of each residence hall; or by students occupying each approved housing unit not a residence hall, fraternity, or sorority. The policy shall provide:

(a) the schedule of hours and days for visitation and open house;

(b) rules for the conduct of residents and guests at various types of open houses and visitations;

(c) procedures for registering guests;

(d) procedures for amending and for providing exceptions; and

(e) means of enforcement.

Open houses and visitations are permissible any day of the week between the hours of 12 noon and one half hour before the closing hours for women's residences as provided in Housing and Hours Regulations, Section 8, of the Code of Student Life.

Each residence hall, fraternity, sorority, and other housing unit shall inform the Office of Student Affairs of its policy. The Office of Student Affairs will acknowledge immediately in writing receipt of such policies. The policy of each fraternity, sorority, residence hall, and other approved housing unit shall become effective immediately upon receipt by the Office of Student Affairs except where the policy requires the Office of Student Affairs to make special preparation for implementation.

Housing and hours regulations

1. Reporting Correct Address: Each student is required to report his correct address at the time of registration each semester or session. This reported address must be the student's actual place of residence. Any change of residence made during the semester or session must be reported within three days to the Registrar's Office. Failure or refusal to comply with this regulation is cause for cancellation of registration.

2. Approved Housing: Single, undergraduate students who will not be twenty-one years of age on or before the last day of the semester are required to live in housing approved by the University or in parental homes. University approved housing includes University residence halls, social fraternity and sorority chapter houses, and approved rooming houses. Students subject to the approved housing regulation are responsible for determining that their housing is approved. Failure or refusal to comply with this regulation is cause for cancellation of registration.

3. Special Permission to Live in Unapproved Housing: Application for special permission to live in unapproved housing must be made in person at the Off-Campus Housing Office, 106 Jessup Hall, prior to the beginning of the semester or session. Single, undergraduate students under twenty-one, upon application, may be given special permission to live in unapproved housing for the following reasons:

1. Living with adult relatives
2. Medical necessity
3. Religious necessity

4. Work situations in which the student receives at least one-half of the monthly rent in exchange for services.

4. Conditions for Approval of Off-Campus Housing: Approval of any off-campus housing located within the postal territory of Iowa City or Coralville will be granted by the Office of Student Affairs upon the following conditions: (a) premises found to satisfy University health and safety standards; (b) lessor agrees in writing to comply with University policy on fair housing practices; (c) lessor agrees to enforce all applicable University rules and regulations regarding student conduct, housing, and hours, and (d) adequate adult supervision is provided. A listing of all housing which has been approved is available to students in the Office of Off-Campus Housing, 106 Jessup Hall.

5. Certified Housing: As a service to students eligible to live in unapproved housing, the Office of Off-Campus Housing maintains a listing of certified housing. Certification is granted to any off-campus housing upon the conditions that (a) the premises are found to satisfy University health and safety standards and (b) the lessor agrees in writing to comply with University policy on fair housing practices. A listing of available certified housing is maintained on the bulletin board on the ground floor of Jessup Hall.

6. University Policy on Fair Housing Practices: It is the policy of the University that lessors, approved or certified, shall rent to all students on the basis of their individual merits as persons without exclusion or discrimination on the basis of race, creed, color, or national origin. A signed non-discrimination pledge is required of all approved or certified lessors. Any complaint of discrimination in housing should be submitted to the chairman of the University Committee on Human Rights within sixty days of the alleged act of discrimination. The name of the current chairman of the Committee may be obtained from the Office of Student Affairs, 111 Jessup Hall. The State of Iowa and the City of Iowa City also have fair housing codes which may be applicable.

7. Guests: Entertainment of guest of the opposite sex in approved housing is to be confined to the public areas except during open houses and visitations. For policies and procedures regarding open houses and visitations, see Social Regulations, Section 3. Guest closing hours for all approved student residences are as follows:

Sunday-Thursday 11:45 p.m.
Friday and Saturday 12:45 a.m.

8. Closing Hours for Women's Residences: Closing hours shall be defined at the LATEST hour for a student's return to her housing unit. The regular closing hours are in effect whenever the dormitories are open for residency. This includes summer session, examination, registration, and vacation periods. All undergraduate women other than those included in the Privileged Hours Program have 12 midnight closing hours Sunday through Thursday and 1 a.m. closing hours Friday and Saturday nights throughout the academic year with the following exceptions:

1. 2 a.m. closing hours on Friday and Saturday, Homecoming Weekend.

2. 1 a.m. closing hours the night before classes are suspended prior to University vacation periods (Thanksgiving and the night before Mercy Day continuing through the week of examinations).

9. Privileged Hours: Women who are sophomores, juniors, or seniors or who will attain the age of twenty-one during the semester may request permission to participate in the Privileged Hours Program in accordance with AWS regulations. Freshman women are subject to 12 midnight and 1 a.m. closing hours with no exceptions for the first semester. Second semester freshman women have 12 midnight closing hours Sunday through Thursday and may request privileged hours Friday and Saturday nights with parental permission.

10. Overnight Sign-Outs. Undergraduate women students may sign out to be away from their place of residence on Friday and Saturday nights in accordance with AWS regulations. Overnight absence without proper sign-out is a violation of University regulations and may be cause for disciplinary action, including suspension from the University.

RECOGNITION OF STUDENT ORGANIZATIONS

1. Eligibility: Any group or organization which consists primarily of University students and whose purposes are consistent with the educational objectives of the University

is eligible for recognition by the University. Recognized student organizations must comply with all regulations contained in the Code of Student Life and are entitled to certain privileges such as the use of University facilities and services as hereinafter provided. Recognition of a student organization by the University does not constitute an endorsement of its program or purposes, but is merely a charter to exist. Additional information and regulations concerning student organizations are contained in the Student Organizations Handbook.

2. Membership Policy: It is the policy of the University that all recognized student organizations be able to exercise free choice of members on the basis of their merits as individuals without restriction as to race, color, or national origin. Any student organization whose choice of members is subject to approval by national or other non-University organizations, or which is required by a non-University organization to procure a recommendation from an alumnus or any other person not currently an active member of the local organization prior to admitting a person to membership, is ineligible for recognition by the University.

3. Officers: Only registered University students or members of the faculty or administrative staff may be principal representatives of a recognized student organization. Each organization must identify at least two and no more than four principal representatives.

4. Recognition Procedure: Recognition of student organizations which are residential living units (residence halls, fraternities and sororities) is granted by their respective governing bodies (Associated Residence Halls, Interfraternity Council, and Panhellenic Council) with the concurrence of the Committee on Student Life. Recognition of all other student organizations is granted under the auspices of the University of Iowa Student Association Senate: (a) Charters are issued by the Student Senate to student organizations which are eligible for permanent recognition; (b) Provisional recognition not to exceed 12 months may be granted by the Office of Student Affairs with the concurrence of the Student Senate Committee on Student Organizations to ad hoc organizations which are eligible for temporary recognition. Application forms for recognition are available in the Office of Student Activities and must be signed by a principal representative of the organization.

5. Registration: On or before October 1 of each year, every recognized student organization must submit a registration statement to the Office of Student Affairs setting forth completely and accurately all of the information requested on the registration form. Such forms are available in the Office of Student Activities and must be signed by an authorized member of the organization. Thereafter, during the year, recognized student organizations shall, within a reasonable time, report to the Office of Student Affairs any amendments to or changes in their constitutions, bylaws, principal representatives, advisers, or programs. Recognized student organizations shall also submit any additional information or data requested from time to time by the Office of Student Affairs or the Committee on Student Life.

6. Annual Report: Before the close of each academic year; every recognized student organization must submit an annual report to the Office of Student Affairs. Such annual report shall consist of a clear and concise statement summarizing the activities and programs of the organization during the year and must be signed by a principal representative of the organization. Failure to file a timely annual report is cause for revocation of recognition.

7. Revocation: Recognition may be revoked by the recognizing agency (Student Senate, Associated Residence Halls, Interfraternity Council, Panhellenic Council) for good cause. The procedure followed must guarantee the student organization reasonable notice and opportunity to be heard prior to any action on the proposed revocation.

8. Appeals: Student organizations may appeal any adverse decision of a recognizing agency to the President of the University or his designated representative.

9. Advisers: Student organizations are encouraged to have advisers who are members of the University faculty or administrative staff; any recognized student organization which is financed, in whole or in part, by an allocation from student activity fees or through assessments collected by the University is required to have such an adviser.

10. Finances: Any recognized student organization financed in whole or in part by an allocation from student activity fees or through assessments collected by the University is required to utilize the services of and transact all business through the Auditor of Student Organizations. Any other recognized student organization may elect to utilize the services of the Auditor of Student Organizations on a voluntary basis. There is no charge for this service. All organizations required to utilize the facilities of the Auditor must deposit all organizational funds and income with the Auditor and shall not deposit funds or maintain an account in any other place. For further information, consult the Student Organizations Handbook.

11. Official Listing: Only recognized and registered student organizations will be listed in the organizations section of the University Directory and other official University publications.

Regulation of student organizations

1. Use of University Space and Facilities: Recognized student organizations may use University space and facilities subject to the requirements of the regular University program. Requests for reservations for the use of University rooms, auditoriums, and other facilities shall be submitted at least one week in advance to the Office of Space Assignment and Utilization, 102 Jessup Hall. Exceptions: Requests for the use of Iowa Memorial Union facilities are to be submitted to the IMU Scheduling Office, located on the main floor of the Union, and requests for the Field House or the Armory are to be submitted to the Offices of the Director of Athletics and of the Commandant of the ROTC, respectively.

2. Charges for Use of Space and Facilities: Recognized student organizations will be permitted to use available University space and facilities without charge except to defray any extra costs or expenses incurred by the University in making the facility available; provided that if the student organization charges admission or otherwise solicits funds from the public, the normal rental fee for the facilities will be charged.

3. Fund Raising: Recognized student organizations may engage in fund-raising activities, provided such activities are registered with the Office of Student Affairs at least one week in advance. Registration forms are available in the Office of Student Activities and must be signed by a principal representative of the sponsoring student organization.

4. Registration of Programs to which Admission is charged: Recognized student organizations may sponsor entertainment or lecture programs to which a general admission fee is charged, provided such programs are registered with the Office of Student Affairs at least one week in advance. Registration forms are available in the Office of Student Activities and must be signed by a principal representative of the sponsoring student organization. No contracts or other financial commitments should be made by the sponsoring organization until registration has been completed. Organizations utilizing the services of the Auditor of Student Organizations must make all financial arrangements through the Auditor's office. The sponsoring organization must have a balance on hand in its treasury sufficient to cover the cost of the program, including facility rental, speaker's fee, advertising, and any other expense, or adequate funds must actually be deposited with the organization by an underwriter, which funds cannot be repaid until all costs and expenses incurred by the organization in presenting the program have been fully satisfied. No advertising or publicizing of any commercial product or trade name shall be permitted. In scheduling programs, sponsoring organizations must observe the calendaring regulations established by the Student Activities Board.

5. Solicitation on Campus: For the purposes of this chapter, the term "solicitation" means the seeking of funds or other support, such as signatures, food, or supplies, by a recognized student organization from persons outside its membership. Thus, solicitation could include, for example, such activities as the sale of goods or services, the distribution of literature, materials, or products, or the sponsoring of rallies, parades, or similar events. Recognized student organizations may solicit at reasonable times and places on the campus and under reasonable conditions imposed by University officials charged with control of areas involved, provided such solicitations are not inconsistent with the stated purposes of the sponsoring oragnization or with the educational purposes of the University, and provided such solicitations are registered with the Office of Student Affairs at least one week in advance. Registration forms are available in the Office of Student Activities and must be signed by an authorized member of the sponsoring student organization. General solicitation of students is ordinarily conducted in the Iowa Memorial Union and is normally restricted to the Gold Feather Lobby. Requests for reservations in the Gold Feather Lobby are to be submitted to the Office of Student Activities at least one week in advance. As nearly as space permits, each recognized student organization shall be entitled to one reservation (up to five consecutive days) per month. In addition to this reservation, unreserved space will be allocated to organizations by request on a daily first come-first served basis. Special requests for space elsewhere in the Union or on campus may be granted due to unusual circumstances. The Office of Space Assignment and Utilization may also designate certain locations on the outdoor campus which may be used for solicitation subject to any reasonable conditions imposed. The organization conducting a solicitation must be identified at every location by means of a sign or an announcement.

6. Guest Speakers: Recognized student organizations may invite guest lecturers, panel participants, discussion leaders or others from off-campus to speak or otherwise participate in campus programs, provided such programs are registered with the Office of Student Affairs at least one week in advance. Registration forms are available in the Office of Student Activities and must be signed by a principal representative of the sponsoring student organization. No arrangements with guest speakers should be made by the sponsoring organization until registration has been completed. In the event the speaker or the issues are controversial, the Office of Student Affairs may require the sponsoring organization (a) to secure a tenured member of the faculty to chair the program and (b) to provide for the speaker to be subjected to questions from the audience at some time during the program.

7. Sponsorship: Sponsorship is determined by an organization's participation, alone or with others, in planning, publicizing, and financing, rather than by the number of members attending or participating in an event. An event is considered to be sponsored by an

organization if it is planned, announced, discussed, or financed by the organization, such as when organization members are notified in a regular or special meeting or by a special announcement or posting, or when the financial responsibility is met by the organization.

8. Posters: Recognized student organizations are permitted to advertise and publicize forthcoming campus activities or events by means of posters, banners, and other displays on University bulletin boards and elsewhere on campus as authorized by the Director of Space Assignment and Utilization, provided all such posters, banners and displays must be approved in advance by the Office of Space Assignment and Utilization. Posters and other displays to be posted on campus bulletin boards may not exceed 11 x 14 inches in size. The name of the organization sponsoring a campus activity or event must appear on every display, and no advertising or publicizing of any commercial product or trade name is permitted. For further information, students may consult the Office of Space Assignment and Utilization, 102 Jessup Hall.

9. Trips: Off-campus trips sponsored by recognized student organizations must be registered at least one week in advance with the Office of Student Affairs. Registration forms are available in the Office of Student Activities and must be signed by a principal representative of the sponsoring student organization.

10. Enforcement: Any recognized student organization which violates any University rule, regulation or policy shall be subject to disciplinary action in accordance with established procedures, which may result in the loss or suspension of recognition or the imposition of other sanctions.

University policy on undergraduate residence groups

1. General Policy: Fraternity regulations are based upon a policy to: (a) integrate the fraternity system into the general University student housing and group living program. University dormitories and fraternity houses are each to be considered as constituting an integral part of the general plan of University housing and every effort will be expended to insure full occupancy of all group living quarters whether University or fraternity owned: (b) assure, insofar as is possible, solvent, successful, and effective operation on the part of each individual fraternity chapter as a housing unit and living group; (c) maintain different types of living groups so that each student may have a choice of dormitory or fraternity group living as a part of his education program in order that he may utilize non-classroom time in such a way as to supplement the work of the classroom in his individual development.

2. House Residency: Only qualified members and pledges and authorized employees may reside in fraternity chapter houses.

3. Housemother: Each house must have a housemother or other authorized chaperon in residence. No housemother or chaperon is to be employed or released by the fraternity without the approval of the Office of Student Affairs.

4. Vacation Operation: Fraternity chapter houses may remain open during school year vacations only with the permission of the Office of Student Affairs.

5. Financial Operations: All undergraduate fraternities must subscribe to participate in the Fraternity Business Service.

6. Governing Organizations: Undergraduate men's and women's fraternities shall be governed by the Interfraternity Council and Panhellenic Council, respectively, which governing bodies may establish, consistent with provisions of the Code of Student Life, additional rules and regulations for recognition of new fraternities, membership selection standards, and standards of conduct. All amendments to the constitution or bylaws of the Interfraternity Council or Panhellenic Council shall be approved by the Committee on Student Life.

University policy on graduate and professional fraternities

The responsibility for the regulation and governing of graduate or professional fraternities shall be that of the Dean of the respective College (within the framework of general University policy).

General

The Code of Student Life is applicable to all students attending the University of Iowa, including undergraduate, graduate, professional, and parttime students, continuously at all times, whether or not the University is in session, from the date of their initial registration at the University for as long as they are students, regardless of whether or not they are currently registered at the University.

It is the duty and responsibility of all students to acquaint themselves with all provisions of the Code and particularly with the rules and regulations pertaining to personal conduct, and every student will be conclusively presumed to have knowledge of all rules and regulations contained in the Code from the date of his initial registration at the University. The Code may be amended at any time by authority of the President of the University. Amendments are effective upon approval of the President and publication in the Code of Student Life, provided that if the President deems an amendment of immediate importance it shall be effective from and after publication in the Daily Iowan (which will be conclusively presumed is adequate notice to all students). A full and complete text of the Code and other general University rules and regulations of personal conduct currently in effect, including all amendments, shall be on file in the Office of Student Affairs at all times and shall be available for inspection by students. The Office of Student Affairs shall be responsible for making available to students copies of all amendments deemed of immediate importance and for distributing copies of such amendments to all housing units, affected student organizations, and otherwise as the Dean of Students deems appropriate, provided that failure to make such distribution shall not affect the effectiveness of such amendments.

POLICY REGARDING USE OF DRUGS

The use of marijuana, LSD, amphetamines, sedatives, and tranquilizers by students is a matter of concern to educational institutions throughout the United States. This concern is shared within the University of Iowa because evidence shows that some of the drugs represent health hazards and because the use or possession of the first two is unlawful. The others should be used only under current medical supervision.

As a matter of policy the University cannot condone the use by students of drugs which are illegal and which may involve substantial physiological or psychological hazards or lead to interference with the rights and privileges of others. As an educational institution the University endeavors to protect and assist students by providing reliable information about the hazards. Such information is available through Student Health and the University Counseling Service. Any discussions between individuals and the professional staffs in these offices are treated as confidential medical information. Groups may enlist the assistance of the staff as speakers or discussion leaders and, of course, may utilize outside speakers and other sources at their own discretion.

Disciplinary action

The use of marijuana, LSD, hallucinogens, or other dangerous drugs will not of itself be regarded as an act calling for disciplinary action. However, students who violate other sections of the Code of Student Life while under the influence of these drugs will be subject to disciplinary action on the basis of their offenses.

Hallucinogens are especially dangerous when administered to anyone without his knowledge. Any student administering marijuana, LSD, or any other hallucinogen or similar drug to any member of the University community without the latter's knowledge, or knowingly permitting others to do so, will be subject to disciplinary action up to and including expulsion. This regulation is intended for the protection of innocent students and clearly involves a separable University interest. Consequently, it will be enforced independently of any criminal prosecution.

University property is not to be used for the unlawful manufacture, processing, or sale of marijuana, LSD, hallucinogens, or other dangerous drugs. Violators are subject to disciplinary action up to and including expulsion and, in addition, may be reported to appropriate civil authorities.

STUDENT BILL OF RIGHTS

It is the policy of The University of Iowa that each student shall be guaranteed the following rights and freedoms; enumeration of these rights or registration at the University shall in no manner be construed to nullify or limit any other constitutional or legal rights or freedoms possessed by students as citizens or residents of the United States or of the State of Iowa:

1. The right to participate freely in University sponsored services and activities without discrimination based on the student's race, creed, or national origin.

2. The right to obtain a clear statement of his basic rights, obligations, and responsibilities concerning both academic and nonacademic student conduct.

3. The right to be evaluated in the classroom solely on the basis of academic achievement and fulfillment of educational requirements with freedom of expression protected and respected.

4. The right to organize and join associations in order to promote common interests.

5. (Affiliation with recognized student organizations.)[3]

6. The right of protection from the maintenance by the University of records reflecting the student's beliefs or his political activities and associations except for counseling records, health records, and records of disciplinary proceedings, and the right of protection from the release to persons outside the University community of such records as well as academic and disciplinary records without the express consent of the student or a court order.

7. The right to petition for changes in either academic or non-academic regulations, procedures, or practices.

8. The right to be represented by a democratic student government.

9. The right to have clearly defined means to participate in the formulation and application of institutional policy affecting both academic and nonacademic student affairs. The student's participation shall include his right to gain access to information, to express his views, and to have these views considered.

10. The right of protection from the placement of non-University financial obligations on the student's University account without the express consent of the student.

11. (Unreasonable searches and seizures.)[3]

12. The right to be free from disciplinary action by the University for misconduct except under reasonable rules which have as their substantive basis the protection of some clear and distinct interest of the University as an academic institution.

---

[3] Statements on these subjects have been under consideration but are not in final form at this time. Discussions will be continued by the relevant groups during the academic year.

13. The right to due process in any action brought or taken by the University against the student which can reasonably be expected to affect the student's status with the University or any of its constituent parts or agencies.

14. (Unaltered status while disciplinary proceedings pending.) [3]

15. The right to protection from ex post facto regulations.

JUDICIAL STRUCTURE TO HANDLE STUDENT NON-ACADEMIC MISCONDUCT

The violation of student non-academic responsibilities as set forth in The University of Iowa Code of Student Life will be adjudicated by three different types of judicial agencies:

(A) The Committee on Student Conduct

(B) The Office of Student Affairs

(C) Various student conduct committees and other non-academic boards

A. Committee on student conduct

1. Jurisdiction

The Committee on Student Conduct will have jurisdiction over cases referred to it by various campus disciplinary agencies. It will hear all cases involving possible suspension or dismissal of the student from The University of Iowa for disciplinary reasons. All appeals of actions taken by the Office of Student Affairs (other than traffic court cases) will result in a hearing before this committee. The committee will also review appeals from lower court decisions and from Office of Student Affairs decisions involving traffic court cases. Such a review may or may not result in a new hearing before the Committee on Student Conduct. The student party making an appeal to the Committee on Student Conduct must file a written statement of appeal with the Chairman. This statement must be filed no later than one week after the action under appeal has been taken. Such written appeals will be read by the seven member board (see A.4.C), and they must receive an affirmative vote by three of the members before a new hearing is granted.

2. Jurisdiction and procedures regarding organizations

Original jurisdiction of disciplinary cases involving recognized student organizations shall lie with the appropriate court governing the organization or, in cases where no such court exists, with the Office of Student Affairs. Decisions by those bodies may be appealed to the Committee on Student Conduct. Alleged violations of a nature serious enough to result in the possible withdrawal of recognition of the organization or the curtailment of activities essential to the organization's continued well being (such as the right to recruit new members) shall be referred by the lower bodies to the Committee on Student Conduct.

Five votes shall be required to withdraw recognition of an organization or to curtail the performance of its essential activities. Those persons recognized as the accountable student officers of the organization (and their counsel) shall appear before the Committee on Student Conduct to hear the charges and present the organization's defense. Hereafter, in applying the reading of this document to organizations, the term "organization" (accountable student officers) may be substituted for "student" with no basic changes in meaning or procedures.

3. Appeals

Students who are parties to a case may appeal from the Committee on Student Conduct to the President of the University. Such appeals shall be submitted to the President in writing within 72 hours after receipt of the decision being appealed.

4. Membership

(a) The Committee on Student Conduct will consist of eleven members, six of whom shall be nominated by the Faculty Senate and five of whom shall be nominated by the Student Senate for appointment by the President.

(b) The Chairman shall be appointed by the President. The Chairman shall have voting rights and shall have served on the committee at least one year prior to his appointment as Chairman. The term of chairmanship shall be one year.

(c) Sitting on each case will be a seven (7) member board consisting of at least three (3) faculty members (including chairman) and three (3) students selected by the Chairman from among the committee members.

(d) Both sexes must be represented on the board at each hearing.

(e) Terms of committee members will ordinarily be for two years with staggering terms to allow for continuity.

5. Procedure

Cases to be heard by the Committee on Student Conduct will usually be brought to the committee by the Office of Student Affairs. A member of the Office of Student Affairs will have the responsibility for preparing the complaint against the student at the committee hearing. In cases involving appeals of action taken by various conduct committees, the committee concerned will have the responsibility of presenting charges and evidence against the student. Such a presentation by a committee will be conducted in consultation with the member of the Office of Student Affairs familiar with Committee on Student Conduct procedures. The student may also consult with the Office of Student Affairs before his hearing. The following regulations will govern hearings conducted by the Committee on Student Conduct:

(a) Hearings: The Committee shall determine whether the hearing shall be closed or open to the public. The student may request an open hearing but the Committee shall decide. Only those persons directly involved with a case may attend a closed hearing: the Committee on Student Conduct, the student or organization whose case is being heard, the person or persons presenting the charges, and witnesses during their testimony. Hearings shall be informal in nature and designed to place the student as much at ease as possible to facilitate communication and understanding. Cases of original jurisdiction or appeal shall be decided by a simple majority (4 votes). A separate vote will be taken to determine sanctions if the student has been found in violation. Action to suspend or dismiss a student requires five votes.

(b) Record of Proceedings: A record of all hearings will be made on a tape recorder, and the chairman will provide a secretary to keep a written digest of the proceedings. Both records will be kept by the chairman in a locked file. Tapes of cases resulting in penalties such as suspension or dismissal shall be kept on file for two years; all other tapes shall be kept for six months. After the appropriate time has elapsed the content of the tapes will be erased and the tapes re-used. The written record shall be destroyed upon student's graduation or after four years. Only those persons directly involved with a case may have access to the records pertaining thereto: the Committee on Student Conduct, the student or organization (and counsel) whose case is being heard, and the person or persons presenting the charges.

(c) Notice of Hearing: The chairman of the Committee on Student Conduct or his agent shall give the student written notice of the specific charges against him, the person or persons making the charges, a list of the eleven members of the Committee on Student Conduct and the time and place of the hearing of his case. Such notification shall be made at least five (5) days before the hearing.

(d) Challenge: Within twenty-four hours following the receipt of notice, the student may challenge the right of any member of the Committee on Student Conduct whom he feels might be prejudicial to his case to take part in the hearing. The challenge shall be submitted to the chairman whose responsibility it shall be to examine the reasons for the challenge and accept or reject it.

(e) Appearance Before the Committee: The student may elect to appear before the Committee in person to present his defense, or he may elect not to appear. Should he elect not to appear, the hearing shall be held in his absence.

(f) Counsel: The student appearing before the Committee on Student Conduct may be assisted by an adviser of his choice at the hearing.

(g) Testimony: The student will have the opportunity to hear and refute all testimony against him. Where witnesses present evidence against him, he will have the opportunity to hear and question these adverse witnesses. Where the evidence is presented in writing, he will have the right to see and refute such written testimony. The student may present any evidence in his own behalf, may reply to charges in his own words, and may present witnesses in his own behalf.

(h) Proof: The burden of proof will rest upon those bringing the charge, and all matters upon which the decision is based must be introduced as evidence during the hearing. Formal rules of evidence will not be followed; however, improperly acquired evidence shall not be considered.

(i) Student Status: The student's status at the University will not be altered pending final disciplinary action on the charges. His right to be present on the campus and to attend classes will not be suspended except for reasons relating to the well being of himself, other members of the University community, or University property.

(j) Notification of Decision: The decision of the Committee will be conveyed to the student as soon as possible following the hearing, and confirmed in writing within 24 hours of the hearing. When a decision results in a change in the student's University status copies of the letter of notification of decision will go to the Dean of Students the college of student registration, the Registrar, and, in the case of unmarried students who have not reached their majority, to their parent or guardian. Disclosure of decisions made by the Committee on Student Conduct shall not be made except at the request of the student. However, if the offense with which he is charged is a prior matter of public record the decision may be made public.

B. Office of student affairs

1. Jurisdiction

The Office of Student Affairs has original jurisdiction in cases referred to it by a variety of agencies both on and off the campus. In addition, it can act with original jurisdiction on cases referred to it by various conduct committees. Various sanctions may be imposed by this office including that of disciplinary probation. All cases coming to the attention of the Office of Student Affairs in which suspension or dismissal from the University would be a likely sanction must be referred to the Committee on Student Conduct.

2. Case Referral

Cases coming to the attention of the Office of Student Affairs may be referred to the Committee on Student Conduct.

3. Appeals

Students who are parties to the case may appeal disciplinary decisions made by the Office of Student Affairs to the Committee on Student Conduct.

4. Disciplinary Counseling

The Office of Student Affairs will be responsible for the disciplinary counseling

which will take place both in regard to students referred to it from various agencies and also for students who have received hearings and received various sanctions from the Committee on Student Conduct. In addition, students may be referred by lower student committees to the Office of Student Affairs for disciplinary counseling.

C. Student conduct committees

1. Jurisdiction

Student courts will be set up in most types of residence units and these courts will have jurisdiction over members of their resident units, except in those cases serious enough to result in possible probation, suspension, or dismissal.

2. Case Referral

Cases may be referred from these committees to either the Office of Student Affairs or to the Committee on Student Conduct. When cases are referred from these commitees to the Committee on Student Conduct, this referral may take place in consultation with a member of the Office of Student Affairs.

3. Appeals

Students who are a party to the case and appealing the actions of conduct committees at this level will appeal their cases directly to the Committee on Student Conduct as specified in Section A.1.

4. Membership

Membership on conduct committees at this level will be determined by the unit concerned.

5. Procedures

Hearing procedures will be determined by the various conduct committees and by the unit concerned. Such procedures should be consistent with the basic requirements of due process: The burden of proof shall rest upon those bringing the charges; the student shall have the right to call witnesses to testify in his behalf; the student shall be permitted to question adverse evidence; and the student may be assisted by an advisor.

D. Amendments

Any person or group proposing amendments to this document must submit such amendments to the Student Senate and the Faculty Council for recommendation. Such proposed amendments must be recommended by a two-thirds majority of both bodies before being submitted to the University President for final approval.

ACADEMIC MISCONDUCT

As stated in Section 1 of the Code of Student Life general conduct regulations, violation of the regulations for academic misbehavior is ordinarily handled within the department or College concerned. The following procedure applies specifically to the Colleges of Liberal Arts, Education, and Nursing, and is generally representative of procedures in the other undergraduate Colleges. Students in other Colleges who wish more specific information should inquire at the office of their respective dean.

1. Reporting of plagiarism and cheating

All cases of plagiarism and cheating in the College of Liberal Arts shall be reported for action to the Office of the Dean of the College through departmental channels with a statement of the necessary facts. The department and the instructor concerned may also submit recommendations in each case for appropriate disciplinary action.

2. Disciplinary action

a. By the Instructor: The individual instructor may reduce the student's grade, including the assignment of the grade of "F" in the course. A report of this action should always be sent to the Dean's Office.

b. By the Dean: The Dean of the College, or a student-faculty committee appointed by him, may impose the following or other penalties as the offense may warrant: disciplinary probation, assessment of additional hours for the bachelor's degree, suspension from the College or recommendation of expulsion from the University by the President.

3. Referral to university committee on student conduct

a. By the Dean: In the cases of flagrant or repeated offenses or for other reasons deemed sufficient by the Dean of the College, he may, at his option, refer the case and records to the Student Conduct Committee of the University for appropriate action.

b. By the Student: If the student feels that the penalty imposed by the Dean is unjust, the student may appeal to the University Committee on Student Conduct by filing a written request to this effect with the Dean of Students.

4. Record of disciplinary action

The Dean's Office shall maintain a record of disciplinary cases and disposition thereof, and shall notify such other agencies of the University as are concerned with action taken in the case. The Dean shall determine whether or not the disciplinary penalty imposed is to be recorded by the Registrar upon the student's transcript of college courses. The student involved shall be informed that a record is being kept of the offense.

Graduate College: Questions of academic dishonesty arising within the Graduate College are treated on an individual basis. Generally, the questions are handled at the departmental level. If a departmental decision is appealed, the Dean may appoint an appeals committee of faculty and students from a slate of nominees prepared by the Graduate Council and the Graduate Student Senate, to recommend an appropriate course of action.

JOINT STATEMENT ON RIGHTS AND FREEDOMS OF STUDENTS

The Joint Statement on Rights and Freedoms of Students was drafted as a cooperative project among national educational associations representing faculty members, students, and administrators. This effort began in the fall of 1966, and various interim drafts were published in educational journals and discussed by relevant groups from time to time. The University of Iowa recognized the value of this effort at an early date and approved the underlying principles before the final draft was ratified by the participating organizations in the fall of 1967. While the specific rules and procedures which govern the University, e.g., the Code of Student Life, the disciplinary procedures, and the Student Bill of Rights, are controlling, every effort has been made to make them consistent with the Joint Statement. Inconsistencies among the specific rules and procedures are to be resolved in light of the fundamental principles enunciated in the Joint Statement. The text of the Joint Statement reads as follows:

Preamble

Academic institutions exist for the transmission of knowledge, the pursuit of truth, the development of students, and the general well-being of society. Free inquiry and free expression are indispensable to the attainment of these goals. As members of the academic community, students should be encouraged to develop the capacity for critical judgment and to engage in a sustained and independent search for truth. Institutional procedures for achieving these purposes may vary from campus to campus, but the minimal standards of academic freedom of students outlined below are essential to any community of scholars.

Freedom to teach and freedom to learn are inseparable facets of academic freedom. The freedom to learn depends upon appropriate opportunities and conditions in the classroom, on the campus, and in the larger community. Students should exercise their freedom with responsibility.

The responsibility to secure and to respect general conditions conducive to the freedom to learn is shared by all members of the academic community. Each college and university has a duty to develop policies and procedures which provide and safeguard this freedom. Such policies and procedures should be developed at each institution within the framework of general standards and with the broadest possible participation of the members of the academic community. The purpose of this statement is to enumerate the essential provisions for student freedom to learn.

I. Freedom of access to higher education

The admissions policies of each college and university are a matter of institutional choice provided that each college and university makes clear the characteristics and expectations of students which it considers relevant to success in the institution's program. While church-related institutions may give admission preference to students of their own persuasion, such a preference should be clearly and publicly stated. Under no circumstances should a student be barred from admission to a particular institution on the basis of race. Thus, within the limits of its facilities, each college and university should be open to all students who are qualified according to its admission standards. The facilities and services of a college should be open to all of its enrolled students, and institutions should use their influence to secure equal access for all students to public facilities in the local community.

II. In the classroom

The professor in the classroom and in conference should encourage free discussion, inquiry, and expression. Student performance should be evaluated solely on an academic basis, not on opinions or conduct in matters unrelated to academic standards.

A Protection of Freedom of Expression

Students should be free to take reasoned exception to the data or views offered in any course of study and to reserve judgment about matters of opinion, but they are responsible for learning the content of any course of study for which they are enrolled.

B. Protection against Improper Academic Evaluation

Students should have protection through orderly procedures against prejudiced or capricious academic evaluation. At the same time, they are responsible for maintaining standards of academic performance established for each course in which they are enrolled.

C. Protection against Improper Disclosure

Information about student views, beliefs, and political associations which professors acquire in the course of their work as instructors, advisers, and counselors should be considered confidential. Protection against improper disclosure is a serious professional obligation. Judgments of ability and character may be provided under appropriate circumstances, normally with the knowledge or consent of the student.

III. Student records

Institutions should have a carefully considered policy as to the information which should be part of a student's permanent educational record and as to the conditions of its disclosure. To minimize the risk of improper disclosure, academic and disciplinary records should be separate, and the conditions of access to each should be set forth in an explicit policy statement. Transcripts of academic records should contain only information about academic status. Information from disciplinary or counseling files should not be available to unauthorized persons on campus, or to any person off campus without the express consent of the student involved except under legal compul-

sion or in cases where the safety of persons or property is involved. No records should be kept which reflect the political activities or beliefs of students. Provisions should also be made for periodic routine destruction of non-current disciplinary records. Administrative staff and faculty members should respect confidential information about students which they acquire in the course of their work.

IV. Student affairs

In student affairs, certain standards must be maintained if the freedom of students is to be preserved.

A. Freedom of Association

Students bring to the campus a variety of interests previously acquired and develop many new interests as members of the academic community. They should be free to organize and join associations to promote their common interests.

1. The membership, policies, and actions of a student organization usually will be determined by vote of only those persons who hold bona fide membership in the college or university community.

2. Affiliation with an extramural organization should not of itself disqualify a student organization from institutional recognition.

3. If campus advisers are required, each organization should be free to choose its own adviser, and institutional recognition should not be withheld or withdrawn solely because of the inability of a student organization to secure an adviser. Campus advisers may advise organizations in the exercise of responsibility, but they should not have the authority to control the policy of such organizations.

4. Student organizations may be required to submit a statement of purpose, criteria for membership, rules of procedures, and a current list of officers. They should not be required to submit a membership list as a condition of institutional recognition.

5. Campus organizations, including those affiliated with an extramural organization, should be open to all students without respect to race, creed, or national origin, except for religious qualifications which may be required by organizations whose aims are primarily sectarian.

B. Freedom of Inquiry and Expression

1. Students and student organizations should be free to examine and discuss all questions of interest to them, and to express opinions publicly and privately. They should always be free to support causes by orderly means which do not disrupt the regular and essential operation of the institution. At the same time, it should be made clear to the academic and the larger community that in their public expressions or demonstrations students or student organizations speak only for themselves.

2. Students should be allowed to invite and to hear any person of their own choosing. Those routine procedures required by an institution before a quest speaker is invited to appear on campus should be designed only to insure that there is orderly scheduling of facilities and adequate preparation for the event, and that the occasion is conducted in a manner appropriate to an academic community. The institutional control of campus facilities should not be used as a device of censorship. It should be made clear to the academic and larger community that sponsorship of guest speakers does not necessarily imply approval or endorsement of the views expressed, either by the sponsoring group or the institution.

C. Student Participation in Institutional Government

As constituents of the academic community, students should be free, individually and collectively, to express their views on issues of institutional policy and on matters of general interest to the student body. The student body should have clearly defined means to participate in the formulation and application of institutional policy affecting academic and student affairs. The role of the student government and both its general and specific responsibilities should be made explicit, and the actions of the student government within the areas of its jurisdiction should be reviewed only through orderly and prescribed procedures.

D. Student Publications

Student publications and the student press are a valuable aid in establishing and maintaining an atmosphere of free and responsible discussion and of intellectual exploration on the campus. They are a means of bringing student concerns to the attention of the faculty and the institutional authorities and of formulating student opinion on various issues on the campus and in the world at large.

Whenever possible the student newspaper should be an independent corporation financially and legally separate from the university. Where financial and legal autonomy is not possible, the institution, as the publisher of the student publications, may have to bear the legal responsibility for the contents of the publications. In the delegation of editorial responsibility to students the institution must provide sufficient editorial freedom and financial autonomy for the student publications to maintain their integrity of purpose as vehicles for free inquiry and free expression in an academic community.

Institutional authorities, in consultation with students and faculty, have a responsibility to provide written clarification of the role of the student publications, the standard to be used in their evaluation, and the limitations on external control of their operation. At the same time, the editorial freedom of student editors and managers entails corollary responsibilities to be governed by the canons of responsible journalism, such as the avoidance of libel, indecency, undocumented allegations, attacks on personal integrity, and the techniques of harassment and innuendo. As safeguards for the editorial freedom of student publications the following provisions are necessary:

1. The student press should be free of censorship and advance approval of copy, and its editors and managers should be free to develop their own editorial policies and news coverage.

2. Editors and managers of student publications should be protected from arbitrary suspenion and removal because of student, faculty, administrative, or public disapproval of editorial policy or content. Only for proper and stated causes should editors and managers be subject to removal and then by orderly and prescribed procedures. The agency responsible for the appointment of editors and managers should be the agency responsible for their removal.

3. All university published and financed student publications should explicitly state on the editorial page that the opinions there expressed are not necessarily those of the college, university, or student body.

V. Off-Campus Freedom of Students

A. Exercise of Rights of Citizenship

College and university students are both citizens and members of the academic community. As citizens, students should enjoy the same freedom of speech, peaceful assembly, and right of petition that other citizens enjoy and, as members of the academic community, they are subject to the obligations which accrue to them by virtue of this membership. Faculty members and administrative officials should insure that institutional powers are not employed to inhibit such intellectual and personal development of students as is often promoted by their exercise of the rights of citizenship both on and off campus.

B. Institutional Authority and Civil Penalties

Activities of students may upon occasion result in violation of law. In such cases, institutional officials should be prepared to apprise students of sources of legal counsel and may offer other assistance. Students who violate the law may incur penalties prescribed by civil authorities, but institutional authority should never be used merely to duplicate the function of general laws. Only where the institution's interests as an academic community are distinct and clearly involved should the special authority of the institution be asserted. The student who incidentally violates institutional regulations in the course of his off-campus activity, such as those relating to class attendance, should be subject to no greater penalty than would normally be imposed. Institutional action should be independent of community pressure.

VI. Procedural standards in disciplinary proceedings

In developing responsible student conduct, disciplinary proceedings play a role substantially secondary to example, counseling, guidance, and admonition. At the same time, educational institutions have a duty and the corollary disciplinary power to protect their educational purpose through the setting of standards of scholarship and conduct for the students who attend them and through the regulation of the use of institutional facilities. In the exceptional circumstances when the preferred means fail to resolve problems of student conduct, proper procedural safeguards should be observed to protect the student from the unfair imposition of serious penalties.

The administration of discipline should guarantee procedural fairness to an accused student. Practices in disciplinary cases may vary in formality with the gravity of the offense and the sanctions which may be applied. They should also take into account the presence or absence of an honor code, and the degree to which the institutional officials have direct acquaintance with student life, in general, and with the involved student and the circumstances of the case in particular. The jurisdictions of faculty or student judicial bodies, the disciplinary responsibilities of institutional officials and the regular disciplinary procedures, including the student's right to appeal a decision, should be clearly formulated and communicated in advance. Minor penalties may be assessed informally under prescribed procedures.

In all situations, procedural fair play requires that the student be informed of the nature of the charges against him, that he be given a fair opportunity to refute them, that the institution not be arbitrary in its actions, and that there be provision for appeal of a decision. The following are recommended as proper safeguards in such proceedings when there are no honor codes offering comparable guarantees.

A. Standards of Conduct Expected of Students

The institution has an obligation to clarify those standards of behavior which it considers essential to its educational mission and its community life. These general behavioral expectations and the resultant specific regulations should represent a reasonable regulation of student conduct but the student should be as free as possible from imposed limitations that have no direct relevance to his education. Offenses should be as clearly defined as possible and interpreted in a manner consistent with the aforementioned principles of relevancy and reasonableness. Disciplinary proceedings should be instituted only for violations of standards of conduct formulated with significant student participation and published in advance through such means as a student handbook or a generally available body of institutional regulations.

B. Investigation of Student Conduct

1. Except under extreme emergency circumstances, premises occupied by students and the personal possessions of students should not be searched unless appropriate authorization has been obtained. For premises such as residence halls controlled by the institution, an appropriate and responsible authority should be designated to whom application should be made before a search is conducted. The application should specify the reasons for the search and the objects or information sought. The student should be present, if possible, during the search. For premises not controlled by the institution, the ordinary requirements for lawful search should be followed.

2. Students detected or arrested in the course of serious violations of institutional regulations, or infractions of ordinary law, should be informed of their rights. No form of harassment should be used by institutional representatives to coerce admissions of guilt or information about conduct of other suspected persons.

C. Status of Student Pending Final Action

Pending action on the charges, the status of a student should not be altered, or his right to be present on the campus and to attend classes suspended, except for reasons relating to his physical or emotional safety and well-being, or for reasons relating to the safety and well-being of students, faculty, or university property.

D. Hearing Committee Procedures

When the misconduct may result in serious penalties and if the student questions the fairness of disciplinary action taken against him, he should be granted, on request, the privilege of a hearing before a regularly constituted hearing committee. The following suggested hearing committee procedures satisfy the requirements of procedural due process in situations requiring a high degree of formality.

1. The hearing committee should include faculty members or students, or, if regularly included or requested by the accused, both faculty and student members. No member of the hearing committee who is otherwise interested in the particular case should sit in judgment during the proceeding.

2. The student should be informed, in writing, of the reasons for the proposed disciplinary action with sufficient particularity, and in sufficient time, to insure opportunity to prepare for the hearing.

3. The student appearing before the hearing committee should have the right to be assisted in his defense by an adviser of his choice.

4. The burden of proof should rest upon the officials bringing the charge.

5. The student should be given an opportunity to testify and to present evidence and witnesses. He should have an opportunity to hear and question adverse witnesses. In no case should the committee consider statements against him unless he has been advised of their content and of the names of those who made them, and unless he has been given an opportunity to rebut unfavorable inferences which might otherwise be drawn.

6. All matters upon which the decision may be based must be introduced into evidence at the proceeding before the hearing committee. The decision should be based solely upon such matters. Improperly acquired evidence should not be admitted.

7. The decision of the hearing committee should be final, subject only to the student's right to appeal to the president or ultimately to the governing board of the institution.

STATEMENT BY PHILIP G. HUBBARD, VICE PROVOST

After consultation with University staff members who are familiar with the circumstances of an incident Wednesday afternoon in the University Career Counseling and Placement Office, I believe there is sufficient evidence to warrant the filing of charges against certain individuals involved. It appears that not more than 10 or 12 persons were involved, although some of them may not have violated University regulations.

Charges of violating University regulations will be filed with the Committee on Student Conduct against students involved, and against Students for a Democratic Society, the organization which sponsored the activity. Civil charges will be brought against non-students involved in the incident.

We expect to act in the next few days, following completion of our investigation.

SCHWENGEL COMMENDS NIXON ADMINISTRATION ON FIRST YEAR'S RECORD

(Mr. SCHWENGEL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SCHWENGEL. Mr. Speaker, we are now rapidly approaching the end of the first year of President Nixon's administration. And what a great year it has been for America. President Nixon has done a magnificent job of getting this country back on the track and headed toward fulfillment of our historic destiny. His achievements are all the more laudable in view of the fact that many of his efforts have been stalled or stymied in the Congress where his party is still a minority.

Let me summarize briefly the President's achievements to date:

NEW DIRECTION IN FOREIGN POLICY

Among the accomplishments were:

The Nixon doctine, set forth at the outset of his round-the-world tour, calling for a new kind of partnership for peace and security.

Agreement with Japan on the difficult question of Okinawan reversion.

New life for the Western European alliance, dramatized by the President's visit to Europe.

New posture toward the countries of Eastern Europe, symbolized by the visit to Romania, the first by any President to a Communist country.

A new policy for Latin America, unveiled in the first Presidential address ever televised live to the other nations of the Western Hemisphere.

A series of initiatives to probe the possibilities of moving toward a political settlement of the conflict in the Middle East.

Continued efforts to end the tragedy of starvation in Biafra.

Proposals for reforms in foreign aid and trade.

The signing of the Nuclear Nonproliferation Treaty.

The opening of the strategic arms limitation talks in Helsinki.

A new policy on the use of chemical and biological weapons.

A Presidential directive to implement significant overseas personnel reductions, to cut back the American presence and to streamline operations.

NEW DIRECTION IN VIETNAM

After years in which American involvement has constantly increased, 60,000 troops were withdrawn.

Casualties fell to a 3-year low.

The continued progress in the President's Vietnamization program enabled him to put into effect an orderly timetable for the withdrawal of American forces.

NEW DIRECTION ON THE DRAFT

President Nixon instituted major reform in selective service.

The first draft lottery since 1942 was conducted.

The period of draft vulnerability was reduced from 7 years to 1 year.

Young men will now know at age 19 the degree of likelihood that they will be drafted and can plan accordingly.

Draft calls for November and December were eliminated entirely, and the January 1970 call sharply reduced.

The first system of youth advisers to the Selective Service System was inaugurated.

An intensive review of the other major aspects of draft policy—including the deferment question—is now underway.

NEW DIRECTION IN DEFENSE POLICY

The Nixon administration conducted the most thorough review of worldwide military strategy and force options ever undertaken, which resulted in:

Presidential approval of explicit criteria for strategic sufficiency.

Presidential approval of explicit budgeted strategy guidelines for planning the defense force posture, which will reduce and stabilize defense spending over the next 5 years.

Presidential establishment of an interagency Defense Program Review Committee to insure balanced review of defense policy and program issues in the light of our overall national priorities.

Initial construction of an anti-ballistic-missile system to protect our deterrent and to defend the American people against accidental nuclear attacks or nuclear blackmail by third countries.

NEW DIRECTION IN GOVERNMENT ORGANIZATION

President Nixon undertook the most sweeping reform of government machinery since the Hoover Commission, including:

The establishment of four new Cabinet level domestic Councils and numerous other new planning groups.

The revival of the National Security Council and other reforms in foreign policy machinery.

The establishment of common regional boundaries and headquarters for the field operations of the major domestic departments.

A program for consolidating Federal grant programs.

A new Office of Child Development to implement the President's commitment to improve the first 5 years of life.

Complete reorganization in such areas as the Manpower Administration and the Office of Economic Opportunity.

The most thorough reform proposal in history for the Nation's Post Office system.

NEW DIRECTION IN FEDERAL-STATE-LOCAL RELATIONS

The President's "New Federalism" proposals marked a historic turning point:

For the first time in history, the President proposed the sharing of Federal revenues with the States and localities.

In another historic innovation, the President proposed that administration of manpower training be turned over to State and local governments.

NEW DIRECTION IN WELFARE

The President introduced dramatic new concepts for helping the disadvantaged. They include:

The first major reform in welfare in over a generation, a new family assistance plan for helping people move from welfare rolls to payrolls.

A new manpower training program to prepare workers for new jobs.

The first comprehensive reform of unemployment insurance in the history of that program.

The elimination or reduction of taxes for some 17 million low-income persons.

The first Presidential commitment to put an end to hunger in America, including an expanded food stamp program and free food stamps for the very poor.

New initiatives to provide more low-income housing.

Strong efforts to eliminate racial discrimination in the job market and new programs for strengthening minority business enterprise.

Proposals for social security reforms, including larger benefits and a provision that future benefits be tied to the cost of living.

NEW DIRECTION ON THE ECONOMY

The President carried on a rigorous and unrelenting fight against inflation:

The Federal budget was cut by more than $7 billion.

A program for gradually phasing out the 10-percent surtax was proposed.

A plan of responsible tax reform was laid out, including substantive proposals for making the tax structure fairer.

NEW DIRECTION AGAINST CRIME

The administration asked for more money for crime fighting.

More personnel were assigned to the war on crime.

Structural reforms in crime fighting included new antiracketeering field offices.

New laws were requested for combating organized crime, District of Columbia crime, pornography, and narcotics.

The President directed that reforms be made in Federal correctional institutions.

NEW DIRECTION FOR TRANSPORTATION

Long-range efforts to meet the transportation crisis were introduced, including:

A $10 billion, 12-year mass transit program, the largest ever.

A $2.5 billion, 10-year program to improve airway facilities and equipment.

An immediate increase in the number of air traffic controllers.

A decision to build a supersonic transport.

The first comprehensive reform of merchant shipping legislation since 1936.

NEW DIRECTION IN HEALTH AND SAFETY

Significant, new steps were taken to protect public health and safety, including:

A comprehensive series of consumer protection proposals to safeguard the "Buyers' Bill of Rights."

Steps to protect the public against pesticides and other potentially dangerous materials in the food supply.

A strong new approach to enforcing occupational safety and health standards.

The first Presidential message in history on the subject of the population explosion.

A strong coal mine safety bill.

During his busy first year, the President traveled to 14 foreign countries, officially received 13 heads of government or heads of state as his guests, in the exercise of a new foreign policy aimed at peace and stability in the world. He sent 31 messages to the Congress, proposing historic changes in domestic policy. It was a year of substantial progress toward changing the Nation's mood, reordering its priorities and reorganizing its institutions. At the end of the year, the American people—68 percent of whom expressed approval of the way the President was doing his job—could look forward to the new decade with increased confidence and hope.

President Nixon said last October:

We intend to begin a decade of government reform such as this nation has not witnessed in half a century.

The record of his first year in office gives solid substance to this promise, for it was a year of reform that set a new direction for America in both foreign and domestic policy.

DEPARTMENTS OF LABOR AND HEALTH, EDUCATION, AND WELFARE APPROPRIATIONS—CONFERENCE REPORT

Mr. FLOOD submitted the following conference report and statement on the bill (H.R. 13111) making appropriations for the Departments of Labor and Health, Education, and Welfare, and related agencies, for the fiscal year ending June 30, 1970:

CONFERENCE REPORT (H. REPT. NO. 91-781)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 13111) "making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies for the fiscal year ending June 30, 1970, and for other purposes," having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 1, 2, 3, 11, 12, 18, 42, 43, 46, 48, 55, 61, 62, 63, 64, 65, 66, 68, 70, 73, and 77.

That the House recede from its disagreement to the amendments of the Senate numbered 9, 17, 20, 21, 22, 23, 24, 40, 47, 49, 67, 71, 79, 80, 81, 82, and 85; and agree to the same.

Amendment numbered 8: That the House recede from its disagreement to the amendment of the Senate numbered 8, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$655,772,000"; and the Senate agree to the same.

Amendment numbered 10: That the House recede from its disagreement to the amendment of the Senate numbered 10, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$12,335,000"; and the Senate agree to the same.

Amendment numbered 13: That the House recede from its disagreement to the amendment of the Senate numbered 13, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$72,352,500"; and the Senate agree to the same.

Amendment numbered 14: That the House recede from its disagreement to the amendment of the Senate numbered 14, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$108,800,000"; and the Senate agree to the same.

Amendment numbered 19: That the House recede from its disagreement to the amendment of the Senate numbered 19, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$47,500,000"; and the Senate agree to the same.

Amendment numbered 27: That the House recede from its disagreement to the amendment of the Senate numbered 27, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$190,362,500"; and the Senate agree to the same.

Amendment numbered 28: That the House recede from its disagreement to the amendment of the Senate numbered 28, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$171,256,500"; and the Senate agree to the same.

Amendment numbered 29: That the House recede from its disagreement to the amendment of the Senate numbered 29, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$30,644,500"; and the Senate agree to the same.

Amendment numbered 30: That the House recede from its disagreement to the amendment of the Senate numbered 30, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$146,334,000"; and the Senate agree to the same.

Amendment numbered 31: That the House recede from its disagreement to the amendment of the Senate numbered 31, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$106,978,000"; and the Senate agree to the same.

Amendment numbered 32: That the House recede from its disagreement to the amendment of the Senate numbered 32, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$103,694,500"; and the Senate agree to the same.

Amendment numbered 33: That the House recede from its disagreement to the amendment of the Senate numbered 33, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$164,644,000"; and the Senate agree to the same.

Amendment numbered 34: That the House recede from its disagreement to the amendment of the Senate numbered 34, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$76,949,000"; and the Senate agree to the same.

Amendment numbered 35: That the House recede from its disagreement to the amendment of the Senate numbered 35, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$24,342,500"; and the Senate agree to the same.

Amendment numbered 36: That the House

recede from its disagreement to the amendment of the Senate numbered 36, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$76,658,000"; and the Senate agree to the same.

Amendment numbered 37: That the House recede from its disagreement to the amendment of the Senate numbered 37, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$234,470,000"; and the Senate agree to the same.

Amendment numbered 38: That the House recede from its disagreement to the amendment of the Senate numbered 38, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$11,722,000"; and the Senate agree to the same.

Amendment numbered 39: That the House recede from its disagreement to the amendment of the Senate numbered 39, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$149,050,000"; and the Senate agree to the same.

Amendment numbered 44: That the House recede from its disagreement to the amendment of the Senate numbered 44, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$330,876,000"; and the Senate agree to the same.

Amendment numbered 45: That the House recede from its disagreement to the amendment of the Senate numbered 45, and agree to the same with an amendment, as follows: Restore the matter stricken by said amendment, amended to read as follows: "$30,000,000 shall be for equipment and minor remodeling and state administrative services under title III–A of said Act of 1958;"; and the Senate agree to the same.

Amendment numbered 53: That the House recede from its disagreement to the amendment of the Senate numbered 53, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$107,500,000"; and the Senate agree to the same.

Amendment numbered 54: That the House recede from its disagreement to the amendment of the Senate numbered 54, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$18,250,000"; and the Senate agree to the same.

Amendment numbered 58: That the House recede from its disagreement to the amendment of the Senate numbered 58, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$148,881,000"; and the Senate agree to the same.

Amendment numbered 59: That the House recede from its disagreement to the amendment of the Senate numbered 59, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$6,737,000"; and the Senate agree to the same.

Amendment numbered 60: That the House recede from its disagreement to the amendment of the Senate numbered 60, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$5,083,000"; and the Senate agree to the same.

Amendment numbered 69: That the House recede from its disagreement to the amendment of the Senate numbered 69, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$120,000,000"; and the Senate agree to the same.

Amendment numbered 74: That the House recede from its disagreement to the amendment of the Senate numbered 74, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$28,360,000"; and the Senate agree to the same.

Amendment numbered 75: That the House recede from its disagreement to the amendment of the Senate numbered 75, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$10,000,000"; and the Senate agree to the same.

Amendment numbered 76: That the House recede from its disagreement to the amendment of the Senate numbered 76, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$30,226,500"; and the Senate agree to the same.

Amendment numbered 78: That the House recede from its disagreement to the amendment of the Senate numbered 78, and agree to the same with an amendment, as follows: In lieu of the sum named in said amendment insert "$911,350,000"; and the Senate agree to the same.

Amendment numbered 86: That the House recede from its disagreement to the amendment of the Senate numbered 86, and agree to the same with an amendment, as follows: Restore the matter stricken by said amendment, amended to read as follows:

"SEC. 407. No part of the funds appropriated under this Act shall be used to provide a loan, guarantee of a loan, a grant, the salary of or any remuneration whatever to any individual applying for admission, attending, employed by, teaching at, or doing research at an institution of higher education who has engaged in conduct on or after August 1, 1969, which involves the use of (or the assistance to others in the use of) force or the threat of force or the seizure of property under the control of an institution of higher education, to require or prevent the availability of certain curriculum, or to prevent the faculty, administrative officials, or students in such institution from engaging in their duties or pursuing their studies at such institution."

And the Senate agree to the same.

Amendment numbered 87: That the House recede from its disagreement to the amendment of the Senate numbered 87, and agree to the same with an amendment, as follows: In lieu of the matter stricken and inserted by said amendment, insert the following:

"SEC. 408. Except as required by the Constitution no part of the funds contained in this Act may be used to force any school district to take any actions involving the busing of students, the abolishment of any school or the assignment of any student attending any elementary or secondary school to a particular school against the choice of his or her parents or parent."

And the Senate agree to the same.

Amendment numbered 88: That the House recede from its disagreement to the amendment of the Senate numbered 88, and agree to the same with an amendment, as follows: In lieu of the matter stricken and inserted by said amendment, insert the following:

"SEC. 409. Except as required by the Consitution no part of the funds contained in this Act shall be used to force any school district to take any actions involving the busing of students, the abolishment of any school or the assignment of students to a particular school as a condition precedent to obtaining Federal funds otherwise available to any State, school district or school."

And the Senate agree to the same.

The committee of conference report in disagreement amendments numbered 4, 5, 6, 7, 15, 16, 25, 26, 41, 50, 51, 52, 56, 57, 72, 83, and 84.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 13111) making appropriations for the Departments of Labor, and Health, Education, and Welfare, and related agencies for the fiscal year ending June 30, 1970, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon and recommended in the accompanying conference report as to each of such amendments, namely:

TITLE I—DEPARTMENT OF LABOR

MANPOWER ADMINISTRATION

Amendment No. 1: Appropriates $655,605,000 for "Manpower development and training activities" as proposed by the House instead of $675,605,000 as proposed by the Senate. The managers on the part of the House are in agreement with the directions contained in the Senate report with regard to the Neighborhood Youth Corps.

Amendments Nos. 2 and 3: Strike language proposed by the Senate.

Amendment No. 4: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendment with an amendment which will appropriate $36,116,000 instead of $35,325,000 as proposed by the House and $36,907,000 as proposed by the Senate and will insert language proposed by the Senate to provide that the funds remain available until June 30, 1971.

Amendments Nos. 5, 6, and 7: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendments which revise legal citations.

Amendments Nos. 8 and 9: Provide $655,772,000 for "Limitation on grants to States for unemployment compensation and employment service administration" instead of $630,772,000 as proposed by the House and $657,700,000 as proposed by the Senate, and provide $15,000,000 for the contingency fund as proposed by the Senate instead of $12,000,000 as proposed by the House.

LABOR-MANAGEMENT RELATIONS

Amendment No. 10: Appropriates $12,335,000 for "Labor-Management Services Administration, salaries and expenses" instead of $9,585,000 as proposed by the House and $12,426,000 as proposed by the Senate. The conferees have agreed to the full amount of $2,000,000 requested for the "organized crime program."

WAGE AND LABOR STANDARDS

Amendment No. 11: Appropriates $12,050,000 for "Wage and Labor Standards Administration, salaries and expenses" as proposed by the House instead of $12,300,000 as proposed by the Senate. The conferees are agreed that, within the amount allowed, high priority should be given to the high-hazard inspection training and education safety program.

BUREAU OF LABOR STATISTICS

Amendment No. 12: Strikes language proposed by the Senate.

TITLE II—DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

CONSUMER PROTECTION AND ENVIRONMENTAL HEALTH SERVICE

Amendment No. 13: Appropriates $72,352,500 for "Food and drug control" instead of

$72,007,000 as proposed by the House and $72,698,000 as proposed by the Senate.

Amendment No. 14: Appropriates $108,800,000 for "Air pollution control" instead of $93,800,000 as proposed by the House and $116,900,000 as proposed by the Senate.

Amendment No. 15: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendent which provides that $45,000,000 of the funds appropriated for "Air pollution control" shall be available to carry out section 104 of the Clean Air Act.

Amendment No. 16: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendment which provides language with regard to the merging of certain unexpended balances of previous appropriations.

HEALTH SERVICES AND MENTAL HEALTH ADMINISTRATION

Amendment No. 17: Corrects typographical error.

Amendments Nos. 18 and 19: Appropriate $360,302,000 for "Mental health" as proposed by the House instead of $385,000,000 as proposed by the Senate; and provide that $47,500,000 shall be for grants pursuant to parts A, C, and D of the Community Mental Health Centers Act instead of $42,500,000 as proposed by the House and $52,200,000 as proposed by the Senate.

Amendments Nos. 20 and 21: Appropriate $224,033,000 for "Comprehensive health planning and services" as proposed by the Senate instead of $207,143,000 as proposed by the House; and provide that $100,000,000 shall be available for grants pursuant to section 314(d) of the Public Health Service Act as proposed by the Senate.

Amendments Nos. 22, 23, and 24: Appropriate $100,000,000 for "Regional medical programs" as proposed by the Senate instead of $76,000,000 as proposed by the House; provide that $73,500,000 shall be for grants pursuant to title IX of the Public Health Service Act as proposed by the Senate instead of $50,000,000 as proposed by the House; and provide that $24,771,000 shall be for development, assistance, and chronic disease control activities authorized by the Public Health Service Act as proposed by the Senate.

Amendment No. 25: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendment which provides for grants of $3,500,000 and loans of $6,500,000 pursuant to the District of Columbia Medical Facilities Construction Act of 1968.

Amendment No. 26: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendment which provides language with regard to the merging of unexpended balances of certain previous appropriations.

NATIONAL INSTITUTES OF HEALTH

Amendment No. 27: Appropriates $190,362,500 for "National Cancer Institute" instead of $180,725,000 as proposed by the House and $200,000,000 as proposed by the Senate.

Amendment No. 28: Appropriates $171,256,500 for "National Heart Institute" instead of $160,513,000 as proposed by the House and $182,000,000 as proposed by the Senate.

Amendment No. 29: Appropriates $30,644,500 for "National Institute of Dental Research" instead of $29,892,000 as proposed by the House and $32,000,000 as proposed by the Senate.

Amendment No. 30: Appropriates $146,334,000 for "National Institute of Arthritis and Metabolic Diseases" instead of $137,668,000 as proposed by the House and $155,000,000 as proposed by the Senate.

Amendment No. 31: Appropriates $106,978,000 for "National Institute of Neurological Diseases and Stroke" instead of $101,256,000 as proposed by the House and $112,700,000 as proposed by the Senate.

Amendment No. 32: Appropriates $103,694,500 for "National Institute of Allergy and Infectious Diseases" instead of $102,389,000 as proposed by the House and $105,000,000 as proposed by the Senate.

Amendment No. 33: Appropriates $164,644,000 for "National Institute of General Medical Sciences" instead of $154,288,000 as proposed by the House and $175,000,000 as proposed by the Senate.

Amendment No. 34: Appropriates $76,949,000 for "National Institute of Child Health and Human Development" instead of $73,098,000 as proposed by the House and $80,800,000 as proposed by the Senate.

Amendment No. 35: Appropriates $24,342,500 for "National Eye Institute" instead of $23,685,000 as proposed by the House and $25,000,000 as proposed by the Senate. The managers on the part of the House agree with the expression in the Senate report that sufficient funds from this appropriation shall be used to employ 25 additional staff for this new institute.

Amendment No. 36: Appropriates $76,658,000 for "General research and services" instead of $73,658,000 as proposed by the House and $79,658,000 as proposed by the Senate.

Amendment No. 37: Appropriates $234,470,000 for "Health manpower" instead of $218,021,000 as proposed by the House and $251,200,000 as proposed by the Senate. The increase over the House bill includes $5,599,000 for institutional support programs, $4,000,000 for direct loans to health professions students, $1,250,000 for direct loans to nursing students, $5,000,000 for the scholarship program, and $600,000 for grants to the schools of public health. The conferees are agreed that any increase in funds for student assistance under this appropriation for fiscal year 1971 shall be budgeted for loans rather than scholarships or fellowships.

Amendment No. 38: Appropriates $11,722,000 for "Dental health" instead of $10,722,000 as proposed by the House and $11,887,000 as proposed by the Senate. The increase over the amount provided in the House bill is for the Dental Auxiliary Program.

Amendment No. 39: Appropriates $149,050,000 for "Construction of health educational, research, and library facilities" instead of $126,100,000 as proposed by the House and $160,000,000 as proposed by the Senate. The increase over the amount provided in the House bill includes $15,000,000 for teaching facilities for health professions schools, $2,000,000 for schools of nursing to provide funds to meet a very serious situation in Boston, $5,000,000 for health research facilities, and $950,000 for medical libraries. The conferees are agreed that 20 percent of the $15,000,000 for teaching facilities for health professions schools shall be for dental school facilities.

Amendment No. 40: Appropriates $1,900,000 for "Buildings and facilities" as proposed by the Senate instead of $1,000,000 as proposed by the House.

Amendment No. 41: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendment which provides language regarding the merging of unexpended balances of certain previous appropriations.

Amendment No. 42: Provides that $60,700,000 shall be available for "General research support grants" as proposed by the House instead of $65,700,000 as proposed by the Senate.

OFFICE OF EDUCATION

Amendment No. 43: Restores legal citation inserted by the House and stricken by the Senate.

Amendment No. 44: Appropriates $330,876,000 for "Elementary and secondary education" instead of $364,616,000 as proposed by the House and $315,876,000 as proposed by the Senate.

Amendment No. 45: Provides that $30,000,000 of the appropriation for "Elementary and secondary education" shall be for equipment and minor remodeling and State administrative services under title III-A of the National Defense Education Act instead of $78,740,000 as proposed by the House and stricken by the Senate. The Senate restored the full amount of the $78,740,000 in amendment number 50. The conferees agreed to the full amount of $78,740,000 for this purpose, but due to a technicality it was not possible for the conferees to include this full amount in amendment number 45. Otherwise, the fact that the $78,740,000 is divided into $30,000,000 in amendment number 45 and $48,740,000 in amendment number 50 has absolutely no significance.

Amendment No. 46: Provides that $5,000,000 of the amount appropriated for "Elementary and secondary education" shall be for dropout programs under section 807 of the Elementary and Secondary Education Act as proposed by the House instead of $20,000,000 as proposed by the Senate.

Amendment No. 47: Provides that $25,000,000 of the amount appropriated for "Elementary and secondary education" shall be for bilingual education programs under title VII of the Elementary and Secondary Education Act as proposed by the Senate instead of $10,000,000 as proposed by the House.

Amendment No. 48: Strikes the appropriation of $1,117,580,000 for fiscal year 1971 for grants under title I-A of the Elementary and Secondary Education Act as proposed by the Senate. There is no authority for the proposed appropriation.

Amendment No. 49: Strikes language and appropriations proposed by the House. With minor exceptions all of this language and the appropriations are carried in the bill in connection with other Senate amendments.

Amendment No. 50: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendment with an amendment which will appropriate $48,740,000 instead of $93,240,000 as proposed by the Senate. All of the $48,740,000 is for equipment and minor remodeling and State administrative services under title III-A of the National Defense Education Act. (See amendment number 45 regarding the additional appropriation of $30,000,000 for this purpose.)

Amendment No. 51: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendment with an amendment which will appropriate $600,167,000 for "School assistance in Federally affected areas" of which $585,000,000 shall be for payments to local educational agencies for the maintenance and operation of schools instead of $660,167,000 and $645,000,000, respectively, as proposed by the Senate. The amounts in the motion will be the same as the amounts included in the House bill, but stricken by amendment number 49.

Amendment No. 52: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendment which adds a legal citation.

Amendments Nos. 53 and 54: Appropriate $107,500,000 for "Education professions development" instead of $95,000,000 as proposed by the House and $120,000,000 as pro-

posed by the Senate, provide that $18,250,000 shall be for subpart 2 of part B of the Education Professions Development Act instead of $15,000,000 as proposed by the House and $21,500,000 as proposed by the Senate. The conferees are agreed that none of the increase over the amount proposed by the House shall be used for fellowships or scholarships.

Amendment No. 55: Appropriates $21,737,000 for "Teacher Corps" as proposed by the House instead of $31,100,000 as proposed by the Senate.

Amendment No. 56: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendment with an amendment which will appropriate $871,874,000 for "Higher education" instead of $1,006,874,000 as proposed by the Senate. This compares with $859,633,000 proposed by the House in connection with the appropriations and language stricken by amendment number 49. The changes made by the Senate from the amounts proposed by the House and the conference action thereon follow:

(1) $164,600,000 is included for educational opportunity grants instead of $159,600,000 proposed by the House and $175,600,000 proposed by the Senate.

(2) $7,241,000 is included for endowment of the Federal City College as proposed by the Senate.

(3) $43,000,000 is included for grants for construction of public community colleges and technical institutes as proposed by the House instead of $125,000,000 as proposed by the Senate.

(4) $33,000,000 is included for grants for construction of other undergraduate facilities as proposed by the House instead of $75,000,000 as proposed by the Senate.

Amendment No. 57: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendment which provides $488,716,000 for "Vocational education", the same amount as was included in the House bill, but stricken by amendment No. 49. The only difference between the House and Senate bill, other than the location of this item in the bill, is that the Senate amendment provides $352,836,000 for the basic grants compared with $357,836,000 included in the House bill and the Senate amendment provides $20,000,000 for consumer and homemaking education compared with $15,000,000 included in the House bill. The managers on the part of the House agree with the directive in the Senate report earmarking $34,000,000 of the allowance for vocational research activities.

Amendments Nos. 58, 59, and 60: Appropriate $148,881,000 for "Library and community services" instead of $135,394,000 as proposed by the House and $155,625,000 as proposed by the Senate, provide that $6,737,000 shall be for transfer to the Librarian of Congress instead of $5,500,000 provided by the House and $7,356,000 provided by the Senate, and provide that $5,083,000 shall be for educational broadcasting facilities instead of $4,000,000 provided by the House and $5,625,000 provided by the Senate. The conferees are agreed that the appropriation includes $20,834,000 for college library resources and $6,833,000 for librarian training.

Amendment No. 61: Appropriates $100,000,000 for "Education for the handicapped" instead of $105,000,000 as proposed by the Senate.

Amendments Nos. 62 and 63: Appropriate $85,750,000 for "Research and training" as proposed by the House instead of $98,250,000 as proposed by the Senate and delete the provision proposed by the Senate that $9,500,000 shall be for experimental schools.

Amendments Nos. 64, 65, and 66: Appropriate $18,000,000 for "Education in foreign languages and world affairs" as proposed by the House instead of $12,000,000 as proposed by the Senate and delete language proposed by the Senate to authorize the use of these funds for sections 102 and 103 of the International Education Act of 1966.

Amendment No. 67: Inserts language proposed by the Senate with regard to loans from the Higher Education Facilities Loan Fund.

SOCIAL AND REHABILITATION SERVICE

Amendment No. 68: Provides that $3,000,000 of the appropriation "Grants to States for public assistance" shall be available for grants authorized in section 707 of the Social Security Act as proposed by the House instead of $5,000,000 as proposed by the Senate.

Amendment No. 69: Appropriates $120,000,000 for "Work incentives" instead of $129,640,000 as proposed by the House and $100,000,000 as proposed by the Senate.

Amendment No. 70: Strikes language proposed by the Senate which would make funds in the appropriation "Grants for rehabilitation services and facilities" available for a migrant labor program.

Amendment No. 71: Appropriates $464,783,000 for "Grants for rehabilitation services and facilities" of which $436,000,000 is for grants under section 2 as proposed by the Senate instead of $499,783,000 and $471,000,000, respectively, as proposed by the House.

Amendment No. 72: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendment which provides that grants to any State under section 2 of the Vocational Rehabilitation Act shall not be less than grants made to the State for the fiscal year 1969.

Amendment No. 73: Appropriates $37,000,000 for "Mental retardation" as proposed by the House instead of $39,000,000 as proposed by the Senate and strikes language proposed by the Senate.

Amendment No. 74: Appropriates $28,360,000 for "Development of programs for the aging" instead of $36,250,000 as proposed by the Senate.

Amendment No. 75: Appropriates $10,000,000 for "Junvenile delinquency prevention and control" instead of $5,000,000 as proposed by the House and $15,000,000 as proposed by the Senate, and deletes language proposed by the House and stricken by the Senate.

Amendment No. 76: Appropriates $30,226,500 for "Salaries and expenses" instead of $28,780,000 as proposed by the House and $31,673,000 as proposed by the Senate.

SOCIAL SECURITY ADMINISTRATION

Amendment No. 77: Deletes appropriation of $300,000 for "Consumer credit training" proposed by the Senate.

Amendment No. 78: Provides $911,350,000 for "Limitation on salaries and expenses" instead of $901,500,000 as proposed by the House and $921,200,000 as proposed by the Senate.

SPECIAL INSTITUTIONS

Amendment No. 79: Appropriates $4,332,000 for "Gallaudet College, salaries and expenses" as proposed by the Senate instead of $4,257,000 as proposed by the House.

Amendment No. 80: Appropriates $1,106,000 for "Gallaudet College, construction" as proposed by the Senate instead of $867,000 as proposed by the House.

DEPARTMENTAL MANAGEMENT

Amendment No. 81: Appropriates $2,060,000 for "Office of the Comptroller, salaries and expenses" as proposed by the Senate instead of $1,808,000 as proposed by the House.

TITLE III—RELATED AGENCIES

Amendment No. 82: Appropriates $8,412,000 for "Federal Mediation and Conciliation Service, salaries and expenses" as proposed by the Senate instead of $8,240,000 as proposed by the House.

Amendment No. 83: Reported in technical disagreement. The managers on the part of the House will move to recede and concur in the Senate amendment with an amendment which will appropriate $1,948,000,000 for "Economic opportunity program" instead of $2,048,000,000 as proposed by the Senate. It is the recommendation of the conferees that the family emergency loan program at the level originally funded by the Office of Economic Opportunity be continued at a level that will permit it to operate as in the past and that an additional $2,500,000 be allocated for the purpose of broadening its operation in areas not presently benefitted.

Amendment No. 84: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendment which appropriates $300,000 for "President's Council on Youth Opportunity, salaries and expenses."

Amendment No. 85: Appropriates $15,000,000 for "Payment to the Corporation for Public Broadcasting" as proposed by the Senate.

TITLE IV—GENERAL PROVISIONS

Amendment No. 86: Restores the second sentence of section 407 included in the House bill and stricken by the Senate. The first sentence of this section is not restored.

Amendments Nos. 87 and 88: Deletes language proposed by the House and stricken by the Senate, and inserts language proposed by the Senate.

DANIEL J. FLOOD,
WILLIAM H. NATCHER,
NEAL SMITH,
W. R. HULL, Jr.,
BOB CASEY,
GEORGE MAHON,
GARNER E. SHRIVER,
Managers on the Part of the House.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. ASPINALL, from 4 p.m. December 22, 1969, until end of first session, 91st Congress, on account of personal pleasure—spending Christmas with his youngest son and his family in Brussels, Belgium.

Mr. CONYERS (at the request of Mr. ALBERT), on account of illness.

Mr. CORMAN, for Saturday, December 20, 1969, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. PATMAN, for 30 minutes, on December 22; to revise and extend his remarks and include extraneous matter.

Mr. MONAGAN, for 30 minutes, on December 22; to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. JONES of Tennessee); to revise and extend their remarks and include extraneous matter:)

Mr. GONZALEZ, for 10 minutes, today.

Mr. HAMILTON, for 60 minutes, today.

Mr. STAGGERS, for 25 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. KEE.

Mr. GROSS to revise and extend his remarks made today on the conference report on H.R. 15149.

(The following Members (at the request of Mr. LUJAN) and to include extraneous matter:)

Mr. MINSHALL.

Mr. GOODLING.

Mr. WYMAN in two instances.

Mr. BUTTON.

Mr. DON H. CLAUSEN.

Mr. JOHNSON of Pennsylvania in two instances.

Mr. DUNCAN.

Mr. LANDGREBE.

Mr. HORTON in three instances.

(The following Members (at the request of Mr. JONES of Tennessee) and to include extraneous matter:)

Mr. DANIELS of New Jersey in 10 instances.

Mr. DANIEL of Virginia in two instances.

Mr. GONZALEZ in two instances.

Mr. BURKE of Massachusetts.

Mr. PICKLE in four instances.

Mr. OLSEN.

Mr. OTTINGER in three instances.

Mr. GIBBONS.

Mr. KLUCZYNSKI in 10 instances.

Mr. FOUNTAIN.

Mr. DINGELL in two instances.

Mr. O'NEAL of Georgia in two instances.

Mr. HAGAN in two instances.

SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 1933. An act to provide for Federal railroad safety, hazardous materials control, and for other purposes; to the Committee on Interstate and Foreign Commerce.

ENROLLED BILLS SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly enrolled bills of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 9334. An act to amend title 38, United States Code, to promote the care and treatment of veterans in State veterans' homes;

H.R. 9366. An act to change the limitation on the number of apprentices authorized to be employees of the Government Printing Office, and for other purposes;

H.R. 14580. An act to promote the foreign policy, security, and general welfare of the United States by assisting peoples of the world to achieve economic development within a framework of democratic economic, social, and political institutions, and for other purposes;

H.R. 14751. An act making appropriations for military construction for the Department of Defense for the fiscal year ending June 30, 1970, and for other purposes; and

H.R. 15090. An act making appropriations for the Department of Defense for the fiscal year ending June 30, 1970, and for other purposes.

SENATE ENROLLED BILLS SIGNED

The SPEAKER announced his signature to enrolled bills of the Senate of the following titles:

S. 59. An act to authorize the Secretary of the Army to adjust the legislative jurisdiction exercised by the United States over lands within the Army National Guard Facility, Ethan Allen, and the U.S. Army Materiel Command Firing Range, Underhill, Vt.; and

S. 2917. An act to provide for the protection of the health and safety of persons working in the coal mining industry of the United States, and for other purposes.

BILLS PRESENTED TO THE PRESIDENT

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee did on the following days present to the President, for his approval, bills of the House of the following titles:

On December 19, 1969:

H.R. 8449. An act to amend the act entitled "An act to promote the safety of employees and travelers upon railroads by limiting the hours of service of employees thereon," approved March 4, 1907.

On December 20, 1969:

H.R. 9366. An act to change the limitation on the number of apprentices authorized to be employees of the Government Printing Office, and for other purposes;

H.R. 14580. An act to promote the foreign policy, security, and general welfare of the United States by assisting peoples of the world to achieve economic development within a framework of democratic economic, social, and political institutions, and for other purposes; and

H.R. 15090. An act making appropriations for the Department of Defense for the fiscal year ending June 30, 1970, and for other purposes.

ADJOURNMENT

Mr. JONES of Tennessee. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 48 minutes p.m.) under its previous order, the House adjourned until Monday, December 22, 1969, at 10:30 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

1432. Under clause 2 of rule XXIV, a letter from the Secretary of State, transmitting a draft of proposed legislation to reorganize and strengthen the U.S. Government structure for dealing with Western Hemisphere affairs; and for other purposes, was taken from the Speaker's table, referred to the Committee on Foreign Affairs.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. MAHON: Committee of Conference. Conference report on H.R. 15209 (Rept. No. 91–780). Ordered to be printed.

Mr. FLOOD: Committee of Conference. Conference report on H.R. 13111 (Rept. No. 91–781). Ordered to be printed.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. SEBELIUS:

H.R. 15392. A bill to amend the Consolidated Farmers Home Administration Act of 1961, as amended, to make interest income on loans sold out of the Agricultural Credit Insurance Fund subject to Federal income taxes, and for other purposes; to the Committee on Ways and Means.

By Mr. TIERNAN (for himself and Mr. EDWARDS of Louisiana):

H.R. 15393. A bill to amend section 105 of the Clean Air Act to authorize increased grants to be made to certain air pollution control agencies not now eligible therefor; to the Committee on Interstate and Foreign Commerce.

By Mr. WYMAN (for himself, Mr. EVINS of Tennessee, Mr. PASSMAN, Mr. BOLLING, Mr. MCMILLAN, Mr. FLOWER, Mr. HANSEN of Idaho, Mr. LANDRUM, Mr. LANDGREBE, Mr. REES, Mr. HASTINGS, Mr. WAGGONNER, Mr. STEIGER of Arizona, Mr. MORSE, Mr. KYROS, Mr. DENNEY, Mr. ANDREWS of North Dakota, Mr. COLLIER, Mr. MCCLURE, Mr. CORBETT, Mr. TALCOTT, Mr. SANDMAN, Mr. DUNCAN, Mr. ADDABBO, and Mr. HOSMER):

H. Res. 762. Resolution amending the Rules of the House of Representatives to expedite the enactment of general appropriation measures, to facilitate the making of appropriations for subsequent fiscal years, and for other purposes; to the Committee on Rules.

By Mr. WYMAN (for himself, Mr. DON H. CLAUSEN, Mr. DONOHUE, Mr. LIPSCOMB, Mr. OTTINGER, Mr. NELSEN, Mr. WIDNALL, Mr. BELL of California, Mr. PRICE of Texas, Mr. DENT, Mr. WYATT, Mr. FREY, Mr. SIKES, Mr. MCCLORY, Mr. CAMP, Mr. MCKNEALLY, Mr. ROBISON, Mr. SHRIVER, Mr. EDWARDS of Alabama, Mr. SEBELIUS, Mr. COUGHLIN, Mr. PICKLE, Mr. WATSON, Mr. MATSUNAGA, and Mr. RANDALL):

H. Res. 763. Resolution amending the Rules of the House of Representatives to expedite the enactment of general appropriation measures, to facilitate the making of appropriations for subsequent fiscal years, and for other purposes; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BURTON of California:

H.R. 15394. A bill for the relief of Leong Tin; to the Committee on the Judiciary.

By Mr. DON H. CLAUSEN:

H.R. 15395. A bill for the relief of Louis Korchek; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

360. By the SPEAKER: Petition of Enick J. Koreski, Shinnston, W. Va., relative to a report of the U.S. Department of Labor concerning the United Mine Workers of America; to the Committee on Education and Labor.

361. Also, petition of Bob Miller, Arlington, Mass., relative to withdrawal of all troops from Vietnam; to the Committee on Foreign Affairs.

EXTENSIONS OF REMARKS

THE PROBLEM OF JUVENILE DELINQUENCY

HON. EDWARD G. BIESTER, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. BIESTER. Mr. Speaker, in recent testimony before the House of Representatives Select Committee on Crime, at its meeting in Miami, Fla., a respected juvenile judge, Frank A. Orlando, presiding judge of the juvenile court of Broward County, Fla., spoke of the problem of juvenile delinquency, of present legislation and of proposed legislation—including the bill H.R. 15124, and the following—introduced by Congressmen TOM RAILSBACK, Republican of Illinois, ABNER MIKVA, Democrat, of Illinois, and myself—to create the Institute for Continuing Studies of Juvenile Justice.

At this point I insert in the RECORD the text of Judge Orlando's remarks:

TESTIMONY OF FRANK A. ORLANDO, PRESIDING JUDGE, BROWARD COUNTY JUVENILE COURT

THE PROBLEM

When the Juvenile Delinquency Prevention and Control Act of 1968 was enacted, the Congress committed the Federal Government to a program of financial assistance to State and local governments and voluntary agencies which are engaged in the prevention, control and treatment of this national social problem. While delinquent behavior is not a new problem in American society, its effects, added to increases in the population and the increasing complexity of our social structure, have focused attention on the need for a broader based effort in delinquency prevention and control.

Almost half of all persons charged with committing a major crime in 1968 was a juvenile. The number of juveniles arrested for all offenses (except traffic) has doubled since 1960 while the number of adults arrested has increased by only 4 percent. Furthermore, the number of juveniles charged with crimes of violence—murder, rape, robbery and assault—was up 125 percent since 1960. More juveniles than adults were arrested in 1968 for larceny, burglary or auto theft.

The rise in juvenile crimes is not just occurring in the slums and adjoining parts of big cities. Crime rates went up as much in the suburbs as they did in the cities in 1968 and the percentage of juveniles among those charged with serious crimes is somewhat higher in the suburbs than in the cities.

There has been relatively little sustained support of delinquency prevention and control programs. Furthermore, current methods of dealing with delinquents are often ineffective, limited in impact, and often, actually harmful. The process of being dealt with by the courts and correctional systems is often a factor contributing to the development of a criminal career. Mere involvement of a youth with the juvenile justice system increases the chances that he will return to that system; and commitment to correctional institutions may reinforce delinquent values and negative attitudes toward authority. The recidivism rate among youths who have been institutionalized runs as high as 50 percent. The ineffectiveness and expense of commitment to correctional institutions argue for a heavy emphasis on prevention at the community level and, if prevention fails, for alternatives to institutional commitment.

OVERVIEW OF THE LEGISLATION

The Juvenile Delinquency Prevention and Control Act emphasizes treating the offender in the community in which he lives, not in an isolated institutional complex far from normal family life. The community ultimately must cope with the offender on his return and he must learn to live in that community as well. Treatment of youth apart from communities generally offers little more than a temporary disengagement for both youth and society. But community resources for working with problem youth are universally scarce. The legislation provides incentives to communities to plan and implement programs of delinquency prevention and correction that take into account the varied needs of today's youth. Through its provisions for training, the legislation helps to create new manpower resources and upgrade the competence of personnel working with delinquent youth. It supports experimentation to refine our knowledge, and provides for evaluation of programs. It provides technical and material assistance to States and communities seeking to develop comprehensive programs for prevention and control, and requires that the States play a major role in coordinating the range of programs directed at juvenile delinquency.

PLANNING

One of the significant needs in the juvenile delinquency field is systematic planning. Many States have, within their boundaries, many diffierent approaches to the problems of delinquency, ranging all the way from the most traditional to the most experimental. Some localities within the same State have more and better programs; some have competing and overlapping programs side-by-side. Unfortunately there has been little effort to compare experience or to adopt sound practices developed elsewhere. The Juvenile Delinquency Prevention and Control Act offers States and communities the much needed incentives to plan for a coordinated and comprehensive network of prevention and rehabilitation programs.

To date, the efforts of State and local governments to reduce the volume and rate of delinquency have been singularly unsuccessful. The extent to which the lack of success has been due to the failure of State and local governments to develop comprehensive juvenile delinquency plans was duly recognized by the Congress when it imposed under Title I of the Juvenile Delinquency Preventiion and Control Act of 1968 planning as a condition to any grant under this Title. However, there are two problems inherent in this area. The first being, in my opinion, the professionals in the area of juvenile delinquency are not capable without extensive and comprehensive assistance from the Federal Government to develop the necessary comprehensive juvenile delinquency plans. The second problem is the fact that the Congress has not appropriated sufficient funds to encourage the States to develop the necessary comprehensive plans. As you are well aware, last year Congress appropriated only five million dollars for the implementation of the Juvenile Delinquency Act for fiscal year 1970, only five million dollars was again the figure appropriated. There is still a possibility that the Senate will increase the amount appropriated by the House, but at this point things do not look very encouraging.

The Office of Juvenile Delinquency and Youth Development was created by the Department of Health, Education and Welfare for the purpose of implementing the Juvenile Delinquency Prevention and Control Act of 1968. This Office was placed within the Social and Rehabilitation Service Section of HEW.

In August of this year, some of you will recall, I appeared before your Committee with Secretary Finch at the time he made his presentations concerning the juvenile delinquency problem in this country. At that time, I was considering accepting the position of Director of the Office of Juvenile Delinquency. Since that time, I have decided not to accept this position and to remain in my judicial capacity. There were several reasons for this decision, both personal and professional, and the purpose of my appearance here today is to make some recommendations to you concerning this Office.

As most of you are well aware, F.B.I. statistics recently released indicate that during the last decade, arrest involving juveniles increased approximately 800 percent while federal spending in this area decreased. One could go on and on with reference to statistics dealing with delinquents but there is no need to do that before this Committee since you are all very well aware of the extensive problem relating to juvenile delinquency in this country. The single most important thing that I feel can be related to you is the fact that our approaches today are not working, and we are not even coming close to making any kind of successful effort in the area of prevention and control of delinquency.

The Office of Juvenile Delinquency has the responsibility of implementing the Juvenile Delinquency Prevention and Control Act. However, since its creation, this Office has been understaffed and under-financed and the Congress has not provided sufficient funds to allow the Office to implement legislation. Furthermore, along with the small amounts of money available under the Act, the guidelines issued by the Office of Juvenile Delinquency which States must follow in order to have grants approved are so cumbersome that States have resisted the efforts of the Federal Government to encourage comprehensive planning and grant applications under Title I of the Act.

I am sure you are all aware that the Office of Juvenile Delinquency has been ineffective and has not been well received within the States. In fact, at the last National Governor's Conference, a Resolution was presented which called for the abolishment of the Office of Juvenile Delinquency and the transfer of its responsibilities to the Department of Justice. This Resolution received twenty three favorable votes and twenty seven unfavorable votes. Notwithstanding the facts that the Resolution failed to pass, it is unthinkable that an agency with such a monumental task and important objective has fallen into such disfavor that twenty three States called for its abolishment.

However, even though the Office of Juvenile Delinquency has been under-staffed and under-financed, and without a Director for more than two years, it has made some significant accomplishments and has the potential to be a productive and successful agency. It is my feeling however, that as long as the agency does not rate the same type of priority as the problem it attempts to solve, it will never be able to achieve any type of success or reach the objective set for it by Congress. Therefore, I would like to recommend the following:

1. That this Committee consider recommending to the Secretary of Health, Education and Welfare, that the Office of Juvenile Delinquency be given the same status as the

Office of Education and placed at the same level within the HEW structure as is the Office of Education.

2. That all functions pertaining to the control, prevention and treatment of juvenile delinquency within HEW be centered within this Office.

3. That the Congress back up the passage of the Juvenile Delinquency Prevention and Control Act with a full funding for the programs for the fiscal year 1970–1971. That is, fifteen million dollars for 1970 and twenty million dollars for 1971. It should be noted here that the Congress authorized fifty million dollars for fiscal year 1970 and seventy five million dollars for fiscal year 1971. If the Office of Juvenile Delinquency was given the status necessary within HEW and properly staffed then, it is my opinion, the amount of dollars authorized by Congress could be properly generated to the States for comprehensive planning and innovative action programs.

With reference to my recommendations pertaining to the Office of Juvenile Delinquency, let me say I feel that this agency is absolutely necessary and that the 1968 Juvenile Delinquency Prevention and Control Act must be properly implemented. However, if the Office of Juvenile Delinquency is not properly funded and staffed and raised within the structure of HEW to the priority which it deserves, then it will never achieve its objectives and I would be the first to agree with those in the country today whose sentiments are that the Office should be abolished and its functions transferred to the Department of Justice.

With reference to the problem of juvenile delinquency, I would like to touch on several other subjects before colsing and make recommendations pertaining to these subjects. Previously, I briefly touched on the fact that, in my opinion, States are not really capable of designing a comprehensive plan for the prevention and control of juvenile delinquency. The statement is based on my feeling that one of the major problems in the field of juvenile delinquency is the fact that many professionals within the field resist change and have not accepted the new and innovative approaches which are available. This resistance is due largely to the fact that many of the professionals in our field were improperly trained before they entered the field, and have not kept up with modern technology down through the years. By professionals I am not only speaking of the probation counselors and social workers, but I am including in this area the judges of the juvenile courts throughout this country. The National Council on Crime and Delinquency, in its publication, "Goals and Recommendations," states:

"Juvenile Judges are frequently undertrained. Some twenty percent are not even lawyers. Eighty percent of the juvenile courts do not have the diagnostic services—two-thirds of the probation services they need.

"Juvenile Court dispositions are often made with inadequate information. Without sufficient justification, too many children are adjudicated delinquent—a permanent stigma on their records—and too many children are detained and sent to training schools.

"Constitutional safeguards are not observed, both in formal court proceedings and informal handling."

This statement, in my opinion, is true and has resulted in the great hopes originally held for the juvenile court not being fulfilled.

One of your colleagues, Congressman Tom Railsback of Illinois, has a proposed Bill which creates an Institute for the continuing studies in juvenile justice. A copy of this proposed Bill has been presented with my testimony for your consideration. It is my opinion that this legislation would create the vehicle by which we could provide, at a national level, the necessary training of professionals who then could return to their States and fulfill their responsibilities of updating the training and performance of the professionals in the area of juvenile delinquency prevention, control and treatment. We do not have one single agency at a national level which has as its sole responsibility juvenile delinquency prevention, control and treatment. The Office of Juvenile Delinquency and Youth Development is primarily a funding agency and does not have the authority or the ability at this time to fulfill the functions which are encompassed in Congressman Railsback's Bill. There is a distinct possibility that if a National Institute was created and made an independent Federal Agency, the juvenile delinquency responsibilities now being fulfilled by HEW and the Department of Justice could both be transferred to this agency so we would have a comprehensive Federal Agency dealing with the funding of State Programs, one which engaged in the continuing efforts to determine the causes of juvenile delinquency and developed methods to treat juvenile delinquency, and which had the resources to offer training programs for the professionals in the field.

The second additional area which I wish to touch on deals with the problem that all of you are very well aware of. This is the fact that in today's society, many adolescents are alienated from the adult American culture. Because they lack acceptable outlets to demonstrate their alienation, many teenagers violate the law. The adolescent culture views positively its dissatisfaction with the adult world and admires violation of adult norms, even when these norms are part of the criminal law.

Young people often feel the adult world uses the law as a weapon to stifle their energies and penalize their pleasures. Many do not understand the necessity for law.

I would like to recommend that this Committee consider recommending to State Governments, and more specifically to the educators in this country, that programs on Government conducted in the schools should be enriched to include material on the theory and practice of the American Government, the necessity for criminal laws, the content of our laws, and the rights of an individual confronting police in the courts. The overall purpose of such a program should be to give juveniles a sense of being a part of society, not just thwarted by it.

There is in existence today, in the City of Boston, a program which is very similar to the type which I am recommending. This program is a legal education course for secondary schools conducted by the Boston University Law School. The Director of the Program is Mr. William M. Gibson of the Law and Poverty Project of Boston University. I have here a packet of materials which outlines the program objectives and the method by which it is implemented in the secondary schools in the City of Boston. The program has recently been expanded to include course work for students in kindergarten to eighth grade, and I have been advised that Mr. Gibson has developed a program for legal education for youth detained in correctional institutions. The outlines for these two additional parts of the program are also included in these materials.

A third additional area which I wish to briefly touch on deals with the development of incentives to attract bright young people into the field of juvenile delinquency prevention, control and treatment. We have heard in recent years of recommendations which would provide tax incentives for industries who would locate their plants within ghetto areas in cities. By so doing, these industries would attract the persons within the ghetto areas as employees. The need to attract new, bright, young people to the field of juvenile delinquency prevention, control and treatment is at least as desperate as the need to attract industry to the ghetto areas. Many bright young people would like to enter this field but due to the unattractive financial conditions they enter other fields. During the last several years, I have taught in the Department of Criminology at Florida State University and have found that many of the bright young students who should have gone on into the field have accepted jobs in other areas simply because of the financial attractiveness of the other field and the brighter future within the field. Therefore, I would like to recommend that this Committee consider the possibility of recommending some type of tax incentive to attract qualified professionals into the field of juvenile delinquency. Along these same lines, I would like to request that the Committee consider the recommendations to improve the quality of juvenile courts by encouraging States to create family courts with their family-orientated approach toward dealing with juvenile delinquency and that these courts be placed within the highest general trial jurisdiction in the State System.

In conclusion, I would like to take this opportunity to thank you all very much for giving me the opportunity to express my views here today, and say that I will be glad to attempt to answer any question which you may wish to ask. Thank you very much.

RICHARD TUCKER, TENOR

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. WOLFF. Mr. Speaker, a little over a week ago, my wife and I had the good fortune to attend an evening at the Great Neck Synagogue honoring the man who has been described as "the greatest tenor in the world," Richard Tucker, and his charming wife, Sarah.

The Tuckers, I am proud to say, are residents of Great Neck, which is part of the Third Congressional District.

The evening, a truly memorable one, was chaired by Sig Heller and inspired by Mac Mendor. As Rabbi Ephriam Wolff, the outstanding spiritual leader of the Great Neck Synagogue, noted, it was dedicated to Mr. Tucker in recognition of his contribution and help in building the North Shore Youth Center which is sponsored by the synagogue. It had additional meaning, I might add, since Mr. Tucker will soon mark his 25th anniversary—in January—of his now historic Metropolitan debut.

Richard Tucker began his singing career as a boy alto in the Allen Street Synagogue on New York's East Side. His Metropolitan Opera debut, in "La Gioconda," on January 25, 1945, marked the beginning of his rise to fame and world renown in a career which was truly inspirational.

Among other awards he has received is the honor of being the first American tenor to record in Milan's historic La Scala. In addition, he is the first person ever to be awarded the State of Israel's Artistic and Cultural Award.

Wherever he has gone, he has generated enthusiasm of vast proportions. At the Vienna Staatssoper, his presence literally caused a riot, necessitating Vi-

ennese police to clear his way through the mobs.

The testimonial dinner was as rewarding as the joys that he has brought to so many with his remarkable voice and warm personality.

Therefore, Mr. Speaker, I would like to take this opportunity to again express the gratitude of so many along with best wishes to Mr. Tucker and his wife, Sarah, for a future which continues to be as exciting and worthwhile as he has known in the past.

And I would also like to mention the names of some of the other persons who helped to make this dinner such an outstanding event. They are: Cochairmen: Harold Donnitch, Mrs. Selma Kon and Bernard Martin; program cochairman: Al Liederman and Shelley Goren; and Rabbi Bernard Jacobson.

GREECE TODAY AND THE LIMITS OF COMPROMISE

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. MIKVA. Mr. Speaker, the recent resignation of Greece from the Council of Europe underscores the need for close scrutiny of relations between the United States and Greece. Charges of political suppression and dictatorial rule are apparently not without foundation. Moreover, the prospect of continued violence in Greece at a level unseen since the 1946–49 civil war, should alert both Greeks and Americans to the need of restoring democraitc rule in Greece.

One expert who has thoughtfully analyzed the situation in Greece and appropriate American action is Prof. George Anastoplo. In a briefing at the Chicago Council on Foreign Relations, Professor Anastoplo presented a paper which I commend to my colleagues.

The paper follows:

GREECE TODAY AND THE LIMITS OF COMPROMISE

(By George Anastaplo**)

"It is not fit that you should sit here any longer! . . . You shall now give place to better men."—Oliver Cromwell.

I

The American scholar who has been perhaps the most respectable advisor to the tyranny in Athens has recently returned to Washington from a visit to Greece. He offers us his current advice about Greek affairs in an article, "A Role for the U.S. in Greek Solution," published in the Washington *Post* of August 3, 1969.

The truly significant feature of this article, however, is not its advice but rather its admission that even Greeks who had been "disheartened by the pre-coup quarrels and political instability and therefore intially accepted the [present] regime with a sigh of relief" are now "cool if not downright hostile" toward it. The mood of this article is in marked contrast to its author's published defenses of the regime ever since its seizure of power, defenses which have been so generous as to be thought worthy of distribution in this country by the Greek government. (See, e.g., *Notes on World Events,* Chicago Council on Foreign Relations, May, 1969, p. 5.)

There is, moreover, no discussion in the Washington *Post* article of why *anyone* should now be cool toward the regime in Athens. But the article does manage to condemn as "intransigent" the Greek opponents of the regime who have been cool and even hostile toward it from the very beginning. They are "intransigent," it seems, because they prefer to continue their determined opposition to this tyrannical regime rather than to accept the advice of those who have collaborated with it.

Advice which has evidently been spurned in Athens, at least by opponents of the regime there, is now offered to Americans and to their government in Washington. Let us see what the advice in this article amounts to and whether American critics of the Greek regime should be as "intransigent" as the Greeks who have already rejected it.

II

We are told in this article that there are two opinions in Athens about what is likely to happen in Greece if things continue as they are now: "Opponents of the regime are firmly convinced that in spite of his protestations, Premier Papadopoulos has no intention of allowing the return of free political life. On the other hand, government spokesmen assert that the regime is only temporary and that elections will be held as soon as 'the aims of the revolution are accomplished.'" "Whatever the truth," the article goes on to advise us, a "compromise" must be found between the opponents and the defenders of the current regime in Greece. But until one is prepared to decide which of these two opinions about what is likely to happen in Greece is correct, one is neither entitled nor equipped to offer responsible advice either to Americans or to Greeks on this vital matter.

Who *is* right here, the opponents of the regime or the government spokesmen? There is, of course, a sense in which both opinions are correct: there is a sense that is, in which both opinions come down to virtually the same thing. Elections *will* be held in Greece, if only for the sake of propaganda, as soon as the aims of the revolution are accomplished: that will be when the transformation (or, at least, the immobilization) of Greek institutions and of Greek public opinion has reached the point where purportedly free elections (but with the press still controlled, of course) can be held without jeopardizing the tight grip upon the country of its present rulers. After all, what do "the aims of the revolution" amount to now, if not primarily the personal advancement and welfare of the handful of junior officers (predominantly colonels) who betrayed in April 1967 their military oaths, their king, their comrades and their fellow-citizens with the deliberate intention of holding on to power long after the immediate political crisis which permitted them to seize power had passed?

The suggestion in the Washington *Post* article of a "compromise" rests upon the condition that things should be so arranged that "the constitutional reforms" that have already been achieved may be preserved. Precisely what reforms can the author be referring to? The Constitution of 1968 is hardly an improvement upon its predecessors, designed as it is to legitimate the colonels who imposed it upon their country. Indeed, the only permanent result of the 1968 Constitution may be to discredit the occasional worthwhile innovation included in it which will hereafter be identified with an oppressive regime.

One must consider, in order to assess properly "constitutional reforms," not only the Constitution itself but also how it has been imposed and what maintains it. We are dealing, after all, with a regime that is ruthless and, even worse, shameless in what it will do and say to perpetuate itself. It is a tyranny which has revealed itself as remarkably incompetent in everything but the tricks of conspiracy and of counter-conspiracy. No conscientious student of Greek affairs can ignore the evidence, available since the first year of the regime and now overwhelming, which displays the present regime as having easy recourse to extensive arrests and torture, to the most flagrant deceptions, to open contempt for constitutions and laws (including its own), to the harsh suppression of all independent opinion, and to an extravagant (and eventually ruinous) expenditure of funds on public works.

Who can doubt that all this is done by the colonels not in the interest of Greece but primarily in order to perpetuate themselves in power? It is no wonder that Greeks who know what is going on in their country are "cool if not downright hostile" toward this regime and its apologists. The wonder is that any responsible man can remain sincerely sympathetic to the regime once its character becomes apparent to him. Some responsible men did express sympathy for the regime at its beginning in the hope that they might thereby help induce the colonels to surrender power willingly—but it should have been evident by the end of the colonels' first year, if not before, that this approach would be of no use.

What informed man can continue to believe that there remain *any* serious "aims of the revolution" worth preserving, any coherent and defensible set of principles guiding the program of the Greek dictators? The serious problem is not how to preserve the legacy of the "revolution," but rather how long it will take to eliminate from Greek life the depredations of the present tyranny, and at what price. The corrupting influence of the colonels in Greece will remain long after they are gone, even if they should go tomorrow: they have done much that will be difficult to undo justly and harmoniously. Is not that usually the legacy of an army of occupation?

The more astute among the colonels must realize that if they go, their constitution and "reforms" will go with them, no matter what promises or deals or "compromises" should be made in advance of their departure. The concern of the colonels at that time is not going to be whether their "reforms" will survive their regime but whether they themselves will. The only compromise the colonels will ever take seriously will be one which seems to permit them to save their necks, not their "aims of the revolution," in the event they find themselves about to fall.

Both the colonels and their opponents are correct in recognizing each other as irreconcilable enemies. What each realistically seeks from the other is not compromise but surrender. The advocacy of compromise between the government and its opponents in 1969 (as distinguished from 1965, 1966 or 1967) is not only naive, it is also harmful

**The author, who lives in Chicago, is Chairman of the Political Science Department at Rosary College, as well as Lecturer in the Liberal Arts at the University of Chicago and Professor of Politics and Literature at the University of Dallas. Other discussions by him of Greece today may be found in the current volume of the CONGRESSIONAL RECORD at pages 6023 (March 11, 1969), 8460 (April 2), 8461 (April 2), 16878 (June 23), 19732 (July 15) and 21018 (July 28).

See, also, Saville R. Davis, "Blow to NATO: Greek Armed Forces Disintegrating?" *Christian Science Monitor,* August 29, 1969, p. 1; Christopher Wren, "Greece: Government by Torture," *Look,* May 27, 1969.

This discussion has been prepared for use in a briefing to be given by Dr. Anastaplo at the Chicago Council on Foreign Relations, September 15, 1969.

to the revival of genuine constitutional government in Greece. The only practical effect of a serious attempt at compromise at this time would be to demoralize, radicalize and divide the serious opposition to the present regime and thereby to gain for the colonels even more time.

Time is working against the interests of both Greece and her allies: the colonels' unprecedented purging and reshaping of the officer corps, of the civil service (including the courts), of the school system, of local councils (both public and private) and of the Church cannot but help them cling to power if they remain united. Once their extensive reorganization is complete—and it should be, except perhaps for the Church, the Navy and Air Force, and the Universities, virtually complete by the summer of 1970—Greece is likely to have to endure for a generation both the colonels' self-righteous tyranny and the sporadic armed resistance it will generate. There is already more violence in Greece today than there has been at any time since the 1946–1949 Civil War.

III

Massive propaganda, reinforced by generous subsidies, will continue to be used at home and abroad by the present Greek government to magnify the virtues of the colonels and the vices of the politicians. We, on the other hand, are not obliged, in order to expose the colonels to be as bad for Greece as they are, to make the politicians of 1961–1967 better than they were. But the longer these colonels stay, the better those politicians look. In fact, it is difficult to name a single prominent Greek politician who would not be better for Greece and her allies today than the colonels now in power. Indeed, the most serious indictment one might make of Greek politicians before April 1967 is that such people as these colonels were permitted to remain in the Army, that they were given an opportunity to attempt to seize power, and that they could suceed in such an attempt. It is to be hoped that the legitimate political and military leaders of Greece, as wel as her allies abroad, have learned the appropriate lessons from this disastrous experiment. One important lesson is that decent Greeks of all parties and allegiances have much more in common than any of them has in common with the kind of man who is apt to be tempted to seize power for himself if decent men are not moderate in their political differences.

It *is* to the credit of Greek politicians of all parties, as well as of Greek intellectuals, that almost all of them have stood firm since April 1967 against the threats, the sophistries and the enticements of the present Greek government and of its apologists abroad. The same tribute should be recorded on behalf of the King of Greece and most of the senior as well as many of the junior officers of the armed forces of that country. These Greeks, in their respect for the best in Greece, have been more perceptive and more principled about what has been happening to their country than have been certain American students of Greek affairs (in and out of the American government).

The Washington *Post* article suggests as the appropriate role for the United States today that we encourage the "compromise" it advocates. But if, as I have argued, any attempt at *such* compromise in these circumstances will help the colonels consolidate their power, then any American effort along that line can only weaken the legitimate influence of America in Greece. For the longer the colonels stay, the more independent they are likely to become of American influence and, indeed, of the influence of any moderate men at home or abroad. (One need only recall Shakespeare's Richard III.) We Americans could have discreetly helped the constitutional leaders of this NATO ally get rid of their usurpers any time between April and December 1967, a period during which the colonels were relying mostly on bluff and maneuver to stay in power. Instead, we were duped by talk of "constitutional reforms" and "law and order" and hence did, or failed to do, various things in 1967, as well as in 1968, which permitted and even helped the colonels to dig in.

Measures are still available to us which can be used to help our true friends in Greece dislodge the colonels and restore their country to control by its people, measures which would be far more effective than are likely to be the timid ones our government now employs to indicate its tardy approval of so destructive a tyranny. Every serious student of Greek affairs knows what more can and should be done by the United States in the present circumstances. There is no need for me to spell out again on this occasion the measures available to us, measures which would emphasize the publicized withdrawal of vital American support rather than any explicit American interference in Greek domestic affairs. I need only add that I continue to believe, along with many in Greece, that Constantine Karamanlis is the best, though not the only, name around which effective opposition to the colonels can rally. I also continue to believe that it would be prudent for Mr. Karamanlis to offer to include in a coalition government, legitimated by the King and recognized by the United States, figures such as Andreas Papandreou. This is where genuine compromise would be good for Greece.

IV

The colonels, by the end of their third year in power (in April 1970), will probably have immobilized, if not transformed, all institutions in Greece which might stand in their way: repression and propaganda and the lavish use of public monies will have done their work. When that happens, whether by 1970 or by 1971, responsible elements in Greece and abroad (including in the United States) will no longer have any significant influence in that country. If the colonels are dislodged thereafter, it will probably be (unless a serious international crisis erupts) only because of the use of armed force against them in Greece. *If* violent opposition should somehow be successful, the liberators of Greece—whoever they may be—are not likely to forget first our negligence and thereafter our impotence in the time of their desperate need. And then what will our long-term influence be in that allied country which we insist is of great "strategic importance" to us?

Whether there will be in Greece a generation of violent tyranny or an immediate return to constitutional government and the rule of law depends, in large part, on what the United States does in the months immediately ahead. We Americans had better use our power while some of it remains, rather than allow ourselves to be duped again (this time by talk of "compromise") into promoting a policy unworthy both of us and of the Greeks.

The peace and the prosperity, as well as the liberty and honor, of Greece require that the colonels go and with them everything they have come to represent. This is what informed and conscientious Greeks are certain of. This, it is to be hoped, is what the sadly misinformed American government is belatedly beginning to realize.

LEST WE FORGET

HON. BILL CHAPPELL, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. CHAPPELL. Mr. Speaker, the Christmas season is approaching and families throughout America are gathering together for worship and gift giving and rejoicing in family reunions.

Today I ask all Americans to join with me as we celebrate this holiday, to remember those men who are missing in action and prisoners of war—

Lest we forget our own gladness in being free;

Lest we forget our own joy in being with our loved ones;

Lest we forget that over 1,300 families will be without a loved one—again this year;

Lest we forget that the reason these men are so cruelly held in prison is because they were fighting for us;

Lest we forget that it is our responsibility to bring these men home again;

Lest we forget the brotherhood of man and our reasons for celebrating Christmas.

Mr. Speaker, this is a time for each of us to take the families of these brave men especially to our hearts. Let us all renew our efforts for freedom so that these absences can be soon turned into rewarding reunions for all the Christmases to come.

NEW U.S. LINE ON WITHDRAWAL A SEVERE BLOW TO ISRAEL

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, December 18, 1969

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Extensions of Remarks an article entitled "New U.S. 'Line' on Withdrawal Deals Severe Blow to Israel," written by William S. White, and published in the Philadelphia Inquirer of December 16, 1969.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW U.S. "LINE" ON WITHDRAWAL DEALS SEVERE BLOW TO ISRAEL

(By William S. White)

WASHINGTON.—The old year is drawing to its close on a somber note for Israel, whose whole position in her fight for survival has worsened markedly in these recent days. The newly enunciated American policy line calling for Israeli withdrawal from frontier security positions seized from the Arabs in the 1967 war, in return for Arab promises for peaceful coexistence, has hit the Israelis a cruel if unintentional blow.

For this well-meant effort to take up a purely even-handed attitude from Washington is in truth a revolutionary departure from the traditional American posture of candid friendliness to the Israeli side in the chronic crisis of the Middle East.

The difficulty is that the doctrine of ostensible even-handedness actually assists those extremist Arab states which are pro-Communist and publicly bent both upon Israel's literal destruction and the spread of Soviet power in the Middle East.

It ignores the immense reality that this is not a case where two adversaries are equally good or equally bad. One cannot equate aggressors patently embarked upon a Vietnam type of "war of liberation," urged on by the Soviet Union, with defenders motivated simply by the desire to stay alive—and defenders moreover who form a pro-Western outpost in the worldwide struggle that is the Cold War.

The logic of this approach comes to saying, in the old expression, that the rich and the poor have an equal right to sleep in the public parks.

It is not hard to see that the purpose of Secretary of State William Rogers in laying down his doctrine is the benign one of trying to avoid another major explosion in the Middle East. That there is no intention to put the Israelis on a thin diet does not, however, alter the fact that this is precisely what is being done.

How is Premier Golda Meir to accept from the more violent Arabs some pledge to end their ceaseless frontier assaults upon Israel when these same Arabs every day proclaim an unaltered determination to throw the Israelis into the sea? Who needs pledges of this kind?

Still, it is not really the Rogers doctrine that is the ultimate source of Israel's present peril; really this is more nearly symptom than cause.

At bottom, the Israelis are the victims of a climate of neutralism and isolationism and peace-at-any-priceism which the New Left has so long and so stridently promoted in this country. The spirit of this clamor is to reject the whole concept of collective security which has been the great rock of high American foreign policy through five Presidential administrations.

To be sure, it is actually a clamor only of a loud and tireless American minority—but that minority has nevertheless been able to bring into fretful and petulant question the absolutely indispensable and historic role of this nation to lead and protect the non-Communist world.

If it can be argued that the United States of America is free to abandon its solemn commitments to one small and tortured people in South Vietnam, it can be—and is being—argued that we owe nothing to the moral commitment for decades acknowledged to another small and tortured people in Israel. So it is that the seeds so sedulously sown in one part of the world have come to ugly harvest in another part of the world.

Too many of us have got into the habit of redefining our obligations to suit not the hard truth of our pledged word but rather our soft wishes. And, irony of ironies, Israel, the very nation that used to be the darling of the far-liberal American community, has now become the one nation to which, above all, that community is prepared to give less even than its tears.

MORE ON THE CHICAGO BLACK PANTHERS INCIDENT

HON. EDWARD I. KOCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. KOCH. Mr. Speaker, on December 15, I expressed my concern in this Chamber over the recent series of police actions directed against members of the Black Panther organizations. I also wrote to Rev. Theodore M. Hesburgh, urging that the U.S. Civil Rights Commission undertake an investigation of the question surrounding the shooting of two Black Panther leaders by the Chicago police.

Today, I have received a response from Chairman Hesburgh, outlining the roll the Civil Rights Commission is taking in this matter vis-a-vis both the Department of Justice's investigation and the national investigation to be conducted jointly by 28 private organizations. To keep my colleagues advised on this matter, I am submitting for insertion in the RECORD Reverend Hesburgh's letter:

U.S. COMMISSION ON CIVIL RIGHTS,
Washington, D.C., December 18, 1969.

HON. EDWARD I. KOCH,
House of Representatives,
Washington, D.C.

DEAR MR. KOCH: I am writing in response to your recommendation that the Commission on Civil Rights investigate the shooting of Mr. Fred Hampton and Mr. Mark Clark, Illinois leaders of the Black Panther Party, in Chicago on December 4.

On December 12, the Commission met with a high Administration official and this matter was taken up. Both on that date and subsequently, I have been in touch with top officials at the Department of Justice. These discussions are continuing.

I assure you that we are deeply concerned over the shooting of Mr. Hampton and Mr. Clark and by the shooting of other Black Panther Party leaders and members in other cities of the Nation. This concern was shared by the White House officials with whom we discussed the matter. We share your judgment that a reliable and completely credible report is essential to reduce the suspicion and distrust which has grown out of the incidents. I believe we are on the right track for both the short-range and the long-range approaches to the problem, and there should be some further information forthcoming shortly.

As you know, the Department of Justice has announced its intention to conduct a preliminary investigation into the Chicago killings, and 28 organizations have announced the formation of a national commission of inquiry to conduct a private investigation of the killings. The Commission, in addition to whatever else it may do, will establish contact with this national commission and determine areas of appropriate cooperation and assistance.

The members of the Commission appreciate your confidence in the Commission and its staff. I wish to assure you of our continued attention to the investigation of the killings of Black Panther Party members and the resulting racial distrust and polarization.

Sincerely yours,

THEODORE M. HESBURGH,
Chairman.

L. A. BURDETTE RETIRES FROM FHA

HON. ROBERT G. STEPHENS, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. STEPHENS. Mr. Speaker, an article in the News and Farmer and Wadley Herald has been brought to my attention by Mr. Ruel Morris, Jr., district supervisor, Farmers Home Administration, in Greensboro, Ga. This article is about my good friend and constituent, Mr. Lonnie A. Burdette of Stapleton, Ga., who has recently retired after 35 years of service with the Farmers Home Administration.

Mr. Burdette, a native of Ashburn, Ga., spent 17 of his 35 years with the Farmers Home Administration as supervisor of the Jefferson County office, which is in my congressional district. During this time Mr. Burdette has earned several citations for his rural farm program work.

In May 1969, the U.S. Department of Agriculture awarded Mr. Burdette its highest individual award, the Superior Service Award, for his exceptional service to low-income rural families of Jefferson County in helping them to become owners of decent, safe, sanitary, and attractive homes. Under the Jefferson County homebuilding program some 275 houses were constructed in the area through the FHA home loan program. Many of these new residences were low-cost homes designed by Mr. Burdette himself.

I think this fine record of Government service will be of interest to all of the Members of Congress, and I commend it to their attention.

OIL SPILLAGE: CURE WORSE THAN DISEASE

HON. DAVID R. OBEY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. OBEY. Mr. Speaker, an article which appeared in the New York Times just yesterday once again emphasizes the necessity for man to realize that there are many unexpected environmental results of many of his actions—even actions taken in an attempt to protect the environment.

The following article indicates once more how important it is to make certain we know the ecological effects of a course of action before we embark on it:

SCIENTISTS TERM THE CHEMICAL TREATMENT OF OIL SPILLAGE MORE HARMFUL THAN THE "DISEASE"

(By David Bird)

Scientists and engineers have expressed concern here that attempts to control oil spills with chemical dispersants is causing more harm than the oil itself and may be creating long-term ecologic damage, such as is now being attributed to DDT and other pesticides.

The concern is expressed in reports and discussion at a three-day Joint Conference on Prevention and Control of Oil Spills, ending today at the Americana Hotel. The meeting is sponsored by the Federal Water Pollution Control Administration and the American Petroleum Institute, an industry group.

When the conference was planned last summer, the sponsors expected about 300 persons to attend. More than 1,000 have registered.

Their interest reflects increased public concern after two disastrous oil spills.

TORREY CANYON DISASTER

The first occurred in March, 1967, when the supertanker *Torrey Canyon* struck a reef off the southern coast of England and sent 30 million gallons of crude oil oozing toward the Cornish coast and across the English Channel to the shores of Brittany.

The second oil spill occurred early this year, when 18 million gallons leaked to the surface of the Santa Barbara Channel in California during offshore drilling operations.

At least one million tons of oil are spilled every year from tankers, manufacturing plants and refineries. Much of the effort to control the spills has centered on chemical dispersants that dissolve the oil, spreading it out so thin that it is not noticeable.

Some scientists say that the dispersants are merely an attempt to hide the visible effect of the spills and that the chemicals pose an additional danger.

A. Oda, a researcher with the Ontario

Water Resources Commission, told the conference yesterday that studies of dispersants since the Torrey Canyon disaster have led to the conclusion that some of them "were far more deadly and far more damaging to marine life and ecology than the oil itself."

BEACH DAMAGE, TOO

In addition, he said, when the dispersants are applied to beaches, they cause the oil to penetrate more deeply into the beach and make the beach "more vulnerable to erosion by tidal and wave action."

Howard J. Lamp'l of the Federal Water Pollution Control Administration said, "We firmly believe that the use of dispersants, emulsifiers and other chemicals is entirely unjustified in the cleanup of oil-polluted beaches."

He said Federal studies had shown that the oil, when "mixed with chemicals, caused penetration of the mixture into the sand at least three times the depth of the untreated oil. In oil-polluted water, Federal officials have recommended that the chemicals be used only as a last resort when it is impossible to soak up the oil with straw or similar material or to suck it up by mechanical means.

Perhaps the strongest attack on the present methods of controlling oil spills came from a biologist, Dr. Ira N. Gabrielson, who is president of the Wildlife Management Institute. He said: "The usual approach is to try to contain or isolate the floating oil—an attack that works rarely, if at all—or to remove it from the public eye by sweeping it under the ocean's surface by means of dispersants or detergents. More animal life was killed by chemicals in the Torrey Canyon accident than by the oil itself."

"Even if the detergents or dispersants are not toxic in themselves," Dr. Gabrielson continued, their action in breaking up the oil "apparently accelerates the exposure of marine life to the toxic hydrocarbons" in oil.

He noted that "some of the hydrocarbon fractions are suspected of having carcinogenic activity," that is, they are linked to cancers.

"These hydrocarbons are stable," Dr. Gabrielson said, "and they can be retained and concentrated in the marine food cycle as the lesser animals are consumed by those higher up the animal ladder. Some ultimately may end up in man."

CIVIL DEFENSE PROGRAM IN ILLINOIS

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. ARENDS. Mr. Speaker, as my colleagues who are lawyers know, there is in law a mythical being known as "The Prudent Man." It is this imaginary individual who serves as a yardstick for the court in certain types of cases.

The "Prudent Man," as the term implies, is one who looks ahead; who acts on the basis of sound reason and good judgment. The Governor of my State of Illinois, the Honorable Richard B. Ogilvie, is highly deserving of this characterization.

Governor Ogilvie believes in the virtue of preparedness just as he believes in safeguarding our greatest treasure and richest resource, our children.

Recently, Governor Ogilvie issued a proclamation in which he declared that in the event of any disaster, our school children must receive maximum protection. At the same time he called for the inclusion of civil defense training "as an integral part of the education of faculty, administration, and students," in every Illinois school system.

I am happy to say that Governer Ogilvie's proclamation had the wholehearted endorsement of the Illinois superintendent of public instruction, Ray Page, and of Col. Donovan M. Vance, director of the Illinois State Civil Defense Agency.

Mr. Speaker, needless to say, I also, am in complete accord with Governor Ogilvie.

Although the term civil defense is associated in the minds of many only with the fear of nuclear attack, our State Civil Defense Agency has the responsibility for protecting the public in many other types of disasters or emergencies, whether man-made or nature-created. This is the case, I believe, with most, if not all, State civil defense agencies.

Industry and finance have gone to great expense to provide for the protection of their valuable records. Why should Government, whether State or Federal, do less for our people?

Mr. Speaker, Governor Ogilvie's message demands and deserves the thoughtful consideration of every Member of this body. I am including the Governor's proclamation as part of my remarks. It follows:

PROCLAMATION

The constantly changing conditions of the world, and the unpredictable elements of nature, dictate the continued preparations for emergencies and the threat of accidental disaster is an evergrowing fear, and

Each political subdivision of our state is authorized to establish—and shall establish—a local organization for civil defense in accordance with the state Civil Defense Plan and program, and

School children are the most valuable asset we possess, so in the event of unforeseen disaster, it is imperative that the school children receive maximum protection and be reunited with their families, when possible, and

Each school system should formulate workable written plans and policies for the protection of all school children,

Now, therefore, I, Richard B. Ogilvie, Governor of the State of Illinois, do hereby proclaim that Civil Defense education should be included as an integral part of the education of faculty, administration and students in accordance with recommendation of Col. Donovan M. Vance, director of the Illinois Civil Defense Agency and Superintendent of Public Instruction Ray Page.

In witness whereof, I have hereunto set my hand and caused the Great Seal of the State of Illinois to be affixed.

"Done at the Capitol, in the City of Springfield, this eighteenth day of November in the Year of Our Lord one thousand nine hundred and sixty-nine, and of the State of Illinois the one hundred and fifty-first.

RICHARD B. OGILVIE,
Governor.

"TO CONGRESS WITH LOVE"

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, with the year 1969, with all its joys and sorrows, drawing to a close, and the U.S. Congress finishing the 12th month of the first session, we stop to consider.

We Congressmen all have our full share of criticism, adverse comments, and just plain pessimism, anger, and despair passed our way.

Then along comes a bright one, an appreciation, a thank you, that lifts our hearts and makes our public service so rewarding and worthwhile.

Let me share with you fellow Members a good pat on the back for the Congress, and a voluntary warmhearted encouragement for all Members.

To Congress—with Lord's prayers, and God's blessings, here's wishing that 1970 problems will be a lot easier, and here's thanking all of you for your hard work and understanding.

With love, from
Mrs. ELIZABETH M. SHUBACK.

SCHOOL BOARD TRAINING AMENDMENT

HON. JAMES H. SCHEUER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. SCHEUER. Mr. Speaker, on behalf of myself and Mr. BINGHAM, Mr. BOLAND, Mr. BROWN, Mr. BURTON, Mr. BUTTON, Mrs. CHISHOLM, Mr. CLAY, Mr. EDWARDS, Mr. ESCH, Mr. HOWARD, Mr. KOCH, Mr. MATSUNAGA, Mr. MIKVA, Mr. OTTINGER, Mr. POWELL, Mr. THOMPSON, and Mr. TUNNEY, I am today introducing an amendment to the Education Professions Development Act which would authorize expenditure of funds for the training and preparation of elected or appointed school board members.

The Education Professions Development Act was a progressive measure passed in 1967 with bipartisan support which recognized the importance of training the people who operate the Nation's schools. Because of an omission, the act now denies the benefits of training to the thousands of school board members across the Nation who every year take up high responsibility to govern the Nation's 26,000 school districts.

New York City provides a dramatic example of the need for amendment of the act. Within the next few months, New York City will be divided into 30 school districts, with each district headed by a separate, locally elected school board. Unless there is some change in EPDA, hundreds of well-intentioned laymen will be called upon, without the benefit of briefing or training to govern the city's beleaguered education system. This situation, in less dramatic form, is repeated in communities across the Nation.

The success of these board members in making the new city district school board plan work may contribute to the difference between quality education and chaos for more than 1 million New York City schoolchildren. Therefore, to assist the new board members, and their thousands of colleagues across the Nation who accede to their responsibilities

without professional assistance, we are introducing this amendment.

It authorizes no new money. It simply extends the authority of EPDA under existing funding, and allows HEW to undertake this important assignment.

Whatever your constituency—rural, urban, or suburban—school boards form a backbone of your communities. I urge all my colleagues to support this amendment which will rectify an important oversight in the Education Professions Development Act.

YEAR-ROUND DAYLIGHT SAVING TIME: WHY NOT?

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. HOSMER. Mr. Speaker, earlier this year, I introduced a bill to amend the Uniform Time Act of 1966 to provide for daylight saving time on a year-round basis.

Public reaction to my proposal has been extremely encouraging. Residents of the urban and suburban areas of the Nation have been the most enthusiastic. In fact, the councils of five cities in California—Long Beach, Bellflower, Signal Hill, Huntington Beach, and Stanton—have sent me copies of resolutions they adopted endorsing the idea.

Regretfully, however, the Department of Transportation and the Bureau of the Budget have not looked with favor on the idea. I suspect their reluctance is more attributable to a lack of willingness to raise a potentially hot political issue than to any basic disagreement with the concept.

The basis for my proposal is that daylight saving time during the winter months would give most office workers in urban areas an extra hour of daylight during the peak evening commuting hours. This, I believe, would be a deterrent to crime—albeit a small one—and would reduce the hazards of driving after dark.

William Delaney of the Washington Evening Star yesterday had an excellent article on this subject. The conclusion of the article is that many urban workers and police officials feel the idea is worth a try. Delaney points out that Great Britain is now in the second winter of a 3-year experiment with year-round daylight saving time.

Because of its pertinence to the subject, the article follows:

IMPACT ON CRIME DEBATED: DAYLIGHT SAVING IN WINTER?

(By William Delaney)

On a darkened downtown sidewalk at 5:20 p.m., Mary Green anxiously scans the 12th Street traffic, hoping to see her husband's car.

"I just don't like going home in the dark," she says, shaking her head. "I think it's quite dangerous for most females."

Mrs. Green, a collector for Central Charge Service, is glad she had a direct ride home from work. If she took the bus, she'd have to walk three blocks from a 14th Street stop to her home on Missouri Avenue NW—past an area where she says a rape occurred in the early evening darkness last winter.

But, like most office workers in America's crime plagued cities, Mrs. Green has no choice but to go home in the dark during these midwinter evenings, when the sun sets before 5 p.m.

She hopes America will adopt daylight saving time in the winter, too.

She would "feel better," she says, if tonight's sunset came an hour later, at 5:48, with twilight lingering 15 or 20 minutes longer.

Mary Green's hope seems to be shared by a big majority of downtown Washington pedestrians, both women and men, according to a random survey conducted during a recent evening rush hour.

DISCUSSED AT WORK

"They all talk about it," said Dorothy Page, referring to her colleagues at the Food and Drug Administration.

Miss Page, an FDA science aide whose home on Luzon Street NW is two blocks from her bus stop, is a firm advocate of winter daylight time. "As long as I have to walk those two blocks in the darkness," she said, "I'd rather do it in the morning."

The reason such a proposal hasn't surfaced as a major public topic is understandable to District Police Chief Jerry V. Wilson.

Outside the nation's urban areas Wilson notes, "daylight time is politically unpopular" with many Americans, even on the April-to-October basis prescribed by the Uniform Time Act of 1966.

Farmers and other outdoor workers generally don't like it, because it keeps them at their jobs until late in the summer evenings.

WOULD "FEEL SAFER"

Most of the Washington area residents questioned by The Star based their support of winter daylight time on the reason cited by Mrs. Green. People would "feel safer," they said, if they didn't have to be on the streets after dark.

But some offered other reasons for favoring the change.

C. C. Segers of Hyattsville, a Post Office Department worker, argued that "it would speed up traffic" in the evenings, when the rush-hour flow seems less staggered than in the mornings.

A few of those polled, like Chesapeake & Potomac Telephone employe Nancy Stacy of Arlington, simply want to see an end to the confusion about which way to turn the clocks each spring and fall.

For these reasons, and to smooth the time difference with Continental Europe, Great Britain is now in the second winter of a three-year experiment with year-around daylight time.

A LITTLE MORE SUN

Interestingly, this gives Londoners a few more minutes of evening sun than Washingtonians now have, though London is 782 miles closer to the arctic and thus has an hour and a half less of winter daylight.

In Congress, the House Interstate and Foreign Commerce Committee has a handful of time-change bills, most of them from Midwestern congressmen who want to whittle down the present half year of daylight to only the midsummer months.

One bill—H.R. 7587—proposes year-round daylight time. Introduced in February by Republican Craig Hosmer in behalf of his sun-loving California constituents, it is a poor bet to make it out of committee.

POLICE SKEPTICAL

Several top District police officials say they doubt whether pushing daylight an hour later would have any significant effect on either crime or traffic problems. Some, however, wouldn't mind seeing the idea tried, if only to make citizens feel a little more secure.

Chief Wilson, who says he can't recall hearing any discussion of the proposal, points out that winter daylight time might simply transfer the problems of darkness to the morning rush hour.

Capt. Ralph Stines, head of the Robbery Squad, thinks it's worth a try.

"The thieves just wait for the dark," he says, and police statistics tend to bear him out.

Last December, for example, robberies rose from a level of 90 an hour at 5 p.m. to a daily peak of 166 by 6 p.m.

In July, the evening surge started at 8 o'clock and peaked by 10, while in October the graph goes up between 7 and 8.

"DOUBLE DAYLIGHT"

William Katzenstein, who heads the police department's Operational Planning Division, thinks one benefit of pushing back the darkness might be to make police saturation patrols easier, by concentrating robberies in a shorter period.

"Personally," he says, "My ideal would be daylight saving time in the summer and an additional hour—double daylight—in the winter."

OBJECTIONS DISCOUNTED

The British experiment with year-round daylight time has been blamed for some loss of productivity in the construction industry, according to a spokesman for the British Embassy here. But over-all, he says, the objections to the changeover "weren't as great as had been anticipated."

The questions of it and when America will ever make such a changeover were perhaps best answered by Sandra Hagen of the D.C. Congress of Parents and Teachers, who said her organization would probably favor year-round daylight time if the idea ever came up for formal discussion.

"I think the reason people don't discuss it," she said, "is that they feel uneasy tampering with time."

MINNESOTA GOOD ROADS

HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. LANGEN. Mr. Speaker, at the September 23, 1969, meeting of Minnesota Good Roads, Inc., the Honorable Harold LeVander, Governor of Minnesota, addressed the luncheon meeting. Governor LeVander pointed out that highways in America and in Minnesota are responsible for regional economic growth, are arteries of American trade, are opportunities for recreation and are vital safety factors when properly constructed. In his remarks, the Governor pointed out the need for building new highways, especially interstate highways, and repairing and improving old routes.

At the board of directors meeting of the same organization on November 7, 1969, a resolution was passed concerning the current highway construction fund freeze on the Federal level. I insert the resolution of the Minnesota Good Roads, Inc., in the RECORD:

RESOLUTION

Whereas, the Congress of the United States has seen fit to pass legislation designed to continue the national highway construction program, and

Whereas, the States generally depend on the Congress for appropriations which will permit long-range planning, and

Whereas, appropriations for the Interstate and ABC programs are made from estimated receipts for the Highway Trust Fund, and

Whereas, highway users have consistently contributed to the Trust Fund with the understanding that the extra taxes would be devoted to better roads, and

Whereas, the Minnesota highway construction program will fall behind schedule, adding to the congestion on our roads and highways, and

Whereas, statistics prove that lives will be saved on new, safely constructed highways, and

Whereas, Harold LeVander, Governor of the State of Minnesota, has stated that highway construction must continue for the economic development of Minnesota,

Now therefore be it resolved, that Minnesota Good Roads, Inc., at its Board of Directors Meeting in Saint Paul, Minnesota, this, the seventh day of November, 1969, cause this resolution to be passed and forwarded to the President of the United States, Minnesota's Congressional Delegation and the Federal Bureau of the Budget, urging that the Administration look to more beneficial means of controlling inflation than by the manipulation of a Trust Fund collected from highway users for the express purpose of providing safer and better streets, roads and highways.

Signed:

FRANK D. MARZITELLI,
President.

Attest:

ROBERT A. TAMBORNINO,
Secretary.

KEEP THEM RUNNING

HON. GARNER E. SHRIVER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. SHRIVER. Mr. Speaker, the disappearance of passenger train service over the Nation is continuing. In my own State of Kansas, a number of communities are without passenger service and others are about to lose theirs. Various proposals are before the Congress designed to preserve long-distance passenger train service. The Interstate Commerce Commission also has made recommendations. It is obvious that this matter of passenger train service deserves serious consideration and action.

Under leave to extend my remarks in the RECORD, I include the following editorial from the Hutchinson News which presents a case for preserving good rail passenger service. The editorial follows:

KEEP THEM RUNNING

It is interesting that our Congressmen are protesting the planned demise of Santa Fe's Nos. 23 and 24, familiarly known as the Grand Canyon, as they have protested—in vain—other passenger train losses.

It will be even more interesting to see if their convictions extend to a practical approach to the problem.

The test is offered in a bill now before the Senate Commerce Subcommittee on Surface Transportation. It is a composite of several Congressional proposals, designed either to help or to force the railroads to keep long distance passenger runs going.

This bill would force service. But it would help pay for it. The proposal is for $60 million a year for new cars, and $50 million to handle two-thirds of any operating loss on the required runs.

It's a modest bid, by comparison with nearly $1 billion to underwrite the supersonic jet transport, $30 billions for super highways, and other billions for airport improvement and jet research.

Nor is it original. Connecticut, New York, New Jersey, and the city of Philadelphia already subsidize commuter train service. Uncle Sam will pay $12 million to Penn Central for the test of its high-speed trains from New York to Washington.

One new feature would require the Secretary of Transportation to study all lines as a single national network. This would be first step toward determining which trains would be required.

Good rail passenger service, particularly in metropolitan areas, is a far more practical target for subsidies than helping to create more jams at airports and on the highways.

BOB PRICE REPORTS TO THE 18TH DISTRICT

HON. ROBERT PRICE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. PRICE of Texas. Mr. Speaker, it has been my practice during my tenure in the House of Representatives to report to the residents of the 18th Congressional District of Texas. The following is the text of the December 1969, issue of "Bob Price Reports to the 18th District":

THE 91ST CONGRESS—FIRST SESSION

The first session of the 91st Congress has moved at a snail's pace. Its accomplishments have been few in number.

The slow pace of the Congress has produced much debate and finger-pointing. Critics of the Nixon Administration have blamed the President for not producing a legislative program. These same critics conveniently ignore the fact that President Nixon submitted his first legislative message to Congress only 10 days after his inauguration. Since then he has sent over 30 additional messages to the Congress, with almost all of them accompanied by specific pieces of legislation.

The list of Presidential messages and reform legislation includes: Vietnam, inflation, organized crime, tax reform, revenue sharing with the states, job training, obscenity control, drug control, draft reform, postal reform, and electoral reform.

The truth of the matter is clear. The President's proposals will not receive the attention they should have until the same party controls Congress that controls the White House. The opposition party now controls the committees and has refused to hold hearings on many of the President's major proposals.

PRICE LEGISLATION

H.R. 205: To disapprove recommended congressional and federal pay raise.

H.J. Res. 612: To support President Nixon's peace program in Vietnam.

H.R. 165: To permit prayer in public schools.

H.R. 166: To exclude employment of communists in defense plants.

H.R. 438: To provide for the public expression of religious faith during space flights.

H.R. 50: To double personal income tax exemption of $1,200.

H.R. 8628: To exempt ammunition from federal registration under Gun Control Act of 1968.

H.R. 9766: To repeal the Gun Control Act of 1968.

H.R. 10612: To prohibit mailing of obscene materials.

REAWAKENING OF THE GREAT AMERICAN MAJORITY

I feel very fortunate to be serving as your Representative in Congress at a time when our President has created a change of National Mood that is the direct result of a change of approach, a change of pace, and a change of men at the helm of the U.S. Government. We now have a President who is representative of the Great American majority.

CONGRESSMAN PRICE IN ACTION FOR YOU ! !

(Letters to Congressman PRICE)

Dear Mr. Price: Could you possibly help me find out what has happened to my request to the Civil Service Commission for payment of the annuities owing to the three minor children of my deceased brother?

Congressman Price contacted the Civil Service Commission and he was soon advised that a check was on the way plus an apology "for the concern caused your constituent by the delay in restoring payment of these benefits."

Dear Congressman Price: I am writing you to request your assistance in my current efforts to obtain a non-service connected pension from the Veterans Administration. I am unable to work because of an automobile accident.

Congressman Price contacted the Veterans Administration and arranged for new examinations for the gentleman who was subsequently determined to be eligible for VA benefits due to total and permanent disability.

Dear Mr. Price: We are requesting a hearing to protest the Social Security Administration's decision to terminate the agreement with our hospital to take care of Medicare patients.

Congressman Price contacted the Social Security Administration; and after several discussions, the hospital was reinstated to the Medicare program.

Dear Representative Price: I am writing on behalf of my husband. He has been unable to work since August of 1965. He first applied for Social Security disability in July, 1966. We believe the decision to deny this claim to be unjust.

Congressman Price exchanged numerous letters and telephone calls with the Social Security Administration before being notified that the constituent's claim had been approved.

Dear Congressman Price: Our son is in the Army and several times has had several examinations for bad hearing. All the doctors say he cannot hear certain high frequencies but none of them have done anything about it and they are now sending him to Vietnam.

Congressman Price made inquiries at the Defense Department and was advised that the soldier would be re-examined. It was subsequently determined that his hearing defect "would limit continuous participation in a combat area involving habitual or frequent exposure to loud noises. To help prevent further deterioration of his hearing he has been reassigned to a non-combat zone."

Dear Congressman Bob Price: My husband is presently in the Navy in Vietnam. He has become the victim of administrative error which has deprived him of the promotion to which he is entitled.

Congressman Price contacted the Department of the Navy which found upon investigation that an administrative error had been made and the sailor was given his promotion."

YOUR TIME IS NOW

HON. HENRY C. SCHADEBERG

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. SCHADEBERG. Mr. Speaker, it is a pleasure for me to include in the RECORD for the edification of my colleagues, an address by one of the great men of the Navy, and my very dear personal friend, Rear Adm. James W. Kelly, ChC, USN, on the occasion of Youth Night, State of Georgia Baptist Convention, November 12, 1969:

YOUR TIME IS NOW

INTRODUCTION

One of the common ways to describe our era is that this is the age in which time collapsed. The rate of change in every area of our life is astronomical in proportions. Every thing happens sooner and quicker. Whereas distance used to be measured in hours, days and months today it is measured in minutes, seconds and microseconds and whereas personal responsibiilty for religious, social and political affairs used to be thought appropriate for 21 year olds and beyond. It is obvious that more and more young people and teenagers are assuming a direct responsibility for the kind of nation and world that we have. It is only a sign of the times that the voting age of 18 for Federal elections was endorsed and actively sought by President Lyndon Johnson.

If this is the age of change, it is also the age of youth. Within the next 10 years 60% of our population will be under 19. I think this has very significant implications for both the Christian church and the youth of our church. Quite simply, as our culture becomes youth oriented so must the church, if it is to exist at all as an institution of any significance and influence It must become a "youthful" institution. We can no longer think in terms of deferred responsibility. You young people can no longer think in terms of "when you grow up." The course of history has thrown you into a position of unique responsibility.

This evening I would like to underline this single observation. The time is now. You are now responsible Christians, and what you do now will determine the nature and future of the church, our Nation, and ultimately the world.

If you take what I have said seriously then I would think that you should feel a bit awed and fearful. But this responsibility which you have is not just your own. It is God given. Our Bibles tell us in no uncertain terms that God calls youth for his work in the world and it is precisely because you are young and have the specific characteristics of youth that He has a special place for you in carrying out His will in the world.

When the word of God came to Jeremiah and he was commissioned to be a prophet of God, he offered the excuse: "I do not know how to speak for I am only a youth." But the Lord said to Jeremiah: "Do not say I am only a youth . . . Do not be afraid for I am with you." When our Lord Himself began to confound the wisemen and leaders of Israel He was only 12 and when He began his public ministry He was at the ripe old age of 30. The favorite disciple was the youthful John and when Jesus wanted to describe the nature of the kingdom of heaven, you remember, He took a little child and placed him in the midst of the disciples.

The point is that you young people have certain natural characteristics which specially fit you to be God's servants in this age.

I. THE SENSE OF URGENCY AND IMPATIENCE

One of the characteristics of youth which makes you so well fitted to serve the church and the world is your impatience. Young people can't wait. But this is precisely one of the things that characterized the Christian movement from its beginning. It was a movement that couldn't wait which was carried out by men who couldn't wait.

When you read your gospel of Mark one word which crops up from the beginning to the end is the word "immediately" or "straightway".

When Jesus was baptized and came out of the water *immediately* He saw the heavens opened. When Jesus said to Simon and Andrew "Follow me," they *immediately* left their nets and followed Him. When Simon's mother-in-law was sick, Jesus was *immediately* informed. When the woman with the flow of blood was touched by Jesus, *immediately* her hemorrhage stopped.

The proclamation of John which was taken up by Jesus was that "The Kingdom of God Is at hand." The simple truth is that Christianity is a religion of impatience for impatient people. Christians are impatient for the world to make a new beginning. They are impatient for men to take up new ways. They are, in short, impatient for the world to accept the promise for a God who promises new life for old.

And the clear promise of the Christian faith is that we need not wait. Just as Peter was so impatient that he leaped out of his boat into the water and waded to shore when he saw his risen Master on the beach—just as the disciples rushed back to Jerusalem to tell everyone that they had been with the resurrected Christ on the road to Emmaus, so too we are called to immediate action in the name of Jesus Christ.

The word is *now*. And you *now* can make the Christian Church the "place where the action is." Now is the "acceptable time of the Lord." God does not intend that goodness be deferred. God does not intend that social problems be placed on a postponed agenda. Christ does not intend that the abundant life be held up only as a distant goal. The word is *now*. There is not one problem in our world so great, there is no issue so complete that they cannot be conquered and solved by men who under Jesus Christ are committed to the *now*. Use your youthful impatience in the service of an impatient God.

II. THE SENSE OF EXPECTANCY

There is another characteristic of young people, like yourselves, which suits you in a special way for service in our age, it is the sense of expectancy.

I think the greatest thing about being a young person is that there is absolutely nothing that you may not hope for—nothing that you cannot hope to be or do. Time whittles away at our hopes. Growing up, for some, means growing towards hopelessness. A young person has yet to fail. An adult already has. As Puskin wrote: "I've lived to bury my desires, and see my dreams corrode with rust, now all that's left are fruitless fires that burn my empty heart to dust."

Philip Brooks, however, the great New England preacher, once said that going into his study on a Sunday morning was like going into a ripe apple orchard—he had only to decide which sermon was ripest.

Youth look to the future with a similar experience—a ripe orchard waiting to be gathered.

A young man's life is not cluttered by memories—he has mostly hopes. A teenager's life is not restricted by old habits and experiences—

Most of you here are continually projecting yourselves into the future: "When I grow up," "when I finish school," "when I marry," "when I become a doctor or scientist or teacher"—these are the words of youth.

Young people expect things to happen. I suspect that the word "happening" has vogue for precisely this reason. And the Christian faith is most assuredly a religion of expectancy. We believe in the God who continues to enter the events of history. Many preachers and theologians have been struck by the number of action verbs which are connected with God in our Bibles. The God in whom we believe is supremely a God of action. He is the God of "happenings." And he is best served by people who live continually in expectation. The Christian cause today requires young men and women who are always looking ahead and throwing themselves into the cause of Jesus Christ whom they expect at any moment to bring his future into our present.

III. A SENSE OF OPTIMISM

I have the feeling very often that Christian folk have lost their nerve. There was a time when we had a lot to say about a new heaven and a new earth. But for sometime the people who have taken a page out of Christian theology have been the Communists. They have nothing to say about a new heaven, but their appeal to the minds of men has been their forceful and confident promise of a new earth.

It seems to me to be the opportunity and special responsibility of young people to infuse the Christian Church again with that sense of optimism that comes so naturally to the church.

We so easily mistake a lost battle for a lost cause. The cross of Jesus Christ is not a sign of defeat, it is the signature of ownership. His cross is an "X," a cancellation sign which should "cross out" every temptation to despair, every tendency to give up, every feeling of inadequacy and personal futility.

A. J. Cronin, author of "Keys to the Kingdom" was one of the first men to return to Europe at the close of World War II. He records that he was traveling through the burned out hulk of a village and he came upon a church which stood in ruin. We went in and there on the remains of an altar was a cross lighted by a candle flickering in the darkness. Cronin recorded in his diary that he had the strangest feeling that so long as that cross and altar stood there was hope for the world.

The word is that the natural optimism of youth is real, and through Christ it becomes a supernatural optimism that confronts our world with complete confidence that there will be a "new earth."

CONCLUSION

The time is now. The people best fitted by their natural sense of impatience, of expectancy, of optimism, are you? It used to be popular to tell young people that they were our future. The truth today is that you are our present.

A TRIBUTE TO CONGRESSMAN JOHN DENT

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. BIAGGI. Mr. Speaker, my distinguished colleague, JOHN DENT of Pennsylvania, has worked very hard and long to achieve passage of a much needed and revolutionary coal mine safety bill. It is a bill that is truly of a humanitarian nature. It graphically illustrates Mr. DENT's deep and genuine concern for his fellow man—in this instance, the coal miners of our Nation who have too often lost life and limb and suffered the perils of a sometimes fatal disease known as "black lung" because of the hazardous conditions in some of the mines where they must work.

Now word has reached the news media and some Members of this Congress that the President will veto the mine safety bill unless it is made less costly. I consider this a callous disregard for human life. Does not the President consider decent, hard-working coal miners a part of "the silent majority" which the administration has so thoroughly heralded in recent weeks?

As I examine some of the events that have taken place—and the coal mine safety bill is just one example—I am beginning to wonder whether the great "silent majority" is being taken for a ride. I have been reading and listening to the tremendous outpouring of words by this administration—and many of the words do not seem to mean very much.

Mr. DENT'S bill is indeed landmark legislation which takes coal miners out of the dark ages. With all of my colleagues who do not put a price on human life, I want to assure Mr. DENT that I will do everything within my power to assist him in achieving his very worthy, noble, and humane objective.

FEDERAL AID TO PRIVATE SCHOOLS

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. PUCINSKI. Mr. Speaker, the general Subcommittee on Education today concluded hearings on "Elementary and Secondary Education Needs of the Seventies." During 15 days of hearings the subcommittee examined the anticipated status of American elementary and secondary education and considered the merits of five different methods of expanded Federal aid.

A major issue facing American education in the 1970's will be whether private and parochial schools can financially survive. In testimony on the alarming financial condition of many parochial schools, the Reverend Monsignor James C. Donohue of the United States Catholic Conference cited the fact that there had been a decline in enrollment of a half-million students in these schools within the last 2 years alone. If this decline continues, our public school system, which in many areas is already financially strained, will be faced with a major crisis.

Mr. Speaker, since the issue of expanded Federal aid in private schools will undoubtedly be a major question before Congress in the next decade, I am inserting Monsignor Donohue's testimony in the RECORD:

STATEMENT OF REV. MSGR. JAMES C. DONOHUE, PH. D.

Mr. Chairman and members of the committee:

I want first to express my gratitude and that of my colleagues, Dr. D'Alessio and Mr. Reed, for the opportunity to speak with you today about the important issues being considered by this committee. Although the primary concern of the Division of Elementary and Secondary Education of the United States Catholic Conference is the continued welfare and improvement of Catholic schools, the Division, like other responsible agencies in American education, realizes that all American schools—public and private nonprofit, church-related as well as non-denominational—are united in the effort to provide better education for the country's children and young people, and that in a very real sense the well being of the total American educational enterprise depends on the health of each individual segment. If one sector of American education is weakened, to that extent all are weakened. They are interdependent, and what happens in one has an immediate impact on the others.

This is evident in regard to the issues which we are discussing today—the financial viability of American schools and the role of the federal government in this area. American education at all levels and in all sectors is currently facing grave economic problems. For instance, as an article in the October 20 U.S. News & World Report points out, at a time when the cost of public education has nearly doubled over what it was ten years ago, taxpayers are becoming more and more reluctant to approve new bond issues to support these soaring expenses. Thus, whereas in fiscal year 1965 voters rejected only about 25 percent of new school bond issues, in fiscal 1969 the rejection rate rose to a disturbing 43 percent.

Undoubtedly many factors have contributed to this situation, but the most fundamental is the simple reluctance of the already hard-pressed taxpayer to contribute substantially more for the support of public schools at this time. There is, it seems, a taxpayers' revolt abroad in the land, and, regrettably, public education is among the targets of this revolutionary wrath.

As I have said, the financial problems of the public schools cannot be separated from the financial problems of the private nonprofit schools—for the simple reason that they have a direct bearing on one another. Unfortunately, the argument is heard in some quarters that, at a time when public schools are feeling a financial pinch, it is out of the question to consider increased public support of private nonprofit schools. The pie is just so big, according to this line of thought, and when there are no longer enough slices to go around, it is the private nonprofit schools which will have to do without.

Apart from its insensitivity to the rights and interests of private nonprofit school students and their parents, however, this argument is a disservice to public education. It oversimplifies a complex issue and, if followed to its logical conclusion, would create a situation which would be disastrous to both public and private nonprofit schools. Let me explain why this is so.

I have had occasion to say before that the very existence of private nonprofit schools in the United States is threatened today. I do not expect to see the total disappearence of these schools in this country, but I do consider it entirely possible that financial pressures could force a drastic reduction in the number of Catholic school elementary and secondary students over the next five years. I do not wish to play the role of Cassandra, and so I do not say that this will necessarily happen. But I regard it as a real possibility which no one seriously concerned with the future of American education can afford to ignore.

The decline in enrollment in Catholic schools over the past several years—a decline brought about by financial pressures forcing cutbacks in the Catholic school effort—has, after all, already been substantial. Enrollment in Catholic elementary and secondary schools has dropped from 5.6 million in the 1964–65 school year to an estimated 4.86 million in the current school year—a decline of three-quarters of a million students in only five years. Furthermore, the process seems to have been accelerating, in that the decline in enrollment in the two school years prior to this one was a full half-million.

But—and this is the heart of the point I am attempting to make—it would be a tragic error to suppose that these figures reflect a problem for Catholic schools only. On the contrary, as Catholic schools are an integral part of the total American educational enterprise, so the the enrollment decline they have suffered in recent years has had a direct and immediate impact on the public sector of American education.

The reason is obvious. When children leave a Catholic school which has closed or been forced to cut back its operations for financial reasons, they do not vanish. They go to school somewhere, and "somewhere else" means the local public school.

The dollars and cents implication for public schools are clear. The more former students of Catholic schools enroll in public schools, the more public schools will be obliged to provide additional teachers, classrooms, equipment, and materials—and this is at precisely the time when they are increasingly hard pressed for funds. Indeed, the conclusion seems inescapable that the present financial crisis in public education is made worse by the financial crisis in nonpublic education.

The available figures demonstrate that this is no fantasy. For instance, it is estimated that taxpayers in the Detroit area have paid some $90 million over the past four years to accommodate in public schools some 50,000 former Catholic school students who have been forced out of Catholic schools which have closed, consolidated, or curtailed classes. This is, furthermore, a continuing expense, since these students will continue to be a drain on the taxpayers' pocketbook for as long as they remain in public school.

Nationwide, the pattern is the same. A recent report by the National Catholic Educational Association, pointing to the loss of 500,000 students in the past two years and an estimated future loss of 156,000 this fall as against last year, states: "Based on the latest national per-pupil cost figure for the public schools, which is $638, the inability of the Catholic schools to provide education for the half-million pupils whom it turned over to the public school rolls during the past two years means a minimum increase in school taxes of $315.8 million annually. Because most Catholic schools are in the large urban centers where public school costs are higher than the national average—for example, a figure of $1100 per pupil was published recently for New York City—the actual tax increase is probably well over a third of a billion dollars per year. If the further drop in enrollment expected this fall stays at the relatively modest 156,000 pupils that seems possible now, the annual tax bill will still increase another $100 million at a minimum."

Quite obviously, then, the present financial crisis in Catholic education is contributing—inadvertently but unavoidably—to the financial crisis of public education. From this point of view alone, it is sound public policy to extend increased public assistance to private nonprofit schools. Their supporters are, after all, not seeking 100 percent subsidy from public funds. Rather, they are asking for relatively modest assistance from the public sector—supplementing but not replacing their own voluntary support of these schools—assistance directed, furthermore, to the secular aspects of their educational programs which so clearly perform a public service function.

That private nonprofit church-related schools do perform such a function is, incidentally, no exclusive discovery of their supporters but is rather a point of view subscribed to by the United States Supreme Court in the 1968 *Allen* decision, which upheld the constitutionality of New York's program of lending textbooks to students in church-related schools. It is worthwhile in this context to recall the passage in which

Mr. Justice White, speaking for the Court's majority, wrote as follows:

Underlying these cases (previous cases involving government assistance to nonpublic education), and underlying also the legislative judgments that have preceded the Court decision, has been a recognition that private education has played and is playing a significant and valuable role in raising national levels of knowledge, competence, and experience. Americans care about the quality of the secular education available to their children. They have considered high quality education to be an indispensable ingredient for achieving the kind of nation, and the kind of citizenry, that they have desired to create. Considering this attitude, the continued willingness to rely on private school systems, including parochial systems, strongly suggests that a wide segment of informed opinion, legislative and otherwise, has found that those schools do an acceptable job of providing secular education to their students. This judgment is further evidence that parochial schools are performing, in addition to their sectarian function, the task of secular education.

Thus, we have seen two reasons why private nonprofit schools should survive, and why it is sound public policy to provide government assistance to help ensure their survival and, more than that, their continued existence as quality educational institutions. These reasons are the adverse impact that a large number of nonpublic school closings would have on the financial situation of public schools and on the American taxpayer, and the fact that private nonprofit schools do perform a public service function in the provision of secular education to their students. Beyond these considerations, however, there is a third reason for extending public support to private nonprofit schools—protection of the values of diversity, freedom of choice and healthy competition in American education.

I am sure this point scarcely needs to be labored. In a pluralistic society such as our own, it is essential that we have an equally pluralistic educational system reflecting the diversity of society itself. The emergence of a monolithic, monopolistic school system in this country would be a threat to the intellectual vitality and liberty we prize. Americans feel a special abhorrence toward monopoly, and we have passed many laws to counteract monopolistic tendencies in a variety of social and economic areas. But a monopoly in the field of education would be especially contrary to the American system. The continued existence and health of private nonprofit schools is the best hedge we have against an education monopoly.

Furthermore, only the existence of these schools makes a reality of our traditional commitment to free choice in education. Freedom which exists only in theory but cannot be exercised in fact, is scarcely freedom at all. If freedom of choice in education is to continue to be a reality in this country, it is obvious that private nonprofit and church-related schools must continue to exist as genuine, available options for parents and students who choose them. The preservation of this freedom is certainly a legitimate object of public and governmental concern.

Lastly, the existence of private nonprofit schools as effective dynamic institutions of education provides an element of healthy competition for public schools. This is, I should emphasize, not cut-throat competition, since public and nonpublic schools are partners in the total American educational enterprise. Rather, the presence on the scene of excellent nonpublic schools provides public schools with a continuing incentive to "try harder"—just as the existence of excellent public schools supplies the same incentive to nonpublic schools.

In making these comments, I wish at the same time to emphasize that the precise vehicle or mechanism by which aid is directed to private nonprofit schools is of less importance now than recognition of the principle that such aid should be forthcoming, followed by implementation of the principle. Certain priorities do of course stand out among nonpublic school needs in the area of federal assistance—these needs are the same as those of the public schools—and I hope will be given legislative acknowledgement. Thus, the first need of the present time is for support of instructional personnel costs; the second is for financial assistance for teaching equipment, materials, and facilities in order to improve the quality of instructional services.

It is in these areas that rising expenses most seriously affect the ability of private nonprofit schools to continue, and federal assistance, if it is to be meaningful, must take this fact into consideration. There are imaginative ways by which substantial aid can go to nonpublic school children in these areas, such as where the assistance is directed to secular subjects and helps to achieve the public purposes of education. Such an approach has been successfully embodied in the purchase-of-services plans enacted within the last year and a half in several states. In any case, it is clear that for the federal government to furnish such aid for public school children and not to furnish it equally for nonpublic school children would contribute to the destruction of private nonprofit education, as we now know it. The federal government would make a major contribution to the improvement of American education by assistance directed to instructional personnel costs and equipment and supplies, since the quality of education is directly related to the quality of the teacher and to the effectiveness of the tools with which teachers and students must work.

With regard to equipment and facilities, Catholic schools are open to arrangements whereby title is vested in public officials, provided only that their students have fair and unimpeded access to such equipment and facilities. Again, Catholic schools are prepared to explore the possibilities of such things as shared-time plans for the utilization of new or existing facilities. I mention these things not to urge them upon the committee but simply to indicate the willingness of Catholic schools to consider a variety of approaches, unhampered by fixed ideas to the effect that only one legislative solution is possible or acceptable.

There can be no question of the urgent need for improved facilities of schools in many parts of the country, especially in low-income areas and large metropolitan areas. Our cities are burdened with school plants geared to 19th century requirements—when what is needed, particularly in low-income areas, are school facilities capable of providing the creative education needed by young people from disadvantaged backgrounds. What is true here of the public sector of education is equally true of the nonpublic sector.

Mr. Chairman, I am pleased and honored at the opportunity to appear before the committee today and comment on the important legislation it is considering. The holding of these hearings is testimony to Congress' commendable recognition of the federal government's role in education. Considering the financial problems of the schools—and of the states and localities from which they receive most of their funds—it is clear that in the years ahead the federal government will have to increase its support of education substantially in order to fulfill its responsibility.

Mr. Chairman, your committee has listed as subjects for comment five bills regarding federal assistance to education, four of which propose specific programs of financial assistance. I am pleased to note that each of these four bills attempts to make some provision for the participation of private nonprofit schools and their pupils in the benefits of the federal funds.

Before commenting on the individual bills, I would like to commend the authors and sponsors of all of them for their recognition that federal assistance to education should benefit all children, whether they attend public schools or private nonprofit schools, including church-related schools. It occurs to me that this recognition is the first step toward development of a truly adequate federal policy for education in the 1970's.

As I have noted earlier, the Supreme Court has recognized the public purpose of private nonprofit schools in our system of education. In addition, a growing number of states are adopting educational policies which utilize the private sector in education to serve the public purpose. I would urge your committee to take notice particularly of the actions of the legislatures in Pennsylvania, Connecticut, Rhode Island, and Ohio.

It is now established policy in these states to provide state support for secular education in private nonprofit schools. The methods chosen by these legislatures vary somewhat from state to state, and include programs for purchase of services and salary supplements for teachers. An even larger number of states have adopted programs which involve state support of auxiliary services for children in private nonprofit schools.

The Congress itself, in recent years, has followed a policy of requiring the participation of children in private nonprofit schools as a condition for state and local public school agencies to qualify for federal financial assistance. I need not mention all of these actions since the members of this committee are the ones who have provided the leadership in the development of this emerging national policy. For the record, I would mention the Elementary and Secondary Education Act of 1965, the Migrant Education Act, the Bilingual Education program, the various acts for the education of the handicapped, the Juvenile Delinquency Prevention Act and, of course, the Vocational Education Amendments of 1968 which originated with this committee under the leadership of the present Chairman. In all of these acts, Congress has made some provision for children in private nonprofit schools. The amount of participation and the means by which private nonprofit schools have been involved has varied with the educational needs of the children and the federal purpose to be achieved. This is as it should be, and I would suggest that the same flexibility should be maintained in the development of future federal assistance programs. Congress has the power, and the ability, to vary its actions to achieve the federal purpose, in the area of education, as well as in other areas of national concern. Thus, a program such as Title I, ESEA, to improve the educational opportunities of economically and educationally deprived children might adopt one approach for the private nonprofit schools and their children, while a program of improving library and instructional media services, such as Title II, ESEA, adopts another. In terms of the bills pending before this committee, my point is that the provisions of Title I, ESEA, might, or might not, be an appropriate method for achieving the public purpose of educational opportunity for children in both public and private nonprofit schools.

H.R. 10833 seeks to provide a system of federal grants to states and, ultimately, local education agencies for "improving elementary and secondary teachers' salaries, for meeting the urgent needs of elementary and secondary education, and for other purposes." All school-age children, those in private nonprofit schools as well as those in public schools, would be counted in determining the amount of federal funds which each state would receive. But there is no adequate requirement that all children would receive the benefits of the expenditure of the federal funds. Authorization is given for use of federal funds, in limited amount, to provide for

"shared-time" programs for children in the private nonprofit schools. While "shared-time" is one method by which private school children can participate in some federal programs, it doesn't seem appropriate for a program directed at improving teachers' salaries. I would suggest, if Congress is to provide federal supplements for teachers' salaries, that the Act require the states to provide equal supplements to the salaries of teachers in private nonprofit schools who are providing secular educational services. This is being done in some states and it would be a proper use of federal funds.

H.R. 11546 would provide a national program of assistance to the states for the stated purpose "of achieving equalized excellence in schools throughout the Nation over a ten-year period." As in H.R. 10833, all school-age children are counted in determining the amount of federal financial aid grants to the states, but the children in private nonprofit schools would not share equally in the benefits. Educational excellence and equalization of educational opportunity are desirable goals for a federal program. The inclusion of language adopted from Title I of the Elementary and Secondary Education Act of 1965 (Section 7(a)(2), of the bill) that provision be made for children in private nonprofit schools through such programs as dual enrollment and mobile educational services would not achieve the stated purpose of the bill.

If our goal is excellence and equalization of opportunity, the federal act should include provision for equal sharing of federal funds to improve the educational opportunity available to children in private nonprofit schools. A requirement that states utilize the federal grants to purchase secular educational services, to provide salary supplements to teachers of secular subjects, or to provide facilities for secular education of children in private nonprofit schools could be included in any federal act along the lines of H.R. 11546.

H.R. 517 would provide federal grants for construction of elementary and secondary schools and supplemental educational centers. The program would be directed toward improving facilities for "areas with concentrations of children from low-income families" and federal funds could be used for construction, reconstruction, renovation, and improvement of elementary and secondary school facilities (including pre-school facilities) to meet the special educational needs of educationally deprived children. The same standards that would be applied for determining the needs of public school children could be applied to the needs of children attending private nonprofit schools. While H.R. 517 makes some provision for children in private nonprofit schools to participate in its benefits—by providing for special projects in which they may take part under shared-time or dual enrollment arrangements—the bill is deficient. I submit that in a construction program, Congress should provide in clear language for facilities for private nonprofit school children in the secular areas of education which have been recognized by some states and the courts.

Congressman Delaney in a singularly eloquent presentation of his bill, H.R. 776, has provided the committee special insights on parental rights in education and the abiding American dream for equity. He emphasized the need for diversity as a cardinal element of education in a pluralistic society. His suggested solution to the crisis in education is to authorize an annual financial grant to each child attending school—whether public or private nonprofit. His confidence is resided in parents to make a prudent choice for the educational welfare of their children. His method is a simple one; merely provide the parents with an educational grant to be made available to the school selected for the education of their children. He would limit payment to children attending private nonprofit schools to the endorsement of both the parent and an appropriate school official of that institution. Payments for public school children would be made directly to a school district. In this way the bill assures that the federal grant is in fact applied to education—a valid public purpose that the federal government is free to support. The bill prohibits federal interference. We believe the bill would be strengthened if provisions were adopted to make clear that private nonprofit schools were free to use payments only for the secular aspects of education provided the children in those institutions.

H.R. 9866 would set forth a Congressional statement on a national educational policy and direct the Secretary of Health, Education, and Welfare to initiate a comprehensive study on the formulation of a plan to implement such a policy. Such a Congressional statement would seem to be needed and the one proposed by H.R. 9866 appears to be adequate. I would like to note that as formulated in H.R. 9866, the statement of national educational policy would recognize the role of both public and private nonprofit educational agencies and institutions. Thus, I would endorse the purpose of H.R. 9866.

Naturally, any future federal assistance to education programs should spell out clearly the recognized prohibition in use of public funds for "religious" instruction or worship. But such prohibition need not inhibit the federal government in its legitimate purpose of improving the "secular" education of all children, those in private nonprofit schools and public schools. This Nation has an educational system which recognizes and approves pluralism and parental rights. Any federal aid program should do the same.

In concluding, I would like to point out that Catholic schools, despite their present grave financial problems, are not seeking 100 percent subsidy—or anything approaching it—from public sources. Catholics remain committed to their schools and to their support. What they are seeking now is simply the rather minimal additional assistance—over and above their own continued voluntary support—which will make it possible for these schools to continue in business as quality educational institutions. The public policy considerations in favor of government aid to nonprofit private church-related schools are overwhelming. First, mass closings of these schools would result in financial—and educational—chaos in the public schools and a greater burden on taxpayers. Second, as the Supreme Court has pointed out, church-related schools give secular education to their students, and thus they perform a true public service function which can and should be aided by government in view of its concern for the quality education of all citizens, not just those who happen to attend public schools. Third, the continued existence and health of nonpublic schools are essential to educational pluralism in our pluralistic society, and to true freedom of choice in education and the maintenance of healthy competition in educational matters.

Mr. Chairman, I am grateful for the opportunity afforded me by the committee to speak on this important legislation. I stand ready now to answer any questions you may have.

TWO BALTIMORE GI'S KILLED IN ACTION

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. LONG of Maryland. Mr. Speaker, Pfc. Mark J. Preis and Pfc. Charles V. Redding, two fine young men from Maryland, were killed recently in Vietnam. I wish to honor their memories by including the following article in the RECORD:

TWO BALTIMORE GI'S KILLED IN ACTION—PRIVATES DIED IN SEPARATE INCIDENTS IN VIETNAM

Two Army privates from Baltimore have been killed in separate incidents in Vietnam, the Defense Department announced yesterday.

PFC Mark J. Preis, 23, of 205 Aigburth road in Towson, was killed October 21 when his patrol was attacked by mortar fire.

PFC Charles V. Redding 3d, 22, of 1058 Arygle avenue, was killed October 23 by an enemy land mine.

MASS SET THURSDAY

A requiem mass will be offered at 9 A.M. Thursday for Private Preis at the Immaculate Conception Church, Ware avenue in Towson.

Private Preis enlisted in the Army July 18, 1968. He had been in Vietnam since October 3. Previously, he was stationed at Fort Benning, Ga.

He was a 1968 graduate of Loyola College, where he majored in mathematics.

At the time of his death, Private Preis was serving in Company C, 1st Battalion, 11th Infantry, 1st Brigade, 5th Infantry Division (mechanized). He had been stationed in Quang Tri province, which abuts the border buffer zone.

Private Preis is survived by his parents, Mr. and Mrs. John G. Preis, of Towson; three brothers, John G. Preis, Jr., of Annapolis; William Preis and Laurence Preis, both of Towson; and seven sisters, Mrs. Henry Dausch, of Chevy Chase, Mr.; Julie Preis, of Madison, Wis.; Dorothea Preis, of Washington; Justine Preis, Gretchen Preis, Colette Preis and Janet Preis, all of Towson.

Private Redding, who was considering the Army as a career, enlisted November 22. He was sent to Vietnam May 23.

Private Redding was wounded in the right hip by enemy gunfire in July and was sent to Japan to recover. He was later shipped back to Vietnam.

At the time of his death, he was serving with Company B, 2d Battalion, 14th Infantry, 25th Infantry Division. He was stationed in Hau Nghia province, 30 miles west of Saigon.

Private Redding was born in Baltimore and attended Carver High School.

He is survived by his wife, the former Rhonda Craig; a daughter, Yolanda Redding; his parents, Mr. and Mrs. Charles V. Redding, Jr., of Baltimore; his grandfather, Charles V. Redding, of Baltimore; three brothers, Michael Redding, John Redding and Mark Redding, all of Baltimore; and three sisters, Edna Redding, Cheryl Redding and Deborah Redding, all of Baltimore.

SLANTED NEWS COVERAGE

HON. EARL F. LANDGREBE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. LANDGREBE. Mr. Speaker, I wish to bring to the attention of my colleagues in the House a recent letter I received from a constituent, Dr. Hugh B. McAdams of Lafayette, Ind. His letter concerns "slanted news coverage" and is particularly interesting and timely, not only for its thoughtful comments but also for the fact that it was written before Vice President AGNEW delivered his criticism of the television news media. The letter follows:

LAFAYETTE, IND.,
November 7, 1969.

Representative EARL LANDGREBE,
House Office Building,
Washington, D.C.

DEAR SIR: Recently I have become disturbed regarding the effect of propaganda presented by ABC, NBC and CBS television on the viewing public in this Country and elsewhere. One does not have to observe these proceedings very long before he reaches the obvious conclusion that it is not news that he is observing but calculated propaganda presented by individuals who represent the liberal or left wing element in our Country. Rarely does one see the conservative side of an issue presented by present day commentators. It is my firm conviction that the daily bombardment of the American people by this liberal propaganda is having a tremendous effect on public opinion. This effect, in my view, is not good for the Country. I am hopeful that, if you concur with my views, something may be done to stop this devious trend in the reporting of the news.

Examples of such biased reporting are quite numerous. On the evening of President Nixon's recent speech on NBC television, a film was presented showing alleged ill treatment of captured Viet Cong soldiers. Connected with it was film shown of a army officer briefing a group of newsmen on the manner in which Viet Cong soldiers should be treated. He explained, that according to the Geneva Convention, certain rules and regulations prevented ill treatment. At the same time the film purported to show exceptionally bad treatment of the Viet Cong prisoners. In my view this is bias and it was done primarily to embarrass the President. It was not pointed out that our soldiers and airmen have received exceptionally poor treatment in the hands of the North Vietnamese, as we know from captured film and documents otherwise. My point here, is that the television industry appears to be bent on presenting only one side of the picture, and that is the side which is embarrassing and detrimental to this Country. Last night on NBC television a report was presented on Okinawa on a program called "The First Tuesday." The commentator described the situation there and it was his conclusion that we are practicing "colonialism" while in fact we should be allowing a policy of "self determination." He did not explain the reason why we are on Okinawa in the first place. He did not relate the history of 25 years ago as to how the Island was acquired and the reasons therefore. He did not explain the cost in money, in lives and material, that it took to capture this Island. He did not explain the reason for maintaining a large military establishment with relation to our efforts in Viet Nam. He did not explain, that in essence, we acquired this Island 25 years ago as a result of the expansionist policy of the Japanese people.

It seems to me that this is a calculated effort to sway public opinion against the maintenance of this base at Okinawa, particularly in view of the fact that the Prime Minister of Japan is supposed to be in this Country in the near future to consult regarding the return of the Island to the Japanese. Further examples of this sort of behavior by the National Networks include the exposure of the defendants in the so-called trial of the Chicago "eight". It seems to me that these people are receiving much television exposure and therefore have a forum for the presentation of their ideas while the United States Government and the city of Chicago literally receive no coverage. Another example of this one-sided reporting is a program witnessed last night on "The First Tuesday Program" which had to do with the difficulties experienced by U.S. Marine Officers in recruiting on the College Campuses across the Country. This put the Marine Corps in a very bad light and placed the general recruitment program of all of the Services in jeopardy. Again there was no effort to present the other side of the problem. There was no effort to show, that on many campuses in the Country, these men are not received in the manner that they were at San Diego State. It did not show that ROTC programs are being maintained by many Universities across the Country. Again it shows only one side of the picture, and to me, it is calculated to disrupt our military effort.

A most glaring example of the above is the result of televising the activities of Congressional Committees. One gets the definite impression that these proceedings are "staged." How else can one account for the fact that most of the witnesses heard propagate the chairman's point of view on the issue being discussed? Rarely does one see a witness who is unfavorable to the chairman's position. Again, it seems to me that this is a calculated effort to influence public opinion.

The above named instances are certainly but a few of those that have appeared on the television in recent weeks and months. The effects of such presentations certainly cannot be underestimated in the formation of public opinion. It is my firm conviction that something should be done on the part of the administration to defend itself, against this propaganda. I have the strong feeling that at least part of the effect on the American people by this media could be negated by the President himself. If he could use television, as he did on November 3rd, to explain to the public the exact nature of his thoughts and his plans for our future well being, then the liberal propaganda presented by the television media could be counteracted. Furthermore, it seems to me, that it might be well to consider a proposition in which television could be monitored. Then, when information is presented in a manner which is untrue and which is detrimental, either to the Foreign Policy of this Country or to the management of its internal affairs, the other side of the picture could be presented. I have in mind something in the nature of the use of the truth squads which have operated in past political campaigns. I do not know whether these suggestions are practical. However, it seems to me that something will have to be done in order to blunt this malicious and misleading propaganda presented by the National Television media.

I am sure that you are quite aware of all of this. I am sure that the President is also aware of the adverse effect that National Television is having on his domestic and foreign policy. I have considered writing to Him personally, but I have the feeling that it would never reach His desk. I would appreciate hearing from you regarding this situation and if you agree at all, I would hope that you might convey my thoughts to the President, either personally or in the form of a letter with your recommendations.

Sincerely,

HUGH MCADAMS, M.D.

PRESIDENT NIXON'S VIETNAM PLAN

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. RYAN. Mr. Speaker, President Nixon announced on Monday a withdrawal of 50,000 more troops from Vietnam by April 15. Any reduction of U.S. forces is a welcome step in ending U.S. intervention in this tragic war which continues daily to take an unjustifiable toll in human life and disfigurement. Only today the U.S. military command announced a loss of 85 killed and 836 wounded Americans. Even one death or one wounding is unacceptable. In addition, the war continues to divert essential money from our pressing problems at home, and to tear asunder this Nation's soul.

However welcome this step may be, it is inadequate; for the President's plan for Vietnamization of the war means the possibility of an indefinite American military presence and carries the threat of renewed escalation.

And as I warned on the floor of the House, the President considers the House passage, by a vote of 334 to 55, of H.R. 613 as an endorsement of his November 3 speech, just as he did when he addressed the Members of the House on November 13. Last Monday evening he made it clear that he interprets the House's passage of H.R. 613 as "supporting his plan for peace."

Mr. Speaker, I commend an editorial published in the New York Post on December 16, 1969, to my colleagues for its analysis of the President's announcement. It also correctly condemns Hanoi's intransigence in refusing to reveal the fate of American prisoners. The editorial follows:

UNANSWERED QUESTIONS, UNSPOKEN ISSUES

President Nixon has once again adroitly appealed to national patience and fortitude. By projecting the withdrawal of another 50,000 troops in the next four months, he appeared to reaffirm his resolve to lead us out of the Vietnam wasteland. By reiterating his readiness to negotiate anything "except the right of the people of South Vietnam to determine their own fate," he invoked the rhetoric of Wilsonian reasonableness so often employed by his predecessor.

As in his address on Nov. 3, Mr. Nixon's speech seemed primarily designed to mute dissent at home and thereby convince Hanoi that time is on our side.

On reflection, however, too many questions still remain unanswered or obscured.

In announcing another troop cutback, Mr. Nixon conditioned the schedule on the good conduct of the enemy and warned that rising infiltration would mean a reescalation of our role. To that extent he once again made our course subject to the decisions of adversaries who have been fighting for 25 years without visible loss of will.

In restating the principle of self-determination, he implicity renewed our commitment, to the present regime in Saigon, which he has repeatedly characterized as the legitimate voice of South Vietnam. Nowhere did he acknowledge that leading non-Communist opponents of Thieu remain in jail, that other supporters of a coalition solution have recently been threatened with new reprisals and that all optimistic calculations rest on the dubious ability of the Saigon cabal to assume the major burden of the fighting. Nor did he confront the question of whether a program to enable Asians to fight Asians on a larger scale would elicit wide popular favor among the South Vietnamese.

Mr. Nixon's use of the House resolution was predictably contrived. He interpreted the 334–55 vote as a declaration of support for his "plan." But he knows that the record of debate shows that many war critics reluctantly backed the resolution after assurances that it merely signified approval of his "effort" to end the war. The outcome was an expression of political entrapment, not a

vote of confidence in the strategy of "Vietnamization."

On one point there will be overwhelming endorsement of the President's stand. That was in his renewed appeal in behalf of the American prisoners whose relatives are cruelly denied knowledge of their fate. Disclosure of the late Ho Chi Minh's rebuff to Sen. Fulbright's plan can only undermine the position of those who believe we remain diplomatic captives of the Thieu regime. Hanoi's obduracy is crude blackmail; it can only strengthen the hand of U.S. hard-liners and smother the true issue of coalition so blandly and sadly ignored in the President's address.

U.S. POLICY IN THE MIDDLE EAST

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. OTTINGER. Mr. Speaker, I was greatly disturbed by recent newspaper articles indicating State Department intentions to ignore a vote by a large majority of the United Nations General Assembly's Political Committee interpreting the 1925 Geneva Protocol on poison gas and bacteriological warfare as banning use of all chemicals including tear gas and defoliants.

Particularly disturbing was the reported comment of Carl E. Bartch of the State Department that "the vote does not in our view represent international consensus" and that "we maintain that the United Nations General Assembly is not the proper forum to decide such disputed questions of international law."

While technically the International Court of Justice may be the more appropriate forum for strict legal interpretation of a protocol, the question raised obviously involves policy determinations that are the province of the Assembly and, at any rate, this technical distinction even if valid is no justification for the slap taken at the Assembly.

If the United Nations is not the proper forum to rally and determine an international consensus and to resolve international disputes, then what forum is appropriate? There really is none. We are left internationally in the caveman era with each nation pursuing its selfish ends without regard to the effects on other nations, and with the ultimate international sanction the threat and use of brute force.

The United States has a sorry record of undermining the international institutions it helped to establish to peaceably resolve international disputes. Our failure to place the Vietnam situation before the United Nations prior to taking unilateral military action there probably did more to undermine its credibility as a peacekeeping force than any other action by any nation in its history. Our insistence on the Connally reservation did more than anything else to emasculate the jurisdiction of the world court.

If we are to have any forum for settling international disputes in a civilized manner, the United States is going to have to be a leader in giving it efficacy. This requires a willingness to submit to international tribunals issues even if they are embarrassing to us and a willingness to abide by decisions of such tribunals even if they appear to be against our interests. Our experience in the United Nations shows us that this will be only a small minority of cases—and, indeed, comparing our own democratic, free society with the much harsher realities of most of the rest of the world, we can be sure that these tribunals will help our causes far more than they will hurt them. We cannot continue to be in the position of balking every time a decision does not go our way, however, for to do so gives justification to all other nations to likewise ignore decisions inimical to them. This destroys the fabric of peaceful settlement of international disputes and is sure to be far more damaging to our interests than the effects of any isolated adverse decisions.

I fervently hope the State Department will reconsider its ill-conceived pronouncements in this regard.

BALFOUR DECLARATION

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. BINGHAM. Mr. Speaker, the real meaning of the Balfour declaration of 1917 on Palestine has in recent years often been disputed.

Mrs. Lottie Greenberg of Rockaway Beach, N.Y., recently sent me a copy of an editorial from the Manchester Guardian of November 9, 1917, which I found most revealing. I share it herewith with my colleagues and other readers of the RECORD:

[From the Manchester, England, Guardian, Nov. 9, 1917]

SIGNPOST OF A DESTINY

We speak of Palestine as a country, but it is not a country; it is at present little more than a small district of the vast Ottoman tyranny. But it will be a country; it will be the country of the Jews. This is the meaning of the letter written by Mr. Balfour to Lord Rothschild.

It is at once the fulfillment of an aspiration, and the signpost of a destiny. Never, since the Dispersion, has this extraordinary people, scattered over the earth in every country of modern European and of the old Arabian civilization, surrendered the hope of an ultimate return to the historic seat of its national existence.

For fifty years the Jews have been slowly and painfully returning to their ancestral home, and even under the Ottoman yoke, have succeeded in the beginnings of a real civilization. Scattered and few, they have still brought with them schools and industry and scientific knowledge, and here and there have, in truth, made waste places blossom as the rose.

The declaration of policy the British government made to-day is the security for a new, perhaps a very wonderful, future for Zionism and the Jewish race. The government has indeed laid down a policy of great and far reaching importance, but it is only one that can bear fruit by the united efforts of Jews all over the world.

We recognize, and shall continue to recognize the Holy Land as the "'national homeland of the Jewish People."

THE ADMINISTRATION AND MR. WHITTEN

HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. CORMAN. Mr. Speaker, for a long while a great deal of confusion was apparent on the part of Members on the other side of the aisle over the President's position on the Whitten amendments to the Labor-HEW appropriations bill.

At the time the bill was considered in the House, it seemed that the Attorney General indicated to the Republican leadership that the President did not oppose the Whitten amendment. Then, belatedly, Secretary Finch publicly did oppose the now famous amendments, apparently with the President's approval.

Yesterday, in acting on the measure, the Republican leaders in the Senate urged their side of the aisle to vote in accordance with the latest-announced Presidential position—against the Whitten amendments, and the cause of school desegregation received a boost.

I am pleased that those on both sides of the aisle in this House who believe in racial justice joined forces this afternoon to resoundingly defeat the Whitten amendments through instructions to the House conferees.

The Washington Post editorially this morning did clarify the issue. Reading it was helpful to me in attempting to understand the administration's ever-changing position on civil rights issues. The editorial follows:

THE ADMINISTRATION AND MR. WHITTEN

When we last looked in on the Whitten Amendments—some deceptively harmless-looking legislation that could in fact undermine both the Supreme Court's rulings on school desegregation and HEW's power to uphold them—the amendments perennially sponsored by the Mississippi congressman, Jamie Whitten were in process of being acted on by the House. That was midsummer. As usual, the whole seriatim drama had the aspect of a soap opera, and not just because it was a replay of cliff-hanging events from the session before. There were also the inevitable Ma Perkins-like questions: Would the House accept the Whitten amendments? Would the administration (which had been rolling around among itself on the matter all one day) take a stand against the amendments?

The answer to the first question turned out to be, Yes, and the answer to the second was, No. We were not aware at the time that for all the rolling around on the part of some people at the White House and at HEW, the Attorney General had already indicated to Republicans on the Hill that the administration most assuredly did *not* oppose the Whitten measures. There is little doubt that had it done so, the amendments (which were accepted by a very narrow margin) would have been stopped in the House.

Since then the administration has either changed its mind or changed its spokesman or changed both. Secretary Finch came out against the amendments a while back, and he informed the members of the Senate Appropriations Committee the other day that the administration opposed them. In a telegram, which he made public, Secretary Finch recommended first that the legislation be eliminated from the pending HEW-Labor appropriation bill and that—failing that—it be itself amended to include, at a critical point,

the words "except as required by the Constitution." As its wont, the Senate Appropriations Committee disregarded the first telegram. However, yesterday, on the advice of Secretary Finch and with the powerful assistance of Senate Republican Leader Hugh Scott, the Senate added the recommended language to the measure, which has the effect of defanging it.

Now we are more or less back to the familiar crisis of the conference, the confernece report, and the final vote. Last time around an inordinate amount of mind-boggling parliamentary maneuver was required in this phase of the game to eliminate the obnoxious features of the amendments. Things are different this session—and in most ways worse. The time is late, the pressure to be done with the appropriations enormous, and the issue if anything muddied by the past months of administration equivocation on matters of race. That is why it is of the utmost importance that Secretary Finch make it plain to the relevant members of the House that when he spoke to the Senate he spoke for the White House and that the President in fact opposes the Whitten Amendments.

THE FRESHENING WINDS OF CHANGE

HON. HAROLD T. JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. JOHNSON of California. Mr. Speaker, a short time ago Robert A. Sandberg, vice president of the Kaiser Aluminum & Chemical Corp., posed to the members of the National Reclamation Association, convening in Spokane, Wash., the following question:

What, really are the dimensions of changes which are so violently and dramatically obvious to all of us today?

Then, Mr. Sandberg proceeded to discuss the reasons for and the consequences of the changes which we are witnessing today, not only in this Nation but throughout the world. With a broad background of public service as a Red Cross official and 17 years as an executive in an industry which has undertaken an outstanding leadership role in the quest for knowledge about our environment—physical, social, and political—Mr. Sandburg demonstrated his own deep personal understanding and concern for people.

His presentation was, without question, the finest discussion I have ever heard on what he refers to as "the freshening winds of change." May I urge my colleagues not only to take the time to read these remarks, which I share with you today, but also to take the time to stop and ponder them, as I have, for I am certain they will increase our perception of the difficult times in which we live. The remarks follow:

SOME DIMENSIONS OF CHANGE

Last week, while quietly sitting out a plane change in the Seattle-Tacoma Airport, your vice president, and my old friend, Lorin Markham, reached me by telephone. He was struggling with a problem of change so immense that it clearly showed in his voice. With discernible anxiety he explained that he had worked for weeks, and under pressure, to get this convention program together. Now it was all ready and the final proofs of the program were on his desk; but the printer, as printers do, was demanding cleared copy—and now! The problem was that his banquet speaker had just withdrawn. Would I speak? The situation was desperate for him; but for me, at that moment, a matter of small concern. It wasn't the end of the world, of course, but he was dealing with a change of some magnitude, and it had a dimension.

I pled for time to consider, but Lorin had no time. His god was a printer who would not wait. So, I agreed. After all, Lorin has been a long and loyal friend, and he was only asking for a speech—a free one—not a good one.

Having received his answer and assured that he could satisfy the printer, Lorin now announced that he could go off on a weekend hunting trip to Moses Lake with a free and unfettered conscience.

The final click of the telephone left me slightly stunned. What had happened? One thing was certain; Mr. Markham knew how to cope with the problems of change. His problem was now my problem! While he was hunting pheasants, I'd be spending my weekend hunting ideas and writing a speech. I thought, what a swift transfer of energy this had been; what a total change this would make in my next few days. As a little microcosm of what is happening around all of us each day, that telephone call demonstrated both the dynamics of change and the magnitude and dimension of it.

I felt a little like old Uncle Ned who was celebrating his 102nd birthday. A young reporter from the local paper was sent to interview him and he asked, "Uncle Ned, you've lived 102 years. You must have seen a lot of changes in that time." To which Uncle Ned replied, "I shor have Sonny, and I've been again every gol blamed one of 'em."

I like the way Eric Sevareid of CBS stated it when he said:

"This generation hasn't had any rest. We've had two bad wars in 20 years with powerful inflationary tendencies as a result. We're in the middle of a racial revolution. We're in the middle of a scientific revolution that seems more fundamental than the industrial revolution of a hundred years ago. We're in the middle of a population revolution—the full consequences of which we have hardly begun to understand. And, we're in the middle of some kind of revolution in personal morals and in concepts of family and community life.

"All this has stirred and alienated a great many people in this country. They are hitting out and reaching out for some way to get this under control—some way to bring about an order of security with which they are familiar, with which they feel at ease and with which they feel safe."

What, really, are the dimensions of change which are so violently and dramatically obvious to all of us today? It isn't only that there is change. Change has been a part of the problem of living since man was first identified as man.

200 years ago Edmund Burke was saying, "To complain of the age we live in, to murmur at the present possessors of power, to lament the past, to conceive extravagant hopes of the future, are the common dispositions of the greatest part of mankind."

65 years ago, Teddy Roosevelt was saying at his inaugural, "Modern life is both complex and intense, and the tremendous changes wrought by the extraordinary industrial development of the last half century are felt in every fiber of our social and political being."

The newness and the prevalence of change as we are experiencing it today is where the difference lies. It's a change in scale and scope, unprecedented—a great upheaval! The change is relatively recent, perhaps measuring back no more than 20 or 30 years and caused almost entirely by the giant progress of technology. We have in a short space of time moved:

From a predominantly agricultural society to a largely industrial one . . .

From a preponderantly rural and small town society to a largely urban and suburban one . . .

From an economy of scarcity, in which productivity was the primary goal, to an economy of abundance, in which consumption is the main goal and distribution the main problem . . .

From a geographically stable society to a highly mobile one . . .

From a relatively primitive communication system to a highly sophisticated one of instaneity . . .

From a labor-and-job oriented society to one increasingly aimed toward the use of leisure time . . .

From an emphasis on manhour productivity to machine-investment productivity, with at least two concomitants; only the highly technically trained could participate in a meaningful and personally satisfying way to life in the economic system; many of the "small jobs" once available to the young or the poorly trained disappeared . . .

What has not changed during this period are our institutions, our schools, our government, our social forms, our ways of controling, organizing and adjusting to the changing technological environment.

And here is where most of the unrest and unease in our society begins. Let's look at ourselves as separate groups influenced by our own personal histories and the inputs of our ages—in spans of 18–20 years.

Group I's were born about 1896. They are in their 70's. They were born into a population of 66 million, gross national product $13 billion, no automobiles, no radio, no television, 5 telephones per 1,000 population. They will remember the Mexican Revolution, the sinking of the Titanic, prohibition, the flu epidemic that killed 20 million people, including 548,000 Americans, Sara Bernhardt, Ben Hur, The Birth of a Nation, The Katzenjammer Kids, "Cleanliness is next to godliness." The predominant thought of the time was that truth has been established . . . we must now transmit it to the young.

Group II's were born in 1914, now in their 50's. Population 114 million, gross national product $87 billion, 7 million automobiles, 140 telephones per 1,000 people, 1 million radio sets, no television. The depression made the greatest imprint. Those of us in Group II will always remember that period. We'll follow the conservative path. We are now the Establishment, remembering *The Saturday Evening Post*, Will Rogers, Lindbergh, Franklin Roosevelt, Tugboat Annie and Fourth of July picnics. We believed America had the answers, the problem was to get others to listen.

Group III people were born between 1935 and 1942. They're now in their early 30's. Population 140 million, gross national product $125 billion, 34 million automobiles, 175 telephones per 1,000 people, 29 million radios, no television. The inputs: Gene Autry, the Cisco Kid, John Dillinger, the Bomb and a push off of the farm and to the cities and the suburbs. The preoccupation of Group III was with jobs, money, and the acquisition of material things. The economy was booming. The wars were a great stimulant to business, and personal income, and unsurpassed luxuries for most people. Their problem as adults is how to keep it up and live comfortably with Group I and II and with the disturbing ideas and mores of Group IV.

Group IV born since 1950. In their span of life U.S. population jumped from 160 million to over 200 million, the gross national product went from $365 billion to $930 billion, 56 million automobiles to 90 million automobiles, a telephone in every home, 3 or 4 radios. Television, though first introduced in 1953, is now in practically every home. It's an age of instantaneousness, and affiu-

ence, and contrasts of rich and poor, white and black, power and no power.

But the institutions continue to be run by a generation that finds it increasingly difficult to be in tune with the technological environment in which it finds itself. Group IV, on the other hand, have never experienced any other world but the technological one in which they are living.

For them two highly significant things happened: time collapsed and the horizon disappeared.

It was, more than anything else, TV that did it in this country. The child who is raised with the television tube experiences events instantaneously. He is constantly barraged by a succession of new products (which burst forth full-blown); new services (which would be his could he but afford them) and news of political and military events, some of which have not been "re-structured" by The Establishment. He wonders why, then, it takes so long to get "anything done" in this society. His impatience with slow and "orderly" processes grows out of experience with the miraculous and the instantaneous.

Time collapsed—and the horizon disappeared. Unlike his forebears, whose horizon was the edge of the farm property, or end of a village street, the TV child saw events thousands of miles away as if they were only next door. In most cases he grew up knowing (by sight and sound) a presidential candidate better than the town mayor. Provincialism disappeared, his community became the world, and when this happened, he had no real reason to respect local authority or that of his parents.

He walked out of a living room filled with miracles and found himself in a world where antiquated bureaucracies slowly pushed pieces of paper around. He knows what he wants. He wants miracles. And he wants them *now*.

After all, man has walked on the moon—and he was there!

And, here we are—all four groups of us, living together someplace between placidity and revolution—struggling with overabundance and equity, some fighting to preserve our institutions in their traditional forms, and some fighting to change the form completely.

Already New Yorkers are beginning to get a taste of what happens when population and an affluent society of mixed inputs outgrow the capacity of their normal utilities and living space. The trains don't run, the phones don't work, the power is shut off, the traffic stalls, the planes can't land and it's no fun to go downtown on Saturday night.

In the next thirty-two years, in this country alone, we must build as many structures as have been built in this country since this nation was founded. And this is just to give people the same standard of buildings they live and work in today—it does not take into account the more sophisticated needs of better educated people with higher incomes, or those who will want two or more homes.

Nor is this our problem alone. Unless we are to face a global catastrophe, we must also be able to help meet the problems of food and shelter caused by the population increase all around the world. According to projections by Dr. Raymond Ewell of State University of New York, there will be a serious famine in India, Pakistan and Communist China within another five or six years. There will be serious famine in Indonesia, Iran, Turkey, Egypt and Brazil within the next decade. Most of the other countries of Asia, Africa and Latin America will be in a famine condition by 1980—just 11 years from now. These famines will affect hundreds of millions of people We could not, even if we were ethically willing to do so, ignore their plight, nor refuse to try to alleviate their hunger, as we surely must do quickly for our own poor and underprivileged millions.

This is perhaps the greatest challenge facing America today—whether we have within us the creativity to solve the problem of the nation's and the world's growing population in the time that we have. And, there is very, very little time.

Another major change that will require new responses is the change in the population's work load. It is predicted that within one generation in the United States, only 2 percent of Americans—as farmers and factory production workers—will be able to produce all the food and manufactured goods the whole U.S. population will want. What is even more astounding is that last year only 9 percent of the population produced all of the food and manufactured goods in this country.

What in the world are the other 91 percent of us doing today? What in the world will the 98 percent of us not engaged in producing food or manufacturing goods be doing in the next 30 years?

One of the inevitable consequences of this transfer of work load to fewer and fewer people is that we have—for the first time in any people's history—vast amounts of discretionary time. The concept of time as a commodity to be used in discretionary ways is still something quite new in the world. We are going to have to create new and satisfying and meaningful ways for people to use their leisure time. Sure, they can play more golf, do more fishing, read more books, listen to more music, watch more television, take more trips. But, in the end, this will not be enough, as most any energetic retired person can tell you today. A major challenge to business creativity will be to find what will give meaning to leisure time.

As a matter of fact, we should begin to take a whole new look at the total relationships of time and work and our modern society. The editor of our *Kaiser Aluminum News*, Don Fabun, reasons this way:

"When it comes to *use* of our time, we are like dirt farmers who have moved to the big city; we bring our farm hours with us. Thus we divide night and day, although, as Marshall McLuhan has pointed out, 'Electric light abolished the divisions of night and day, of inner and outer, and of the subterranean and the terrestrial.'

"Having brought day with us from the country (because, without lights, it was the only time we could work), we divided the daylight hours with three meal periods, because the work on the land was hard and it was good to rest the horses and refuel ourselves in the middle of the long days. It has not, in our urban areas, for some time been necessary to rest the horses, and it is doubtful that in the normal course of our labors, we expend enough energy to require refueling ourselves three times a day. But we continue to do so.

"The result of this farm-type, Colonial-Era thinking is to create the sort of problems that result when everyone goes to work at the same time, eats at the same time, has recreation in the same time, gets up and goes to bed at the same time. The way we solve the problem is to build generating capacity in our power plants for peak hours; to build highways three times as big as they need to be, to take care of peak traffic to and from work, and to overload our parks, resorts, beaches and other recreational areas to the saturation point two days a week and leave them virtually deserted all the rest of the time. As population increases, and becomes more highly congested in urban areas, the 'problems' compound, too, and we are forced into an insensate (an ultimately useless) frenzy of designing and building to take care of urban problems created by rural thinking.

"It may be that within the next twenty years, driven to it by taxes and frustration, we will begin to run our lives around the clock, and stagger our days off, and thus reduce peak traffic loads by two-thirds, and use our shopping and recreational facilities the week-around. We have done this during war times; but does it take a war to make us do so?"

One of the things we most certainly will have to do is to become more involved in education—not only for ourselves, but for those who will want to participate in the world of the future, and for those who will otherwise find increased leisure time a burden.

"One thing at fault with our thinking," says Professor Neil W. Chamberlain, professor of economics at Yale, "lies in our persistent notion that a person can acquire in the first 20 years or so of his life all the formal education he will need to keep him on an ascending career line through the remaining 40 years or so of his working life."

There is one other aspect of our participation in this world of change that I want to touch on briefly. You won't need more than a reminder to have some apprehension about the growth of the role of government—all kinds of government—in our social and economic environment. The government—Federal, State and local—is the nation's biggest employer—and spender . . . but, more than that, it has an increasing role on our personal lives and in the conduct of business. And the only point that I want to make is that, among the changes in our business environment, the growth of government is to be reckoned with, and we'll simply have to learn to live with it and make the most of it. It isn't going to go away—and it's not going to get any smaller.

Another thought I would like to leave with you is that it is almost impossible for an American business not to become involved in the world market—even if it does not ship a single product overseas. You can bet its counterpart in some other country is shipping a similar product into the United States; and so you are involved internationally, whether you intended to be or not.

This shift from purely domestic considerations to global ones is one more big change that affects all of us. And we will become more deeply involved in the years immediately ahead. It is one in which most of us have had little experience.

Let me add to that this statement by David Sarnoff: "Through communication satellites, laser beams and ultraminiaturization, it will be possible by the end of the century to communicate with anyone, anywhere, at any time, by voice, sight or written message . . . Ultimately, individuals equipped with miniature TV transmitter-receivers will communicate with one another via radio, switchboard, and satellite, using personal channels similar to today's telephone number."

We have recently been asked to "think the unthinkable." Now I am asking you to "imagine the unimaginable." For the rising demand for goods and services by all the people of the world, once they have turned information wants, and wants into needs, is truly unimaginable to our minds today.

Here we will have a *qualitative* demand as all-encompassing, as insistent, as desperately in need of solution, as we have a quantitative demand resulting from the population increase When the two of them are joined together, in that world of the immediate future—you and I and all our associates in the business world will be put to the test more severely than ever in our lives.

I am confident, and my business associates at Kaiser Aluminum are confident, that we—most of American business—will meet the challenge boldly and expertly. Our technology is giving us the tools—we have but to have the courage and intelligence to use them wisely.

A few months ago in our company maga-

zine, our editor wrote about change in this restless world in two paragraphs which he titled, "A Freshening Wind." He said, "There is a new wind abroad in the world. It sweeps through Africa, riffling the waters of the Volta and the Nile—the beat of drums becomes the pulsing of machinery. It ruffles the trees that line the Ganges and the Rihand—the might giant that is India stirs with a new and vital restlessness. It touches the Rhine and the Elbe, the Rhone and the Po, the Amazon and the Rio de la Plata, skirts the Mediterranean and sifts the sands of Suez. Wherever it touches, there is new vitality, new hope, new striving.

"It is a wind that whispers that life does not need to be lived in a mud hut; that food does not have to be grubbed from fetid, crowded harbors; that loads do not forever and ever have to be carried on aching shoulders. It is a wind that carries the promise that what has always been does not always have to be; that in the minds and hearts of men—all men—lie the skills and understanding to erase, once and for all, the economic barriers that have so long divided the world.

"It is the wind of 20th Century technology. It carries the hope of better things to come and the adjuration they will have to be worked for and the challenge of economic competition such as Western economies have never faced before. How this challenge will be met—to ensure maximum progress with minimum commercial conflict—is the great problem facing the American people. That the challenge will be met—and successfully—there can be no doubt. And it will have to be met soon.

"For there is a wind—and it is freshening . . ."

HOUSE JOINT RESOLUTION 506

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. PHILBIN. Mr. Speaker, I believe we should join in extending and renewing the interstate compact to conserve oil and gas. This is of paramount importance, if we are to expect to follow decent, conservation practices, and if we are to be assured of future, adequate supplies of oil and gas, which are being utilized at escalating rates, as well as suffering from wasteful practices and uncoordinated, unsound management practices, in a great many instances.

This is a very important incident of effective national conservation, and Congress must act in every way necessary to make sure that our supplies of oil and gas are safeguarded, and that our regulations require full respect and compliance with sound conservation principles.

Our wasteful practices of the past, which wrought so much loss and damage to the Nation cannot be tolerated in this day and age, if we expect to keep our oil and gas supplies at acceptable levels.

Gas and oil are mandatory for the continued success of our great economic system and for the convenience of the public in their homes and business.

The essential factor is that the responsibility for gas and oil is truly indispensable for the public's use and welfare and we must do everything we can to insure at all times an adequate supply of the oil and gas we need and fair distribution to the people at reasonable prices.

AMATEUR PHOTOGRAPHERS NEED FOURTH-CLASS MAILING RATES

HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. HORTON. Mr. Speaker, over 40,000 amateur photographers in this country are adversely affected by the present language of the postal rate law and by its unequal interpretation.

Today, I am reintroducing H.R. 13907 to obtain fourth-class postal rates for photographic materials mailed by amateur photographers.

I am pleased to have the cosponsorship of my able colleagues: Congressmen JAMES G. FULTON, HENRY HELSTOSKI, PETER N. KYROS, RICHARD L. OTTINGER, HOWARD W. ROBISON, PETER W. RODINO, JR., WILLIAM B. WIDNALL, and LESTER L. WOLFF.

Amateur photographers are unjustly dealt with by the present law.

I am referring to that section of the postal statutes which describes materials allowed to be mailed under the "educational or book" postal rate. My bill would permit amateur photographers who send photographic prints or slides to and from nonprofit photographic exhibits, or to and from other amateur photographers for educational purposes, to send these materials under the "educational materials" rate.

This change would be consistent with the fact that many "educational materials" sold through the mails for profit now qualify for this privilege. The present provisions, as they apply to photographs mailed for educational purposes, are so confusing that they are unequally applied in post offices across the Nation. Each postmaster seems to have a different interpretation as to which rate applies to amateur photos.

This September the very able executive secretary of the Photographic Society of America, Mr. Frederic B. Shaw, testified on this problem before the Post Office and Civil Service Committee's Subcommittee on Rates, chaired by our able colleague, the gentleman from Montana (Mr. OLSEN).

I would like, at this point, to include a brief excerpt from Mr. Shaw's testimony which illustrates quite effectively the nature and extent of this inequity:

Prints move to these shows in standard sized cases of almost identical weights. Postage of these prints however may vary, in total postage charged, by from 9¢ to 95¢ even though they are posted in like postal zone areas. This variance is due simply to separate interpretations of the law by different postal officials.

For instance, print cases may be shipped from Houston, Shreveport, or St. Louis to Oklahoma City and be charged for at three separate and distinct rates though all fall within the same postal zone and weight class. Following the exhibition, these same cases of prints may have to be returned at still a fourth rate as the result of still another interpretation.

The experience, in recent years, of the salon committee in a major metropolis in Kansas has been that many print cases shipped to their exhibit may almost certainly be held up by local postal officials until a ransom in postage due is paid out of entry fees. The accepting post office, which has interpreted the regulations another way, may then be recipient of a sizzling letter from the receiving post office about "law violation."

A sad commentary is the fact that a case of prints as described above may be sent to Asia, Africa or Europe for a rate less costly than to a fourth postal zone in the United States, to say nothing of the fifth through eighth zones.

A monthly book selection, an album of records, or a TV commercial on movie film, which can weigh more than the above mentioned prints with case, is likely to move at a lower postal rate because post office officials have ruled that educational rates can apply only to materials moving to or from the office of a recognized agency. Apparently the office of an "educational division" of a watch company, selling phonograph records, or an advertising agency shipping TV commercials to a customer or a paying client, do qualify in this regard.

While this is not a problem of major proportions from the standpoint of national policy, I feel that as long as Congress is setting postal rate policies, those policies should be free from unfairness and confusion. The support of each colleague in clearing up this point of postal rate law would quickly alleviate the problems, Mr. Shaw points out.

STATEMENT ON VIETNAM

HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. MORSE. Mr. Speaker, the following statement on Vietnam was signed by a number of members of the clergy of Woburn, Mass. It is a most thoughtful and compelling document, calling upon every citizen to work together to reach the common goal, the goal on which all Americans agree—peace in Vietnam. I am honored to be able to share this statement with my colleagues in the House:

STATEMENT ON VIETNAM

We, the undersigned clergy, of the City of Woburn, Massachusetts, are acutely aware of the agonized struggle of our people regarding the painful war in Vietnam which so sorely divides our nation. We believe that the religious communities should support the cause of peace and work for the repudiation of war as an implement of foreign policy and as a way to settle international disputes. This leads us to support the goal of bringing our military involvement in Vietnam to an end.

While we are united in seeking an end to the war in Vietnam we differ among ourselves as to whether immediate withdrawal or a gradual, scheduled pullout of military forces is the best way to end the war.

We urge all citizens to work for the creation of a new moral climate directed toward the redefinition of our national goals and the reallocation of our national resources which give the highest priority on the use of our energies and resources to the solution of the critical social problems which beset our nation and the world.

John R. Wood, Fred J. Cartier, Jr., Emmanuel S. Hedgebeth, Bruce A. Young, John H. Kidder, Richard Swan, Daniel J. Cananaugh, H. John Murchie, Samuel G. Brown II, Willis S. Pollins, Thomas E. Barker, Robert H. Holmes, John S. Morris, Harold G. Ross, Jr.

COMPARING U.S. POSTAL SYSTEM TO OTHER COUNTRIES NOT FAIR

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. DULSKI. Mr. Speaker, we keep hearing about the great efficiency of postal systems in other countries. Perhaps it is something about the proverbial grass on the other side of the street.

If the U.S. system had to serve only an area of one State—instead of 50—it could beat any system in the world. That is all the systems of other countries have to do—in fact, most areas are smaller than our major States. None of them have the volume of mail and the geographic area to serve that is the responsibility of the U.S. system.

One of the latest to rap the U.S. system is, of all people, the U.S. Postmaster General when he talked to the Tokyo press club and lauded the Japanese system.

Bill Bayne, who writes the "Post Office Box" column in the Federal Times, has some pertinent comment on the general's observation and draws some interesting parallels between the United States and Japanese systems.

Following is the text of the column from the December 17 issue:

THE POST OFFICE BOX

(By Bill Bayne)

WASHINGTON.—Postmaster General Winton M. Blount has returned from a two-week visit to Far East military bases and Japan, where he attended the Universal Postal Union meeting.

While in Japan he had occasion to address the Tokyo press club where he paid tribute to the boom that is the hallmark of Japanese industry.

But he also reportedly said that Japanese mail sorters could work as fast as American machine sorters and that the "Japanese haven't forgotten how to work."

Many postal workers in America have taken this to mean that the PMG is implying that the U.S. postal workers "have" forgotten how to work. Department officials say nothing could be further from the truth.

But to get back to the Japanese and their mail system.

EASIER TO SORT MAIL IN JAPAN

It is a far easier task in Japan to sort mail than it is in the United States. For example, there are no street addresses in Japan. There are only areas or ku's that are listed as the address. There are also cho's and chome's which give area breakdowns. Within the smallest area, there may be 10 blocks or so, depending on the density of the businesses or population.

So letter sorting, once the areas are learned, is merely a matter of sorting in the same fashion that cities are sorted in our post offices.

Further, in Japan, there is the matter of literacy. Japan claims the world's lowest illiteracy rate—less than one per cent.

This is not qualified by adding "technical literacy"—the ability to read or write one's name, but purely literacy. Given this aspect, it is understandable that the Japanese postal worker will not need to be the genius at deciphering some alien code in addresses for letter sorting that his American counterpart will.

Additionally, the Japanese made extensive use of zip codes and the use of preprinted envelopes with boxes for the zip digits, with the digits appearing in exactly the same location on every envelope. This system easily adapts itself to the use of the Japanese high speed optical character scanner.

BOXES FOR ZIP SPEED MAIL

The scanner used here in the United States will locate the zip code on the address of any envelope, regardless of its location. U.S. postal experts state flatly that if the Japanese boxes were used here for our optical character scanner, millions of dollars could be saved in letter sorting. And further, that the scanner could then be used for handwritten as well as typed address sorting, as the Japanese system is.

The question that comes to mind is: Why doesn't the Post Office ask Congress to write a law specifying the zip coded boxes? Or at least a law calling for standardization of envelope size?

Answers offered by post office spokesmen are that the general public would be up in arms if such restrictions were promulgated. A questionable argument.

To most individuals there are but three sizes of envelopes now—the business envelope, the short business envelope and the cordial note envelope.

It is true that the greeting card industry uses a tremendous variety of sizes of envelopes, but for general correspondence, the three sizes cover a huge percentage of the mail.

MANY VARIATIONS OF ENVELOPES

The fact is that although this may seem to be true to most Americans, there actually are thousands of variations in the size and shape of our envelopes.

Not only is there wide variance in shape, but also in the colors and materials used.

Manufacturers claim there is a demand for the different sizes and shapes and for the colors. And that demand will be filled.

But if the department does not take it on itself to ask for these changes, which it claims could represent such a huge savings, it will never know whether the demand for the differences is created by the manufacturer or by the public.

It seems there is a tremendous need for some forthright educational work on the part of the department for the people it serves.

Pat Nilan, legislative director for the many sorters in the U.S. post offices can sort 3,000 letters an hour—the rate commented on by Blount in Tokyo.

Optical character scanners, on the other hand, can sort up to 43,000 letters an hour. Possibly at an even higher rate, if the scanner did not have to search for the digits.

The department owes the public at least the sweat involved in pushing for envelope standardization. And while it's at it, it should also ask for the manufacturers to block out or line out a standard area for the zip code.

The manufacturers could certainly meet that demand as well.

Blount proved a diplomat in complimenting the Japanese on their industriousness and their skill at letter sorting. It would be a great benefit to America if he were as able a student of the problems and the methods of solution found in the land of the rising sun.

POWER TO CHANGE AND OBLIGATION TO PRESERVE AND ADVANCE

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. PHILBIN. Mr. Speaker, we must be very careful in the economies we seek in our social and economic areas as well as in overall military programs, because we may be creating new, serious problems on which our security and the security of the world may depend, and which could set back many progressive, domestic programs. But there is always urgent need for selective economy.

To provide for the defense of the United States is our great responsibility in these days of danger. We must make sure that, until peace really comes to this troubled world, and as we strive vigorously, and in good faith, for peace in Vietnam and in the world, to keep our defenses at a high pitch of efficiency that will enable us to protect our country as well as it can be protected in this nuclear age.

There will be sharp differences of opinion and controversy surrounding our action to keep a strong posture that can defend the United States, and that will also firm up our world commitments in terms of necessary weapons systems, aircraft, and ships that many be necessary to modernize our Armed Forces, and provide instantaneous readiness in case of aggression against this country, and other dire emergencies that may affect this country at home. We must make sure that we are prepared and ready for any development that may threaten the peace, security and institutions of our local communities.

It is very easy to sit back in an armchair and pontificate about the items we can cut from our military requirements, and the reductions we can make in our social-economic programs.

We have made a good start in reducing military procurement, and there are some additional cuts we can and will make in the pursuit of peace, security and economy.

The point I am urging at the present time is that we cannot, and must not, cut below safe levels, adequate to meet all possible contingencies which may confront us, not only military, but social and economic and domestic. The home front must be kept secure at all times.

Above all, we must make sure as best we can, that whatever cuts we make do not endanger our defense, even though we cannot always be absolutely certain that we have left nothing undone to implement every necessary measure to provide us with the means of defending ourselves, and helping to sustain those who are identified with us in the cause of freedom in a world seething with violence and irrational, aggressive movements.

We must uphold freedom, personal liberty, and equality at all costs, if this country is to exist as a great, free democratic Nation, indeed if this great civilization, and the values that have made us what we are, shall exist at all.

Never let it be said that freedom was lost while we slept, and that the Nation failed to unite to save our freedom and the prosperity and well-being that the free way has made possible.

By the same token, never let it be said that we turned our backs on the poor, the helpless, and the deprived fellow citizens and residents who are struggling in the midst of poverty and want in urban compounds, where millions live below normal standards of health, education, and opportunity to feed, clothe,

educate, and advance themselves and their families.

This Government is not static and helpless in the face of need. It can under full democratic procedures provide every change in the law and method of this system that may be needed to solve every problem that confronts us.

This Government is a dynamically sparked organism equipped by law to make any change the people believe is necessary to maintain their rights to survive, and protect and sustain this Nation, and its free system to which we owe so much.

At the same time, we must recognize that we must utilize our governmental powers to any extent necessary, and by every change required to improve the health, resources, education, welfare, and happiness of the people. And we look to the executive arm to do its full part toward these ends. And we ask and urge fellow Americans to join hands to unite the country and tackle and solve our serious problems as we have always done, with a spirit of loyalty, dedication to freedom, and resolve to perfect and protect our great, free system.

RESERVISTS WIN NIXON'S PRAISE

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. BRAY. Mr. Speaker, on December 16, 1969, President Nixon signed a proclamation honoring nearly 37,000 Reservists who were called to active duty in Vietnam or because of the *Pueblo* incident.

At a special ceremony in the White House, attended by a representative from each of 115 separate Reserve units called up to active duty, the President noted that 32,000 had served overseas, and won more than 4,000 citations and more than 250 Purple Hearts.

At the signing, the President commented:

That is eloquent testimony of the service they rendered. The nation is grateful to you, grateful for the service you have rendered, grateful because you are still in the reserves.

Following is the text of the proclamation:

RESERVE RECOGNITION DAY

(A proclamation by the President of the United States of America)

In January and May of 1968, one hundred and fifteen units from the Reserve Components of the Army, Navy and Air Force were ordered to active duty to quickly augment the Active Forces. This action provided this country with armed strength capability with which to meet possible contingencies that might have arisen as a result of the threats and actions by the North Koreans and the need for additional troops in Vietnam caused by the TET offensive.

Many of these units have served in Vietnam while others have served in Korea, Japan, and the United States. Those units remaining in the United States were primarily used to strengthen the strategic reserve and participate in the Military Airlift Command operations.

By June 18th, Reserve units of the Naval Air Reserve, the Naval Reserve Mobile Construction Battalions (Seabees), the Air National Guard, and the Air Force Reserve were demobilized and the units returned to inactive reserve status. The units of the Army National Guard and the Army Reserve have now been released.

All of these Reserve Component units responded to the Nation's call in time of need and established records of performance, both in and out of combat, which have demonstrated a level of readiness and training never been achieved by our reserve forces. In addition, many individual reservists volunteered for active duty during this period. They have truly upheld the heritage and tradition of the citizen soldier and have again proven that both the National Guard and the Reserves are a great resource for our country and one which is necessary to our national security.

Now, therefore, I, Richard Nixon, President of the United States of America, do hereby issue this proclamation in recognition of and appreciation for the patriotic, dedicated and professional service of our loyal members of the Reserve Components of the Armed Forces of the United States.

In witness whereof, I have hereunto set my hand this 16th day of December, in the year of our Lord nineteen hundred and sixty-nine, and of the Independence of the United States of America the one hundred and ninety-fourth.

RICHARD NIXON.

JAMES S. KEMPER, JR., RECOMMENDS NATIONAL INSURANCE STANDARDS

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. McCLORY. Mr. Speaker, my friend, James S. Kemper, Jr., president of the Kemper Insurance group, has given careful thought to the subject of improving standards guiding our Nation's automobile insurance companies.

In expressing support for national standards, without jeopardizing the traditional State role in the automobile insurance field, Mr. Kemper has provided a valuable and constructive approach.

Mr. Kemper's recommendations were contained in an address delivered recently to the National Association of Mutual Insurance Agents at its annual meeting in Washington, D.C.

I commend to my colleagues and to Americans throughout the Nation his thoughtful words which follow:

AUTOMOBILE INSURANCE: A NATIONAL APPROACH

(By James S. Kemper, Jr.)

The very subject matter of this panel, *Harnessing the NOW Revolution in Government*, presents a problem. Current emphasis in some quarters on Capitol Hill and in some Federal administrative agencies suggests that I might better discuss *Harnessing the NOW Revolution in the Automobile Insurance Industry*.

Our business is deep in the ferment of corporate and marketing revolution; and, as we struggle through the pain and disorder of rebirth into new forms and new systems in automobile insurance, we are vulnerable as never before to the harness of Federal regulation.

We cannot blame those who would so regulate us. At best, they see the harness as a needed restraint and guide which, with prudent use of the whip, will teach us docility and respect for the man in the driver's seat—who is, of course, the consumer. At worst, they are simply acting out their frustrations over the very existence of a private mechanism for collecting money from and paying benefits to one hundred million people. Either way, they say and seem genuinely to feel that we should accept Federal regulation for our own good, as well as for the good of the consumer.

This thesis is rejected by most property and casualty insurers, but not by all. For reasons not too hard to figure out, there seems to be a leaning toward Federal regulation by those companies which, because of their own failure to serve the needs of the consumer, have lost both share of market and huge sums of money in recent years. They have turned a line of insurance, currently unprofitable for all of us, into a disaster area for themselves.

For such companies Federal regulation may appear, not as a harness, but as a haven. In a free enterprise economy regulation is a substitute for competition, a shield against aggressive competitors. Regulation guarantees uniformity in marketing systems and a reasonable profit to the least efficient units in the industry. I do not challenge the logic of the position of such companies, from their point of view; in fact, it is an inevitable position for inefficient companies losing share of market. But I do challenge the claim that somehow the consumer will also benefit from turning automobile insurance into a Federally regulated system. It is to this point that I would like to address my remarks.

First, as a generalization, the mainstream of American political thought, on the part of liberals and conservatives alike, now flows away from concentration of power in Washington and seeks to place power at the scene of the action. The reasons for this have been elaborated upon by legislators of both parties, by columnists, by academicians, by administrative officials.

The issue of Federal versus state or local regulation is no longer an issue of ideology, but of practicality. The people, i.e., the consumers, have been consistently voting against concentration of power at the Federal level for at least the past three years, not as a matter of theory but because it doesn't work. The consumer has been telling us that delivery systems—under Federal control are too expensive, and furthermore they don't deliver.

In the face of such mandates, the burden of proof now rests, not upon us, but upon those who advocate that we wear the harness of Federal regulation. Is the performance of the automobile insurance industry so inept that the welfare of our customers demands that we be so harnessed?

If this question had been asked 10 years ago, or even 5 years ago, it could well have been argued that we needed *something* to shake us up and force us to face the real and changing world. Most of us were slow to react the changing demands of the marketplace, slow to respond to customer complaints, slow to recognize the need for improvement in the quality, availability and dependability of our services. And our lack of sensitivity to change, and our management responsibility to initiate and manage change, was shared by most of the state insurance regulatory apparatus. It, too, was asleep at the switch.

But I do not suppose we should be Federally regulated (i.e., punished) for past sins of omission which we are rectifying today. Nor should the state regulators be ousted from jurisdiction in the face of the rapid growth of professionalism and consumer consciousness which is taking place in state insurance departments throughout the nation.

Consider what has been achieved in the past five years—for the auto insurance consumer.

Policies non-cancellable except for loss of driver's license or failure to pay the premium.

Adoption on a massive scale of advance claim payments to accident victims.

Expansion of assigned risk plan coverages guaranteeing every licensed driver adequate liability and physical damage insurance.

Enactment of uninsured motorists coverage in 48 states, 34 of which have included insolvency protection (and others with such legislation now pending).

Introduction in several states of legislation calling for improvements in claim payment systems to pay more accident victims and to pay them faster.

Passage by several states, and pending legislation in many more, of open competition rating laws designed (and proved by experience) to broaden market availability and to give free play to competitive forces in ratemaking. This is the one area which merits renewed attention and may call for Federal regulation, through an amendment to the McCarran-Ferguson Act making rating activity subject to the Federal anti-trust laws, with an appropriate information shield in the law to permit statistically necessary functions to be performed by bureaus.

Passage in several states, and pending legislation in several more, of post-insolvency assessment laws which—at minimum administrative expense and without creating bureaucratic empires—make it impossible for the public to lose money if an insurance company becomes insolvent.

Some of the legislative improvements for the consumer in this list have already been adopted in a majority of states; others have been passed in only a few states but will be enacted widely during the 1970 legislative sessions. All have had the strong support of most of the insurance industry, both companies and producers, and of the state regulators. And the tide of improvements, the result of a genuine effort to meet and satisfy consumer demands, continues to flow—both by legislative enactment and by competitive marketing developments within the industry.

I think we are fulfilling our responsibilities as auto insurers. The job is far from finished, but we're well on our way. And in moving to meet the needs of our customers, we are gambling on what ought to be a pretty good bet—that if we do the job, we will again become a profitable industry. We won't all make money, but the innovative, efficient companies and the professional producers will; and I personally do not care to see any system which protects the inefficient—whether they be companies or producers.

This is a proper point at which to pause and give credit to some of our critics for providing us with a little motivation, a touch of the whip without the harness. I don't agree with some of the proposals made by Senator Hart and Senator Magnuson in the regulatory area, and I feel many of the hearings conducted by the committees they chair have tended unduly to accentuate the negative. But they have certainly motivated us, and we needed it. They motivated us so thoroughly that we've done something about the consumer problems they spotlighted, and perhaps now, having motivated us, they will see that these problems can be solved without the anti-competitive consequences of broad Federal regulation.

Speaking now only for myself, and for the people in the group of companies I represent, I have also become motivated to believe that the automobile insurance industry and the National Association of Insurance Commissioners must seek a *national* solution for consumer problems. I do not mean Federal regulation, or Federal standards imposed upon the state regulators and the industry. I mean national standards in all of the areas in which so much progress has already been made, standards voluntarily accepted and supported by the industry, with legislative action where necessary in all 50 states.

As long as some states fail to enact post-insolvency assessment laws, there will be danger of a Federal bureaucracy to administer the machinery of a Federal insolvency law. As long as some states fail to move in the areas of non-cancellable policies, broadening of coverages and realistic financial responsibility limits, there will be gaps into which the Federal government may be tempted to move.

There are other insurance areas in which national standards should be considered and debated: assigned risk plans and policy simplification, for example. Also, the whole field of judicial administration of automobile accident claims may well lend itself to the development of national standards, in cooperation with the bar and the judiciary. The lagging response of many states to Federal traffic safety standards suggests another fruitful area for a new approach.

The NAIC has already made a significant start in the direction of national standards through its work on a model holding company bill and a model post-insolvency assessment bill. An extension into other fields is logical and timely.

I suggest that we do not limit participation in this work to the NAIC and the insurance industry, but that we solicit the active cooperation of the Council of State Governments. For those not familiar with the council, it is a joint agency of all 50 state government, to assist states in improving their legislative, judicial Federal-state relations. It maintains a competent research staff. It provides staff services for the National Governor's Conference, which a few months ago officially affirmed support of state insurance regulation and called for continued effort to draft model state laws. It cooperates with other organizations, including the National Conference of Commissioners on Uniform State Laws.

The Council of State Governments, so far as I know, has never been called upon for help in insurance matters. But by its purposes, organization structure and inter-relationships with other agencies it is ideally suited to assist us in the difficult task of developing and obtaining widespread enactment of national standards in automobile insurance.

The Kemper companies will support the development of national standards in auto insurance by the NAIC, working in conjunction with the insurance industry and the Council of State Governments as needed and desired. We think this approach can produce all the benefits that have ever been claimed for Federal regulation or Federal standards, without the anti-competitive and expensive consequences which seem inherent in the concentration of power at the Federal level.

Much has been achieved, but we cannot afford a regulatory gap. Nor can our customers. Nor can the producers who market our services.

We can fill this gap by supporting the development of national standards for automobile insurance.

SPACE SHUTTLE ACCENTED

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. TEAGUE of Texas. Mr. Speaker, the Christian Science Monitor of Tuesday, October 28, 1969, carried an informative article by Mr. Neal Stanford, staff correspondent, discussing the future of our national space program and the need to develop low cost transportation systems for space. Mr. Stanford discusses the development, in the years ahead, of a space station and the requirement that space transportation be treated much as airline transportation is treated today, by reusing the flight vehicles numerous times. At a time when the Congress will soon approach decisions on the future and content of our national space program, Mr. Stanford's article outlines one of the paramount needs for an economic and effective space effort.

Under unanimous consent I submit the article for inclusion in the CONGRESSIONAL RECORD, as follows:

SPACE SHUTTLE ACCENTED

(By Neal Stanford)

WASHINGTON.—Space stations without a space-shuttle service would be like the Empire State Building without elevators. You could walk to the 102nd story. But who wants to? Think of the expenditure in time and energy!

That is why space officials today, both civilian and military, have made a space-shuttle system their No. 1 priority. Says Dr. George E. Mueller, associate administrator for manned space flight: "A low-cost shuttle system is the key to the economical operation of a space station."

Says Lt. Gen. Samuel Phillips (who recently left the national space agency as director of the Apollo program to head the Air Force's space and missile systems organization): "It is important to put a high priority on a space shuttle to allow us to exploit the space medium."

Last week, top officials in the civilian space agency, the National Aeronautics and Space Administration (NASA), the Air Force (which is responsible for military manned space operations), and aerospace-industry concerns held a two-day meeting in Washington to crystallize thinking on space shuttles.

REUSABILITY REQUIRED

Two things were immediately obvious:

Space-shuttle vehicles have to be reusable.

These requirements become obvious once you give the matter a little thought. What if everyone wanting to go to the Empire State Building, 102nd floor—or any floor—had to provide his own elevator? What if elevators weren't reusable?

General Phillips figures that reusable vehicles would bring the price of a space flight down from about $1,000 to $100 a pound—that is, cut the cost to one-tenth.

Space-shuttle vehicles have to be able to take off and land from regular jet airfields much as do airplanes. Here, too, the reason is obvious. You can't tie up the Kennedy space center at the cape with its expensive pads, rockets, etc., every time a shuttle car takes off.

AIRLINE-TYPE OPERATION?

Spacecraft shuttling back and forth from the earth to earth-orbiting space stations won't be so numerous that the shuttle craft will be stacking up over Dulles or O'Hara airports to land. But if shuttling men, materials, and equipment back and forth from earth to orbiting space stations is ever to become more than a stunt, it has to operate much as do airlines.

What these two basic requirements for space shuttle craft mean is that shuttle vehicles have to be different from the manned Gemini and Apollo spacecraft now used in space exploration.

To begin with these shuttle spacecraft may have to take off from special launch pads at airports, not just any runway. But those working on this shuttle problem don't rule out that in time these spacecraft will be able to take off and land at any major airport or air base.

The aerospace industry concerned with working on this problem of air-shuttle vehicles are busy at their drafting boards drawing and devising spacecraft that look more like the paper airplanes school children make when their teacher's back is turned than cone-shaped Apollo modules.

GRAVITIES CONSIDERED

Dr. Mueller, in talking about his concept of a shuttle vehicle, says: "I am talking about payloads of the order of 25,000 pounds, which is about the payload capacity of a DC-3. This capacity could be for passengers or for cargo, or split between the two. Possibly I should add that these shuttles should have a relatively slow acceleration going into space and coming back.

It is all right to ask astronauts flying to the moon and back or riding atop a Saturn rocket to take between five and eight gravities. They are prepared for it. Their suits, chairs, and equipment are built and contoured to take it. But the most one should ask of nonastronauts on a space flight for business or pleasure via a space shuttle is not over three gravities.

NASA not long ago set down 10 characteristics for a viable space shuttle, goals that aerospace concerns wanting to get into the shuttle-construction business are aiming for in their designs:

1. Take off and land from air bases or major airports.
2. Refuel with ordinary cryogenic fuels.
3. Self-contained on-board checkout.
4. Continental and/or intercontinental traffic control.
5. Standardized ground-support equipment.
6. All-weather operation.
7. Passenger safety and comfort comparable to large-transport aircraft.
8. Standardized equipment and processes for refurbishment.
9. Progressive maintenance.
10. Carry 25,000 to 50,000 pounds payload at a cost approaching $5 a pound.

Leroy Day, chief of NASA's space shuttle working group, who chairmaned last week's space-shuttle conference, says the agency hopes to award detailed design contracts for the shuttle around March, 1970. NASA hopes to get between $200,000,000 and $300,000,000 into its fiscal 1971 budget to finance detailed designs for the space shuttle. Says Mr. Day: "The shuttle is the cornerstone of our future plans for doing anything in space."

THE ONE-ROOM SCHOOLHOUSE RETURNS—IN STYLE

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. PUCINSKI. Mr. Speaker, the most creative components of that historic educational institution, the one-room schoolhouse, have been revitalized by the Downers Grove, Ill., public school system. Children in its El Sierra School are enjoying the type of warm relationship with teachers that once characterized the one-room school, and they are developing intellectual skills and knowledge at their own rates of learning through independent study and small-group activity.

However, there are several important innovations. The children in this new school today have the benefit of the finest educational technology. Their classroom is skillfully engineered to absorb noise. And the teachers are considerably better educated than their counterparts in the earlier days of American education.

The El Sierra School represents a wedding of some of the best traditional and contemporary educational techniques. For the information of my colleagues, I include an article from the Chicago Sun-Times of Sunday, December 14, which describes the school in greater detail:

THE ONE-ROOM SCHOOLHOUSE RETURNS—IN STYLE

(By Kingsley Wood)

A concept popular in the days of Abraham Lincoln is being tried by El Sierra School in suburban Downers Grove. It harks back to the old one-room schoolhouse, but with an ultra-modern look.

El Sierra School, 6835 Fairmont, has nothing but open space between classes. There are no interior walls. The 381 students cluster around large tables or sit in groups. Those who want it get individual instruction.

El Sierra is not unique. There are a growing number of such schools, particularly in California and Florida. But many have sliding partitions that allow teachers to close off areas at times. El Sierra does not.

El Sierra is one of two identical open-space schools opened by the Downers Grove Public Schools system this year. Educators say a major advantage is that that they allow major advantage is that they allow teachers to co-ordinate various learning activities more efficiently.

On a typical school day, this might be the scene at El Sierra:

One teacher reads to a group of first graders sprawled on the huge sound-deadening carpet while, about 25 feet away, a fourth-grade social studies class reads about the polar regions. Over in a corner, somebody is giving a science demonstration to two classes. A sixth grader at a table nearby is sketching animals; another boy at the same table is engrossed in a history book.

Team leaders, teachers, teacher aides and interns move from table to table, looking over the shoulders of the slow- and fast-reading groups and other specialized groups throughout the room.

And near the center, two long lines are forming and an aide is saying: "Please stand here if you are going to the public library. Stand there if you are going to the gym."

There are no heads popping up from the tables as the lines form.

In the learning center in the middle of the big room, a second grader is practicing word recognition on a "Flash X" machine. At another table, a first grader pronounces words into what is known as a Languagemaster. Elsewhere, older students work individually or view a film strip.

A 12-year-old blond named Rebecca Wingard, sits down to hear a musical recording. Then she checks out an engraved reproduction of a Picasso painting. She writes down the answers to several questions testing the student's knowledge of the artist and this particular painting. She then walks over to the south end of the room for her social studies class.

In an open school like El Sierra, it's not so obvious to the slow students that they are being separated from the brighter students.

"Here, everybody goes to the learning center, whether he is bright or slow," said teacher William Schubert. "The only ones who know what they are doing there are the students themselves, and the teachers.

"There's better camaraderie between teachers here," he continued. "Also, if a student doesn't get along with one teacher, we encourage him to go to another for help."

Rebecca's mother had been skeptical of the open school idea.

"I didn't think there could be any order in a school like this," Mrs. Raymond R. Wingard recalled.

"Also, I was worried that because the students would be working in specialized groups so much of the time, the teachers really wouldn't be able to keep track of each student's progress." However, she added, upon questioning the teachers she was pleasantly surprised to discover they "remembered details about every project my daughter was working on."

The open-school idea in Downers Grove evolved from a discussion among several teachers and the architects, K-M Associates of Elkhard, Ind.

Teachers said they wanted their students to have easy access to a variety of learning materials and, after a number of discussions, the architects suggested the open school.

The teachers and some interested parents subsequently visited several open and partially open schools. They were told that the carpets and acoustical ceilings solve most noise problems. They also found that pupils were not distracted by the other classes going on around them.

Some teachers' fears were dispelled. They had thought they wouldn't be able to coordinate so many specialized activities with a basic learning program. And many were fearful that the principal would be looking over their shoulders.

But now, the teachers and team leaders are the most enthusiastic advocates of the open school.

INDIANA GIVES VOLUNTEERISM A BOOST

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. BRAY. Mr. Speaker, application of private talent to public problems shows great possibilities for tackling some of the more difficult and complex matters at hand in our country. The following article in the Washington, D.C., Star of December 16, 1969, pays special tribute to three Hoosiers: Gov. Edgar Whitcomb, Mrs. Margaret Moore, and Mrs. Mattie Coney. As Mr. Bartlett states in his article, these examples could well be copied in other cities and States.

The article follows:

INDIANA GIVES VOLUNTEERISM A BOOST

(By Charles Bartlett)

INDIANAPOLIS.—When President Nixon finally begins his campaign to inspire languid Americans to become volunteers, he can draw heavily on this city where the spirit of self-help is running strong.

In fact the pace of volunteerism among the Hoosiers is so lively that Nixon's efforts to date appear languid by comparison. While the Nixon campaign has been grounded in disagreements on how to stimulate private citizens to tackle public problems, various people here have taken on some tasks with impressive results.

Indiana's new governor, Edgar Whitcomb, is making the most of this Hoosier spirit to get done some of the things which need to be done without running up the budget. For example, he is asking 60 Indiana corporations to assign socially minded junior executives to work for a year at setting up day care centers in counties where they are needed.

Whitcomb, an innovative Republican who wants to keep his credentials as a fiscal conservative, is leaning so hard on volunteers that the success or failure of his administration is likely to depend on their response. His initial experience has been auspicious.

A group of private companies was persuaded last spring to find a large number of summer jobs for college students. Another businessman's committee has come up, at Whitcomb's request, with 632 recommendations for cutting the cost of state government.

The volunteer spirit is flowering at this conservative crossroads because the Hoosiers are increasingly disposed to believe they can more effectively do for themselves many things for which they have relied in the past upon bureaucrats. Their self-confidence stems in part from the recent achievements of two unusual women.

Mrs. Margaret Moore, a 59-year-old newspaperwoman with deepset eyes and a strong chin, has transformed feminine indignation against crime into a crusade that has enlisted an army of local women in a gamut of activities directed at the root causes. The ladies have executed some original initiatives so effectively that they have won the enthusiasm of police officials who were once wary of their intrusion.

Since 52 percent of the juveniles who commit crimes are school dropouts, the ladies seek out youngsters who leave school and try to persuade them to go back. They claim to have succeeded with 2,000. Since the courts are part of the problem, two ladies sit in every court every day. "It's amazing," says a police officer, "how much the atmosphere is changed by the presence of those little ladies with white gloves and beaded hats."

The ladies have invaded every area where they might have a constructive impact, even to the extent of staging receptions for each graduating class of police recruits. "Battling crime is women's work," says Mrs. Moore, "because we have the time. We have had no trouble getting the volunteers we need."

One offshoot of the crusade against crime is the success of a forceful Negro, Mrs. Mattie M. Coney, at forming over 1,000 block clubs to struggle against the deterioration of character and environment in poor neighborhoods. "If you learn to live where you are," says Mrs. Coney in her evangelizing way, "you'll know how to live when you move."

Mrs. Coney is frankly engaged in persuading poor blacks to shoulder their own problems and correct their own habits instead of putting the blame on the whites. She is organizing them to cooperate with the establishment for their own advancement, and she claims the mood is running with her.

The experiences of both ladies have obvious applications in other cities and they are both in heavy demand for speeches. In fact, Mrs. Moore described her work at a 1968 luncheon for "doers" that Mrs. Lyndon Johnson gave in the White House, but Eartha Kitt stole the headlines with an outcry against the war.

The test of Nixon's leadership in volunteerism will be his ability to transform achievements like these into national stimuli. The evidence here is that the people are ready to be rallied into joining constructive initiatives. The President can light the torch and show the way.

HEART-LUNG MACHINE

HON. MARVIN L. ESCH

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. ESCH. Mr. Speaker, while we often concentrate on dramatic, headline making advances in science such as the land on the moon or a heart transplant, we often ignore the major medical and technical advances which precede them and make them possible.

One such major advance was the development of the heart-lung machine. Its development is a prime example of the advances that can take place through cooperation between the research and medical communities and private industry.

I am proud that many of the major advances in the development of an effective heart-lung machine took place in Michigan's Second District. Mr. Richard Sarns and Dr. Joe Morris have worked closely together, along with many people from St. Joseph's Hospital, the University Hospital, and Sarns, Inc., in developing the most modern and effective heart-lung machine in the Nation.

I am proud to have the opportunity to call this to the attention of the Congress and submit an article from the Ann Arbor News at this point in the Record:

[From the Ann Arbor News, Dec. 14, 1969]

NEW HEART-LUNG MACHINE A SYMBOL OF MANY THINGS

(By Larry Bush)

The new heart-lung machine on the surgery floor of St. Joseph Mercy Hospital is a symbol of medical progress, community progress, individual initiative, and the merger of medicine and engineering to save lives all wrapped up in one shiny instrument.

An improved model of equipment built by Ann Arbor's Sarns Inc., which was used by Dr. Christian N. Barnard in the world's' first heart transplant and many others which followed, it attains even greater significance in its every day use in open heart surgery here and throughout the world.

There is little doubt that thousands are alive today because of two men—a dedicated surgeon with some revolutionary ideas and a young engineer with a flair for innovation who worked long hours in his basement to make those ideas a reality.

Not to take anything away from the many other physicians and engineers to whom so many owe so much for combining their skills to promote medical progress, this community and a lot of people everywhere owe a debt of gratitude to Dr. Joe Morris, Richard N. Sarns, and Sarns, Inc.

The development of the Sarns heart-lung machine into a near perfect instrument over the past 10 years parallels the growth of the community. From a one-man basement workshop to a small business operation on N. Main, to a new modern plant on Jackson Rd., even now being expanded, the local firm is an outstanding example of area industrial progress.

On the other hand, although overshadowed by man's first landing on the moon and other space feats during the same period, the heart-lung machine is also a symbol of the phenomenal technical and scientific progress of the last decade.

In addition, it is an example of the triumph of individual initiative in an age when team work is given credit for most of our technical progress. Not that team work wasn't important in the development of this equipment. A Rackham grant, people at St. Joseph Hospital, at University Hospital, and others at Sarns, Inc., all had a hand in it. But the team was secondary to the individuals.

Dr. Morris, professor of thoracic surgery in the U–M Medical School and head of the St. Joseph Mercy Hospital heart station, gives Sarns all the credit. I probably wouldn't have gotten an interview if he had known I was going to bestow a share of it upon him. But a man's good works have a way of becoming known.

"Dick (Sarns) has made it on his own and is making some of the finest medical equipment in the world. He was working as a design engineer for Strand Engineering when he started work on the pump," Dr. Morris said.

"At the time he lived next door to Dr. Theodore Dietrich who was then a U–M medical student and is now working with Dr. DeBakey (Michael E. DeBakey, world famous heart surgeon at Baylor). Dietrich, who was then working with me, told Dick about our needs and problems.

"Sarns was amazed at the gap in what was possible and what was available. We were then using equipment that was used in making cottage cheese and for pumping slurry. Dick was willing to gamble with his time and some of his money and he and I and Dietrich spent many hours in his home. He built a pump in his basement which was very successful."

Dr. Morris attributes much of Sarns' success to the fact he worked from the point of view of the physician. He also notes that the president of the successful young Ann Arbor industry is a perfectionist who has built "better" equipment through working at it until "fixtures are ultra polished," something of utmost importance in blood handling devices.

In 1960 St. Joseph Mercy Hospital bought the pump built by the Oslon Co. * * * Mass., which also had Sarn's name on it to signify his part in rebuilding the original and the addition of the heat exchanger he had developed.

The original sits beside the six-month-old new Sarns heart-lung machine on the second floor of St. Joseph Mercy Hospital which the local firm has loaned to the medical facility until an identical model is purchased in the spring.

The new heart-lung machine has been around the world. It was exhibited at conventions in a number of countries, was shown at a world trade fair in Tokyo, at the meeting of the American College of Surgeons in San Francisco, and was left off in Hollywood where it was filmed for use in connection with TV medical shows before finally ending up at the local hospital.

"Some of the virtues of the new Sarns heart-lung machine is that we can adjust it to the thickness of blood in the tubing, can reverse the blood flow back to the patient, can dial pumping speed, control it manually if power fails, and it has more reserve power," Dr. Morris said.

The new heart-lung machine, with its fingertip control in color code which circulates a patient's blood while surgeons operate on his heart, and its predecessors, were made effective medical devices, however, through developments in the plastics field.

When glass or rubber tubing is used, much of that part of the blood in which the clotting element is contained breaks down as the blood moves through, making its use almost impossible if not fatal.

"The kind of plastic tubing used with heart-lung machines wasn't available until developed through research in the 1950's. All of a sudden the technology to contain blood outside the body and prevent clotting in the tubes was available," Dr. Morris explained. It has been a remarkable 10 years both in space and in medicine, and the space program, too, has played its part in new medical developments.

In conclusion, just a word about this better than average hospital where the new Sarns heart-lung machine is now in operation. St. Joseph Mercy Hospital, a 540-bed facility, appears now to be far too small for the number of patients it serves and the growing number it will be expected to provide services for in the future.

Last year, it had 21,000 admissions, almost as many as the larger University Hospital. There is need for a new 1,000-bed St. Joseph Mercy Hospital which will require considerable public support to bring to reality.

Considering the fact it draws on the U-M Medical Center, with many experts from the Medical School faculty serving part time on its staff to provide better than average service, that it has provided $250,000 of its own money to pay for medical care of the poor and unfortunate of the community, it seems only logical that it should receive this support.

Also, knowing how some physicians feel

about other doctors who they think get "free advertising" through newspaper articles, I hope I haven't damaged Dr. Morris' reputation with his colleagues by writing about his part in development of the heart-lung machine.

BILL OF RIGHTS BIRTHDAY

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. MIKVA. Mr. Speaker, the Bill of Rights is treasured by all Americans as one of the cornerstones of a free society. It is only to our detriment that we forget the central place of this document in insuring the fundamental freedoms of our republic.

It is noteworthy that the American Civil Liberties Union celebrated the 178th birthday of the Bill of Rights. This outstanding organization has been a leader in safeguarding the freedoms guaranteed by the Bill of Rights.

I commend to the attention of my colleagues, an article by Bob Cromie from the Chicago Tribune, which illustrates some of the important activities of the ACLU.

The article follows:

BILL OF RIGHTS BIRTHDAY

(By Bob Cromie)

The 178th birthday of the Bill of Rights will be celebrated tomorrow evening with supper and dancing at the Playboy mansion on North State parkway. Sponsor of the event is the American Civil Liberties union, an organization formed 50 years ago next January to battle for the rights of all United States citizens [or anyone else] regardless of race, color, religion, political persuasion, social position, or ideology.

The A.C.L.U. has defended both Communists and members of the American Nazi party. It has succeeded in having declared unconstitutional many laws which it—and most thinking people—regarded as repressive. It has persuaded high school administrations to cancel rules against the wearing of slogan-buttons by students, and to wipe out "dress-code" and hair-length regulations.

It has been called, of course, Communist-controlled or red-tinged—a charge emanating, usually, from the ultra-right wing or from those who don't take the time to acquaint themselves with what the A.C.L.U. stands for. In view of this it is interesting to observe that among past or present national officers or committee members are August Heckscher, Michael Harrington, Walter Millis, Elmer Rice, Norman Thomas, Francis Biddle, Lloyd K. Garrison, Karl Menninger, Thurman Arnold, Catherine Drinker Bowen, John Mason Brown, Pearl Buck, Stuart Chase, Irving Dilliard, Quincy Howe, Robert M. Hutchins, Arthur Schlesinger Jr., William L. White, and Thornton Wilder.

Earlier this year, to give a specific example of how the A.C.L.U. operates, Atty. Kermit Coleman was successful in having charges dismissed against eight young blacks, arrested while trying to prevent two Chicago policemen from beating a deaf mute who had angered the officers by refusing to answer their questions. When the others protested and tried to explain to the two policemen—according to the testimony of the defendants and other witnesses—they were arrested and beaten. Atty. Coleman says he himself was threatened at the trial by one of the officers who made the arrests.

Among scores of other actions instituted or decided in 1969, the A.C.L.U. forced integration of five Waukegan elementary schools, overturned the conviction of Dick Gregory and others for "disorderly conduct" while picketing Mayor Daley's home, and forced the city of Chicago to change its ordinance governing the granting of parade permits.

The party tomorrow, at which Bill Mauldin, Pulitzer prize winning cartoonist, is to be guest of honor, will be attended by a number of Chicago business executives whose firms have purchased space in a book of Mauldin's cartoons published by the A.C.L.U.

Here is a quotation from the Houston Chronicle which sums it all up in capsule form:

"The rights of an American citizen are not chance tidbits, to be given or seized. These rights are fundamental. Deny them to one citizen and they are denied to all citizens. The A.C.L.U. upholds that proposition when it defends a communist or a General Walker. . . ."

Illinois division headquarters of the A.C.L.U. is at 6 S. Clark st.

EX-COLLEAGUE W. E. MILLER IS LEADING HAPPY LIFE

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. DULSKI. Mr. Speaker, when I came to the House in 1959, the incumbent in the neighboring 40th District of New York was William E. Miller. He was an able representative of his district and had not yet shown the national political flair which was to become apparent the following year.

That was when his colleagues on the other side of the aisle named him to head the Republican congressional campaign committee. From there, he subsequently was promoted to national chairman and then gave up his congressional seat in 1964 to be his party's candidate for Vice President.

Bill Miller is no longer active in politics, but he is quite active in community affairs and has handled some chores for the Governor.

A columnist for the Buffalo, N.Y., Evening News talked with Mr. Miller the other day about several matters, including the vice-presidential candidate who was elected last year. Following is his December 11 column:

REMEMBER THE 1964 TICKET? THE LOSER IS A HAPPY MAN

(By Bob Curran)

If you like trivia, as I do, ask someone who was the candidate for vice president on the Republican ticket in 1964. Maybe the smart guy in the crowd will know that the name was William E. Miller from Lockport, New York.

Now when Bill Miller was placed on the ticket—after Gov. Scranton talked his way off it—there were some jokes about the unknown man.

This was a wrongo, because inside the party Bill, who had been chairman of the National Republican Committee for four years was well known. Certainly better known than the gent that the Republicans put into that spot in 1968—a fellow named Spiro Agnew.

Of course the names make a difference. You can picture a chap saying "Which Bill Miller do you mean?" Can you imagine anyone asking, "Which Spiro Agnew are you talking about?" That name is a grabber.

ASKED ABOUT AGNEW

So the other did I decided I'd ask Bill Miller what he thought about the other "unknown" who has suddenly become a household word.

"I don't know Agnew too well," Bill Miller said, "but I know him well enough to say he is a forceful guy. And the word on him with the people close to the situation is that he is a man of great integrity.

"I know one thing. You have to be some sort of man to take on the communications media. This certainly shows that he has no ambitions about being President or continuing his career in any way in politics.

"You don't tackle the media, as he has, if you are looking at the long road. You just try to maintain a posture that will perpetuate your political tenure.

"Now a vice president can be a nonentity—especially one who wants to be President some day. But it is obvious that Mr. Agnew has no such designs. He seems to just want to make a contribution instead of being a nothing, and he is certainly making a contribution. He is saying out loud in public what a lot of people—in and out of public life—have been saying for years."

IS HE HATCHET MAN?

Is he being the hatchet man for Mr. Nixon?

"I don't think so," Bill Miller said. "I am sure that he has the tacit approval of the President when he makes his speeches. But I don't believe that the President or his speechwriters decide on the content of the speeches.

"I believe that he decides what he is going to say. Then he lets the White House staff know what he is going to talk about. After that, he and his speech writers—his own, not Mr. Nixon's—get together and draft the speech.

"This man believes deeply in what he is doing. And he believes that he is making a genuine contribution to the administration. And I feel he is."

Did he get a tough time from the news media when he was running with Barry Goldwater? Bill Miller laughed and said:

"You don't have enough time to write what happened. Remember the picture of Barry on the cover of a news magazine that looked just like a picture of Hitler in Nazi Germany at the height of his power?

"Then I recall one day I spoke in Vermont. There were about 1000 people at the affair. The photographer from a major news magazine took the picture of me from the angle that showed nothing but empty seats. There were empty seats at the side of the hall but the rest of it was filled. You would never have known it from the picture they ran.

"If you complain about it, people say it's sour grapes. So just let's repeat that Spiro is saying in public what all the other politicians complain about in private."

PRESIDENTIAL OUTLOOK

Does he believe Mr. Nixon will be re-elected?

"Yes—unless something goes really wrong. He has captured the mood of the people. He is appealing to the silent majority, and in the long run they will elect the Presidents.

"If Nixon can end the war the right way—and I believe he knows how to do it—and if he can do a tolerable job of controlling inflation, he should be voted in again."

How about the threat of Ted Kennedy?

"No threat, really. Because you're from Massachusetts you know that he will probably win his seat in the Senate again by a large margin. But I can't believe that the people around the country could accept him as a candidate for the Presidency in 1972."

LIFE "NEVER BEEN BETTER"

And how is life treating Bill since he left the ring?

"Never been better. I find myself involved in matters that are very important now, but would have seemed unimportant then. Like Little League baseball. Cookouts. Golf. And it's so great to be home almost every night for dinner.

"I enjoy the work at my law firm in Buffalo, and I like being a spectator on the political scene. I am pleased with what I see of what Mr. Agnew is doing. But I am just as happy that he, not I, is in the middle of that struggle. I'm quite content to be the forgotten vice presidential candidate."

A TOUGH ASSIGNMENT

HON. GARNER E. SHRIVER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. SHRIVER. Mr. Speaker, our former colleague, Donald Rumsfeld, Director of the Office of Economic Opportunity, has chosen well in appointing John Crutcher, former Lieutenant Governor of Kansas, as Director of the State and Local Government Division in OEO.

It was my privilege to serve with John Crutcher in the Kansas State Senate. He is a public servant who will provide excellent leadership in this challenging assignment.

Following his service in the Kansas Senate, Mr. Crutcher was elected Lieutenant Governor in 1964 and 1966. He comes from Hutchinson, Kans., which is in my Fourth Congressional District of Kansas.

I take this opportunity to offer congratulations to John Crutcher and under the leave to extend my remarks in the RECORD, I include an appropriate editorial from the Wichita, Kans., Eagle:

A TOUGH ASSIGNMENT

A well-known Kansan has accepted one of the tougher assignments in Washington. John Crutcher, former lieutenant governor, is going to be director of the state and local government division in the Office of Economic Opportunity.

As columnists Robert S. Allen and John Goldsmith pointed out on this page Tuesday, things with OEO are far from being smooth, and it is quite possible that it stands to undergo considerable review and revision, perhaps both by Congress and the Nixon administration.

Crutcher's appointment may, in fact, be a part of that change. He told The Eagle there is a re-orientation of policy in OEO that will for the first time give the states genuine power and responsibility to improve OEO programs.

This would mean that Crutcher would be working with mayors and governors to help them to solve their problems in connection with the various anti-poverty programs under the OEO organization.

He doubtless will be as effective as anyone could be in this somewhat dubious undertaking. The theory of it is excellent, but in far too many cases there has been evidence that the politicians at the local level really aren't terribly concerned with abolishing poverty.

Crutcher, however, is experienced in politics and knows its problems and its quirks at the state level. He is, moreover, energetic and resourceful.

If he succeeds in the difficult task of getting the local officials to assume this responsibility and to do a good job with it, he will have proved himself equal to almost any task.

And he just might. He will have Kansas' best wishes, anyway.

LEGISLATION ON TEACHING ETHICAL AND MORAL VALUES

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. BENNETT. Mr. Speaker, there is a great need in America today for broad instruction in the development of man's moral and ethical values. Such a program can be developed in the elementary and secondary schools of our Nation and the Federal Government can give stimulus to this through the grant procedure.

Today, I am introducing a bill to accomplish this with 23 more cosponsors, a companion bill to H.R. 12339, introduced by nine members of the Florida congressional delegation.

The teaching of ethics and instruction in moral values are a proper function of our schools, especially in view of recent Supreme Court rulings prohibiting prayer and Bible reading in public schools. Educational programs of this nature and textbooks for such have already been developed in some school systems in the Nation.

The curriculum and academic instruction in morals and ethics could take the form of assembly programs or individual classes. Lessons on courage, heroism, and good works developed from actual stories and biographies of great men and women could be the teaching avenue.

Programs on the growth of the freedom of worship—how it became part of our Constitution; on patriotism—how brave men fought to preserve our freedom; on good citizenship—why is it important to obey the law and on the objective history of religion, which the Supreme Court has approved, could all be topics of classroom discussion.

Mr. J. Edgar Hoover has said that we have as a society failed our youth by failing "to teach them the meaning of discipline, restraint, self-respect, and respect for law and order and the rights of others." The teaching of moral and ethical standards belongs in the home, church, and school.

The juvenile crime rate is growing at a much faster rate than the overall crime rate and this is an indication of failure to teach our children the difference between good and bad. The latest figures show that arrests of juveniles for serious crimes increased 50 percent in 1967 over 1960, while the population in the juvenile age group, 10 to 17, increased only 22 percent.

If we are to reverse the rising crime rate, costing the Nation $27 billion annually, then we must concentrate on the problem where it hurts the most: our young people.

The legislation we have introduced will attack the problem at the root and through strong classroom teaching of moral and ethical values our young people will be better able to cope with the challenge of right and wrong.

H.R. 15336

A bill to provide federal grants to assist elementary and secondary schools to carry on programs to teach moral and ethical principles

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That title VIII of the Elementary and Secondary Education Act of 1965 is amended by adding at the end thereof the following new section:

"GRANTS FOR TEACHING MORAL AND ETHICAL PRINCIPLES

"SEC. 807 (a) The Commissioner shall make grants to State educational agencies to assist them in establishing and carrying out programs under which students attending public elementary and secondary schools will be provided instruction in moral and ethical principles. The content and nature of such instruction shall conform to general standards prescribed by such State agencies.

"(b) For the purpose of carrying out this section, there is authorized to be appropriated $5,000,000 for the fiscal year ending June 30 1970, and each of the two succeeding fiscal years."

SEC. 2. Section 804 of such Act is amended by inserting after "this Act" the following: "(other than section 807)".

GREAT GREY ICE GATHERING

HON. NICK GALIFIANAKIS

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. GALIFIANAKIS. Mr. Speaker, I am delighted that young people from my congressional district in North Carolina are planning to participate in a Richmond, Va., event called the Great Grey Ice Gathering.

The Great Grey Ice Gathering, scheduled for December 30, is a project to involve young people in the struggle to stop destroying our environment.

Since the district I represent—North Carolina's Fourth—is so thoroughly antipollution oriented as evidenced by the unique Research Triangle Institute, I take pride in endorsing the concept of the Great Grey Ice Gathering, and inserting the following self-explanatory news release into the RECORD.

[From the Charlottesville (Va.) Clean Water News, Dec. 9, 1969]

Richmond has a Great Grey Ice Gathering in its future, according to area students and the Federal Water Pollution Control Administration.

The Great Grey Ice Gathering, to be held Tuesday, December 30, in the Richmond Arena blends hard rock music, movies, speeches, young people from the Mid-Atlantic States and Federal Water Pollution Control Administration officials as a first step by FWPCA's boss, Interior Secretary Walter J. Hickel, to involve young people in what is turning out to be a life-or-death struggle to quit destroying our environment.

Jointly sponsored by the FWPCA and the Mid-Atlantic Student Council on Pollution in the Environment (SCOPE), the Great Grey Ice Gathering will begin "about 1 p.m. December 30 and last until the music and words no longer stir the gathering," ac-

cording to Patti Collins, SCOPE co-chairman and University of Richmond co-ed.

Collins said the "Gathering" would provide students "with the kind of information they need to react intelligently to the apathy of Government officials and business and industrial leaders to the awesome environmental crises now blooming in the United States."

Eugene Jensen, Director of FWPCA's Mid-Atlantic Region said it was evident that young people were growing concerned about the kind of planet they will inherit from older generations.

His office, he said, would provide any assistance it could to student efforts to reverse the long-continuing debasement of the environment in the United States.

"These students should be concerned." Jensen said. "They will be the first generation of Americans to actually experience a lowering of the quality of life as adults because of what's happening to our water, air, and land."

Jensen encouraged students from all States in the Mid-Atlantic Region to attend the Great Grey Ice Gathering in Richmond. Those States are Pennsylvania, Maryland, North Carolina, South Carolina, and the District of Columbia, in addition to Virginia. Events similar to the Great Grey Ice Gathering are also planned for the cities of Boston, Cincinnati, Chicago, Atlanta, Dallas, and San Francisco on December 29 and in Kansas City and Portland on December 30.

SCOPE Co-chairman Randall Simmons, graduate student from the University of Virginia, stressed that the December 30 meeting was simply the first of SCOPE's activities.

"In addition to organizing the Gathering," Simmons said, "the twelve-member SCOPE intends to meet regularly and provide Mr. Jensen and Secretary Hickel with the thinking of young people, and to serve as a focal point for organizing student environmental activities.

THE AMERICAN FLAG IN THE NATION'S CAPITAL

HON. JOHN O. MARSH, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. MARSH. Mr. Speaker, I took time in the House on Thursday, November 20, to raise a question as to the official policy on display of the American flag at public places in the Nation's Capital—specifically, at the Washington Monument.

My inquiry then was prompted by my understanding that the 50 American flags customarily flown from staffs circling the Washington Monument were not displayed on Saturday, November 15, when the assembly of the national Vietnam moratorium was held on the monument grounds.

I expressed then the opinion that, if a decision had been taken not to fly the American flag at that time and place, out of fear of an attempt by some of the persons assembled to desecrate it, it was an unwise decision.

I now have received a reply to the request for information on the matter which I had directed to the Secretary of the Interior and to the Director of the National Park Service, and I append it to these remarks for the information of the House.

With due credit to the explanation given, I continue to believe that the decision was unwarranted and unwise. I hope it may not be taken as a precedent for policy with respect to the flying of the American flag at shrines and other public places in the Nation's Capital in similar future circumstances.

As I stated here on November 20, the proper response to any indication of possible interference with normal flying of the American flag at a shrine, monument, or public building, or park under jurisdiction of the United States would seem to be measures for the protection of the national emblem against such interference, rather than striking the colors.

The reply to my inquiry follows:

U.S. DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE,
Washington, D.C., December 16, 1969.

Hon. JOHN O. MARSH, Jr.,
House of Representatives,
Washington, D.C.

DEAR MR. MARSH: Secretary Hickel has asked me to reply to your letter of November 20. He and I appreciate very much your courtesy in sending us copies of the remarks you made on the floor of the House of Representatives concerning display of the American flag at the Washington Monument on November 15. I am pleased to respond to your letters to us by giving you the circumstances surrounding this matter.

The planning for the National Vietnam Moratorium on November 15 was coordinated by an intergovernmental group under the leadership of the Department of Justice. As part of the planning it was decided that the Washington Monument would be closed since the grounds around it were destined to be the site of the principal concentration of demonstrators estimated at 250,000.

On the morning of November 15, National Park Service employees proceeded to raise the fifty flags around the base of the monument. At 8:30 a.m., when the last flag was being raised, an attempt was made by one of the demonstrators to drive off with the Government vehicle used by the flag detail. The offender was arrested and taken to Park Police headquarters.

Unlike flags that usually fly over Federal property from the tops of buildings, the fifty flags which fly at the base of the monument are located at ground level where they may be easily reached.

In view of the attempted theft of the vehicle used by the flag detail and numerous incidents involving militant groups on November 14, together with the disruptive activity expected to continue on November 15, it was decided that the flags at the base of the monument should be lowered. They were lowered between 9:30 and 10:00 a.m. This decision was also prompted by the improbability of simultaneously protecting fifty flags against possible attempts of desecration in the midst of a milling crowd estimated at 250,000 persons, some of whom were known to be inclined toward disruptive activities.

You also inquired as to our policy with respect to the display of the flag. The applicable policy of this Department is contained in Chapter 5 of its Departmental Manual. The pertinent part, 310.5.1, provides as follows:

"United States of America Flag.

"A. *Policy.* The display and use of the flag of the United States of America by the Department of the Interior will be in accordance with the Joint Resolution of June 1942 (PL 623) as amended by the Joint Resolution of Dec. 22, 1942 (PL 829) and Presidential Proclamation 3044 dated March 1, 1954. (36 U.S.C. 175).

"C. *Outside Use.*

(1) The flag should be displayed daily, weather permitting, on or near the main administration building of every Interior activity."

Please be assured that consistent with the resources available to this Department, every effort will be made by it to comply with the foregoing policy which embodies the applicable Congressional enactments.

Thank you for the opportunity to provide our comments on this facet of the recent Moratorium observances.

Sincerely yours,

GEORGE B. HARTZOG, Jr.,
Director.

STUDENT LOANS FLUNKING OUT

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. PUCINSKI. Mr. Speaker, among the most serious victims of our spiraling inflationary economy are the Nation's young college students, struggling to meet rising costs of education. The mounting enrollments of our higher educational institutions have created competition for financial aid—particularly student loans—at the same time that banks are tightening their belts and raising interest rates. This Congress passed the Emergency Insured Student Loan Act of 1969 to help alleviate this need, but apparently this has made little difference to many of our Nation's lending institutions. I believe this situation demands our immediate attention, and I am including an article from the Chicago Sun-Times of Sunday, December 14, which makes specific recommendations for remedies in the present system:

STUDENT LOANS FLUNKING OUT

(By Dennis V. Waite)

Quiet panic appears to be seizing tens of thousands of college students as one college term ends and another looms not far around the New Year corner.

The students' desperation is triggered by one simple word—rejected—on their applications for loans.

An all-time high of 4,156,268 full-time students at 1,145 of the nation's colleges and universities are facing an all-time high in expenses and an apparent all-time high rejection rate by institutions that generally loan money to them.

"Now you see it, now you don't" is the sad name of the money game American college students and their parents watch as loan funds seem to shrink despite recently passed emergency legislation.

On Oct. 22, 1969, President Nixon signed a bill which subsidized insured student loans up to 3 per cent beyond their 7 per cent interest ceiling.

The Emergency Insured Student Loan Act of 1969 was made retroactive to Aug. 1 and provided that the Secretary of Health, Education, and Welfare, each three months would pay a subsidy to lenders on their outstanding student loans of up to 3 per cent. The current allowance is 2 per cent, affording lenders a yield of 9 per cent.

The legislation apparently has made little difference to larger, money-center banks and to many students in need of money to carry on their education. Schools are also short of funds.

The University of Illinois at Chicago Circle isn't even bothering to reject new loan applications. It is sending out a notice to all new student applicants that no financial aid can be given by the school for the rest of the school year.

Arthur J. Falls, director of financial aid at Illinois, says he is rejecting about two out

of every three loan requests from students already enrolled.

A University of Chicago spokesman said the legislation did help many of the hundreds of thousands of students stranded this summer after federal loan and grant funds were sharply cut. "But we're pretty much back in the same old pot," he adds. Robert L. Franklin, director of student aid, Roosevelt University, agrees.

An official at a large Chicago bank that is considered a leading lender of student loans in Illinois says: "Our bank may not give out a nickel in new student loan requests after Dec. 31."

Another banker says even the granting of additional loans to present student customers may be curtailed.

CREDIT CRUNCH

Money-center banks in urban areas like Chicago say the subsidy is not helping much. "Right now we're turning down many of our own creditworthy customers for loans of 12 and 13 per cent. We often have to pay more than 9 per cent to borrow money from smaller banks ourselves," one bank officer recently said.

One loan official commented "Banks are licking their wounds. Bearded wonders and irate mothers are demanding the banks cough up money.

"Even schools blame banks, saying banks have the money, the interest rates are high and the loans are insured. But many people don't realize that the larger banks are severely squeezed by record money costs, dwindling deposits and a continued knocking on their doors for loans by almost all of their customers."

Nevertheless, banks in Illinois continue to put more money into student loans than ever before, Dr. Lee Noel, assistant executive director of the Illinois State Scholarship Commission, said last week.

"Since August, 1966, we've guaranteed $110,000,000 in student loans, or 103,000 loans to 80,000 students," Noel said. The ISSC (which coordinates loans made by private lenders through federal insurance programs to individual students) projects $50,000,000 in loans in Illinois under the guaranteed program for 1969–70, according to Noel. In 1968–69, the amount was $40,000,000 and in 1967–68, $26,000,000, he said.

QUESTIONS OPTIMISM

Noel's 25 per cent increase projection seems optimistic given the very slight increase in loans already made this year over last, according to some experts on educational finance. Loans made through the commission for July, August, and September for 1969 show a 2.5 per cent increase over comparable 1968 figures.

And the small rise also reflects the fact that money availability from schools and federal sources is down, one administrator said. Total federal grant assistance to Illinois Circle Campus, for instance, has fallen 67 per cent. National Defense student loan funds at the campus for the current school year have dropped by some 50 per cent.

At the University of Chicago, National Defense funds were slashed from $1,800,000 to $1,300,000.

And the record number of college students, the increasing amount of schools becoming eligible for federal and state funds, and the continuing money anemia in the U.S. economy mean the answers so far have not proven big enough to solve the problems.

SUGGESTIONS OFFERED

Suggestions made by school administrators, state officials and financial executives include:

—Allow other financial lenders to participate more in the guaranteed loan program.

—Invest part of school endowment funds in the program, allowing high yields to add to the student loan fund pool.

—Allow freer interchange of federal aid at the discretion of each school's needs.

—Create a super corporation similar to the Federal National Mortgage Assn. that could buy large blocks of student loan paper and permit banks and corporations to borrow on the paper.

—Pressure Congress and the administration for more federal loan, grant and scholarship funds.

Meanwhile, state officials, bankers and student loan officers wait for an explanation from the HEW Secretary about a regulation concerning lenders which deny "a substantial number of eligible students . . . a fair opportunity to obtain an insured student loan because of practices . . . which limit student participation."

The law states that the secretary should adopt or amend regulations, "to prevent, where practicable, any practices which he finds have denied loans to a substantial number of students."

BEN COLE'S CHRISTMAS POEM

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, December 19, 1969

Mr. BRAY. Mr. Speaker, for some years a feature at Christmastime by Ben Cole, long-time Washington correspondent for the Indianapolis Star, has been a special Christmas poem concerning Indiana Members of the House and Senate. Following is Ben's verse for this Christmas, 1969:

It's time again for Christmas songs and lights and fun and mirth,
For holly wreaths and tinseled trees and peace o'er all the earth.
It's time for hanging stockings up, for buying presents, too,
'Cause almost any moment, now, old Santa Claus is due.

Out, standing on the busy street, old Santa's hung a pot.
He calls a "Merry Christmas!" e're you drop a coin or not.
It's a money-raising method Vance Hartke keeps in mind
In case next year campaign funds become too hard to find.

Reindeer skim the rooftops as snowflakes softly fall
While the spell of winter magic captivates us one and all.
Such is this Christmas wonder which filters from the sky
That even Clement Haynsworth got a card from Birch E. Bayh.

By the twinkling light of candles the carolers make their way—
Their voices fill the wintry air to tell of Christmas Day.
As he listens at his window, Ray Madden's sad to know
The bill reforming taxes left them all out in the snow.

What really makes it Christmas is Santa's annual trip.
The way he drives those reindeer is enough to make you flip.
But if they should ever falter and Santa's out of luck,
Earl Landgrebe's right there, waiting, to take over with a truck.

Now deck the halls with holly, and let's trim the Christmas tree;
And rest ye, merry everyone, as jolly as can be.
John Brademas is busy, his researches took a week
To prove that Claus, no Eskimo, is actually a Greek.

Icicles fringing every roof mean winter time is here—
Each household brims with laughter, and with gifts and Christmas cheer.
Ross Adair has sent a letter asking Santa if he'll trade—
Ross will drive his reindeer while Santa battles foreign aid.

Dolls, trains and gleaming ice skates left beneath the Christmas tree
Are evidence that Santa Claus can fill young hearts with glee.
As he greets the Christmas season, Dick Roudebush debates
The phrasing of his greeting to the Senate candidates.

Deck the Halls of Montezuma with wreaths and mistletoe.
Keep those Yuletide caissons rolling—the Army's on the go.
Santa's in the wild blue yonder with anchors all aweigh
For a military Christmas with Congressman Bill Bray.

Johnny Myers is very busy with his Christmas shopping chores—
He's bought a bunch of presents and he's looking for more stores.
As he rushes through the city at such a hectic pace,
You would think that he's in training to run a Senate race.

Now Roger Zion's window's bright with Christmas candle light
That spreads its cheer across the snow to guide old Santa's flight.
In his home so warm and cozy, safe from the winter cold
Zion hopes to reform Congress before he gets too old.

Lee H. Hamilton's young children are gathered at his knee
To hear him read a Christmas poem beneath the Christmas tree.
And if the coming New Year ends the war in Vietnam,
Perhaps the folks in Brookville, then, will get to build their dam.

David W. Dennis puts on a jaunty Christmas tie
And shouts a merry greeting with a twinkle in his eye.
If we ever hold elections to choose our Santa Claus,
Dave says he's sure the District Plan would have the fewest flaws.

Santa likes to drive his reindeer and Mrs. Santa keeps a cat.
There are people who tame tigers and scary things like that.

But Andrew Jacobs Junior makes his choice of pets quite plain—
He has fitted out his office in wall-to-wall Great Dane.

There! That's the Season's roll call of Hoosiers on the Hill
Where snow encrusts the great iron dome, and everything is still.
May Christmas bring you happiness, wherever you may be—
That is the wish we're sending you from Washington, D.C.

THE NADER REPORT ON AIR SAFETY

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. OTTINGER. Mr. Speaker, aviation safety has long been a matter of serious concern to me. It has been the

subject of countless hours of work by my staff and me, resulting in comprehensive proposals to the Department of Transportation, to the Federal Aviation Administration, and to my colleagues in Congress. It is unfortunate that in all three arenas, progress is sadly lacking.

Illustrative of my contention are the facts developed by Ralph Nader and Reuben Robertson in a study of the regulation of air-carrier maintenance and inspection practices and procedures by the FAA. The report concludes that the FAA's approach to regulation has permitted an increasing laxness by the airlines in this area. This can be expected to become more serious as the carriers search for new ways to cut costs and maintain profitability during the period of severe financial strain that appears on the horizon.

In my view, it is urgent that the downgrading of maintenance and inspection procedures and the FAA's abadonment of its regulatory responsibilities be stopped now, before the loss of more lives, and before the introduction of the jumbo jets into widespread service.

I am pleased to present for the serious consideration of my colleagues and the public, the text of this latest Nader report and a copy of a covering letter to the chairman of the National Transportation Safety Board further pursuing the issues the report covers:

A PRELIMINARY REPORT ON REGULATION OF AIR SAFETY, DECEMBER 10, 1969

(Prepared by Reuben B. Robertson)

One of the most important responsibilities of the Federal Aviation Administration is to assure the safety of the American public through diligent regulation, supervision and inspection of airline equipment and operations. In charging the FAA with these duties, Congress clearly understood the need for an independent watchdog agency, responsive only to the public interest, to prevent safety from ever being comprised by considerations of financial expediency, scheduling demands or other economic pressures that are inevitably part of the airline business, like any other profit-oriented enterprise. In the Federal Aviation Act of 1958, Congress unequivocally set air safety as the first priority in air regulation, specifically referring to "the duty resting upon air carriers to perform their services with the highest possible degree of safety," and requiring the FAA Administrator to "exercise and perform his powers and duties under this Act in such manner as will best tend to reduce or eliminate the possibility of, or recurrence of accidents."

Today many of the muitibillion dollar airlines are suffering severe financial repercussions from overexpansion and mismanagement. At a time when they can barely fill half the available seats, the airlines are anticipating the delivery of a whole new generation of commercial albatrosses—the jumbojets, airbusses and, not too far away, the SST's. It is therefore appropriate to take a look at the quality of safety and maintenance practices in the industry and to assess the performance of the FAA in protecting our safety. The picture that emerges from even a cursory glance is, in a word, shocking.

Airline maintenance and inspection functions have been allowed to deteriorate to an alarming degree, so much that the safety of the travelling public as well as people on the ground is being seriously jeopardized every day. The FAA has been totally captured by the airline lobby so that today, instead of performing the rigorous inspection and policing job that the taxpayers have a right to expect, the FAA has degraded itself to the role of providing free management consulting services to the industry and serving as a recruiting base and a training ground for middle level airline management. Instead of taking serious enforcement actions to prevent the safety violations that are regularly being committed by the airlines, the FAA relies on quivering and apologetic "recommendations," "verbal agreements" and "requests" as the primary mechanisms of enforcement to halt unsafe practices. Let me be more specific.

It is well known throughout the industry that many carriers have seriously undermanned and undertrained maintenance and inspection crews. Often two men are put on jobs for which a minimum of three are needed. For example, one mechanic employed by a carrier at San Juan was responsible alone for the routine ground handling, servicing and non-routine maintenance problems of three jet aircraft, all of different types, at the same time. He had training experience for only one of these types, by a previous employer, but as to the other two he was left to his own devices.

Although the Federal Aviation Regulations, known as FAR's, do formally require each airline to have training programs for their maintenance personnel, in practice the training programs of many carriers are virtually nonexistent. Several major studies of this problem for the federal government in the past few years have recommended massive programs to alleviate the critical deficiencies in the training of air maintenance personnel. The FAA is fully aware of this problem and has even admitted in an internal handbook that "inspections have revealed operators having excellent training programs laid down in their manuals, who, in fact, had no training program at all and which existed only on paper." Yet the FAA has taken no firm enforcement actions in this area and has not even set minimum time or course content standards for maintenance personnel training. Even worse, the FAA does nothing to crack down on the uncertified schools, such as Georgia Flyers, which are undermining legitimate training efforts by "guaranteeing" that students will be able to pass FAA mechanic certification examinations after only three days of study. (Exhibit 1)

The pattern of undermanning maintenance crews is becoming increasingly severe as the airlines seek to reduce costs through personnel layoffs. A recent article in the Washington Post reported on "very drastic" economy moves and personnel cutbacks by several carriers. (Exhibit 2) A recent issue of the Pan Am house organ noted substantial layoffs resulting from a $38.4 million dollar earnings crash this year alone. (Exhibit 3) For any employees who might have missed the point, the same issue contains an article outlining the kinds of attitudes Pan Am management wants to instill in its personnel. This article states that the company is organizing management efforts to find employees who "think efficiently," "face change with enthusiasm" and "take risks to achieve a goal." (Exhibit 4)

And as far as taking risks is concerned, National Airlines must have set some kind of record by summarily firing over a thousand employees, mostly maintenance personnel, in a dispute over whether a two man crew is adequate for taxiing aircraft. The facts are pretty well set forth in an article from the Miami Herald of February 2, 1969. (Exhibit 5) The mechanics claimed that a third man is needed to monitor gauges, watch the wings and cut the power in an emergency. The firing of its maintenance force, however, has not resulted in significant curtailments in National's service. The airline's claimed ability to suddenly find and hire hundreds of experts and skilled mechanics off the street, despite the critical industry-wide shortage of such technicians, is something of a minor miracle. The major miracle is that National has been able to get through so far without a catastrophic accident—and without strong FAA actions strictly enforcing the FAR's. On one recent flight into Washington a wheel fell completely off the plane and rolled into the Potomac River; in another incident at National Airport, the aircraft filled with thick, acrid smoke from a defective auxiliary power unit, resulting in monumental confusion and fright.

The concern over maintenance practices and the lack of effective surveillance and policing of air safety by the FAA is by no means confined to persons outside the industry. On the contrary, while the problems are almost totally unrecognized by the general public, they are of great concern to high airline management officials in discussions in the inner circles of industry. Yet these officials, with few exceptions, almost never speak out in conscience about what they know or should know is happening. One Eastern Airlines vice president did speak out in a 1966 internal company memorandum with the following shocking conclusions he had drawn about Eastern's engineering and maintenance departments:

"Eastern Airlines today enjoys a reputation for reliability, passenger service, and general competence that it has not approached in many, many months if, in fact, ever.

Some of our recent experiences could be construed as the first symptoms of localized reversion to the lax practices and habits of by-gone days!"

Elaborating on the last point, he went on, in part, to describe specific incidents:

"Last November 25, a TRC DC–8F aircraft was destroyed by fire in our hangar at Miami.

"At the CAB hearing on Aircraft 218 (our Constellation involved in a mid-air collision with a TWA 707 on December 4) it was brought out that Maintenance and Inspection personnel had released an airplane at Boston without performing a required post-maintenance function check.

"B–727 Aircraft 101 landed at Miami on March 5 with the gear retracted because maintenance, performed improperly prior to that flight, prevented extension of the right main gear." (Exhibit 6)

There is tremendous pressure within the companies to downgrade the maintenance and inspection functions. For one thing, it looks good for the organization men who head the carriers' maintenance departments if they can save money for the company by successfully absorbing personnel shortages in their departments. In reality, the maintenance managers see their primary function as minimizing the number of flight delays arising from maintenance problems. At Eastern Airlines, for example, the maintenance managers are required to report on and justify in detail any delays resulting from maintenance work in a daily conference call with top management. It is not hard to understand why maintenance items discovered in transit are deferred as long as possible until scheduled maintenance downtime. The FAA, if it does not know about these practices, must be blind. If it does know, it is failing to diligently protect the public.

The flight crews are also under intense management pressure not to ground aircraft for maintenance items which can possibly be deferred until later. As a result, instead of writing up maintenance problems in the log book enroute, as required by the FAR's, it is the practice of many flight crews to note the problems on loose scraps of paper which are written up in the log book just before scheduled maintenance. Again, the FAA does nothing, although even the slightest investgation would reveal these practices.

Theoretically, the aircraft mechanic has authority to ground an aircraft by refusing to sign the airworthiness release after the performance of maintenance work, and the airlines make much of this in their publicity. For example, a preposterous bit of American Airlines promotional foolishness sets forth the imagined powers and virtues of the aircraft mechanic as follows:

"He thinks nothing of keeping a 7 million-

dollar airplane in the hangar because a 10-cent part needs replacing.

Or checking the burbling air in a fan-jet 20 times—until he's satisfied it's burbling just right." (Exhibit 7)

In fact, the likelihood of a mechanic actually grounding a plane without reprisals is only slightly less improbable than recurrence of the Immaculate Conception. The real message to be gleaned from the American Airlines ad, which demonstrates the actual differentials between maintenance and scheduling, comes at the end:

"We built this airline with the professional traveller in mind—the man who rates an airline on the service it gives, not how glamorous it looks.

"And if his plane is late on Sunday, we know his Travel Agency won't be calling us for tickets on Monday."

The fact of the matter is that maintenance and inspection functions are by and large invisible to the customer, except insofar as they inconvenience him by schedule disruption. In transit and on-line maintenance work does not directly reduce costs or increase revenues for the carrier, and it is accordingly treated at best as a necessary evil, to be reduced to the minimum possible level. The airlines vigorously struggle among themselves for image superiority in theme songs, paint jobs, crew couture, cuisine delights and other items of snob appeal, but excellence of ground maintenance unfortunately is not a factor in the equation of non-price competition. The critical concept that ambitious employees in airline operations must grasp to get ahead in the company is "on-time departure." This means that, unless an item is of an absolutely critical nature, the carriers' general policy is to defer in-transit maitnenance repairs which involve possible substantial delays, and to rely on built-in redundancies of jet aircraft systems to get the flight to its destination.

Dispatching planes in these circumstances does mean increased hazards, of which the airline personnel are aware but the passengers are not. Since the carriers' equipment is generally heavily insured, the only real risk they are exposed to is the adverse publicity of an accident, and this is the primary restraint on the practices of the carriers today. It is common knowledge in the industry, for example, that the first order of business after a crash has traditionally been to paint out the name and insignia of the airline on the wreckage. The FAA, of course, couldn't care less.

One hair raising incident was recently related to me by an experienced aircraft mechanic. While travelling as a passenger on a major western airline DC–6 flight, he was looking out of a window during a fueling stop in Las Vegas. He noticed a greenish fluid streaming out a vent in the left wing near the engine. Feeling somewhat concerned he got off the plane and went over to check the fluid, which he knew from the smell to be fuel. A serious explosion and fire situation exists any time that fuel is vented overboard, especially in the vicinity of the engine's hot exhaust, so he immediately notified the flight engineer and the captain of the problem. The captain's response, even after a lengthy discussion, was to go ahead anyway, and "we can get it fixed in Los Angeles." It was not until the passenger announced that he would not reboard the plane unless the situation were corrected, and that he would call the FAA if the flight departed, that the flight crew had the problem corrected.

Such problems are not uncommon and the technical personnel working in the maintenance crews are by no means unaware of them. One flight line mechanic with over fifteen years experience with a wide variety of aircraft types recently estimated that he sees two to three flights a day leaving his station at Washington National Airport in defective condition. They are leaving with items he believes should be corrected then and there but are not, such as leaking brakes, leaking hydraulic systems, out-of-rig flight controls, broken seats and safety belts, and defective escape chutes. The FAA, which is supposed to make inspections of aircraft to assure that they are in safe flying condition, in fact does not make such inspections and is never around to catch these kinds of defects before flight.

All of these could be serious safety hazards in certain circumstances. Yet an aircraft mechanic is subjected to brutal company pressures if he should dare refuse to sign the required certification that the plane is properly maintained and ready to fly. If the mechanic signs, he is held personally responsible in case of trouble and is subjected to summary punishment by the company and the FAA. If he refuses because he does not feel he can in good conscience attest to the adequacy of the job that is done, the maintenance foreman, who may know nothing about the particular work, will very likely sign off on the aircraft and the mechanic may be subjected to harassment, reprimands and reprisals on the job. The FAA stands idly by.

This trend was articulately exposed in a letter written to the FAA in 1967 by a group of concerned airline maintenance employees. They stated as follows:

"This letter is written by a representative group of United Airlines maintenance employees who believe that a situation is developing at some of our line maintenance stations which in our opinion has a detrimental reflection on our duty as government licensed "A & P" mechanics. The situation we refer to is a growing trend to coerce or intimidate line and terminal mechanics into signing log book maintenance releases that we feel are not always in the best interest of aircraft safety."

The letter continues by describing some specific incidents:

"In recent weeks we have had several instances at Denver, that we are personally aware of where, had it not been for the alertness and insistence of the A and P mechanics, the aircraft would have been released in a condition that was known to be unsafe and unairworthy. In at least two of these instances, despite the mechanics protest, the supervisors insisted that the mechanic sign the maintenance release. The mechanic in one instance had to notify the flight crew of doubtful deferred item AFTER the supervisor had signed the maintenance release, because the mechanic had refused to do so. The flight crew then refused to accept the aircraft until the condition was thoroughly corrected.

"In the second instance a mechanic refused to sign the maintenance release because of a reported unsafe item on an enroute plane. It was not investigated to find the probable cause of the reported malfunction, because it "apparently righted itself." The supervisor signed the maintenance release and later the mechanic and all other mechanics were warned that they would face dismissal for insubordination if they refused to sign future maintenance releases. There have been other instances since. Please note the copy of the letter of warning contained here." (Exhibit 8)

The FAA refused to take action in the matter.

Even in writing such a letter to the federal government, these mechanics were taking a serious personal risk. If a maintenance employee should dare to communicate with the FAA, which is directly responsible for regulating air safety, he may be subjected to incredible harassment and retaliation by the airlines, including actual and threatened termination of his livelihood. In fact, the problem is apparently so severe that I was recently informed by Chairman John Crooker and Executive Director Charles Kiefer of the Civil Aeronautics Board, which itself also receives complaints of safety violations from airline employees, that the Board could not release the names of complainants because the airlines would take retaliatory actions against them. While I at first considered this reasoning totally specious and incredible, I have now had to make somewhat of a reevaluation in light of what I have subsequently learned about the industry's practices.

The silencing of maintenance employees has even been incorporated in formal airline rules and regulations. An Eastern Airlines employee astutely noted this in a letter to the editor of the Miami News after an accident involving a 727 at Miami International Airport in 1966. In defending the actions of two Eastern mechanics in refusing comment on the accident (which Eastern management attributed to improper maintenance), the writer pointed out that, "according to Eastern Airlines' employee rules and regulations they would have been in danger of additional disciplinary action had they made any remarks in their defense which supervision considered damaging to the public image of Eastern Airlines." (Exhibit 9)

Surely the FAA should have regulations prohibiting company practices like this, but it does not.

The intimidation and retaliation practiced by many airlines is clearly demonstrated in the experience of a courageous aircraft inspector employed by Air West in Phoenix, Arizona. The inspector was first threatened with disciplinary action for refusing to sign off on certain aircraft maintenance work. Later he was called to task for writing up several critical structural and mechanical items which in his opinion needed immediate maintenance attention. The inspector then pointed out to the Air West supervisory personnel that the items in question, including cracked rivets in a structural element of the wing seriously deteriorated tracks for the plane's flaps, in fact were in need of repair, and he reported this safety problem to the FAA as an example of deteriorating maintenance at Air West. This action immediately provoked the following response from his supervisors:

"In regard to your last statement that you had referred this matter to the FAA and the CAB was in poor judgment. If you felt that strongly about it, you could have come to me personally, and then if you were still not satisfied, there were other channels you could have followed in accordance with company policies and procedures. . . . This indicates very little regard for the Company for failure to recognize supervision of constructive criticism and to follow the chain of command, and further, to submit your letter to the FAA and CAB without prior discussion with your supervisor or other company channels."

In view of the foregoing, disciplinary action will be taken. A second memorandum from the company arrived shortly afterward. There could be no doubt whatever as to the company's attitude toward communicating with the federal government or anyone else about safety related maintenance shortcomings:

"For Air West, this is a critical time in many respects, including the establishment of new relationships with the FAA. The actions you took in contacting the FAA rather than your supervisors was beyond the scope of your responsibilities, and contrary to the best interests of the company.

"An overall appraisal of your recent actions can be viewed only as insubordination. Insubordination cannot, and will not, be tolerated. In view of your actions, I am left with no alternative but to suspend you for one week without pay effective May 17, 1968.

"Any further actions of this sort will merit your termination." (Exhibit 10)

The FAA is fully familiar with this Air West case. But when I asked what they had done about it, an FAA official responded that the FAA did nothing. "Officially, we have no concern with any actions between the

company and the employee," he told me. "I guess the Department of Labor would be the ones to get involved in that."

The shocking picture that emerges from these incidents indicates a pattern of industry suppression of American citizens in the exercise of their fundamental rights, and the direct violation of the Federal Aviation Act which guarantees the right to notify the FAA and the CAB of safety violations. As Judge J. Skelly Wright of the United States Court of Appeals has eloquently stated:

"It is not seriously questioned that every citizen has the right, if not the duty, of informing his government of violations of the law, and that a court of equity, on a proper showing, may enjoin any interference with that right. . . . Indeed, an interference with such a right may be punishable under the criminal statutes of the United States." [Edwards v. Habib, 366 F. 2d 628 (D.C. Cir. 1965)]

That such corporate assaults on the rights of citizens could be experienced on a widespread basis in this country is a national disgrace. That the FAA, which is well aware of these practices, could permit them to continue and do nothing about them is even more shocking and inexcusable—especially in light of the urgent need for the agency to maintain free channels of communication about safety matters that affect the public. (Exhibit 11) However, this dereliction of responsibility is part of a larger pattern that involves a complete sell-out by the FAA of the public interest.

The duties that have been imposed by Congress on the FAA are crystal clear. The Federal Aviation Act of 1958 explicitly states as follows:

"Sec. 601.(a). The Administrator is empowered and it shall be his duty to promote safety of flight of civil aircraft in air commerce by prescribing and revising from time to time:

* * * * *

"(3) Reasonable rules and regulations and minimum standards governing in the interest of safety, (A) the inspection, servicing, and overhaul of aircraft, aircraft engine, propellers, and appliances; and (B) the equipment and facilities for such inspection, servicing, and overhaul."

The Act further explicitly requires the FAA to actually inspect aircraft and equipment used in civil aviation to assure their safe condition and maintenance:

"Sec. 605 (b). The Administrator shall employ inspectors who shall be charged with the duty . . . of making such inspections of aircraft, aircraft engines, propellers, and appliances designed for use in air transportation . . . while used by an air carrier in air transportation, as may be necessary to enable the Administrator to determine that such aircraft, aircraft engines, propeller, and appliances are in safe condition and are properly maintained for operation in air transportation."

This section says the FAA must actually inspect the equipment itself and check the maintenance. It does not say that the FAA can accomplish its job merely by going over the airlines' records once or twice a year, and it does not say that the FAA should inspect only after a crash or reported maintenance problems. Yet this is precisely the approach that the spineless FAA has been cajoled into taking by the high-pressure airline lobbyists.

In 1966, the FAA first introduced its new conception of the regulation of airline maintenance and operations that, in effect, turned over the surveillance, inspection and policing of the companies to the companies themselves. Simultaneously, the agency sought to downgrade the experience requirements for applicants for the FAA aircraft mechanic examination and agreed with the almighty Air Transport Association to treat safety violations that might be discovered with friendly discussions and "correction letters" instead of firm enforcement. The FAA's new approach was articulated in its "System-worthiness Analysis Program," affectionately known in the industry as "SWAP." (Exhibit 12) The FAA itself ingeniously concedes that one of the primary objectives of SWAP was to "eliminate to the maximum extent practicable inspections by resident inspectors assigned to the operator. . . ."

The SWAP program is principally based on a system of periodic audits of the maintenance and performance procedures, records and operations of the carriers, performed by teams of FAA inspectors and auditors on a 12 to 16 month cycle. The program also provides for "special" after the fact visitations "whenever there are valid indications that the performance of a particular operator is falling below a particular level." Among the triggering conditions for special examinations listed in the SWAP handbook are "accidents and incidents," and "high percentage of complaints concerning safety items," although it is not indicated what the FAA thinks the source of many complaints might be.

The SWAP visits are announced to the carriers well in advance, and the airlines have plenty of time to clean up any aspect of their operations that is likely to be reviewed, in order to minimize the likelihood that any of the problems or violations will be found. The airlines have kept each other closely informed of the intimate details of one another's SWAP experiences and areas that are subject to examination, and the airline lobby has also been very active in assuring that the FAA remains toothless, as demonstrated by a recent American Airlines maintenance department memorandum. (Exhibit 13) Some carriers, including American, have even prepared and distributed elaborate instructions to their employees to clean house before the SWAP team's arrival, including a detailed script of questions to be asked by the FAA and answers which are to be given by the company's personnel. (Exhibit 14) One American memorandum ambiguously instructs maintenance supervisors to assure that the company's deficiencies "are not allowed to become part of our filed aircraft records." (Exhibit 15)

With such a carefully choreographed performance by the airlines' personnel virtually assured for the benefit of every SWAP team, one wonders why we should waste any money at all on such FAA inspections. Indeed, the FAA SWAP instruction manual reads much more like a handbook for marriage counselling than the hard-hitting enforcement directive that is needed at FAA. For example, the SWAP program calls for one inspector to "call for and chair the initial meeting of the inspection team and the operator," and states as follows:

"He will explain the purpose and scope of the inspection and identify the areas to be inspected. In cases where a problem area is suspected to exist, it should be frankly discussed with the operator. This straight-forward approach will help to foster a feeling of mutual trust and respect that is beneficial, if not essential, to the analysis."

To allay any unwarranted airline fears that the FAA might suddenly be overcome with a burst of regulatory zeal, the manual continues with the following:

"The operator should also be advised that experience has shown that rumors relating to FAA findings while the inspection is in process are not unusual and should be disregarded. Such rumors usually stem from the searching nature of the questions posed by members of the team."

The FAA's feeble "SWAP" program and its failure to have a real inspection and enforcement mechanism have opened the door to the current massive downgrading of maintenance by the airlines. In handing over its on-line nuts-and-bolts inspection responsibilities to the operators, the SWAP program violates the cardinal principle of separation of maintenance and inspection functions. The rationale of this principle was articulately expressed in an airline industry management manual:

"If left to their own devices, most people feel that they do a pretty good job. Ask a mechanic if he repaired your auto and he will usually assure you that it is in top running condition. After you drive the auto a few miles you may find that the mechanic didn't really do the job he said he did. Self-inspection of work usually requires more self-discipline than most people are willing to exercise.

"Whenever possible the work of an employee should be checked and reviewed by a person who is objectively interested in the proper performance of the job. This is the best way to assure that quality standards are maintained."

In conclusion, the FAA's current practices and procedures in regulating airline maintenance are grossly inadequate. This situation must be corrected now, before more serious accidents occur and human lives are destroyed. I believe that a full-scale Congressional investigation into the practices of the FAA and the airlines industry is needed. Such an inquiry should also look into the FAA's regulation of maintenance in the field of general aviation (as opposed to commercial aviation), and also should cover the extremely serious situation which exists today with respect to foreign registered aircraft and airlines operating in this country. We do not permit such seriously lax inspection and maintenance procedures to jeopardize the safety of astronauts on an Apollo mission, and I think it is completely reasonable to ask why we should tolerate these hazards where the lives of thousands of American citizens are involved.

1. Advertisement for "guaranteed" 3 day training for FAA airframe and powerplant examinations.
2. News article from the Washington Post concerning announced airline personnel cutbacks.
3. Article from Pan American Clipper Magazine regarding Pan Am employee lay-offs.
4. Article from Pan American Clipper Magazine regarding "proper" employee attitudes.
5. Article from the Miami Herald discussing the dispute between National Airlines and its mechanics.
6. Eastern Airlines company memorandum regarding Eastern maintenance problems.
7. Advertisement of American Airlines.
8. Letter from United Air Lines mechanics to the FAA regarding maintenance problems.
9. Letter to the editor of Miami News regarding Eastern Air Lines' employee rules and regulations.
10. Correspondence concerning maintenance problems and reprisals against employee of Air West.
11. Letter to FAA from labor organization concerning problem of reprisals against mechanics for filing complaints with FAA.
12. FAA swap handbook 8000.3B.
13. American Airlines memoranda concerning swap program.
14. American Airlines instructions and questions and answers for swap visit.
15. American Airlines maintenance memorandum on swap findings and procedures.

WASHINGTON, D.C.,
December 12, 1969.

Mr. JOHN H. REED,
Chairman, National Transportation Safety Board, Washington, D.C.

DEAR CHAIRMAN REED: We have for some time been engaged in a study of aircraft safety and the FAA's regulatory performance in this area. Enclosed is a copy of a preliminary report on some of the problems in the maintenance practices of the airlines and deficiencies of the FAA in its surveillance and inspection duties.

An unidentified FAA spokesman was quoted by the Wall Street Journal of December 11 to the effect that "the portion of

airline accidents that relate to maitnenance deficiencies has fallen from 31% in 1966 to 12% last year and so far this year." Since the NTSB has primary responsibility for ascertaining the "causes" of airline accidents, we would appreciate any comment you might have on this statement by the FAA.

Specifically, we would like to know:

1. What is the source of the statistics referred to by the FAA? What are the precise figures, the total airline accidents and the total number attributed to or "related to" maintenance deficiencies for each year since 1959?

2. Does NTSB regard the FAA's figures as accurate and meaningful?

3. Do the FAA figures take into account the improved safety characteristics of jet aircraft, which have many elements of built-in redundancies, over piston aircraft, which have increasingly been retired from service (through accidents and otherwise) since 1966?

4. What kind of occurrences are included in the FAA's definition of "airline accidents," and what percentage of fatal crashes, and of the numbers of fatalities, are attributable to maintenance, if these figures are known?

5. What is meant by the language "relate to" in the FAA's statement? Does this imply a determination of capability?

6. How is the FAA able to give such precise figures for "last year and so far this year" when the NTSB investigations have not been completed and reports as to the causes have not been determined yet for several important accidents?

7. Do the FAA figures include the fatalities resulting from the following accidents, and if so to which categories are they deemed related?

a. The June, 1969, Dominicana crash at Miami International Airport;

b. The June, 1967, Mohawk crash of a BAC 1-11 in Pennsylvania;

c. The Braniff Lockheed electra crash near Dawson, Texas in May, 1968, in which there was some possibility of prior damage (cracks in the aircraft's wing induced by stress corrosion) that could not be completely ruled out as a causal factor, as well as "unrelated" findings of contaminated hydraulic fluid and corrosion of hydraulic components;

d. The Los Angeles Airways helicopter crash on August 14, 1968;

e. The crash of the Air South Beech 99 near Monroe, Georgia in July, 1969;

f. The United Airlines crash into Santa Monica Bay at Los Angeles on January 18, 1969, which involved an inoperative generator on which repairs had been deferred through 42 hours of flight time prior to the accident;

g. The fatal crash of a Trans World Airlines Boeing 707 in July, 1969, near Pomona, New Jersey, in which the flight crew experienced a malfunction of the utility hydraulic system at a critical juncture in final landing approach;

h. The two recent Allegheny Airlines crashes on approach into Bradford, Pennsylvania; and

i. The recent Mohawk Airlines accident in New York State in which the aircraft collided with the top of a mountain.

In each of the above accidents, have maintenance deficiencies been either established or positively ruled out as a primary or contributing causal factor?

8. Even if the FAA figures are accepted as accurate and meaningful, does the NTSB consider 12% of airline accidents caused by or "relating to" maintenance deficiencies an acceptable low figure?

9. The NTSB has been highly critical of certain areas of FAA regulation regarding air safety operations and procedures. Do you share our concern that there may also be increasing problems in the area of airline maintenance? Does NTSB feel that the FAA's surveillance of the operations and maintenance of foreign air carriers in the United States is adequate to protect the safety of the public?

10. Has NTSB made any inquiries or studies concerning maintenance practices and procedures in the airlines and their relation to air safety? Has NTSB sent questionnaires or reporting forms to the airlines, and if so, what responses have been received?

Since the increasingly deficient maintenance and inspection functions of the airlines are well known throughout the industry, and the FAA has taken a "hands-off" attitude toward the carriers in these areas, we believe these problems should be of substantial concern to you, especially as the stakes become so much larger with the introduction of the jumbojets into service.

If it is not possible for you to provide full responses to all of these questions immediately, we would appreciate your giving us whatever answers may be made available within a week or two, together with some estimate of when the other points can be covered.

We will look forward to receiving your views on the above questions and to any other points or observations you may have about these problems.

Yours sincerely,

RALPH NADER.
REUBEN ROBERTSON.

PERFORMANCE CONTRACTS—THE NEW TREND IN FINANCING EDUCATION

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. PUCINSKI. Mr. Speaker, last year the Office of Education funded a project in Texarkana which hopefully will have implications for American education throughout the next decade. In this project a school awarded a performance contract to a private company for the purpose of bringing certain children up to specified achievement levels. The company is paid according to its success in this upgrading. I believe that this project has great implications not only for school-business cooperation, but also for holding the schools accountable for their educational output.

Dr. Leon Lessinger, Associate Commissioner for Elementary and Secondary Education, is to be commended for his outstanding leadership in funding this project. His vision in this endeavor is only another instance of his laudatory administration of the Bureau of Elementary and Secondary Education in the Office of Education.

Mr. Speaker, I include the article from the December 1969 issue of Nation's Schools in the RECORD at this point:

ACCOUNTABILITY AND PERFORMANCE CONTRACTS: AFTER TEXARKANA, WHAT?

(By Leon M. Lessinger)

(NOTE.—What's going on in Texarkana schools today may be going on all across the country in the next decade. Tied up with the idea of schools being accountable for their educational output, the Texarkana plan revolves around a performance contract in which a special teaching group will be reimbursed according to how well the students in its program do on a set of standardized tests.

(Texarkana's implications are vast. If funds for education depend on educational output, not input, then schools will be concerned with learning, not teaching, and the development of a science of performance measurement may create a new type of educational planning in this country.

(The article that follows discusses the problems and promises of accountability and performance contracts and reveals some of the thinking that is going on about them at the most influential educational and political levels.)

As major federal financial support for schools broadens, people increasingly ask, "What are we getting for our money?" Traditional answers in terms of money spent, number of teachers on the staff, and buildings in use are no longer sufficient. The public wants to know if young people can read, can get and hold a job, and can successfully compete at a higher level of education. This calls for accountability of results is a demand for changes in education of such size and influence that the results can only be characterized as revolutionary.

If schools are to be held accountable for results, a new approach to the basic mission of the schools is necessary. First, the focus must shift from teaching to learning. Second, a technology of instruction based on specific learning objectives will start to build. Finally, a rational relationship may be established between costs and benefits.

While the idea of accountability is seemingly simple, its implementation is not.

Performance contracts: The August 13, 1969, *Congressional Record* includes remarks by Roman C. Pucinski (D., Ill.), the chairman of the House Subcommittee on General Education, about a description of the experiment then about to be launched in Texarkana, Ark., appearing in an article by Jonathan Spivak of the *Wall Street Journal*. Under the heading "The Coming Revolution in American Education," Pucinski stated, "The unique aspect of the Texarkana experiment is 'guaranteed performance.'" The contractors must promise to bring backward Texarkana students up to normal grades for their age levels at a given cost and in a given time—or else pay a money penalty.[1]

This notion of someone guaranteeing educational performance embodies generally the concept of accountability and illustrates specifically an approach to achieving accountability through performance contracts with private enterprise. Such a concept may have far-reaching implications toward efficiency of education in years to come. A description of the project and its ramifications can demonstrate the use of performance contracts.

The Texarkana model: A local education agency, the Texarkana, Ark., school district, applied to the U.S. Office of Education for funds to conduct a dropout prevention program under a proper Title of the Elementary and Secondary Education Act. It proposed to translate its compensatory training objectives, *e.g.* reading, arithmetic and study skills for disadvantaged students in six junior and senior high schools, into performance criteria for competitive bid by private contractors.

The school district then employed an "actor's agent," in the form of outside technical assistance from a nonprofit firm, to help them translate their objectives into an evidence framework and to develop a Request for Performance (RFP), the specification document for bidders. The firm also

[1] Readers of Nation's Schools news columns have been kept up to date on the Texarkana performance contract right along. Announcement of the bidding by some 90 private companies was made in our August issue (p. 66). Last month (p. 96), a story was published on the winner—Dorsett Educational Systems, a medium-sized developer of teaching machines based in Norman, Oklahoma. In bagging the contract, Dorsett beat out such corporate giants as RCA, McGraw-Hill, Westinghouse, IBM and Singer.

supervised the bidding, developed the performance contract with the successful bidder, and served as liaison to school staff and community.

Terms of agreement of the Texarkana program are:

1. Students who are two or more grade levels below standard in basic skills, and whose family income is $2,000 per year or less, are to receive a training program for up to three hours per day in a portion of the school plant. The students remain in the total school program to receive other school benefits.

2. The contractor agrees to use school personnel so that the school system can carry on successful practice after the project is terminated.

3. The contractor agrees to be paid only on the basis of a stipulated amount of money for each student who successfully completes the training program.

4. A penalty is assessed for those students who do not achieve specified performance levels.

5. Six months after the termination of the project, school officials have a right to reassess student performance. If it is less than the specified level achieved, a penalty may be assessed.

6. The school system, not the contractor, selects the students.

7. The training program of the successful bidder must be cost effective, and not labor intensive.

The assumption behind the program is that a private contractor, in concert with regular school personnel in the overall school setting, will have greater freedom to innovate and may be more successful in motivating students than the regular school system.

Performance objectives: Performance contracts are not new to education. Elements of the notion can be seen in a variety of experiments during the 1920s and even earlier. But the concept of holding an educational agency *accountable for results* is new. This hardnosed approach has grown out of careful study of current reports on the various programs administered through the U.S. Office of Education.

These reports—evaluations of the various titles of the Elementary and Secondary Education Act—raise questions as to whether such funds are flowing into the most appropriate channels or whether a good part is drained off in poorly conceived, improperly managed programs. Much loss might be avoided if those seeking funds submitted proposals based upon specific performance objectives, including a clear statement of the conditions, evidence and standards used to show the degree to which objectives had been met. Such proposals could be solicited in response to a Request for Performance (RFP). The agreement arrived at through bid or through other arrangements could then take the form of a performance contract.

When a student is able to demonstrate in concrete terms what he has or has not learned, educators and the funding agencies will be in a better position to judge where and why a program succeeds or fails and to make the changes needed for success.

Thus a proposal for funds to back a reading program might stipulate that 90 per cent of the participating students would be able to achieve a particular grade level increase within a specified time. In requesting funds for teacher training, the agency might be able to prescribe the teaching skills to be imparted and the criteria for measuring the "proficiency level" of participants in the program. In both cases, the funded agency would then be prepared to explain any failure—to achieve the performance levels on which such a contract is based—preferably in terms of suggested changes in the program that might be expected to guarantee results.

Many programs have been funded, and are now underway, which at no point describe what students are expected to gain from their educational experiences. Instead of vague promises to provide "an opportunity to learn, to communicate effectively," instructional program objectives should be stated in terms as specific as these:

"Given three days and the resources of the library, the student completing this program will be able to write a 300 to 500 word set of specifications for constructing a model airplane that another student could follow and build."

There are, of course, larger objectives in education that are difficult to define, and impossible to measure as the consequence of any given program. The training components of education, illustrated in the basic skills of reading, arithmetic and the like, are most amenable to performance contracts, and it would be tragic to go beyond the training component at this time. Only those aspects of education that can be operationally defined and for which acceptable methods of assessment can be used are eligible for inclusion in a performance contract.

A performance contract approach to federal resource allocations promises greater economy in the use of federal funds and in the allocation of general education resources as well. Educational objectives pinned to predictable, measurable student performance, which are necessary arts of these contracts, would offer a much needed basis for measuring program cost against program effectiveness.

SPECIFICATIONS OF PERFORMANCE CONTRACT

Have you ever thought how you might frame a performance contract? The model Request for Performance (RFP) below, will show you the type of considerations that might go into such a contract when it is to be carried out by an outside agency.—L.M.L.

REQUEST FOR PERFORMANCE

I. General

Educational service to be provided: You are invited to submit a proposal to provide educational services to remove math, reading and other directly related educational deficiencies of potential dropouts at the secondary school level.

Payment: A fixed fee contract with incentives for successfully providing student achievement in math, reading and related skills in the most effective and efficient manner will be granted to the successful bidder. The contractor will be paid on the basis of prenegotiated standards of performance.

II. Population to be served

The population will be students designated by the local school district as potential dropouts due to specified educational deficiencies.

III. Educational process to be used

A general description of the process is detailed here, *e.g.* students will be released from normal school classroom time for three hours per day to participate in the program as described with free access to the regular school program.

IV. Standards of performance

For math and reading, pretests and posttests will be utilized as the basis for determining student achievement. Peferred test to be utilized will be a designated test of educational development. The contractor may wish to propose another testing instrument or combination (*e.g.* at different grade levels) in which case a rationale and justification for doing so should be made. If the designated test is used, or if another test or combination is proposed, the proposal should indicate which subcomponents of the tests (*e.g.* reading, math, study skills) constitute the "reading" and "math" on which achievement will be based.

V. Method of cost reimbursement

To achieve the over-all objectives, incentives will be allowed for the contractor to assist the student to achieve designated performance levels in the most efficient manner. In proposing the method of reimbursement, the contractor might want to consider one or a combination of these methods:

An all or nothing fixed fee on a grade level achievement basis in math and/or reading per maximum hours of instruction (*e.g.* one grade level in math and reading for $250 in not more than 200 instructional hours; if the student does not achieve at the prescribed levels, then the contractor is not reimbursed).

Fixed fee based on a grade level achievement basis in math and reading per maximum hours of instruction or achievement normalized to the maximum hours of instruction with penalty clauses (*e.g.* if the student achieves only 0.8 grade level increase in 120 hours, when 100 hours is the maximum stipulated time, then with a penalty clause of 60 per cent between .5 and .7 grade levels of achievement, the contractor would be paid 40 per cent of the stipulated fixed fee).

Fixed fee basis per "cluster" of study skills with maximum hours not more than one third of total hours of instruction in math or reading. Behavorial objectives and pre- and post-tests to be used will be stated explicitly.

The bidder may choose to propose an approach other than those above. Such approaches will not be considered when submitted alone, but are encouraged when submitted as supplemental to the basic response to this RFP. In the supplemental proposal for cost reimbursement, the rationale and justification must be made quite explicit.

VI. Other provisions

The contractor will agree to the following specific provisions or stipulate reasons to the contrary and provide descriptive information as described below:

To hire and train local personnel, most of whom are to be used as paraprofessionals. Minimal qualifications will be stipulated for each job slot which would be filled by same. At least 50 per cent of personnel involved in the instructional program will be local; approval must be given by the school board on the personnel recommendations of an executive committee (to be specified).

To utilize teachers and administrators (in a number specified) from the participating school chosen by the executive committee as "consultants" who will work part-time and will be involved in over-all design, curriculum redesign and modification, instructional systems development, instruction evaluation, and other areas in which their first-hand knowledge of the nature and extent of academic problems unique to the schools will be useful to the contractor. The contractor will be reimbursed for the costs of hiring these consultants. Specific areas in which these local consultants could be used part-time must be stipulated by the bidder.

To submit a list and specifications of all nonexpendable equipment, materials, as well as consumable instructional materials which will be used. Suggested equipment, sales representatives, and addresses should be made available; equipment available through "surplus programs" should be noted. All equipment marketed by the contractor should be noted and if same equipment amounts to over 50 per cent of total equipment and materials costs, then suggested lease-purchase arrangements should be explained in detail. Estimated delivery dates for both initiation and expansion of program should be noted.

VII. Detail of bidder proposal

The proposal to be submitted to the fiscal agent of the school should include the above conditions and provisions, performance requirements, and other information related to the above in the following format:

(a) statement of the problem, (b) approach taken, (c) schedule of performance, (d) subcontracting, (e) copyrights and patents, (f) personnel to be used, (g) costs and pricing, (h) equipment costs and specs.

The contractor will also submit a proposed space requirement per optimal student body size (*e.g.* 30 students per "classroom"). Also included will be refurbishing cost estimates of an existing facility.

How To Determine Performance Fees

Financial incentives are what make performances contracts tick. Although the Texarkana plan relates remuneration to advances in student grade level abilities, that is only one type of performance measurement that can be used, among other measurements that might be appropriate. Here are some others:

A fixed amount per student for achievement on a General Education Development Equivalency Test Certification, demonstrating that the agreed-upon students have completed all five subtests (administered by a certified administrator) and received a standard score of not less than 40 on any one subtest or achieved an average of 45 on all five subtests.

A fixed amount per school for each student for demonstrating at least N per cent per month increase in agreed-upon behaviors, as recorded by the use of a behavior checklist.

A fixed amount per student who successfully passes such situational performance tests as shall be developed and agreed to by all parties to the contract.

A fixed amount per student who demonstrates no anti-social activities, such activities being defined as those that would/should result in a written report on them within existing administrative and management regulations.

A fixed amount per student for each student who achieves a high school diploma—defined as a verification that 16 credits have been attained in the following areas with proportional allocations: English, 3 credits; social studies, 2 credits; mathematics, 1 credit; science, 1 credit; electives, 9 credits. A credit is defined as 72 hours of successful classroom study.

A fixed amount per student who enters and participates in VISTA or the Peace Corps, when such entry in these programs takes place within N months of his departure from the school.

A fixed amount per student who is gainfuly employed within N days of his departure from the institution, meaning that the employer must be a state, federal or governmental political subdivision or a bona fide representative of the private sector of the economy, including privately financed nonprofit organizations.

A fixed amount per student (first year only) who is gainfully employed in the first year after departure from the school, such employment to have been continuous with the employer of record at the end of 12 calendar months for at least N months.

A fixed amount per student who, while gainfully employed receives payment for his services that is 20 per cent over the minimum wage required by any or all applicable state, local or federal regulations and statutes.—L.M.L.

UNUSUAL LETTER FROM CONSTITUENT

HON. GRAHAM PURCELL

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. PURCELL. Mr. Speaker, several days ago I received a most unusual letter from one of my constituents in Richardson, Tex. It is unusual in the sense that few Americans are willing to openly express themselves these days, and this letter represents the opinions of many members of what we are today calling the silent majority. I would like to insert this letter in the Record at this point, Mr. Speaker, in order for my colleagues to recognize and consider what, as I have said, represents a number of widespread viewpoints on several major issues before us—but which have not received the attention they should have.

Richardson, Tex.,
December 12, 1969.

To the Congressmen and the President:

We are still a free country, I hope—so here at Christmas I must speak my mind which represents so many feelings of so very many true blooded Americans.

I *cannot* believe a group of men supposed to be so intelligent as all of you, do not know why we are undergoing the worst inflation I have known in my 64 years.

Bacon I paid 69 cents per pound for last week is 99 cents today. That's the *cheapest.*

Let me point out a few things to all of you brilliant men we all were really so dumb to elect!

When Mr. Nixon came in as President he got a 100% raise in salary. Congressmen all voted them a 42% raise.

From there the real inflation began. Unions then began to ask for higher wages for their members. Why shouldn't they? Prices were going up on everything and they wanted to live too.

We've never been union and we've had no raise to help us meet the inflationary prices. We have a modest living, have tried to save a little to help us in retirement but if we make any interest on our savings you've voted to take that away from us too.

You give, give, give to foreign countries when we have millions of hungry people at home—poor housing conditions—and so many places needing help at home it is pitiful.

It makes a big splash to give while they spit in the face of Americans. We've lost all respect for our country by trying to have other countries be like us! Aren't we good examples? You can't even solve the problems at home—the other countries don't need to be like us and all they want is our money.

Mr. Nixon, you want $40 billion, the paper stated last night for arts and better music! That makes me sick at my stomach. It has to come from our taxes and we are taxed slap dabbed to death. While you give to other countries and you live like kings and queens because you like that kind of living—remember others would like a comfortable living at home.

As for welfare—that is fine so long as those physically able to work, earn that check which comes from what our husbands work like a dog to help pay for.

The White House wasn't good enough for the President to live in—so he spends fabulous fortunes for homes here and yonder to rest in. Our taxes pay for the plane trips—and that trip to Paris by many of you, paid for with our taxes, so you could see an air show!

You have no idea how many people are waiting for next election time—and you want to know something, if Mr. Nixon vetoes that $800.00 deduction and that 10% surcharge isn't taken off—there are Republicans and Democrats ready to vote for one Mr. Wallace who believes in the common people—and there are more common—white collared College grads—who have taken just about all they can stand.

You are bleeding us to death and we're sick of it.

Did it ever enter any of your cotton picking minds that relief on federal income tax would stop inflation! We'd like a chance to save that to live on in retirement wouldn't be much more than bare existence but it would be what we had earned not welfare.

You all might have to take a cut in your high and mighty living but what if you were in our shoes—$200,000—plus Congress 42 or what ever it is now—compared to people who don't even make $3,000.00 a year and those of us with college educations—if we earn from $10,000 to $20,000 a year—by the time you've bled us with income tax and state taxes and food so high—yes—and because of your raises you started it all spiraling worse than ever.

Oh, what's the use? But Mr. Nixon, if you veto the help on Federal income tax—your chest won't stick out so far next election time. People who have remained silent because we'd elected men we thought would be in Washington to help our people—are ready to get on the stump next election time and really clean out the selfish, greedy and high and mighty.

Too bad public churches aren't even good enough any more.

I've used my paper on you and it probably will go into the trash can.

This Christmas people are thinking more than they've ever thought before.

Higher living costs—more crime than I've known in my lifetime—What a bloody mess America is in.

Think on that and have yourselves an expensive Christmas at the expense of all of us while you line your pockets and protect the wealthy who've never paid their way.

Mrs. Walker.

AN ANSWER TO WATER POLLUTION

HON. GUY VANDER JAGT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. VANDER JAGT. Mr. Speaker, an article in today's Wall Street Journal most effectively points out the almost catastrophic difficulties which face this Nation in its efforts to bring about solutions to water pollution problems. Excerpts from the excellent article by John Barnett entitled "Hudson River Cleanup Turns Out To Be Slow and Frustrating Task" follow:

The pollution of the Hudson is so gross, in fact, that it has made the river something of a symbol to pollution fighters—and it has inspired one of the most ambitious river cleanup efforts ever launched in this country. But it has also raised some troubling questions among conservationists, scientists and public officials who wonder if even the most ambitious of cleanup campaigns can restore the purity of a river whose ecology has been so drastically altered for so long.

* * * * *

Still, conservationists and scientists who study the river say they are less worried about the delays in the timetable than about the possibility that the technical knowledge needed to clean up the river simply doesn't exist. They point, for instance, to the inability of even "modern" sewage treatment techniques to remove such nutrient materials as phosphorous and nitrogen from waste water. The nutrients could eventually cause the river to become so choked with algae that it might be far less attractive and far less able to support marine life than it is now.

* * * * *

Removal of nutrients might be accomplished by so-called tertiary treatment of

waste—another step beyond the customary primary and secondary methods of treatment that are included in the sewage plants now being built. But New York State Health Department scientists say no economical and efficient method of tertiary treatment has yet been devised, though the department's research staff is working on what is described as a promising method of chemical treatment of waste water.

* * * * *

Similarly, officials say they are determined to force industrial concerns to clean up their waste. Dwight F. Metzler, the Health Department's deputy commissioner for environmental health services, says: "Industry is told, 'We don't care how you get rid of this. You can have your employes drink it, you can put it into a tank car and ship it to Canada, you can incinerate it—that's up to you. All we care about is what comes out the discharge pipe.' "

As a practical matter, however, solutions aren't likely to be forthcoming quickly. Paper companies say, for instance, that much of the technology for treatment of their wastes is so new that extensive engineering work is necessary before they can determine what equipment is needed.

Mr. Speaker, there are answers to these questions. They do not lie in the traditional applications of waste water treatment technology. I believe that we have proven that point in the past in the ineffectiveness of our efforts. What we must turn to now are the applications of present technology in new ways. And there is a system of waste water treatment that proposes to do exactly that. A discussion of that system was presented on Tuesday of this week to the Government Operations Subcommittee on Conservation and Natural Resources during hearings on phosphates in detergents.

Following is part of that presentation:

A COMPREHENSIVE APPROACH TO THE MANAGEMENT OF PHOSPHATES

(By John R. Sheaffer, Fred Roland, and Wayne Cowlishaw)

THE NEED FOR A COMPREHENSIVE APPROACH

The effects of phosphate-based detergents on water quality can be best assessed within a comprehensive framework. The adoption of such an approach will help to avoid the results of incomplete analyses (failure to consider external effects) and short range planning which have characterized current water pollution abatement efforts. Disjointed incrementalism is a graphic description of the effort. Water pollution abatement is generally promoted by the entire range of governmental bodies so that it tends to be decentralized or disjointed. Also, the effort seeks to extend or enlarge upon existing technology thereby producing only incremental changes in water quality. A continuation of disjointed incrementalism will tend to avoid the development and application of comprehensive global planning which can produce the programs necessary to bring about dramatic changes in water quality.

The need to abandon disjointed incrementalism is illustrated by the report entitled "Examination into the Effectiveness of a Construction Grant Program for Abating, Controlling and Preventing Water Pollution." This report, which has been prepared by the Controller General of the United States observed that the benefits from the construction of more than 9,400 projects having an estimated cost of about $5.4 billion have not been as great as they could have been. A case study presented in the report contained an analysis of water quality, treatment, and standards on the Merrimack River. The apparent ineffectiveness of many of the expenditures leads one to conclude that perhaps the technology being applied is inadequate and that the answer is not one of seeking to meet minimum standards with a programmed expenditure for selected treatment plants, but rather to adopt a new technology which could provide a solution and at less cost.

A resume of the present pollution effort is necessary to provide a framework for our statement regarding the effects of phosphate-based detergents on water quality. As we view the national effort, it is characterized by reaction to problems as they become apparent, e.g., biodegradable detergents, phosphates. As such, it is a defensive battle which provides no vision or leadership. It is truly myopic.

If the phosphorus is to be replaced in detergents, the question of what is to take its place must also be considered. Based on past experience, the replacement may turn out to be just as serious a pollutant as the phosphorus. What effect will 600 million pounds of starch derivates per year have on water quality? Methods of phosphorus removed from waste water effluent generally involve some type of chemical replacement. For example, the use of ferric chloride to precipitate phosphates will add 20 mg/l chlorides and 4 mg/l iron. Would widespread use of this method lead to problems of cholorides and iron in water?

Many water pollution abatement efforts simply transfer pollutants to another location or another media, e.g., from water to the air or the land. If phosphorus is precipitated out into the sludge of a sewage treatment plant and the sludge is then incinerated, it is likely that some of the phosphorus will be discharged into the atmosphere and will be brought back to the land and water with the rain.

The concentration of phosphorus in rain is estimated to be from two to seventeen million pounds per year—without the removal of phosphorus. If phosphorus is removed at sewage treatment plants and the sludge incinerated, the amount of phosphorus in rainfall will greatly increase.

There is increasing evidence to suggest that viruses are the cause of many of the most serious diseases plaguing the United States. Yet, it is startling to discover that such health-related organisms as viruses are not covered in any of the water quality standards now in effect in the United States. In fact, few measurements are made of viruses.

Many viruses are found in waste water and should be considered in any waste water management program. Viruses certainly warrant as much attention as dissolved oxygen in our water quality standard. We need to assign priorities to pollutants in terms of their potential effects rather than in terms of our ability to remove them.

The most widely used method of secondary treatment, activated sludge, has been shown to be totally ineffective in removing viruses. An analysis of alternative treatment methods in terms of virus removal was carried out by P. H. McGauhey [1] of the Sanitary Engineering Research Laboratory at Berkeley, California. He obtained the following results:

(1) Samples of raw sewage, primary effluent, and activated sludge effluent were 100 per cent positive. (Thirteen different viruses were identified.)

(2) Effluent from oxidation pond (30 days detention) showed 30 per cent of samples positive.

(3) Recreational pond effluent, after 2,500 ft. in soil system, was 100 per cent negative.

The results show no removal of viruses by activated sludge treatment plants. Nevertheless, this process is being advocated as the answer to the water quality problems which are plaguing the nation.

A NEW APPROACH TO WASTE WATER MANAGEMENT

An appraisal of the effectiveness of the current pollution abatement efforts need to formulate a new approach to waste water management. Such an approach would provide an offense or a vision. As stated in Proverbs, "Where there is no vision, the people perish." This new approach or vision is undergirded by three concepts. They are:

(1) Pollutants are resources out of place,

(2) Waste water management systems must be designed as closed systems, and

(3) The environment is a total entity.

Viewing pollutants as resources out of place is analogous to a botanist's viewing a weed as a plant out of place. It is not difficult to see how this concept applies to waste water management, for the primary elements which create the problem of excess algal growth in water-nitrogen, phosphorus and potassium—are the principal elements in fertilizer. If these elements were on the land they would be considered as resources, but when they are discharged into the water they are pollutants—resources out of place. The second concept calls for the design of closed systems. Historically, waste water management systems have been designed as open-ended systems, which can function only if they discharge into some receiving body of water. The reason for the design of such systems was the belief that wastes could be carried away by streams which could purify themselves.

However, urban sprawl and population explosions have shown that it is no longer possible to throw things away because there is no longer an away. Waste water management requires a closed system. Systems can be closed by recycling pollutants (resources out of place) back into the productive cycle, thereby avoiding direct discharges.

The final concept is that the environment exists as a unit and all of the elements relate and interact with one another. The relationships tend to be in balance but are constantly changing; hence the environment is described as a "dynamic equilibrium."

A NEW WASTE WATER MANAGEMENT PLAN

The three concepts presented above underlie the waste water management programs that have been developed for Muskegon and Ottawa Counties in Michigan. These plans offer total solutions to the total phosphorus problem including that of detergent-based phosphorus. The waste water management systems outlined in these plans constitute solutions to the water quality problems. The systems are made up of the following components. A pipeline is used to transport all of the wastes from an urban area to a site which environmental geologic studies have shown to be safe for the operation of a waste water management program. A series of treatment lagoons are constructed at the site which provide for aeration to satisfy biological oxygen demand, settling to remove settleable solids, aerobic bacteria to consume soluble organic wastes, and photosynthetic cells to convert nitrates and phosphates into algal cell material that can be retained by the soil. The lagoon treatment facility produces an effluent superior to that of a secondary sewage treatment plant. In addition, the lagoon facility offers several distinct advantages. First, large amounts of storage can be provided in the treatment lagoon to hold and treat unusually large flows of water generally associated with stormwater runoff and combined sewer overflow. Second, because of the large volume of water held in the lagoon treatment facility, it has the capacity to assimilate toxic shock loads associated with industrial spills. Even if the bacterial colony is killed off by the toxic material, the incoming wastes are stored until another colony can be established. This is quite different from an activated sludge, where a colony kill results in the discharge of par-

[1] P. H. McGauhey, *Engineering Management of Water Quality* (New York: McGraw-Hill Book Company, 1968).

tially treated wastes for seven to ten days until a new colony is established. An analysis of a large activated sludge plant in the midwest showed that such colony kills are likely to occur as frequently as six times per year.

Another advantage is the effect of lagoons in terms of virus removal. Research has shown that thirty days retention in a lagoon removed seventy per cent of the viruses in comparison to the zero per cent removal obtained by secondary treatment plants.

After the waste water is treated in the lagoon system, it is applied to geologically suited land areas. In the Muskegon-Ottawa County plans, these areas tend to be glacial outwash plains which are unproductive because they lack water-holding capabilities and nutrients. By spraying the treated waste water on these sites, both of the missing ingredients are provided and the barren land will become productive. The waste water is applied to the land by large automated rotating spray irrigation rigs which cover 160 acres from a central point. These rigs require low labor inputs to operate and will produce little, if any, aerosol or drift effect. Because the pipe rotates around the field, the water does not have to be projected high into the air to gain coverage. The harvesting of crops from the irrigation site completes the treatment process and essentially closes the systems. To illustrate, nutrient may be looked upon as moving in the following cycle. Corn is grown to feed animals which are slaughtered and sent to the city as a food supply. The meat is eaten and the waste is discharged to the water treatment system as sewage. The sewage is pumped out to the lagoon treatment facilities where the nitrates, phosphates and potassium are treated. After treatment, they are applied to the land where they are taken up by the corn crop planted on the site, thus completing the cycle. Another example of a closed system relates to the water. Drinking water is taken from Lake Michigan and, after treatment, is piped through the city where it is used and discharged into the waste water treatment system. When the waste water enters the lagoon treatment facility, suspended solids, heavy metals, and other materials settle to the bottom, seventy per cent of the viruses are removed, and those materials which are dissolved in the water (the remainder of the viruses, the nitrates, the phosphates, the potassium and the soluble heavy metals) are applied to the land. The living filter, which is the biological zone of the soil, treats these wastes. Research has shown no viruses present after the waste water has moved through a biological zone. In addition, heavy metals are held by the organic matter in the soil, clay particles, and some are taken up as trace elements in the plants. The waste water, after purification in the lagoons and treatment by the living filter, moves to the ground water table where it either flows as base flow or is pumped from wells to a river and then back into the Lake.

Waste water management programs of this nature appear to be feasible in virtually every urban area in the United States. Such programs would render the direct discharge of wastes into the water resource unnecessary. In addition, there is strong evidence that suggests that a synergistic effect would result. The total effect will be greater than the sum of the two programs—waste water management and agricultural production—if they were taken independently.

The availability of land will not be a deterrent to the adoption of such programs. As a rule of thumb, if waste water were to be sprayed at a rate of two inches per acre per week, approximately 130 acres of land would be required to accommodate a million gallons of water a day. Using simple mathematics, if 100 million gallons of water were to be disposed of, 13,000 acres of land would be required; if a billion gallons of water per day were to be disposed of (the largest water system in the country) 130,000 acres of land would be required. A preliminary evaluation of the major metropolitan areas in the United States strongly suggests that such land areas exist within one hundred miles of most major metropolitan areas. Furthermore, these land areas are generally unproductive and add little return to the economic base of the region.

THE EVALUATION OF THE MUSKEGON COUNTY AND OTTAWA COUNTY WASTE WATER MANAGEMENT PLAN

Muskegon and Ottawa Counties, in Michigan, are striving to provide a vision for our waste water management effort. With respect to phosphorus, these plans regard it as a resource out of place. It becomes obvious that an alternative to the replacement of phosphorus in detergents with some other substance (i.e., starch derivatives) should be pursued. Your subcommittee could be instrumental in bringing about waste water management systems which would view phosphorus as a resource out of place rather than an element to be replaced. The beneficial use of phosphorus in the manner proposed in Muskegon and Ottawa Counties will avoid the direct discharge of any pollutants into the water resources.

Soil systems are capable of removing certain forms of soluble nitrogen compounds, soluble phosphorus compounds and various other pollutants from percolating waste water. These removed materials become available as nutrients for plants.

The principal mechanisms of removing and holding these nutrient materials are: (1) adsorption, and (2) chemical replacement.

Adsorption is the process whereby ions are chemically or physically attracted to and held by molecular complexes existing in the soil medium. Clays and organic materials are the principal complexes present. Nitrogen and phosphorus compounds can become part of the intricate lattice structure of these complexes at the surface and sub-surface layers. Ion exchange and satisfaction of lattice bond deficiencies are the mechanisms of retention. Electrical potential influence fields are also responsible for the retention of ions present in the percolating water.

Progressing from sand to clay, the soil increases in its retention capabilities. The effect of soil type has a greater influence on nitrogen retention than phosphorus retention. Nitrogen in the ammonia or ammonium form will be readily retained in clay and organic soils. Nitrate nitrogen appears to be leached readily out of most soils. Considerable amounts of ammonia will likely be converted rapidly to nitrates by the bacteria in the soil. These would also be readily leached. The chemical replacement mechanism is one by which ions bound to the soil molecular structure are replaced by ions in the percolating water.

Studies in a number of areas have shown that even with high application rates of phosphorus, only negligible amounts will be leached by most soil systems. Certain soil-phosphorus bonds can be broken by the nutrient uptake processes of plant roots and the phosphorus utilized for plant cell structure. The growth of plants utilized in man's food chain would in effect produce a closed system which would utilize phosphorus and other compounds that now are disposed of as useless pollutants.

The economic and technical potential of soil systems results from their ability to virtually eliminate a host of difficult pollutants in one single process. In addition to phosphorus removal, soil systems provide advanced treatment for biological and suspended matter, for nitrogen compounds, detergents, toxic heavy metals and for bacteria and viruses.

Reduction of only phosphorus in waste water by changing the compounds used for detergents would reduce the combined economic benefits of the soil treatment system. The net result of such an incremental approach to the long-range needs of water quality management could be the elimination of land application as a feasible alternative.

For the proposed Muskegon system, benefits of the land application approach extend beyond the direct benefits of waste water reclamation. One important resulting benefit is the prospective expansion of employment opportunities due to the ability of the system to handle the solids problems of important industries. A waste management system such as this, that effectively deals with present and anticipated waste treatment needs of industry, constitutes a potent incentive for industrial expansion and influx. The following table summarizes the quantified benefits of the Muskegon County Waste Water Management Plan. Investment in waste water management becomes an economic endeavor yielding a 69 per cent yearly return on the investment.

The approach we have outlined not only deals with the effects of phosphate-base detergents on water quality but also provides a total solution to the water quality problems. It can provide a vision for our efforts. As Solomon stated "Where there is no vision, the people perish." We are faced with the same dilemma, for without a vision, our water resource will perish.

Economic analysis of Muskegon County waste water management plan

[Average annual benefits]

Benefits from Muskegon County waste water management plan:	
Revenue from crop production in excess of costs (corn yield 120 bu/acre x $1.20/bu. $70 production cost x 10,000 acres)	$740,000
Equivalent value of fertilizer contained in waste water ($17./acre x 10,000 acres)	170,000
Appreciation of land ($100./acre value as wasteland; $400./acre value as fertile land with buildup of humus, tilth, and nutrients. $300/acre appreciation x 10,000 acres=$3,000,000) 20 years	150,000
Agricultural subtotal	1,060,000
Employment opportunities generated by plan Agriculture (100 jobs x $10,000 with 100 percent credit)	1,000,000
Paper mill sanitation division (500 jobs x $10,000 with 20 percent credit)	1,000,000
Shoreline development (600 jobs x $10,000 with 33⅓ percent credit)	2,000,000
Employment subtotal	4,000,000
Recreation benefits through enhancement of water quality for boating, fishing, and esthetic purposes through the removal of all direct discharges into the lakes (Mona, Muskegon, and White Lakes=7,361 acres), increased use benefit estimated at $120/acre/year	883,000
200-boat marina made possible by waste water plan	30,500
Recreation subtotal	913,500
Total benefits	5,973,500
Costs of Muskegon County waste water management plan:	
Capital costs of $23,728,000 (annual debt service, 30 years at 6 percent—.07265)	2,623,839
Operating costs	900,000
Total	3,523,839

Benefit/cost=1.69.

Mr. Speaker, this system of waste water treatment may well be the answer to the problems of the Hudson River. It may well be the answer to the problems of waste water disposal by most of our cities and towns. I would hope that Federal and State agencies responsible for cleaning up our lakes and rivers would give this system the most serious attention which it deserves. It is truly the "vision" which may well save man on this earth.

THE ISSUE OF "BAD HEREDITY"

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. GUBSER. Mr. Speaker, in recent months I have placed in the CONGRESSIONAL RECORD material furnished me by Dr. William Shockley and Dr. Joshua Lederberg, both of Stanford University, relative to the question of whether the National Academy of Sciences should conduct a scientific study of the hereditary aspects of our national human quality problems. I have done this in the interest of objectivity, and in no case have I taken a position with respect to the issues involved.

Dr. Shockley has now presented additional material for the RECORD, and it is inserted herewith:

[From the Stanford M.D., October 1966]

THE ISSUE OF "BAD HEREDITY"

In the last issue of *Stanford M.D.* you reprinted an interview with Dr. William Shockley which appeared originally in *U.S. News and World Report.* This kind of pseudo-scientific justification for class and race prejudice is so hackneyed that we would not ordinarily have cared to react to it. However, Professor Shockley's standing as a Nobel Laureate and as a colleague at Stanford, and now the appearance of his article with a label of Stanford medicine, creates a situation where our silence could leave the false impression that we share or even acquiesce in his outlook, which we certainly do not.

Professor Shockley has made some constructive suggestions—the essentiality of more research on genetic factors in social maladjustment, and certainly the need for more creative imagination than we now observe in planning social welfare and in education. However, we deplore his innuendos about the hereditary basis of the purported intellectual and social deficits of Negroes, and the tone of his entire discussion about "bad heredity." Why did he not trot out the "scientific documentation" of the Jukes and the Kallikaks? Whatever good might come from his constructive suggestions is outweighed by the mischief of a pseudo-scientific basis for evading or distoring our social responsibilities; too many people will seize any excuse for these purposes. The plain fact is that we do not know the answers to his provocative questions, and in our present-day context it falls between mischief and malice to make such a prejudgment in his terms.

There is also a common fallacy about genetic defect—that it is fundamentally irremediable. The whole concept of "bad heredity" is in any case a myopic one, since the high values of one social milieu are the vices of another one, and our milieu is constantly changing. The quantitative importance of hereditary variation for our social problems is, we repeat, quite unknown, nor will it be as easy as Professor Shockley implies to find out. As long as any racial prejudice or prejudgment lingers, would a Negro child adopted into a white family have the same effective environment as a white baby? Howbeit we can be sure of two things: (1) that under any circumstances the rate of genetic change of the population is very slow compared to the changes in our social institutions, and (2) even if we adopted a totalitarian answer on Shockley's premises, there would be plenty of residual variability to contend with. In these circumstances we can hardly neglect another prescription that Shockley overlooks—to work out the techniques of medical care, education and industrial and economic organization that can create incentives and useful careers for the whole wonderful variety of human beings.

A. T. GANESAN,
L. A. HERZENBERG,
JOSHUA LEDERBERG,
ELLIOTT C. LEVINTHAL,
ERIC M. SHOOTER,
SILVIO VARON,
The Faculty of the Department of Genetics.

DR. SHOCKLEY REPLIES

In commenting on my interview, "Is Quality of U.S. Population Declining?," *U.S. News and World Report,* November 22, 1965, and, "We Have Reason to Worry . . .," *Stanford M.D.,* January 1966, the members of the faculty of the Department of Genetics agree that I make constructive suggestions regarding "the essentiality of more research on genetic factors on social maladjustment" and that they "do not know the answers to his provocative questions." These sentences seem to me to contradict their conclusion: "The whole concept of 'bad heredity' is in any case a myopic one, . . ." because of varying "milieu."

In appraising the interview they refer to "a totalitarian answer on Shockley's premises" and "deplore his innuendos about the hereditary . . . deficits of Negroes" and employ the words "malice," "mischief," "pseudo-science," and "hackneyed." In selecting these expressions and in signing en masse is the faculty of the Department of Genetics contributing to objective and constructive thought or assuming a totalitarian and dogmatic posture to dictate permissible channels of thinking? I refer the *Stanford M.D.* reader to my interview as a whole and specifically to my answer to an opening query, and again, my concluding paragraph, *i.e.*, ". . . when I try to pin professional geneticists down on this point, the reaction is often: 'We don't really know anything about this, and you shouldn't raise these possibilities.' This withdrawn attitude does not fit my idea that progress is made by open-minded exploration." The Genetics faculty's letter documents this observation. The interview's concluding paragraph stated: "My program for continued progress is: Let's ask the questions, do the necessary research, get the facts, discuss them widely—then either worries will evaporate, or plans for action will develop."

I disagree seriously with the members of the Genetics faculty on three main points:

1. *My article is objective, not racially slanted.* Regardless of race or color, I admire intellect (even when I disagree with it) and deplore feeblemindedness (especially an I.Q. of 55 with 17 children). Here I disagree with the Genetics faculty; I cannot in good conscience apply the word "wonderful" to the feebleminded "variety" of humanity. My article's proposals on scientific data from controlled adoption programs were not focused on Negroes. The members of the Genetics faculty criticize my proposals but their constructive suggestions include none regarding the interaction of environment and heredtiy. They might have noted that Negro orphans do have available superior, prejudice-free home environments with eminent, successful Negro families.

2. *What the Stanford genticists label "the whole concept of 'bad heredity'" and dismiss as "myopic" does exist and is important for our nation to understand.* In preparing a reply to the Genetics faculty letter I encountered the following references: (A) "Mental Retardation" (W. B. Saunders, Philadelphia, 1965) by Mrs. E. C. Reed and her husband, S. C. Reed, Director of the Dight Institute of Human Genetics, University of Minnesota. (B) *U.S. News and World Report,* March 7, 1966, "The Unfit: Denmark's Solution," an article provoked by my interview. (C) Reports of a 1957 study by Dr. T. Kemp related to (B). (D) Dr. Ralph W. Gerard refers me to Kallman on genetic factors in schizophrenia and on manic depressive psychosis and also on the latter to Winokur and Pitts (*J. Psych. Res.,* Vol. 3, p. 113, 1965). (E) Terman and Odin, "The Gifted Group in Midlife" (Stanford University Press, 1959). (F) Testimony of James A. Shannon, Director of National Institutes of Health, March 2, 1966, released by House sub-committee on appropriations, also Washington *Star,* p. 1, March 25, 1966. Is all this "hackneyed" "pseudoscience"?

The title and first paragraph of the news story of item (F) reads: "Dissuade Genetic Defects as Parents, Doctors Urged" . . . "Dr. James A. Shannon, Director of the National Institutes of Health, has warned that physicians must equip themselves to discourage men and women carrying genetic disabilities from having children." Are the National Institutes of Health "myopic" in their "whole concept of 'bad heredity'"? Is the Genetics faculty so equipping Stanford M.D.'s?

My conclusion from these references is that mental traits, both admirable and deplorable in my personal set of values, are significantly affected by heredity much as are the biochemical ones Shannon emphasizes. For example, reference (E) reports that "gifted" parents have 30 times the average probability of producing 150 plus I.Q. children Items (B) and (C) are in accord with the Reeds' conclusions stated in (A) as follows:

"When voluntary sterilization for the retarded becomes part of the culture of the United States, we should expect a decrease of about 50 percent per generation in the number of retarded persons, as a result of all methods of reducing retardation." They also write ". . . instead of the 6,000,000 retarded persons now in the United States there would only be 500,000 of them, if only normal persons with normal siblings and married to normal persons, had reproduced in the previous generation." They also comment that "the transmission of mental retardation" is "a subject which has been rather carefully ignored in recent years."

Why do the members of the Genetics faculty appear carefully to ignore and even to obscure the subject of transmission of mental retardation?

If the editor will allow me space here to deviate from my response and to plead for a cause, I would like to mention findings reported by the Society for Humane Abortion. They quote social workers who find that many pregnant mothers of poor economic and marital status do not, as often alleged, irresponsibly seek to increase their income by having more dependent children. They would choose abortion if available. I urge the members of the faculty of the Department of Genetics to add their prestige to my support of the Society for Humane Abortion in San Francisco and the Association for the Study of Abortion in New York. They can do so with a clear conscience without taking a position on Point (2)—bad environment is enough reason for abortion in these cases.

I favor all environmental improvements possible for all humanity. On this obvious matter the Genetics faculty and I agree. The means are another subject for research.

3) *The Stanford geneticists give the lay public (and that includes scientists in other*

fields) credit for very little intelligence and integrity. They tell us in effect: "Mind your own business and do not talk about this: the public can't be trusted." Happily, we have encouragement from some thoughtful medical-social scientists to do otherwise. Dr. Alan F. Guttmacher, National President of Planned Parenthood, states "that in matters of social progress the people have always been ahead of their leaders, whether politicians, churchmen, physicians, etc."

It is my personal opinion that the discussion of human genetics is a sorry mess lacking objectivity and candor and that this situation may threaten the future of our nation. To quote Shannon's testimony: to ". . . put it bluntly, Mr. Chairman . . . we are gradually weakening our genetic inheritance" of biochemical and physiological functional traits. The correspondence I have from geneticists and other scientists who insist on not being quoted is evidence enough for this judgment of lack of candor and objectivity as is the content of their letters. I commend *Stanford M.D.* for the courage to publish on such provocative questions and I hope that its influential readership will thoughtfully consider and appropriately discuss such questions privately and publicly.

WILLIAM B. SHOCKLEY,
Poniatoff Professor of Engineering Science.

A PROPOSAL THAT THE U.S. GOVERNMENT QUERY THE NATIONAL ACADEMY OF SCIENCES REGARDING POSSIBLE UPDATING OF THE ACADEMY'S 1967 STATEMENT ON HUMAN GENETICS AND URBAN SLUMS

(Proposed by W. Shockley as an experiment in research on methodology to reduce the environment-heredity uncertainty, including ethnic and racial aspects)

My proposal amounts in essence to asking the National Academy of Sciences:

Is or is not your 1967 Statement on Human Genetics and Urban Slums now clearly out of date and unsound as a result of the analysis published in the Winter 1969 issue of the Harvard Educational Review by Dr. Jensen and its subsequent review by Dr. Crow?

If the 1967 Statement (see Enclosure (1)) is out of date, then a restatement of it is urgently needed.

Evidence that a response to my proposed questions, as formulated in detail below, would not require extensive research is furnished by the history of the 1967 Statement as described in part in the Academy's story in the News Report of June–July 1969.

"As a response to the issues he raised [i.e., Shockley prior to October 1967], the Council of the Academy, with the help of several eminent geneticists, in 1967 prepared a 1600-word statement on human genetics and urban slums."

The eminent geneticists were identified as reported in Enclosures (1) and (2) as Professor James F. Crow of the University of Wisconsin (now at the California Institute of Technology), Professor James V. Neel of the University of Michigan and Professor Curt Stern of the University of California at Berkeley.

It is my understanding that the preparation of the 1600-word Statement did not require new research or extensive review of old research; it did represent the prevailing current thinking. Its review for approval by the Council, I recall being told by telephone, took place in the course of one weekend meeting of the Council. My purpose in making these observations is to support my opinion that my proposed questions would provoke a review that would require relatively small effort; in fact, in the light of the evidence given in detail below, the suggested review might be accomplished with very much less effort than went into preparing the 1967 Statement. The consequence might be a drastic revision of what I appraise as the "unsearch" posture of the Statement (exemplified by the two sentences that, as taken from the 1967 Statement, I shall discuss below and refer to as the 1967 Quotation).

Here is a proposed format of the three questions that I urge be transmitted by government to the Academy:

An appraisal is requested of the validity of two items reported in the recent Harvard Educational Review article by Arthur R. Jensen and of a third statement presented by W. Shockley at the Autumn 1966 Academy meeting and of the relationship of all three to the Academy's statement on human genetics and urban slums:

(1) On pages 62–63 of the Jensen article, a 1968 study is cited. The incidence of mental retardation (IQ below 75) for children is quoted here as being very much greater if the mother's IQ is below 80 than if it is above 80. Furthermore, at one to three years of age both groups of children had an average IQ of 95 so that the IQ deficit of both groups was very small at 1 to 3 years of age.

Question (1) pertaining to the validity and significance of this reported research is divided into three parts:

(1A) Are these 1968 results statistically valid? If not, can they be rejected or do they call urgently for more research in order to establish the facts?

(1B) If the 1968 results are valid, is it correct to conclude that prenatal and birth problems were unimportant in the subsequent drop of intelligence test performance of the children of lower IQ mothers to an average of about 63 IQ at age 14? Does this mean that the low average IQ at 14 was caused inevitably by hereditary factors? Do the social implications of this question call urgently for more research?

(1C) Were similar studies available prior to the National Academy of Sciences' 1967 position statement on human genetics and urban slums? If so, could the references be cited and an evaluation in respect to the 1968 study be furnished?

(2) Is it indeed a soundly established fact that the probability of incidence of mental retardation (IQ below 75) for Negro children is between 6 and 16 times higher than it is for white children of families matched with the Negro children's families, both being of relatively high socioeconomic status? (This question is based on Table 3 on p. 83 of the Jensen article.)

(3) Is it valid to express one aspect of the relative importance of environment and heredity in determining intelligence as measured by standard IQ tests by the following sentence: "Heredity controls intelligence more than twice as much as environment in families that adopt one of a pair of white identical twins."? (The preceding quoted sentence was correctly reported in a New York Times news story of Dr. Shockley's contributed paper at the Autumn 1966 National Academy of Sciences meeting.)

The purpose of these questions is to focus on several specific items so as to ascertain the current validity of the 1967 statement. For this purpose partial answers to some of the questions might suffice.

The significance of the proposed questions in respect to the Academy's 1967 Statement is obvious. So is their potential impact on recent Legislative hearings concerned with the effects of malnutrition and remedial education. I shall single out the third question as one for which a recent change of position by one of the authors of the 1967 Statement is most important.

For this purpose I shall refer to three different appraisals, expressed respectively in 1966, 1967 and 1969, of the importance of hereditary factors in determining intelligence. All of these appraisals involve the same three eminent geneticists and Academy members: James F. Crow, James V. Neel and Curt Stern. These scientists authored the Academy's 1967 Statement according to Enclosure (1), which, as does Enclosure (2), suggests that the Statement was an answer to questions that I had raised prior to the Autumn of 1967.

The first appraisal, referred to as the 1967 Quotation, is quoted from the Academy's Statement:

The problem of disentangling hereditary and environmental factors for complex intellectual and emotional traits where many genes may participate, where measurements are often not reproducible, where it is not certain what is being measured and where subtle environmental factors are involved, is extremely difficult. It is unrealistic to expect much progress unless new methods appear.

The 1966 Responses that I shall next discuss show that in 1966 two of the authors held views in keeping with the preceding 1967 Quotation. The 1966 Responses were expressed by Dr. Neel and Dr. Stern and resulted from my efforts to produce a clear and relevant presentation of a quantitative appraisal of the importance of heredity in controlling the development of intelligence. "Clear and relevant" I interpreted to mean comprehensible to the non-expert but adequately qualified to satisfy the expert.

My inquiries proceeded from Dr. Stern to Dr. Neel. Dr. Neel referred me to his former Ph. D. student Steven Vandenberg as the best available expert. My statement in question (3) was based on Dr. Vandenberg's letter of Enclosure (4). (This frank and objective letter tells almost the whole story in itself except for the new methods that have appeared since 1967 as discussed in Jensen's article.)

It was my impression that Dr. Stern and Dr. Neel would concur in a statement that would be acceptable to Dr. Vandenberg. Prior to quoting their concurrence with the relevant sentence in my contributed paper at the Autumn 1966 Academy meeting, I sent the following telegram to all three:

"This telegram confirms my verbal understanding with Stern, Neel and Vandenberg that they concur heredity controls intelligence more than twice as much as does environment in families that adopt one of a pair of white identical twins."

My reason for qualifying by "white identical twins" will become clear from the reference to identical twins in London in Dr. Crow's 1969 Position discussed below. Dr. Stern's response to my telegram was:

"Sorry, I do not concur in any estimate such as 'twice as much' concerning heredity versus environment."

Dr. Neel sent me a telegram reading:

"Prefer not to be quoted in that context."

He followed this with a second telegram delivered via Professor Handler (now President of the National Academy of Sciences) who was present at the Academy meeting reading:

"Do not quote me as concurring."

I telephoned Dr. Vandenberg, informed him of these non-concurrences and obtained his (courageous!) authorization to state: "This statement [i.e., the quote of question (3)] was acceptable to identical-twin expert Steven Vandenberg to whom I was referred by human geneticist James Neel."

The 1966 Responses of Dr. Neel and Dr. Stern quoted above are consistent with the 1967 Quotation cited from the Academy's 1967 Statement above.

The 1966 Responses of Dr. Neel and Dr. (and quoted at the end of the next paragraph) in his evaluation of the Jensen paper appears to be clearly inconsistent with both the 1966 Responses and the 1967 Quotation. Jensen (page 47, Table I) shows that 77.1% of the variance of IQ (for the school population of London studied by Sir Cyril Burt) arises from genetic components and 16.5% from environmental factors and 6.4% from test unreliability. *These figures unambiguously support my 1966 "more than twice as much"* statement of question (3) starting on page 2.

My assertion that *Dr. Crow's 1969 Position does not agree with the 1966 Responses of Dr. Neel and Dr. Stern and thus probably not with the 1967 Quotation is based on the evidence of his published review of Jensen's*

estimates. (See the Spring 1969 issue of the Harvard Educational Review.) Dr. Crow writes: "I agree for the most part with Jensen's analysis." He also supports Jensen's numbers in detail. In the following quotation, H^2 values of 0.75 and 0.86 correspond to 75% and 86% in the same sense that I used 77.1% above. I make this observation to point out that you need not be concerned with the definitions of the symbols E^2 and H^2 that occur in order to interpret the following direct quotation from Crow's review:

"As Jensen mentions, the Burt study appears closest to the ideal of placing the separated identical twins into random environments at an early age. There is some reassurance to the skeptic (*such as I have been*) [emphasis mine] in that H^2, as estimated by the correlation of the one-egg twins reared apart [i.e., by families that adopt one of a pair of white identical twins], and E^2, estimated by the correlation between unrelated children reared together, add up to approximately 1 [i.e., unity]—as they should if everything is simple (0.75 + 0.24= 0.99 in Jensen's Table 2; 0.86 + 0.25 = 1.11 in Burt's individual measurements.) Other cross checks are also in reasonable agreement.

"If we take the results from many investigations at face value, there is a great deal of consistency, as Jensen points out, and H^2 averages 0.8 . . . I agree with Jensen in deploring an uncritical assumption that only environmental factors are important and that genetic differences are negligible."

To sum up, I believe Crow's 1969 Position strongly supports my 1966 statement that was at that time rejected by the 1966 Response of two of the authors of the 1967 Academy Statement. Dr. Crow's position has apparently changed upon reading Jensen's article—indeed his clause "skeptic (such as I have been)" suggests a recent change of view on his part.

I submit that this analysis is adequate evidence for my case that a "plain and relevant presentation" has not been produced by "the scientific community" on the influence of heredity in controlling the development of intelligence.

My reason for urging the transmittal of my proposed questions to the Academy is that, in keeping with the wisdom that gave the Academy its charter in the first place, such an outside inquiry from the government might contribute as much in a few months to increase the awareness of the need for a "plain and relevant presentation" of facts pertinent to our human quality problems as have my own efforts over the last several years. I doubt if such an inquiry would be tabled before discussion as was my proposed resolution. For example, if now asked in 1969 what science can assert in regard to my three questions, the three authors of the 1967 Statement might all be found to concur in the 1969 Position expressed by my quotations from Dr. Crow's review.

The facts reported above regarding the appraisals expressed in 1966, 1967 and 1969 and their differences and changes are a matter of record that may be readily verified. These facts raise questions about the scientific (versus popular) soundness of the Academy maintaining its 1967 Position in April of 1969 as expressed by President Seitz.

"The strong feeling among the great majority of members," Dr. Seitz told newsmen, "is that it is essentially impossible to do good research in this field as long as there are such great social inequities. And such research is so easily misunderstood in these times."

President Seitz' views here appear to me to be frighteningly subservient to a popular majority opinion rather than to one tested by adequate study and debated and thus, as I have expressed for the record several times, not appropriate to a position of leadership in science.

In closing, I shall emphasize the importance of my conclusion that the 1967 Statement needs revision by expressing my general appraisal of the significance of the current situation:

I regard the Academy's Position as being the most serious and obvious dereliction of intellectual responsibility in the history of science. This appraisal was underlined to me in mid-May by the statement of a fellow Laureate to the effect that the answers to my questions were "so obvious." I do not believe he would be willing to state his convictions publicly. I believe that an important contribution to man's future can be made by documenting this irresponsibility on the part of American science as has occurred for Lysenkoism in Russia. The greater seriousness of our irresponsibility is underlined by the following quotation from Jensen's article:

"Is there a danger that current welfare policies, unaided by eugenic foresight, could lead to the genetic enslavement of a substantial segment of our population? The possible consequences of our failure seriously to study these questions may well be viewed by future generations as our society's greatest injustice to Negro Americans."

My own worry, expressed at the last meeting of the Academy and quoted by the AP story of Enclosure (5), is that during the next 20 years our well-intentioned welfare programs may unwittingly lead to the birth of more than a million illegitimate slum babies destined to lives of agonized frustration by being mentally retarded as a result of low values of their genetically controlled components of intelligence.

These are the problems about which Enclosure (2) says the National Academy of Sciences has voted not to encourage scientific study. I propose that transmitting my questions to President Handler of the National Academy of Sciences might put these vital questions on an appropriate agenda.

THE BATTLE OVER AMERICA'S ENVIRONMENT

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, December 18, 1969

Mr. BRADEMAS. Mr. Speaker, I would like to place in the RECORD two articles describing the campaign to improve the American environment. The articles, one from the winter 1969–70 issue of University: A Princeton Quarterly and the other from the December 22, 1969 issue of Newsweek, point to the growing militancy of conservation groups dedicated to the cause of a better environment.

Mr. Speaker, clearly there is increasing concern in the Nation that Congress must provide more meaningful legislation in this field. For that reason, together with my distinguished colleagues, the gentlemen from New York (Mr. SCHEUER and Mr. REID) and the gentleman from Idaho (Mr. HANSEN), I introduced on November 12, 1969, H.R. 14753, the Environmental Quality Education Act, which would authorize support for developing and providing programs of environmental education in our elementary and secondary schools and in local communities. The subcommittee which I chair hopes to conduct hearings on this legislation during the next session of Congress.

At this point, I would like to insert the text of the two articles in the RECORD:

[From University: A Princeton Quarterly, Winter, 1969–70]

REPORT FROM MANY FRONTS ON THE BATTLE OVER AMERICA'S ENVIRONMENT

(By Thomas C. Southerland, Jr.)

(EDITOR'S NOTE.—The campaigns to destroy, and defend, America's earth, air and waters move forward so briskly and on so many fronts at once that the average person has a hard time keeping up. Thomas C. Southerland Jr. keeps up. We asked him to share his information with our readers in what might be called The Story Up To Now.)

Many Americans are aware of pollution problems, a fact substantiated by a 1969 Gallup Public Opinion Poll in which 73 per cent of those polled said they were even willing to pay additional taxes in order to improve their natural surrounding and combat pollution.

Dr. Jacques Picard warns us that "This technology we enjoy today is little else but a widespread suicidal pollution. . . . Technology is working against man. Man is working against nature and instead of natural selection only technology remains." Admiral Hyman G. Rickover has said he was 'troubled by the case with which purveyors of technology pressured the general public into letting 'so-called progress' alter their lives." The biologist Dr. Barry Commoner says population and new technology threaten "to destroy the web of life on which our civilization depends." C. P. Snow charges us with "letting technology ride us as though we had no judgment of our own." Conservationist Wesley Marx, writing in the magazine *Audubon,* says "The Conquest of the Land gives me a high standard of living—and a cheapened environment in which to enjoy it."

A rapidly increasing population is obviously one cause of all our problems, but until recently this subject was generally avoided, causing Robert S. McNamara, President of the World Bank, to observe that "There is an understandable tendency simply to avoid argument, turn one's attention to less complicated matters and hope that the problem will somehow disappear." (But a new candor about that problem is emerging. Kingsley Davis, Director of International Population and Urban Research at the University of California at Berkeley, told the *New York Times* in October that "family planning" was a hopelessly futile means of controlling the population explosion and advocated a government ban on early marriage, taxing married persons more heavily than single ones, free abortions, a tax on children, equal job and education opportunities for women.)

Not all agree, however, that we are in danger. Glenn T. Seaborg, Chairman of the Atomic Energy Commission and Nobel Prize laureate, is less concerned. He says, "There is a certain hysteria in the country about environmental problems. 'Environment' has become an emotionally charged word today, almost on a par with 'crime in the streets' or 'student revolts.' It is obvious that enough is not being done in controlling and regulating the environments. But much more is being done than the public is aware of and more than ever before."

It would be surprising if Dr. Seaborg were *not* aware of a certain "hysteria," for his AEC is the target of conservationists, biologists, and Howard Hughes. Conservationists opposed the AEC nuclear blast in a wildlife refuge on Amchitka Island in Alaska. Biologists are generally against AEC's "Operation Plowshare," an operation using atomic energy for construction purposes, including a new harbor at Keraudren Bay in Australia and another Atlantic-Pacific inter-ocean canal in Central America. Unlike the Panama Canal, there would be no locks (too complicated and/or too expensive) and this absence could result in grave ecological

problems, such as radiation damage and temperature imbalances. Certain fish would then be able to enter one ocean from the other and this migration could cause large-scale extinctions. (Many will remember the devastating consequences of the sea lamprey's entrance via the Welland Canal into Lake Erie; gradually spreading into the other Great Lakes, it destroyed the lake trout and whitefish as commercial fish.)

Howard Hughes, a relative newcomer to Nevada, has expressed strong concern, as a land-owner and developer, over the AEC's megaton-range underground detonations and their related seismic shocks. (Testing has already triggered minor earthquakes in Nevada.) He is also concerned over the accidental release of radiation into the air and the possible contamination of ground water.

As a people, we Americans incline toward the short view of technological problems. Many who criticize deficit spending by the government, seeing it as obligating their grandchildren to pay a bill not of their own contracting, see no wrong in greedily leveling redwoods, spoiling hillsides with strip-mining, or using additional power equipment which adds to air and water pollution. Expenditure of unrecoupable resources is a far greater loss to our descendants than deficit spending. It can be terminal. David R. Brower of the conservationist Sierra Club calls ours "a chain-letter economy, where we pick up the early dividends and our children find the mail box empty."

The conservationist trying to protect some landmark or wildlife area often hears from would-be exploiters the argument that "this is the price we have to pay for progress." But who knows what the actual price may be in terms of our future well-being? Greece is an example of a nation that sentenced its ancestors to a poor standard of living by failing to understand ecology. At one time, Greece was lush with greenery. Even lions were plentiful and were often depicted in early Greek art, the most notable being the lions of Delos. Then the Greeks leveled great forests to build houses and ships, and the winds and rains washed the bared soil away, exposing rock and limestone. Overgrazing by sheep contributed to the erosion.

There are man-made deserts scattered throughout the world today, including sections of India and the Middle East. Remember the Okies in this country? It will take generations for certain over- or wrongly-cultivated land areas of Oklahoma to become productive again. But we seem never to learn: in the Mississippi delta, eastern Arkansas farmers are now clearing 150,000 acres of forest a year for soybean crops. In just eight years, forests there have been depleted by one million acres. This is the sort of "progress" Lamont C. Cole, Professor of Ecology at Cornell, had in mind when he said, "We hear a lot today about 'underdeveloped' and 'developing' nations, but many of them might more accurately be called 'overdeveloped.'"

Some hope the world's expanding population can be fed one day by exploiting the world's oceans. But not if we continue to dump oil, sewage, gases, herbicides, insecticides, and nuclear wastes into them to the detriment of fish, plankton, and other marine life. (The world's oceans produce over twice as much of our life-sustaining oxygen supply as do trees and other plants.) Off California, marine life has steadily decreased over the years, and across the Pacific insecticides—along with radioactive fallout—are suspected of killing the triton. Since this fish is a predator of starfish, the unchecked population of coral-eating starfish is now destroying Australia's Great Barrier Reef and other coral islands, the breeding ground of oysters, mussels, clams, and many other fish. We gain land by filling in marshes and wetlands, the spawning grounds of many fish. We have even dammed up some of the rivers in Oregon so that the salmon are prevented from reaching their spawning areas.

In Biscayne Bay, south of Miami, shellfish and crabs have been killed in large quantities by generator-heated water dumped into it by the Florida Power and Light Company—which now plans to replace these generators with two nuclear ones which would produce even hotter water. Nuclear generators are projected for other places throughout the country. Of course this pollution can be prevented by cooling the water before releasing it, but this would cost so much money that the nuclear plants might be unable to compete as an economical energy source.

EARLY LEGISLATION

Among the many problems of our deteriorating environment, air and water pollution make the most headlines. In 1952 the deaths of some 4,000 persons were blamed on London smog and in 1966 a Thanksgiving weekend inversion in the New York area claimed about 80 lives—not to mention those whose deaths are hastened every week by bad air. And air pollution is harmful not only to our health but to our crops and livestock. It eats away at rubber, steel, and stone. Some of the buildings it damages are historic and irreplaceable.

Air pollution has been found to affect local weather patterns, the notable example being the dramatic increase in rainfall over La Porte, Indiana, downwind from the steel mills of Chicago and Gary, Indiana. The rain is produced by the combination of smog and moisture in phase with the hazy days in those industrial areas. Just outside this smoke plume is South Bend, whose rainfall pattern is unaffected. There is much speculation as to what long-term effect air pollution will have on the earth's atmosphere. One theory is that a "greenhouse effect" might occur, holding in the sun's heat and warming the earth unnaturally; another theory holds that the earth might be turned unnaturally cold by certain pollutants' screening out the sun's energy. It is estimated that each year air pollution costs the nation over 12 billion dollars (in the Northeast, about 18 million dollars a year to farmers alone). But that, after all, is only money; the final price may well *be* final.

In 1965 Congress amended the Clean Air Act of 1963 to establish controls over emission from automobiles, the prime source of air pollution in this country. Next the Air Pollution Act of 1967 was passed to set up regional air-quality-control regions, and in 1968 the National Air Pollution Control Administration was established. It would appear that something is being done and air pollution is on the way out, right? Wrong. Industrial plants are increasing in number, automobiles are doubling, airplanes are doubling (with each jet dumping 2½ tons of carbon dioxide pollutants into the atmosphere every ten minutes). There are no national standards for other than automobile pollution, the present laws are too cursory, and are seldom if ever enforced.

In Philadelphia (America's third city in air pollution) from January 1969 through June 1969 not one violator was prosecuted or fined. In other years many polluters have been brought in to court time and again, paid their small fines and resumed their activities. Several large firms have had four convictions each. One of these companies—which paid the exorbitant fine of $25—annually puts out some 650 tons of sulfur oxide, 160 tons of nitrogen oxide, and 40 tons of dust and soot. New Jersey's record is much better; it now has a Division of Clean Air and Water. New Jersey, unfortunately, is the exception.

THE AUTOMOBILE AND POLLUTION

The automobile contributes 60 per cent of our air pollution but only a little over 3 per cent of the National Air Pollution Control Administration budget has been spent on motor vehicle research. The NAPCA has awarded the Thermo Electron Corporation a contract ($174,173) to design a steam car and the Marquardt Corporation a contract ($96,683) to study ways of minimizing steam engine pollutants. The Department of Transportation has contracted for a prototype steam-powered bus. Some research is being conducted on an electric car, but there is no all-out effort by government or industry. The most notable entirely private effort is by William Lear (of Lear Jet fame) who has undertaken to perfect a commercially feasible steam auto.

In July 1969 the California Senate cleared a bill that would outlaw internal combustion automobiles, starting in 1975, in the hope of forcing auto makers to develop other types of cars. The manufacturers, apparently caught by surprise, recovered in time to lobby a narrow defeat of the proposal (by one vote) in a state assembly committee. A victory for industry, but nevertheless a straw in the smoggy wind. In September 1969 the U.S. House of Representatives defeated 99 to 22 an amendment to limit the manufacture and sale of those internal combustion engines whose exhaust emission after 1978 exceeds a certain standard. Again, the fact that the issue was even brought to vote is noteworthy and it is almost certain to be brought up again.

WATER POLLUTION

Water pollution made big news when oil from the sinking S.S. Torrey Canyon washed onto England beaches in March 1967, though that ship was small compared to supertankers being built today. When drilling off the California coast produced the Santa Barbara oil leak, the impact on Americans was even greater because the spill was on our own shores. (Incidentally, Union Oil, the company that did the Santa Barbara drilling—though other companies were indirectly involved, is the same firm for which the Torrey Canyon sailed.)

There has been much publicity about the expiration of Lake Erie (America's Dead Sea), and the pollution of the Hudson, Connecticut and Potomac Rivers, but nearly every American river and stream is affected to some degree. Some rivers are open sewers. There have been infamous fish kills from pollution in, among others, the Mississippi, and the Raritan of New Jersey.

Partly because of the technological revolution and partly because of the population increase, our water usage since 1900 has increased by a factor of nine (900 per cent), yet pollution renders most of our water supply unusable. Water resources have long been a concern of the federal government but with a few exceptions pollution has received proper attention only since 1961. Though a national Clean Water Act has been enacted and there is a Federal Water Pollution Control Administration, water pollution continues to increase.

A tougher Congressional water pollution bill is now in joint conference that will make oil polluters liable, set standards for DDT spillage, aid states in controlling thermal pollution, perform research in acid mine drainage, provide aid for pollution control in the Great Lakes and remove hazardous debris in navigable waters. This is certainly a step in the right direction, but many feel that the funds authorized will just cover the annual increases in pollution.

The drop of subsurface water levels is another element in our water crisis, and in the Southwest the use of water without replenishment has become so bad that the water table has lowered to the point where fossil water from the last ice age is being used.

Civic boosterism impels a mayor to advertise, "Settle in beautiful Arizona," say, without regard to water table or drainage capability of the area. If successful, he ends up appealing to the "federals" for funding to stop

pollution or for more irrigation. Irrigation water, by the way, picks up natural ground salts and drains them back into local rivers and streams. The Mexican government has long been irritated over the high salt content of the Colorado River and President Nixon and President Gustavo Diaz Ordaz discussed this at the dedication of the Amistad Dam in September 1969. Salinization occurs in arid regions such as the Southwest U.S. because evaporation is greater than precipitation. Rain dissolves the natural salts and through capillary action the resulting salt water is raised upward. When this water is evaporated salt is left on the ground. Irrigation drainage now has even more salt to empty back into the river. Still, mayors go right on trying to attract more residents.

The mayor of Miami wants a jetport so that his city can become another New York City, but would any mayor in his right mind want New York's problems? Other city boosters want more people, more industry. And why not? After all, although a large city's problems today are a small town's tomorrow, the present mayor won't be in office for the expansion's aftermath.

OVERCROWDEDNESS

Overcrowdedness is blamed for most of our nation's ills, and it is true that our highways, schools, and cities seem unable to keep up with the population increase. But pollution is more the product of technology: The U.S., with only 6 per cent of the world's population, uses between one-fourth and one-half of the world's resources.

Garbage and junk are becoming major pollutants. The dumping of solid waste into streams or the ocean leads to water pollution, and burning it adds to air pollution, and no one has an answer to this problem, though various study programs were called for in the 1965 Solid Waste Disposal Act. America produces over five pounds of trash per person per day for an annual U.S. total of 3.5 billion pounds.

Other interesting statistics: we throw away 26 billion jars and bottles, and 48 billion metal cans per year. This output has led Prof. Lucien Brush, formerly of Princeton's School of Engineering, to speculate half-jokingly that future archeologists specializing in our culture will divide the twentieth century into two groups called Beercan Cultures I (tin) and II (aluminum). Tin cans slowly rust away but not aluminum cans. (Reynolds Metals Company, fearing future legislation against aluminum cans, now offers a return on used ones in the Los Angeles and Miami areas, where one-third of the nation's beer cans end up.)

We are a nation of litterbugs. Cans, cartons, bottles, cigarette wrappers are strewn along our highways by the billions. It has been estimated that we spend $500 million a year to remove litter from American highways. Nevada estimates that it spends ten cents collecting just *one* item from a highway. Supported by a $54,291 grant from the Bureau of Solid Waste Management, Dr. Samuel F. Hulbert, of Clemson University, is developing—with encouraging results, a water soluble glass container to dissolve in the atmosphere or water after being opened.

NOISE

Noise is a particularly difficult pollutant to deal with. Doctors at the Sixth American Medical Association Congress on Environmental Health in Chicago in May 1969 called noise as great a hazard to mankind's environment as air and water pollution. Noise can cause hearing loss by injuring the inner ear, and many cities recognize this by having (largely unenforced) ordinances forbidding the honking of auto horns.

Airplane noise is even harder to deal with, and there are few ordinances against it, but airport authorities are finding it increasingly difficult to negotiate for new airports. Most everyone is now familiar with the controversial supersonic transport (SST) and its accompanying sonic boom. Public feeling against the sonic boom continues to mount. People ask why the government should help subsidize a plan to benefit a select few (those who can afford it) at the expense of the vast majority. The expense is not only measured in dollars but in terms of mental peace.

The boom of a plane flying at supersonic speeds can be as loud as a moderate-size explosion a block away, and is continuous throughout the plane's flight, and can cover a 50-mile-wide bang-zone. Sonic booms have already caused a number of minor disasters. To name a few: by 1967 thirteen deaths had been attributable to sonic booms in France and in August of that year three persons were killed in Mauran, France, when a sonic boom caused the collapse of a barn; Ottawa and Oklahoma City have each experienced sonic boom damages estimated at $500,000. Possibly the SST, when built, will be barred from flying over land because of the hazard to health and to buildings—and the propensity it has for triggering snow slides when flying over vulnerable slopes. There is also speculation as to what effect flights over the oceans will have on the fishing industry.

A measure proposed by Senators Clifford P. Case (R, N.J.) and William Proxmire (D, Wis.) to ban supersonic flights over U.S. territory was defeated but authorization was passed for the Federal Aviation Administration to set limits on general airplane noise and on booms. Case likened this to "setting the fox to guard the chickens." Despite public pressure to ban SST flights over land there will be great counter-pressure from those who stand to make large profits from the SST. And conservationists have discovered that when the profit motive conflicts with the environment, the latter usually loses. Look for overland SST flights to be defended in the name of increased employment or as a means of improving our balance-of-payments.

The Department of the Interior has complained of the irreparable damage to Canyon de Chelly National Monument, the Mesa Verde Cliff dwellings, and other archeological treasures in the Southwest caused by booms from Air Force planes. Rock slides have poured on some of the ruins and structural cracks have formed on others.

Of course, not all high decibel noises are produced by sonic booms. In the home we hear kitchen appliance noises, air conditioners (our own or the neighbors'), washing machines, and vacuum cleaners. All of us at one time have been awakened by the lawnmower (107 decibels), the motor cycle (111 decibels), trucks on the highway, and the hand-powered saw. Many enjoy the quiet solitude of the woods in winter, but now even this is threatened: The snowmobile with its deafening roar is increasing in popularity. There are 700,000 now in use, with sales of 350,000 predicted for the 1969–70 season. Bad news for hibernating wild life.

Our legislators are just beginning to show an awareness of noise as a pollutant.

But the big conservation fights of recent years have been over land use: The fight to save the redwoods (about 1 to 2 per cent of the origial forests still stand), to defeat the Grand Canyon dams, to protect the Point Reyes National Seashore, to save New Jersey's Great Swamp, to preserve the Texas Big Thicket (home of the ivory-billed woodpecker), are just a few of the more famous national issues.

DESPOILING THE LAND

The Sierra Club, best known of the so-called militant conservationist organizations, is often accused of putting nature's rights before human rights. But the club's policy on national forests, surprisingly enough, identifies twelve appropriate land uses in addition to recreation and protection; these include timber production, mineral excavation, and water resource development. What the Sierra Club and other conservation organizations try to do is prevent unreasonable exploitation of finite resources and combat ecological ignorance and apathy. These organizations, staffed largely by volunteers working part-time on a small budget, are usually pitted against industries employing full-time publicists or lobbyists, their salaries charged off as business expense.

Such industries are well represented in Congress. Lumbering is typical. Many congressmen represent districts where lumbering is big business, and the industry-sponsored National Timber Supply Act was proposed jointly by many members of both the House Committee on Agriculture and the Senate Committee on Agriculture and Forestry. This fall that proposed Act was altered slightly and its name was changed to the National Forest Conservation and Management Act of 1969 in an apparent attempt to appease the conservationists who called it a "timber grab." In the past there have been numerous congressional standing committees representing the exploiters of natural resources, but even today there is no committee concerned with our environment as a whole.

That unspoiled land needs to be set aside is obvious. National park land has potential for economic development or it would not have had to be "preserved" in the first place. Unused land supports wildlife, protects watersheds, provides outdoor science laboratories (the pituitary gland of a bird threatened with extinction may be found to cure leukemia; the root of a rare New Jersey Pine Barren orchid to cure another disease) and provides a recreational retreat for millions of persons, generation after generation.

The nation's dam builders—the Bureau of Reclamation and the Army Corps of Engineers—have long been targets of the preservationists. Federal dams for flood control or cheap power are often popular locally and as a consequence there are cases of too many dams being placed on the same river and too close to one another. Some of the most controversial dams—such as Northern Arizona's Glen Canyon Dam, now called the Eisenhower Dam—are in the Southwest. The proposed Grand Canyon dams—Marbled Canyon and Hualapei—were defeated in an emotional struggle inside and outside Congress, but had they been approved they would have caused the flooding of part of the canyon floor, destroying one of the world's most extraordinary geological and ecological entities. The living Colorado would no longer have been able to perform its ageless task of sculpturing the canyon.

Hetch Hetchy was a valley similar to Yosemite, and when a controversial dam was placed there in 1913 the power advocates promised that the resultant lake would attract thousands of visitors each year. Today Yosemite Valley has thousands of visitors each *day*, Hetch Hetchy has one or two. Nothing grows around the artificial lake as it rises and lowers daily with changes in the demand for power in the San Francisco area it serves.

The proposed Hooker Dam in southwestern New Mexico along the Gila River would back water into the Gila Wilderness. The proposed High Mountain Sheep Dam on the Snake River in Idaho threatens the nation's deepest gorge, Hell's Canyon. The proposed Dos Rios Dam along the Eel River in northern California would inundate lush Round Valley. The Rampart Dam along the Yukon River in Alaska would diminish 2,400,000 acres of duck breeding habitat, and the Red River Gorge Dam threatens the scenic Red River Gorge in Kentucky. In New Jersey the projected Tock's Island Dam on the Delaware, approved by the U.S. Senate in July 1969, poses a threat to future shad runs.

Conservationists argue that the best and most logical spots to place dams have long since been occupied. Furthermore, most dams are temporary (between 60 and 160 years) because silt, or mud, gradually fills the artificial lakes formed by dams. Also, since lakes

evaporate at a faster rate than moving water, a decrease in water results, something a thirsty region can ill afford. Canyon walls, because of their "sponge effect," absorb a lot of the water and also contribute to the water loss. Lake Powell, formed by the Eisenhower Dam, is far behind in its predicted rate of rise. One hundred or so years from now our descendants will see not Glen Canyon but the remnants of a dead lake surrounded by rocks and filled with desert sand. Finally, from an ecological standpoint, flood control is best served by protection of our flood plains and forests.

NATIONAL PARKS

New national parks have been established over the last few years, notably Canyonlands in Utah, Redwoods in California, Guadalupe Mountains in Texas, and North Cascades in Oregon, but still the parks cannot keep up with the visitors (7 per cent increase per year). In 1968, over 150 million people, approaching our nation's total population of 200 million, visited the National Park system. Obviously many of these were repeaters. The estimate for 1969 is 162 million. This deluge of mankind is not surprising when one observes the increased sales of birding, camping, and fishing equipment. This trend may reflect a new appreciation of nature, but the crowds mean that the natural beauty of many parks is threatened by construction of highways and parking facilities and lodges—and by litter. Some camp grounds have been turned into virtual slums. In some ways we are defeating the very purpose of having such parks, which was stated by Congress as to preserve intact all "flora and fauna."

The Gallup Poll cited earlier disclosed that most Americans (75 per cent) favored setting aside public lands for conservation. A *Christian Science Monitor* readers' poll (on the subject of our national parks) further showed that the majority favored the placing of some type of limitation on visitors, that new roads should be of the primitive scenic type, that U.S. highways should be removed, and all present wilderness areas preserved. In spite of the notoriety of the two 1967 deaths caused by grizzly bears, readers also favored the protection of all animals. Although swimming, mountain-climbing and the automobile cause far more park fatalities than grizzlies, such animals will have to be removed to lands designated as wilderness if present trends continue.

To reduce crowds at peak seasons, a plan is being considered by the present administration to suggest that school and industrial vacations be spread through the year instead of being concentrated in the summer. Oregon has stopped advertising itself as a tourist attraction, and has diverted those funds to combating litter. There are also plans to seek recreational facilities closer to urban areas.

The case of the Everglades National Park in Florida is typical of our losing battle for park protection. At one time the Everglades was sustained by fresh water from its major natural source, Lake Okeechobee, but for flood control purposes the Army Corps of Engineers diverted that water to reclamation project canals and sent it out to sea. The Everglades was threatened with water strangulation. This was partly resolved when the administrators of the Central and Southern Florida Flood Control District, in response to public pressure, allowed the Everglades National Park to receive the bare minimum of water, making it the only national park supported by artificial means.

Now the Everglades faces a new threat. The Dade County (Miami) Port Authority, backed by the Federal Aviation Administration, local merchants, and land speculators (and no doubt the major airlines), decided to build a major supersonic jetport. Construction has started on a training site—part of the projected total complex—whose pollution, noise, and land-fill pose a deadly threat to this sawgrass region with its rare animal and plant life. It seems incredible, in the words of Gary Soucie, Eastern Representative of the Sierra Club, that "the U.S. public is unwittingly subsidizing the destruction of Everglades National Park."

Secretary of the Interior Hickel, Governor Kirk of Florida, and Transportation Secretary Volpe disclosed at a joint press conference in September 1969 that federal funds would not support the jetport but the government would continue to back the jet training site. (Some skeptical conservationists suggest that Hickel is going all out to save the Everglades in order to cover up his support of the exploitation of resources in his own state.) Since that time an Interior Department study has shown that even training flights would endanger the Everglades. Talk and study continue—but so does construction.

In discussing the intense competition for land use, it is almost impossible not to discuss population growth. The following statistics from the AFL–CIO are revealing: "In 1900 each American had the equivalent resources of 25 acres of land; by 1950 this was down by one half to 12.5 acres; in 1966 there were 9.7 acres of land per capita. When the year 2000 rolls around there will be less than 6 acres of land per capita."

Nothing has changed or scarred the American landscape more than has the highway. Urban areas, suburban trails, parks, open space, wildlife refuges—none has been safe. There are federal funds to build new roads, but little to widen existing roads. Secretary Volpe was against proposed regulations designed to give equal weight to local goals and objectives when highway locations were being considered, because he was against construction delays that would be caused by the inevitable hearings. Engineering criteria would continue to dominate the method of choosing location. Nevertheless, Volpe rejected a highway through New Orleans' historic French quarter—perhaps the beginning of a new trend.

President Nixon has asked the Congress for 10 billion dolars to be spent over a 12-year period for a mass transit system, to relieve highway congestion and reduce the pressure for more highway building. But many believe the rate of expenditure is too small. It also remains to be seen if the transit system, even though it would benefit more people, will get the support and attention that highways have in the past, since the automobile is a power and status and sex symbol.

CHEMICALS

In many other ways man flirts with upsetting the balance of nature. In March 1968 winds carrying "nerve gas" from the Dugway Proving Grounds in Utah killed thousands of sheep, and alerted the public to the dangers in chemical and biological warfare research. In summer 1969 when 27,000 tons of deadly chemical weapons were to be shipped in box cars from Colorado and dumped in the Atlantic, the public outcry was loud and emphatic: The interstate shipment would not be tolerated. The public outcry was loud, but not loud enough: A train derailment in September 1969 caused the evacuation of 30,000 residents of the Mississippi Delta when four cars containing vinyl chlorine caught fire and the heat combined with the chemical to release deadly phosgene gas. Are sufficient precautions being taken to insure that a deadly strain of germ-warfare virus does not escape somewhere?
